VOLUME II

ARTHUR—BUNYAN

EDINBURGH: T. & T. CLARK, 38 GEORGE STREET
NEW YORK: CHARLES SCRIBNER'S SONS, 153-157 FIFTH AVENUE
1909
PREFACE

Besides general books of reference, every one must now possess a work of reference covering the whole field of his own special studies with sufficient fullness. This Encyclopaedia will cover the field of Religion and Ethics, the most widely interesting and the most important of all departments of thought.

1. The articles are written by those who have made a special study of their subject, and are recognized as most competent to write upon it. Attention is given to grace of style, so that the articles may be read with pleasure as well as relied upon for accuracy and insight.

2. The articles are full enough to give the reader a good working acquaintance with their subject; and to each article is added a select bibliography for the use of those who wish to pursue the subject further.

3. The range of the Encyclopaedia is well defined. Religion and Ethics can no longer be studied separately with any profit. They are accordingly dealt with together; but each topic, whether religious or ethical, or both, will be found under its own appropriate title. The Encyclopaedia will contain an account of all beliefs and customs which belong to Religion or Ethics throughout the world. It will also contain articles on the religions themselves, or on the nations professing them. And when a belief or custom belongs to more religions than one, or is found in more than one place, it will often be described in a series of articles, each article being written by a scholar of the particular religion or country.

4. Much attention is given to social topics which have an ethical or religious aspect.

5. The Encyclopaedia includes some account of such persons and places as are important in the history of Religion and Ethics.
In issuing the second volume of the Encyclopaedia of Religion and Ethics, the Editor desires to acknowledge with thankfulness the generous reception that has been given to the first volume.

The difficulties of the task have been recognized, but it has been acknowledged, and that most handsomely in the reviews of greatest weight, that these difficulties have been successfully overcome, and that (in the words of the Harvard Review) 'the Encyclopaedia will be indispensable to the student of any part of its wide field.'
AUTHORS OF ARTICLES IN THIS VOLUME

ABRAHAMS (ISRAEL), M.A. (Lond. and Camb.).
Reader in Talmudic and Rabbinic Literature in the University of Cambridge; formerly Senior Tutor in the Jews' College, London; editor of The Jewish Quarterly Review.
Blasphemy (Jewish), Body (Hebrew).

# SCHEME OF TRANSLITERATION

## I. HEBREW

### CONSONANTS

<table>
<thead>
<tr>
<th>Hebrew</th>
<th>Transliteration</th>
</tr>
</thead>
<tbody>
<tr>
<td>b, bh</td>
<td>m</td>
</tr>
<tr>
<td>g, gh</td>
<td>n</td>
</tr>
<tr>
<td>d, dh</td>
<td>s</td>
</tr>
<tr>
<td>h</td>
<td>v, w</td>
</tr>
<tr>
<td>z</td>
<td>p, ph</td>
</tr>
<tr>
<td>h or ch</td>
<td>q or k</td>
</tr>
<tr>
<td>t</td>
<td>r</td>
</tr>
<tr>
<td>y or j</td>
<td>s, sh</td>
</tr>
<tr>
<td>k, kh</td>
<td>t, th</td>
</tr>
</tbody>
</table>

### VOWELS

<table>
<thead>
<tr>
<th>Short.</th>
<th>Long and Diphthongal.</th>
<th>Shevases.</th>
</tr>
</thead>
<tbody>
<tr>
<td>a</td>
<td>ay, é, ê</td>
<td>ay, í</td>
</tr>
<tr>
<td>e</td>
<td>é</td>
<td>é, í</td>
</tr>
<tr>
<td>i</td>
<td>í</td>
<td>í</td>
</tr>
<tr>
<td>o</td>
<td>ó, ò</td>
<td>ò</td>
</tr>
<tr>
<td>u</td>
<td>ü</td>
<td>ü</td>
</tr>
</tbody>
</table>

## II. ARABIC

### CONSONANTS

<table>
<thead>
<tr>
<th>Arabic</th>
<th>Transliteration</th>
</tr>
</thead>
<tbody>
<tr>
<td>d</td>
<td>ط</td>
</tr>
<tr>
<td>t</td>
<td>ئ</td>
</tr>
<tr>
<td>th</td>
<td>ظ</td>
</tr>
<tr>
<td>j</td>
<td>ج</td>
</tr>
<tr>
<td>b</td>
<td>ب</td>
</tr>
<tr>
<td>b</td>
<td>ب</td>
</tr>
<tr>
<td>h</td>
<td>خ</td>
</tr>
<tr>
<td>d</td>
<td>ل</td>
</tr>
<tr>
<td>dh</td>
<td>م</td>
</tr>
<tr>
<td>r</td>
<td>م</td>
</tr>
<tr>
<td>z</td>
<td>ز</td>
</tr>
<tr>
<td>s</td>
<td>س</td>
</tr>
<tr>
<td>sh</td>
<td>د</td>
</tr>
<tr>
<td>y</td>
<td>ي</td>
</tr>
</tbody>
</table>

Composite shevase: [simple sheva].
### II. ARABIC—continued

<table>
<thead>
<tr>
<th>Short</th>
<th>Long</th>
<th>Diphthong</th>
</tr>
</thead>
<tbody>
<tr>
<td>a</td>
<td>ä</td>
<td>ai</td>
</tr>
<tr>
<td>i</td>
<td>i</td>
<td>au</td>
</tr>
<tr>
<td>u</td>
<td>ü</td>
<td></td>
</tr>
</tbody>
</table>

### III. PERSIAN AND HINDUSTANI

The following in addition to the Arabic transliteration above

<table>
<thead>
<tr>
<th>P</th>
<th>Z</th>
<th>R</th>
<th>Zh</th>
<th>S</th>
<th>G</th>
</tr>
</thead>
<tbody>
<tr>
<td>p</td>
<td>z</td>
<td>r</td>
<td>zh</td>
<td>s</td>
<td>g</td>
</tr>
</tbody>
</table>

1 The diacritical marks in this scheme are sometimes omitted in transliteration when absolute accuracy is not required, the pronunciation of g being the same as that of s, while z, z, z, are all pronounced alike.

### IV. SANSKRIT

#### CONSONANTS

- **Gutturals**—k, kh; g, gh; ñ (=ng in finger).
- **Palatals**—ch (=ch in church), chh; j, jh; ñ (=n in onion).
- **Cerebrals**—t, th; d, dh; ñ (a sound peculiar to India).
- **Dentals**—t, th; d, dh; n (=n in not).
- **Labials**—p, ph; b, bh; m.
- **Semi-vowels**—y; r; l; v.
- **Sibilants**—ś or sh; ś or sh; s.
- **Aspirate**—h.

- anunāsika (\(\sim\)); anusvāra, ṃ; visarga, b; avagraha (\(\acute{\text{\textcircled{\textbullet}}}\)).

[A small superior number designates the particular edition of the work referred to, as KAT², LOT⁸, etc.]
ARTHUR, ARTHURIAN CYCLE.—The Arthurian cycle is a body of legend that has grown up around the name of the British hero, Arthur. There appears to be no reason for doubting that Arthur was one of the leaders of the Britons against the English in the 6th cent. A.D., but nothing further concerning him can be stated with certainty. Among the Britons themselves legends appear to have readily attached themselves to his name, as they did to the names of other British heroes, while to the original Arthurian legend itself legends of other heroes became appended, so that in the Middle Ages the Arthurian cycle of romance had attained an extraordinary development. In France, especially, the cycle was the successor in popularity to that of Charlemagne, and, like other legends, either in France or in Britain, it was combined with certain legendary narratives of the Church to form the story of the finding of the Holy Grail, the Cup from which Christ drank at the Last Supper.

The name Arthur is Brythonic (the Celtic tongue of the Britons), a language which came later to be differentiated into Welsh, Breton, and Cornish. Though Brythonic in form, the name Arthur is probably borrowed from Latin, like many other Brythonic names, such as Urien (Urbigana), Weinn (Eugenius), Geraint (Gerainta), Padarn (Paternus), Ewryd (Ambrasius), Custennin (Constantinus), Bhulaw (Romanus), Anarawd (Honorus), Khyssut (Restitutus).* The Latin original of Arthur is Artorius, a name found in Greek letters in Clement of Alexandria, and at Khamsus in an inscription dedicated to the goddess Nerida by G. Artorius Tertullus. Another form of it is probably Artorius, found in Juvenal (Sat. iii. 29). The latter Latinized form Arturus or Arthurus and the Irish Artur are based on the British form, and of this the French form Artus and the Italian Artù are also corruptions. In Wales the name Arthur does not appear to have been common, but there is an example of it in the Book of Llath Date (Oxf. 1520, pp. 77 and 153) and also in one of the pedigrees, as of Arthur, father of Noc or Noû (also written Nongoy), a member of the royal line of Dyfed (Dumedia). In the Osney Charter of 1152 the name Gwyrfris Arturus (probably Geoffrey of Monmouth) occurs as that of one of the witnesses. The fact that the name Arthur is a genuine phonetic derivative of a real, though rare, Latin name is strong evidence of its authenticity, and the probability is that it was preserved, like other Welsh names of the Saxon period, in some genealogy or rudimentary chronicle, such as the nucleus of Nennius, which Prof. Zinner (in his Nennius Vindicateus) thinks was composed at Dumbarston or Carlisle.

Attempts have been made from the evidence of Arthurian place names to determine the region of

*In this art, the spelling of Celtic names follows that now generally adopted by Celtic scholars, except in a few cases, where the actual spelling of the medieval documents has been retained.

Britain with which Arthur was most closely associated; but, in spite of the researches of Mr. Stuart-Glennie (author of Arthurian Localities) and others, it cannot be said that these attempts have been successful, insomuch as the later popularity of Arthur led to the naming of many places after him. The oldest indications make it probable that, like other prominent post-Roman Britons, he came from the zone of the North. Certain ruling families of Wales, such as those of Coel, Cunedda Wledig, and Cynfarch, maintained even into mediaval times the tradition (supported by Nennius) that they were settlers in Wales from the North, and styled themselves in their pedigrees 'The Men of the North' (for the northern associations of the Arthurian and kindred legends see the writer's articles in the Celtic Review for Oct. 1907 and Jan. 1908 on 'Wales and the Ancient Britons of the North'). The northern zones in question appear to be two: (1) that of Caer Aldun (Dumbarston), and (2) that of Dineiddin (Edinburgh). In an early stratum of Arthurian legend Arthur seems to be closely associated with Caew or Brodyrn (Caw of Picthland), the father of Gildas and Aneirin (a Welsh poet), and of many of the saints of Anglesey. In the 22d cent. Life of Gildas, Arthur is represented as making war against Hueil, king of Scotland, one of the sons of this Caw. How early the name of Arthur came to be associated with the local legends of Wales it is hard to say, but it is significant that the name of one of Arthur's closest companions, from the very first appearance of the legend in the Welsh literature, is that of Cai (the Sir Kay of the Romances), whose name is found in that of Caer Gai, near Bala in North Wales, a place also known as Caer Gwyn, after the name of Cai's father Gwynor, an old Welsh poet which survives in the Red Book of Hergest mentions a hpywnon fodwydr ('the Spring of Bedivere'), but its locality is unknown. Through its entry into local legend in Wales and in other parts of the Brythonic world, the name of Arthur became attached to the characteristic stories of Celtic folklore, of which numerous examples are given by Professor Sir John Rhys in his Celtic Folklore, Welsh and Manx (1901), notably to those of the Other World, a type in which the folklore of Celtic countries abounds. It is not necessary to suppose that the names which that
of Arthur may have sup plant ed in suc h stories bore any res ondence to it in sound or deriv ation.

In dealing with the Arthurian cycle, it will be convenient to give its place, first, in the tradition found in Cymric literature; secondly, in the Chronicles; and, thirdly, in the Romances.

The Arthur in Cymric tradition.—The chief MSS in which fragments of this tradition are to be found are: (1) The Black Book of Carmarthen (verse, 12th cent.), (2) The Book of Anevin (verse, 13th cent.), (3) The Book of Taliesin (verse, early 14th cent.), (4) The White Book of Rhuddner (prose, 14th cent.), and (5) The Red Book of Hergest (prose and verse, late 14th and 15th cents.). The Triads of Arthur and his Men, which are found in a Hengwrt MS of the 13th cent., are also important, as showing with what other legendary cycles that of Arthur was then, and probably earlier, associated in Wales. A considerable amount of the matter contained in the MSS, especially in the case of the oldest poetry, is older than the period of the MSS themselves. The Cymric tradition has many affinities with that of Geoffrey of Monmouth, but it is not possible to show clearly any direct influence of Geoffrey, and which show that, while Geoffrey in some points borrowed from it, he either neglected or was ignorant of certain other important portions of it.

Of those above named, the MS which gives the clearest indication of containing pre-Norman matter is the Book of Anevin (now in the Cardiff Free Library), since in one of its poems the scribe, in the course of copying a poem called Goruchan Maeldene, departed from his usual practice of changing the orthography into that of his own time, and copied that of his archetype practically unalmodied, thus showing that this archetype was written in a style of spelling in many points identiﬁed with that of the pre-Norman glosses of Wales. In this MS, the name in which the name of Arthur occurs in the words 'bel of arthur' ('even if he were Arthur'). The poem in question is practically identical in many of its lines with the Gododin, which forms the main portion of the MS, and thus suggests that the name of Arthur was held in high respect in the zone of poetry to which the Gododin belongs. This zone is essentially one composed in praise of the family of Cynfarh, to which Cynon ab Clydno Eiddin, the chief hero of the Gododin, belonged, and also Urien Rheged, whose name occurs in the poem Trowes Ysaw. With this family was associated the poet Llywarch Hen, and Elphin, the friend of Taliesin, and other heroes, whose names with brief records of their memory are given in the Gododin in connexion with the battle of Castraeth (one of the famous battles of Welsh bardic tradition), in which they were said to have taken part. From all indications, the historical stock-in-trade of the Welsh bards seems to have contained short lists of famous battles, such as Cattaetha, Gwenysrad, Argoed, Llyr, Llwyd, and so on, which last were among the chief battles of the Arthurian tradition. In Welsh, as in other legend, the prominent heroes of one period tended to sink into the background of action in that of a later date, or else to survive as vaguer and less imposing figures, as it were, behind the scenes. Cynon ab Clydno Eiddin, Caw of Pictland, and Brychan Brycheiniog are names of this type in Welsh medieval literature, while in the Cymric Arthurian tradition Arthur's warriors generally play a much more active part in the story than his own figure does. The fact has often been wrongly interpreted as implying that the legend of Arthur himself was not in any way developed in Wales (a view which, in face of the significant allusions to Arthur in Welsh literature, is quite untenable), while the truth seems to be that it was so long established in Wales that to it were attached other legends, whose heroes came to loom more largely in action than Arthur, their sovereign chief. In the stock-in-trade of the bard and storytellers of Wales, from whom the remnants of old Welsh poetry and Arthurian tradition were derived, Arthur held distinctly a place of honour, and the various portions in which this stock-in-trade of legend reveals itself bear witness to the same tale. This stock-in-trade, though the stories composing it were heterogeneous in origin and in local association, yet preserved a certain unity from its professional character, and portions of it can easily be detected in various parts of old Welsh literature. In the Triads, in the account of Arthur's Court found in Kulhuch and Olenen, in the Book of Anevin, in the Triads of Arthur's Court, in the Black Book of Carmarthen, in the Stanzas of the Graves, in the poetry of the Book of Taliesin, in the Llywarch Hen poems of the Black Book of Carmarthen and the Red Book of Hergest, certain associated groups of names come to view which form a body of legend which they were never meant to belong. It is signiﬁcant that in all these legendary clusters the name of Arthur appears. It is true that he is not once mentioned in the Four Branches of the Mabinogi, in the Dream of Mazar, or in Lludd and Llewyn; but the reason is that, in the Mabinogi in its present relations, a chronological arrangement is implied which would make any reference to Arthur anachronistic in a story that was meant to be pre-Saxon. In the Book of Taliesin and in the lists of Arthur's men in Kulhuch and Olenen—the last altered of the Mabinogi stories—no such regard for chronology is shown, and in the latter Arthur is said to have been related to the 'Men of Caer Dathyl' on his mother's side. It is signiﬁcant that, even in Chrétien and the later romances, many of the names of those who are associated with Arthur are those of well-known heroes of the Cymric tradition. If this tradition was carried into Cornwall or Brittany, the extreme scantiness of the heroic literature of these provinces in medieval times makes it exceedingly difﬁcult to judge of the extent of the transference, and it may well be that it was only fractional in character, though Arthur himself may have attained a high degree of legendary popularity, as Alanus ab Insulis suggests when he bas, in the second half of the verse, "The more any man of Brittany who should deny Arthur's return would arouse the deep hatred of his hearers.

In the Stanzas of the Graves (given in the Black Book of Carmarthen), a series of verses kindred to the elegies of Llywarch Hen, the various heroes of the Cymric cycle are commemorated, and among them in one stanza are named March (the King Mark of the Tristan legend), Gwyfur (the rival of the fairy king Gwyn, son of Nudd), Goganth, the Red Sword, and Arthur. Each of the first three heroes is said to have a great birth, and Arthur is said to be 'anoth bai' ('the object for which the world searches'). The word 'anoth' meant 'difiicult,' as it still does in the Dimetian dialect of Welsh, and was used for the object of a difficult search, as in the Arthurian story of Kulhuch and Olenen. In the Black Book of Carmarthen, where these stanzas occur, there are other poems that contain direct or indirect allusions to Arthur. For example, in an elegy upon Geraint, son of Erbin (the Erec of Chrétien de Troyes), Arthur, for whom Geraint is called, at the battle of Llongborth, is called 'the emperor, the ruler of the soil.' The signiﬁcance of an allusion such as this, as indicating the place of Arthur in Welsh story, is clear. The site of Llongborth is unknown, but the men of Geraint are
said to have come from the region of Dyfnant (the Dumnion). Poem xxxi. in the same MS is clearly Arthurian; but it is important to observe that it is one of a group in which the story of Arthur is associated with a cluster of names from the bardic tradition. Poem xxxi., for example, though it does not name Arthur, the other characters, the Cantor, the Calad of Nemius, the mark of whose hoof, according to that chronicler, was left on a mountain near Builth when Arthur was hunting the Pencos Troit (i Twrch Trwyth). In Kulhwch and Olwen, Cavall is erroneously given as the name of the bardic tradition hero. To Cavall is also mentioned Owain Rychg, the Ywain of Chrétien. In the obviously Arthurian poem (No. xxxii.) there is a picture of Arthur and his men that is entirely distinct from those of Geoffrey and the Romances, and much more akin to that of the Welsh. Arthur and his men arrive at a fortress (for what purpose is not stated, but it may have been for the rescue of one of their lost companions). Among his men are Cei Wyn (Kel the Blessed); Bedwyr (Bedwrec), Mabon, son of Modron (Wlly Mw Mabon); son of Maello (Lightning); Manawynn, son of Llyr (Mannanan mac Lir of Irish legend, a hero of the Four Branches); Llacheu, Arthur's son (who is unknown to Geoffrey); and others. Some of the topographical allusions, such as to Trarach Tirlann, the Solway Firth, or the Caithness mountains, Yr Eiddin (the mountain of Edinburgh, possibly Arthur's Seat), are to the North. As in Kulhwch and Olwen, expeditions to the wild country of the North, geruith uffern ('the wild land of Hades'), as it is called, appear to serve as the theme of the Welsh Cynric Arthurian tradition; and for the men of North Wales, North Britain appears to have been the natural way of getting into the Other World by land, while the men of South Wales may have had their corresponding entrance into it in Cornwall. The poet in question, too, like the story of Kulhwch and Olwen and portions of the lives of the Welsh saints, describes Arthur and his men as being in conflict with certain pests, both animal and human, and, among the latter, with certain malignant hags or witches (the Llwynod Ymarch), and with the Boar of the boundary (the Boar of Annwn). All this is part of the usual repertoire of 12th-century folklore.

Poem xxxiii., though not referring to any exploits of Arthur, mentions his son Llacheu, 'the marvelous in song,' in words put into the mouth of a speaker who refers to certain other of the stock characters of the Welsh bardic tradition, such as Gwyn, son of Nadd; Creurdiad, daughter of Llad (the Cordelia of Geoffrey); Guendolen, son of Keidaw (the Gwendolwen of the Myrddin legend); Bran, son of Iwerdd (the latter possibly his mother's name); and Gwyddnewn Garanhir (a prominent character in a legend of involution). With this poem is closely linked poem xxxiv., which is also a version of the theme, while it also alludes to two of the chief characters of Math ab Mathonyw (Llew and Gwydion), whose names and legends were associated with the places Nant Llew (now Nantlle), Din Llew (now Dimle), and Bryn Gwydion in Carnarvonshire, and Moel Gwydion near Trawsfynydd in Merionethshire. Poem xxxiv., though referring to the idea of imprisonment and release in the Welsh Arthurian tradition, it may be stated that one of the Triads contains a supplementary statement referring to the former imprisonment of Arthur and his followers: 'The three noble prisoners of the Isle of Britain, Ulyr of imperfect speech, who was with Eowyscyrd in prison; Athelwulf, the second, Mabon, son of Modron, and the third, Gweir, son of Gwyrigoed, and one who was no better than all three was for three nights in the prison of Ogwen, and spent, and was for three nights in prison with Gwenn Benn Dragon, and was for three nights in the prison of magic (or fairyland) under the rule of the demon, and the sentence upon Arthur was from him, and the same youth released him from those three prisons, and that youth was Goren, son of Custennin (Constantine), his cousin, who was Gwydion.'
themselves, too, in the Welsh Arthurian story of 
Kulwch and Olwen, where Arthur and his 
warriors are represented as hunting the Twrch Trwyth (the 
Ore or Tore Thrith of Irish legend), a fabulous 
beast, to which there are obscure references in Old 
Welsh eulogies and triads. The Welsh tradition 
refers to Arthur's expedition to Annwn and to 
other pieces of legend connected with that sphere, 
yet, like the Four Branches of the Mohunagi, it is 
characterized by the minute localization of its 
topography, an indication of the close relation of the 
Arthurian legend to certain Welsh districts. In 
Kulwch and Olwen the narrative bears signs of 
having been connected originally with the North, 
but in its present form it is chiefly connected 
with Pembroke, Carmarthenshire, Cardiganshire, 
and Breconshire. It is pre-eminently a story that 
has grown by accretion. The Court of Arthur, 
as usual in the Welsh tradition, is located at 
Gelligwir in Cornwell (Cernwy). It is possible, 
however, that Cernyw is a later substitute for some 
Welsh locality. There is in the peninsula of Lleyn 
in Carnarvonshire a region called Gelligwir, but 
the writer has been unable to discover how old 
the name is. It is, perhaps, not irrelevant to mention that 
in this peninsula there is a name by which a Welsh 
Arthurian legend, such as Bodarnaweir (for Bod Gwennabwy), 
Dyfrs (for Rhedynfre), Cooan Arthur ('Arthur's goeit'), a 
fine mountain, and Annwn, the kingdom of the Dead, 
Gwernabwy, and Panfyl, or Panfil, of Cernwy ('Guinevere's Willow'). In the same district, too, is Castellmarch 
('Mark's Castle'); nor is the zone of Xant Gwetyn ('Verti-
gynt's field'), the site of the largest known hill-camp, 
Abererch, where Rhuddderch Hael was said to have been 
buried, far off.

Of the Welsh tradition there are certain indica-
tions, too, in the historical poets of Wales which 
suggest that it differed in some forms of it from 
Geoffrey's version. For example, in elegies and 
eulogies men are compared in compliment to Medrod (Mordred) of Powis, 
and Meilir says Gruffydd ab Cynan, who died in 1137, that he 
thrust in the fore-front of battle like Medrod'; 
and Gwalchmai, Meilir's son, in praising Madog 
ab Maredudd, prince of Powys, says that he had 
the strength of Arthur and the gentleness of Medrod. 
Gwynafarid Brycheinig, too, calls the 
Lord Rhys of South Wales the twin-brother of 
Medrod, prophesied by Myrddin (Merlin). One 
trio ('Foerster, MS. Arch.' p. 303a), which shows, 
it is true, signs of later modification, states that 
there was the Court three days and nights, 
Niosinaig, king of Denmark; Medrod, son of 
Hywel, king of Cynfrach; and Hywel, son of 
Euntary Llydaw. They were, the trio says, men of such 
gentleness, kindly, and fair words, that any one 
would be sorry to refuse them any request. Where the 
feud between Arthur and Medrod is mentioned, it is 
represented sometimes in a different light from the 
account of Geoffrey; nor is the sympathy of the 
tradition always with Arthur. For example, 
a blow given by Arthur to Medrod is called "an evil 
blow", the name given by Matholwch to 
Gwernabwy.

In a trio referring to the three costly campaigns of the 
Isle of Britain, Medrod is said to have gone to Gelligwir in 
Cornwall, to do battle for his food drink and sustenance, and to 
have dragged Gwennhwyfar from her queenly throne. Arthur 
in revenge is said to have gone to the Court of Medrod, and to 
have similarly consumed all the food and drink, and, further, to 
have left neither man nor beast alive in the Hundred. The 
story of the battle of Camlan, too, appears to have been 
differently treated in different forms of the tradition. 
One form sacrifices it to a blow given by Gwennhwyfar to 
Gwenhwyfaer as he was killed in a triumphant march through 
the straits of the Isle of Britain. Another trio speaks of this as 
one of the vain battles of the Isle of Britain, and attributes it to 
the rigid jealousy of Gwenhwyfar. Another version 
adds to the story of Kulwch and Olwen, Gwennhwyfar was Gwenhwyfar's sister. In the story of The Dream of Rhonabwy, the battle of 
Camlan is said to have been caused by the new God 
Idawc Ord Prydain in the negotiations between Arthur 
and his nephew Medrod. There is the fact that one of the 
trios says that there were three Gwennhwyfar: one suggests that 
there were not one but several Arthurian traditions. Though the Welsh 14th-
cent. poet Dafydd ab Gwlym mentions Melwas (in the Life 
of Gildas) apparently as the abductor of Gwennhwyfar, it cannot 
be stated with certainty that he was so known to the 
Welsh tradition. The name may, however, have been 
used in the story of T. idawc Ord Prydain in the Liber Landavennatis.

Possibly, in one form of the Welsh tradition 
Arthur and Medrod were killed at the same side 
at Camlan, for one of the triads says that one of the 
evil counsels of the Isle of Britain was Arthur's 
decision to divide his men three times with Medrod 
at Camlan. It is not impossible that this was 
the view of the writer of the Annedawl of the Annwn 
(537), who gives Camlan as the battle in 
which Arthur and Medrod fell together (cornwre). As 
illustrating further the Welsh tradition, it may be 
noted that Cynwddw Brecon, brother of Meilir, 
locates Arthur's Court at Celligwir, and that he has allusions 
to Gwalchmai, Dulais, son of Eurei, Cai and his father Cuny, 
Dulais, Myrddin, Eliwy, Lleuad, the hands of Mandrwy, 
the family of Gwynarc, the Twrch Trwyth, and the battles 
of Beddau and Cambria. Another poet, Bedwyr Farly, refers to 
Arthur as the slayer of a certain Brychuan, and to the valor 
of Gwalchmai as proverbial. All these allusions, though only of 
a passing character, suggest undoubted acquaintance with 
the legend, and the independence of the Welsh tradition from 
Geoffrey.

2. Arthur in the Chronicles. Under this head 
reference may be made first to the lives of some 
Welsh saints, which lead to the Chronicles proper. 
The Life of St. Gildas, written in 1160, according 
to one of the most distinguished of Arthurian scholars, 
M. Ferdinand Lot, represents Arthur as being 
in conflict with Huwil, king of Scotland, the 
son of Caw of Pietlia, and brother-in-law to the 
association of Arthur with the family of Caw 
suggests a stratum of legend of an early type, 
not unrepresented in the story of Kulwch and Olwen. 
The same Life also represents Melwas, a petty king 
of Somerset, as having carried Gwennhwyfar away 
from Arthur. In the Life of St. Gildas, Arthur 
and his companions, Cai and Bedwyr, are represented 
as haunting the borders of Breconshire and 
Monmouthshire.

In this connection it may be mentioned that the highest point 
of the Breconshire beacon was called in the time of Giraldo 
Cambrænsis (10th cent.), 'Arthur's Throne.' The association 
of Arthur in Nennius with Bithyn, in the same county, has already 
been mentioned, and there are similar associations in the story 
of Kulwch and Olwen. Agyn in the Life of St. Camlan 
('the saint of Llanchango in Cardiganshire'), there is a reference to 
Arthur as hunting a very powerful, huge, and terrible serpent, 
which had laid waste twelve parts of the land of Carrum—a 
description of Arthur's activities which is in thorough 
keeping with the Welsh tradition.

The Life of St. Illtud speaks of Arthur as the saint's 
cousin, to whom Illtud becomes a soldier, 
but the site of the Court of Arthur is not 
mentioned. Further, in the Life of St. Padarn 
there is a curious story told of Arthur, who is called a tyrannus, 
in which, owing to his cupidity, he is cursed by 
the saint and swallowed in the earth up to his chin. 
This story is probably connected with the place 
named Llys Arthur ('Arthur's Court'), in the parish 
of Llanbadarnfawr in North Cardiganshire. In the 
Chronicles proper Arthur first comes to view by name 
in Nennius (a composite work completed before the 
9th cent.), the nucleus of which was a Chronicle of North Britain, 
written probably at Dunblane or Carlisle. Gildas, 
though he does not name Arthur, mentions a battle of Badon 
(fought, according to the Annales Cambrie, in 516), which 
Nennius gives by name as one of the battles of 
Arthur. This story is frequently referred to by 
the Welsh poets as Gweth Padon ('the action of 
Badon'). In Nennius, Arthur is called Dux bel-
torum in the account of his battles, and miles 
elsewhere. The names are given of twelve of his 
battles, one of which was fought in 'the wood of 
Colunon' (Culario). Some of these names were 
also probably in the North. In the Chronicle 
called Annales Cambrie, there is a reference under 
A.D. 516 to Arthur's leadership of the Britons 
at the battle of Badon by carrying the cross on his 
shoulders for three nights. In Nennius's account of
in his letter to Warinus. Beneficit of Gloucester, too, gave a sketch of the Arthurian period in his Life of St. Dubricius. Afterwards came Thomas de Loches (about 1147) with a similar narrative in his Gesta Comitum Anglensanum. The chief successors of Geoffrey, however, were Geoffrey Chaucer (published 1387) and Wace in History of the Britons unfortunately has been lost, Wace (in poetry), the author of the Anglo-Norman Brut, and Layamon, the author of a Brut in English verse. Wace’s Brut is in the main a free paraphrase of Geoffrey’s History, but in style it is often more romantic. His descriptions of the battles, for example, are not unlike those given by the Arthurian poet Chrétien de Troyes. Wace shows more of the spirit of chivalry than Geoffrey, and he appears to know many more stories about Arthur than he relates. It is a problem for any student of Arthurian literature whether or not Geoffrey’s Brut was written while Geoffrey was still attached to the court of William of Newburgh, and also to Geoffrey’s Brut was the Gesta Regum Britanniarum and the Epitome Historia Britannicæ. In spite of its popularity, Geoffrey’s History was not allowed to escape criticism; it was violently denounced by William of Newburgh, and also by Gildas Cambrensis, who accepts, however, important sections of the Arthurian story. A similar attitude was adopted in the middle of the 14th century, by Raphael Higden. The longest account of the supposed discovery of Arthur’s tomb at Glastonbury is probably that of the Englishman, and merchant, John Leland, in his De Principis inquisitione (written about 1594). Of the later writers who followed Geoffrey, the most important is Holinshed (1577), from whose work the substance of Geoffrey became known to Shakespeare and other English poets.

3. The Arthurian cycle in the Romances.—The chief development of the Arthurian cycle combined with other cycles, both British and foreign, is found in the Romances, and the centre of this type of literary development was France. This development took place in the 12th century, and was largely determined by Geoffrey’s History and the paraphrases of his successors, but the romances contain features of the Arthurian legend which are clearly independent of the Chronicles. In France, the chief poetic exponents of the Arthurian legend were Marie de France, Chrétien de Troyes, and Robert de Boron. In Chrétien de Troyes, especially, there are so many proper names—as Uiriens (Urien), Yvain (Ywain), Erec (Greneit), Kans (Kei), Bedivere (Bedwyrt), Gawain (Gwaelmaid), Iler il Nut (Edern, son of Modred), Brane (Brad), Mordred (Modred), Bredrez (Caraedog Freichrâns), Gantevre (Gwenhwyfar), Tristan (Trystan), Melian (Melwas), Maehlos (Maelwas), Bilis (Belis), Brantiago (Brangwen), not to speak of others which are less obvious,—which are so clearly identical with well-known names of the Arthurian tradition, that the existence of some relation to this tradition, whether direct or indirect, is obvious. Though the legend of Arthur himself flourished in Brittany, it is very doubtful whether the heterogeneous yet professedly connected mass of legends which the romances in the provinces of Brittany, it undoubtedly did in Wales. In spite of the opinion of Prof. Zinner, it is perhaps simplest to accept the view that the Arthurian and other legends of the Welsh
Arthur, Arthurian Cycle

tradition made their way into French literature through the contact of the Normans in the 11th cent. with the men of Breconshire, Glamorgan, and Monmouth. These districts were rapidly Normanized, and intermarriages of Normans and Welsh dwellers were frequent. Gildas was in close touch with Glastonbury and with other important monasteries, and monasteries such as this and Fécamp played no small part in the dissemination and development of the Arthurian and other legends. As from the lays of Marie de France, on the other hand, certain terms, such as Lancelot (=Loïc, 'the nightingale'), as Prof. Zimmer points out, suggest Brittany as the source of their Arthurian matter. The degree of Chrétien's indebtedness not only for some of his proper names, but for his materials, to Celtic sources has been a subject of great controversy, Prof. Foerster, the chief editor of his works, going so far as to deny that Chrétien derived any of his materials from such sources. But it is hardly conceivable that he should have borrowed from these sources only if he had not also drawn from the same without a scrap of the legends connected with them. The task of discovering definite Celtic matter in his writings is, however, far from easy, owing to the elaborate transformation which such material as has survived has undergone and the fact that the courtly love-poetry of Chrétien and to his romantic conceptions generally. Still, it should be borne in mind that Welsh literature itself, as we see from the Four Branches of the Mabinogi, had already been developing by the 10th cent., and that the same was the case, as the traces of foreign influence on them show. At the same time, the Welsh tales, though in their present form based either on Chrétien himself (as Foerster thinks) or on his originals, largely preserve that narrative structure which had been shaped into conformity with a living Welsh Arthurian legend in a manner which adds considerably to their value and interest. The search for Celtic materials in Chrétien has been carried out with great diligence by Sir John Rhys, Mr. Alfred Nutt, M. Loth, Miss J. L. Weston, and a distinguished medievalist, M. Ferdinand Lot. The task of reducing the narratives of Chrétien to their simplest elements, and comparing them with the narrative types of Welsh and Irish legend is one of great difficulty. Apart from the work of the Celtic scholars, in their zeal for instituting such comparisons, have attempted to prove too much, without making sufficient allowance for the various literary influences to which Chrétien was accessible, or for his own imaginative power. The most fruitful line of investigation is the study of that Welsh group of legends from which Chrétien undoubtedly derived many of his proper names, and the classification of them into narrative types. Principally the following are the narratives that imply the wandering and return of Arthur's warriors, and in some cases their respite from prison by him and his men. Narratives of the relations, pacific and hostile, between Arthur and his men and the fairy dwellers in Amynyn are a promising field of research. But the modern versions of the Arthurian legends are now entirely abandone

Chrétiendev Troyes was initiated in Germany by Hartmann von Aue, who wrote his Erec before 1197 and his Iwein before 1204; and also by Wolfram von Eschenbach, who composed his Parzival between 1225 and 1215. The latter mentions, in the ordinary Mordred the Second (i.e. Merlin). The story of Merlins, the holy Grail, Tristan and Iseult, and Lancelot and Galahad. The story of Merlin occurs in two forms, the ordinary Merlinc (see above), and the wondrous Merlin (see Merlin). The story of Tristan and Iseult is one of the most beautiful and tragic in the whole of literature, and, except perhaps as an element in the Welsh bardic tradition, was originally quite distinct from the Arthurian legend. The story of Lancelot is of uncertain origin, and that of Galahad, apart from the mere name (the Gwalcved of the Welsh tradition), has no evident counterpart in Celtic legend. The story of Tristan was turned into German verse by Gottfried von Strassburg about 1216, who left it unfinished. The most important work in this series is the Rhinegold, published by Dümmler in 1856 and Heinrich von Freiberg (about 1270). In England the great collection of Arthurian romances was that of Sir Thomas Malory, printed by Caxton.

Within the limits of this article it is impossible to deal with all the possible various interrelations of these romances have raised, especially in the story of the Holy Grail. This story is essentially one where the legend of Arthur has been brought into connexion with the legends of the Church, notably such as were read from the Apocalypsean Gospels at Easter. The stories of Helen, the mother of Constantine, and of Charlemagne had been similarly enlivened. One of the most distinguished authors in the Grail legends, Mr. Alfred Nutt, conveniently divides them into two types, which he calls the 'Quest' and the 'Early History' versions respectively. These he enumerates as follows: Class I. (a) Conte del Graal, by Chrétiendev Troyes; (b) Conte del Graal, by the continuators of Chrétiendev Troyes—Gautier, Manessier, and Gerbert; (c) the Farseal of Wolfram von Eschenbach; (d) Peredur son of Ercwc; the Welsh version of Perceval; (e) Sir Percevulle, an English metrical romance founded in the Thornton MS., written shortly before the middle of the 15th cent. Class II. (a) Robert de Boron, Joseph de Arimathie, and the Perceval de Galis; (b) Quete del St. Graal; (c) Didot Perceval; (d) Perceval le Gallois, translated into English by Dr. Sebastian Evans under the title The High History of the Holy Grail. There is a Welsh medieval translation of the story of the Holy Grail entitled Y Saint Graal which has been published with an English translation in the Hengwrt MSS. In modern times the Arthurian legend is most familiar through Tennyson's Idylls of the King and through Wagner's Parsifal and Tristan. Even into Danish, German, Scandinavian, and navanian literature portions of the Arthurian cycle is penetrated.

ARVAL BROTHERS.—The study of the Arval Brothers is peculiarly valuable to the historian of religion, because it gives a unique insight into the details of the activity of a Roman priesthood. It also illustrates in a pre-eminent degree the accidental character of our knowledge of ancient religion. Further, it emphasizes the activity of Augustus as a restorer of forms of ancient religion. And, lastly, it affords us additional proof of the supreme value of inscriptions.

In the matter of the appointment of priesthoods the Romans were extremely conservative. During the whole period of the Republic only two new priesthoods were formed—the Duoviri (later Decemviri, later Quindecemviri, sacri facundiae), in charge of the cults introduced by the Sibylline books; and the Treviri (later Septemviri epulones, merely sacristans to the Arvalis during the banquets. On the contrary, many of the older priesthoods declined, and were, if not entirely forgotten, so neglected that they are very seldom mentioned in the literature. Thus during the Republic we hear of a certain priesthood, the Sodales Titi, described by Plut., who, however, had been Arvals (Monumentum Ancyranum, i. 46) result merely in our possessing eight or nine inscriptions in which individuals are referred to as Sodales Titii.

Exception that the etymology of the word Fratres Arvalis is easier to understand than that of Sodales Titii, we should know scarcely more concerning them than concerning the Sodales Titii, were it not for the remarkable discovery of inscriptions. It is this discovery, however, that we are here to relate. What is known of the Fratres Arvalis apart from these inscriptions.

1. Literary sources.—The one and only reference to the Fratres Arvalis in the literature of the Republic is in Varro's Lingua Latina (v. 56), and reads as follows: "They are called Fratres Arvalis from ferre and arva. Some people derive the name (fratres) from fratria: fratria is a Greek word designating a section of the people, as it is seen even at Athens.

other words, Varro's interest is merely etymological, and his whole manner of treating the subject shows that the priesthood, though possibly in existence, was practically unknown.

Bergesii, Q.: (1881)“Brutus, the Roman hero, seen on the coins of D. Postumius Albinus Brutus f. and of L. Claudius Longus (Rabeeli, ii. 241ff., and 263) relate to the Arval Brothers; but this is by no means certain. (Cf. E. von Pauw-Wissowa, i.e. "Arvalis," ii. 1463.)

Had not Augustus included the priesthood of the Arvals another religious refaire, this might well have been our only reference to them. As it is, however, apart from the inscriptions, of which we shall speak in a moment, and which are themselves due to Augustus' influence, we have such a revival of interest, that a faint reflexion of it is seen even in the literature.

A famous jurist of Tiberius' reign, M. Aurelius Sabinus, seems to have dealt with the problem of the origin and the legend of the Arvals. We read in Gellius viii. 7: "But M. Aurelius Sabinus in the first book of his Memoriae tells us on the authority of certain historians, that A. Laurentia was the tutor of the Arvalis' nurse. This man, he says, lost one of her twelve sons by death. In his stead Romulus became a son to her, and called himself and her other sons the Arval Brothers. From this time the college of the Arval Brothers was twelve in number. The insignia of this priesthood were the crown of corn-ears and the white fillets."

A similar story is told in Silvy, I., viii. 5, and again in Fulgentius, Sermo vii. 9, in the first book of his Historiae divinae (c. L. P. L. A. Suessa) of the Augustan period. It is probable that M. Aurelius Sabinus was in some unaocountable way taken as genuine legend. This seems to have been done by Augustus' friend E. C. Hoffmann, "De Arvales, Bruder, Besessen 1858 (original and more condensed form in the Verhandlungen der Breitschau Phys. Ver. 1857, xi. 185). A similar story is in another E. B. (ad ex. 113)."

A similar one is told by E. von Pauw-Wissowa (ib. 1864) has pointed out that this legend of Romulus and the Arvals arose at the beginning of the Empire, when the Emperor, as a new Romulus, himself belonged to the priesthood.

One additional piece of information is given by Festus (ed. Müller, p. 5): "Ambaravales hostiae are sacrificial animals (hostiae) which were wont to be sacrificed on behalf of the fields by the twelve (duodecin, so Augustini; duobus, MS) brothers."

These are evidently the Arvals (cf. Macrobii, Sat. Conv. iii. 5. 7.)

With such a story beginning it might well seem foolish to expect that the discoveries of modern times would put us in the position of knowing more about the Arvals than about any other Roman priesthood. Yet such is the case, and it is entirely owing to the discovery of inscriptions.

2. Inscriptions.—These discoveries began in 1570 (on the date of a possibly Aldobrandini in Cod. Vatican. 5237, f. 158). In that year, while workmen were digging in a field five miles outside the Porta Portese on the Via Campana, near the Papal villa La Magliana, in the region which then as now was known as Area Latina ("Drown the donkey"), more precisely, in a vineyard then called Vigna Galletti (later Vigna Cecarelli, now Vigna Vignoli), the remains of a building were discovered. In the asp of this building were found nine (according to other authorities seven) statues of Emperors who had been members of the Arval priesthood. In each case the base with the inscription was preserved.

Flamiano Vacca (Memoria, ed. Nibby, Roma Antica, iv., No. 98; ed. Schreiber, Rerum Italicarum Scriptor. Lat. no. 99) says: "A good two miles outside the above-mentioned gate (Porta Portese), in a place which is called "Drown the donkey," towards the "Black Horse" inn, were found in the time of Gregory xiv. (1572-1576; 1570 seems correct) many columns in marble, and each one had his pedestal with an inscription; and also columns for a market. The bases of these columns were sawn up and used for the Cappella Gregoriana at the Peter's. Three of the columns were seen at the time. They were, however, of only fairly good workmanship." Baldare Sforza's husband, Silvestro or Sallustio, made a sketch of the ground-plan of this building at the time of its restoration. These are preserved in Florence (Diaptyghe et Architettura, No. 661), and are reproduced by Huelsen, Eph. Ephig. vili. Tab. II.
The statues have entirely disappeared, and all the inscriptions except one (CIL vi. 1012: to Marcus Aurelius, preserved in the Vatican, Giardino della Pigna; cf. Amelung, Veröffungen des vatikanischen Museums, pp. 109, 110) have been preserved in copies (CIL vi. 968, 1024, 1053, 1093). The seven emperors are: Hadrian, Antoninus Pius, Marcus Aurelius, Lucius Verus, Septimius Severus, Caracalla, and Gordian.

At the same time were found fragments of inscriptions containing the names of the priestesses of the priestesses of the grove, and the names of the priestesses of the temple, and of the temple. These fragments have been published in copies (CIL vi. 1866, 1868, 136, Tab. iv.). A third proof of age is the sacred grove which stands, the words of which have been preserved to us in the minutes of the year 218 (CIL vi. 23: vi. 2104: Buecheler, Carmina Epigraphica, No. 1 = Schneider, Exempla, No. 392, where other literature may be found). This discovery at the time was poorly understood by the people of the Augustan age.

The fact that the grove is sacred was noted in the list of old festivals in the so-called calendar of Numa, printed against its very great age. It was a movable feast, and hence could not be engraved on a permanent stone calendar. We cannot tell the exact nature of the Arvals' worship in this early period. In Augustus' restoration certain of the old festivals were retained, but it is impossible to say from what is new in his scheme. Hence it is better to leave the discussion of details until the Augustan age.

In general, however, we can think of the Arvals during the Kingdom and the early centuries of the Republic as performing their sacrifices to Mars and the Deus Dia, one of those numerous agricultural ceremonials of which the ritual of early Rome was so full. As we have seen above, the history of the priesthood during the Republic is absolutely unknown to us, but we are probably correct in thinking that in the priesthoods. Our first definite reference to the new life into which the Arvals entered with the coming of the Empire is found in the Monumentum Ancyranum (iv. 7), where Augustus, in reconstituting the priesthoods to which he belongs, mentions that of the Arval Brothers. This record, written at the close of Augustus' life, is therefore contemporaneous with what has hitherto been supposed to be the earliest datable fragment of the Arval inscriptions, from a.d. 14, the year which saw Augustus' reign end and that of Tiberius begin. On the other hand, together with the Arval inscriptions were found fragments of a list of consuls (Pistati Consulares, cf. CIL ii. 70 ff.). The fragments cover the years b.c. 2 to a.d. 37. It has been supposed, accordingly, that the restoration of the Arval priesthoods by Augustus in or before the year b.c. 2, and probably not earlier than b.c. 12, when on the death of Lepidus he became Pontifex Maximus. This office would unquestionably be the best strategical point for a revision of the priestly cult. It has been shown (by Hulin, Arch. Epir. Mitt. xvi. 1892, p. 23 ff.; for counter-arguments, which, however,
It is not convincing, cf. Mommsen, Eph. Epigr. viii. 305ff.) that one fragment at least (CIL vi. 32338) dates from the year B.C. 29. Accordingly, Augustus refused, and, as we have seen before, he became Pontifex Maximus. We have, however, other indications of Augustus's interest in religious restoration at the very beginning of his reign, notably the augurium solutio of B.C. 29 (aptly compared by Wissowa in Pauly-Wissowa, Real-Enc. ii. 1468; cf. Dio Cass. liii. 8. 2, on the building of temples in B.C. 28 (proves for this date especially Dio Cass. lii. 2, and Hor. Carm. iii. 6, collected by Mommsen, Rez Gestae, p. 86).

The college as re-organized seems to have contained 24 members. Apart from the own elective officers and these lads of noble families, the Arvals were assisted in their work by a number of slaves and freedmen. Some of these, the regular servi publici, were assigned to them by the Emperor. Besides these, each brother had his own servant (calator), whom they assisted in the old ritual, and more concerned with the adaptation of the priesthood to the purposes of the moment. All these new adaptations, including the beginnings made by Augustus, were attempts to connect the priesthood of the Arvals with what was becoming more and more the universal religion of the Empire, namely, Emperor-worship. Thus the greater number of the ceremonies performed by the Arvals were in the interest of the Emperor and of the Imperial household.

The cult acts of the Arvals fall therefore into two categories: (1) those acts which are connected with the old forms of the religion of the Kingdom and of the early Republic, and (2) those acts which are connected with the Emperor.

(1) Let us discuss, first, those acts which go back to the old cult. We have seen above, in our discussion of the early history of the cult, that it was originally one of the many agricultural worships characteristic of early Rome. We have left until now the discussion of details.

So much did the Emperor and his household monopolize the attention of the Arval Brothers that during the early part of the Empire, when the minutes are in general more concise, we have relatively few references to any of the really ancient ceremonies. As the minutes become more diffuse, however, the descriptions of the older rites are more dependable. And we may believe with Mommsen that when the Flavians have a full account of at least the May festival. Thanks to the conservative tendency of ritual performance, we are justified in considering that what we know of the ceremonies as conducted in the year 218 corresponds almost exactly with the ceremony as restored by Augustus.
ARVAL BROTHERS

describing these ceremonies, therefore, we are at liberty to use them as though they were contemporaneous inscriptions covering more than two centuries.

The ancient ceremonies of which we find traces in the acts of the Arvals may be roughly divided into two classes: (a) those which relate to the great festival in May, and (b) certain piaule, or pro-pitiatory ceremonies, carried out under special circumstances.

(a) The festival in May.—As has been said above, the May festival belonged to the category of movable feasts, the so-called Feriae Indiciae. The days on which it was to be celebrated had to be formally announced at the beginning of the year, and we have therefore no known record of the date. It must in the nature of things go back to the earliest days of the priesthood, and may well have been mentioned in all the minutes from the time of Augustus. The first indicetio actually preserved is of the year a.d. 21 (CIL vi. 32340). As an illustration of the process may be quoted the acta of the year 105 (CIL vi. 2057, l. 11):

‘Under the same consul on the seventh day before the Ides of January, in the vestibule of the temple of Concord, the Arval Brothers, Marcus Valerius Trabelius Decianus, the magister, having written the name of the new year, opened the doors to the open air and facing the east, together with his colleagues set the date for the festival of the Dea Dia, thus for this year: So many days, and the names of the magistrates, Caesar Nerva Trajan Augustus Germanicus Dacicus, and for his whole household, for the Roman people, for the Quindecim and for the Arval Brothers, the festival of the Dea Dia shall take place this year on the sixteenth day before the Kalends of June (May 19) at home, and on the fourteenth day before the Kalends of June (May 16) in the grove and at home, and on the thirteenth day before the Kalends of June (May 20) as the festival of the temple of Concord.’

Though the festival was indicated every year, there arose by degrees a certain regularity in the dates chosen. For the earlier period before Vespasian more or less irregularity prevailed, but from Vespasian onward, with the exception of the year 90, the dates chosen are the 17th, 19th, and 20th of May (in the years of the city which were even in number according to Varro’s reckoning), and the 27th, 29th, and 30th of May (in the years of the city which were uneven in number according to Varro’s reckoning).

The festival itself accordingly occupied three days, but extended over a period of four days, because the first and second day were separated by an interval of a day, the familiar dies postridiu-

anceus. Of these three days the second was the most important, and on this day solemn sacrifices were held in the grove, whereas on the entire first and third days the celebration was held in Rome.

Regarding the localities in which these ceremonies took place the following seems to have been the state of affairs:—In Rome itself the Arvals had no official meeting-place of their own. In the minutes of the earlier years we find them meeting in the year 14 in the Regia, in 58 in the temple of Jupiter Stator, in 59 in the Pantheon, in 63 in the temple of Concord, and from 69 onward they were before the temple of Concord, though naturally when ceremonies were held in honour of the various deities referred to in the acta they went to the temple of the particular Emperor. In the grove itself there were no regular buildings, but buildings had been made there. First, there was the temple of the Dea Dia, which was on or near the hill near the Roman Forum. When we speak of the grove in the Renaissance sketches seem to represent it. Probably in this temple the marble tablets containing the acts were exposed. As we have seen above, the temple was not near the foot of the hill but a building referred to as the Tetraestylum. As its name implies, it was rectangular, and it is therefore probable the temple stood a year to the same year as the Arval and Flavian Alpsins a fanam . . . and then they wished the customary good wishes, and went down out of the grove; and, taking off their prayer-books and the other things they had, and banqueting in the Tetraestylum. And the platters with the magnificent earthenware and other vessels with the wine; sets of each of the priests were carried into the Tetraestylum like a solemn circus procession. And after the banquet each of those present received the sporta (the ‘sporta’ and) their own. Then the AEnius Atilianus, the vicemagister, put on a tunic with a broad border and the purple mantle, and upon his head a wreath of roses, and he took his place above in the Carceres and

of certainty on account of the other various descriptions in other years of the minutes):

‘Under the same consul on the sixth day before the Kalends of June (May 23), in the great house of AEnius Atilianus, the vice-magister, officiating, the Arval Brothers made sacrifice at dawn with incense and wine, and they put on the white garments for UPPER and down into their hands the grove of the toga precepts, and also the bread crowned with laurel, and they anchored the Dea Dia with oil, and the Arval Brothers put on, in chairs, and, having washed their hands, and washed their hands, they put on the white garments for upper and lower, and placed them on dining chairs. And afterwards the toga precepts, the father and mother of each of whom were living, sons of senators, four in number, sat in the chairs and were served. And (for that purpose) the Arval Brothers reclined on couches ornamented with fluted valences, and made sacrifice with incense and wine; and the sacrifice was thinned with three on either side of the table and wrapped them in the napkins (to take home).

Likewise the second course, the dessert, was served, and were given to the other priests whose names are written above. Then, having distributed the roses, they gave the usual salutations of fare-

well.’

Thereupon follows immediately the account of the second day:—Likewise on the fourth day before the Kalends of June (May 29), in the great house of the Arval AEnius Alfenius, the vice-magister, officiating, at the altar two young sons, an offering of incense, and a sacrifice, and expiation for the past and future, and after the sacrifice were done, and then he sacrificed a heifer in honour of the Dea Dia, and going to the Tetraestylum he sat in his chair. Then returned to the altar, he himself sacrificed an ox, and carried it in the circle, in a silver brazer ornamented with a piece of turf, he offered the ox of the altar, and then he returned to the Tetraestylum and once again honored the sacrifice, and thereupon he took off his pretrea and returned to his tent. Moreover, in the afternoon there were sacrifices on a table that was destined for the Tetraestylum and on the benches and entered in the official records that they were made and come together with the doors of the temple and the table and the altar, upon the young sons which had been sacrificed for expiation, and afterwards consumed the blood. Then wearing the pre-
trea, with covered head and crowned with laurel, he went up into the grove, and AEnius Atilianus, the vice-

magister, officiating, they sacrificed a fattened lamb, and I examined the victims and saw that they were well, and when the sacrifice had been completed, they all made offering of incense and wine. That afternoon they went to their seats and marked the time, danced the step, singing thus: “Enos Lasa evate, enos Lase evate, noevue Marmarni surncires in pleines, noevue Marmarni surncires in pleines! satitur fu, fere Mars! limes sal, sta berber! satitur fu, fere Mars! limes sal, sta berber! fere Mars! limes sal, sta berber! fere Mars! limes sal, sta berber! fere Mars!”

And the third day, that a given sign was to be held among the priestesses, and the other priestesses, and the poets, and the magistrates, and the others. And after the third day, they wished the customary good wishes, and went down out of the grove; and, taking off their prayer-books and the other things they had, and banqueting in the Tetraestylum like a solemn circus procession. And after the banquet each of those present received the sporta (the ‘sporta’ and) their own. Then the AEnius Atilianus, the vicemagister, put on a tunic with a broad border and the purple mantle, and upon his head a wreath of roses, and he took his place above in the Carceres and

2194. It reads as follows (filling out the lacune, a process which can be accomplished with a high degree
gave the signal to the four-horse chariots and to the two-horse chariots, and to the vaulters ... and when the circus performances finished, Diocletian rode to Rome into the house of the magistrate, and put on white dining garments, and, reclining upon couches with fatted banquets there and interceding with incense and wine; and there ministered unto them the sons of senators, the boys above mentioned, whose fathers and mothers were slain. And when the sacrifice was finished, they received perfumes and wreaths, and again they consecrated perfumes and wrapped them in napkins, and each one received a Phialæ (Phialæ: new dishes) and carried on their head the dessert, and then they took the roses and wished the customary good wishes.

Easily comes the account of the third day. On the second day before the Kalends of June (May 30), in the house of the magistrate, in ancient assemblies, the sacred assemblies took place to the Dea Dia. At the supper there were present (a list of names follows), and reclining upon couches with fatted banquets there and interceding with incense and wine, ministered to them those same sons of senators above mentioned, those boys whose fathers and mothers were slain; and these, bidden by the guests and the slaves of the State, carried the sacrificial grain-stalks to the altar. Then, lighting the lamps, they took the Tuscan wine-jars and sent them home by their private servants. Then they divided the second course, the dessert, and received wreaths and perfumes and sportulae (each 100 denarii). In this year they feasted for a common meal on each day, the sixth, the fourth, and the third day before the Kalends of June, and there feasted also the boys, the sons of senators, four in number, and they (too) received each day a sportula. And they wished the customary good wishes.

In spite of the detailed character of our information, the question still remains open as to the precise meaning of these ceremonies. The one thing which binds the three days together is the presence of the grain-stalks, which the Brothers handled at dawn on the first day, which were passed from hand to hand at the solemn sacrifice of the second day, and applied to the altar on the third day. The presence of these grain-stalks, the very name itself (Arved = 'land-brother'), the crowns of ears of wheat, their religious year from Saturnalia ('seed-festival') to Saturnalia, and the time of the festival in May at the close of the long series of agricultural festivals—all proclaim the character of their worship as intimately connected with agriculture.

Riddles in abundance remain, however. One is the identity of the chief goddess, the Dea Dia. This is, of course, not a proper name, but is merely one of those adjectival descriptions so common in early times (cf. Bona Dea, Di Mnes, Dea Tacta), which were employed because of the reverent fear of mentioning the real name (that this fear was especially felt regarding agricultural deities is clear from Pliny, bn. xvi. 50, and Eutychus, Ann. Conv. i. 16. 8). This goddess can scarcely be other than Tellus or the old Italic Ceres. Another difficulty is the relation of this May festival to the Arborvalia. This has been the subject of a long discussion (full literature on both sides is given in Pauly-Weihsowa, ii. 1475 ff.). The truth seems to be that the Arborval festival, while not identical with the Arborvalia in a whole, was closely connected with it. That this connexion was very clear in the minds of later Roman writers is evident from Festus, p. 6 (quoted above, p. 7).

(a) Expatriatory ceremonies. A part from this great annual festival in May, the only traces of ancient ritual which remain are those of certain expatriatory ceremonies (picaenodio). Two of these ceremonies—that connected with bringing instruments of iron into the grove, and that connected with taking them out again—have already been referred to. Other ceremonies are connected with the trees in the grove. We have a series of minor expiatory acts on account of broken branches or trees destroyed by old age or snow-storms. There are also certain marks or expiatory pietae of more serioyous importance—for example, the growing of a fig tree on the roof of the temple, or a tree in the grove being struck by lightning. An event of the latter character occurred in the year B.C. 249, and on that occasion the temple area was erected and many victims were sacrificed. Certain victims went to Dea Dia, to Janus, to Jupiter, to Mars, to the Juno of the Dea Dia, to the Virgines Dia, to the Famulæ Dia, to the Larès, to the mother of the Larès, to Pom, to Flora, to Nona, to Sumnus, to Mother Vesta, to the Vesta of the gods and goddesses, to Adelinda and Coimpenda, to the Genius of the emperor, and to the XX Divi.

(2) The other and more frequently recurring function of the Arborvala was its annual use in connexion with the Imperial household. They made sacrifices on birthdays, anniversaries of consecrations, on the occasion of accession to the throne, and on the giving of the title of pater patriae or of the office of pontifex maximus, etc. Extraordinary sacrifices were at times made on special occasions in the life of the Emperor—for example, when conspiracy was overthrown, when great military victories were won, when an Emperor was saved from shipwreck, etc. Another feature of their work was the making of regular annual vows (vota) on behalf of the safety of the Emperor and of the members of the Imperial household.

We have seen that the inscriptions begin with Augustus and continue down into the reign of Gordian. During this time the priesthood was in the main prosperous. There is, however, a slight indication that even before the close of this period the tide of prosperity had turned. It lies in the fact that the latest datable inscription (that of the year 241) gives the sportula as twenty-five denarius instead of the one hundred denarius always mentioned in the inscriptions. The altar of the State was therefore being reduced. We may suppose that this reduction was at least continued, if not increased, during the subsequent reign of Philip, who showed decided tendencies towards Christianity (cf. Ersi, Ann. 185, 72 E.).

Under Gratian (382, cf. Cod. Theod. xvi. 10. 20) the Arval's wealth went into the public treasury, but the geographical location of the temple and the grove outside the city of Rome, and possibly also the connexion with a circus for public amusements, would tend to preserve it (Cod. Theod. xvi. 10. 3). In any case it was preserved as a matter of fact. The proofs for this are sufficient, though in the main negative. Before the time of Constantine the catacombs of St. Gensere was built in the immediate neighbourhood of the Arval grove, but no materials from this period are known (cf. de Rossi, Roma Sottosuore, iii. 689 ff.). The same respect for the grove was shown when Pope Damasus (366–384) built the oratory of the Martyrs Simplexus Faustinus and Viatrice. The first description of the marble plates occurred in the building of a Christian cemetery in the 5th or 6th century (Henzen, Acta, p. xxv).

Litteratur.—The best general discussion: G. Wiusowa, s. n. "Arvales" in Pauli-Weihsowa, ii. (Stielgert, 1890) 1469–1495. The inscriptions themselves are available in Ueberlieferung, parts i and 4. With these inscriptions may profitably be read Henzen's splendid Commentary, Acta Fratrum Arvalium quae supersunt, Berlin, 1874; and Huelken's Commentary in Ephemeris Epigraphicas, viii. G. Gatti's article "Arvales" in de Ruggiero's Dizionario Epigrafico, i. 682–716, may also be consulted.

JESSE BENEDICT CARTER.

ARYAN RELIGION.

[O. Schrader]
ARYAN RELIGION

Mythology (collected in 2 vols., 1897), Lectures on the Science of Language (1851–64), along with the "Essays," Chips from a German Workshop (1867–75), Origin and Growth of Religion (1878), and Biographies of Germans (1888), etc., are well known throughout the whole learned world—went even further than A. Kuhn in the naturalistic explanation of mythical names. As specially characteristic of the views of both scholars, the fact may be mentioned that they both discovered old Aryan myths, but tried also to deduce their origin from the character of human speech, its capacity for poetic interpretation, its polyponymy and homonymy, etc. Such is, in a very condensed form, the conception of Aryan religion held by Kuhn and Müller, for the full characterization of which we should have to note also the meager attention given in the works of both scholars to the important sphere of religious ceremonies or worship. This conception continued to be the prevailing one down to the eighties of last century, although from an early period currents were perceptible which, issuing from various departments of science, seemed to threaten the foundations of the Kuhn-Müller theory.

While this theory, in its re-construction of the Aryan religion, started mainly from the oldest literary remains of the Aryan races, first of all the Veda, and then the Avesta, Homer, and the Edda, on the other hand, the science which has become known under the title of 'Folklore,' and which has as its aim the collecting of the legends, fairy tales, customs, and habits still prevalent among the people, directed attention to the forms of the so-called lower mythology, and sought to prove that the very oldest material is to be found in analogies, such as those of the Gods of the Germanic races and the modern German gods, in common ideas among mankind, it was held to be demonstrable that many exalted divine and heroic figures originated in these circles. The most successful representative of this view was W. Mannhardt, in his two chief works, Der Baumkultus der Germanen und ihrer Nachbarn (Berlin, 1875, 2nd ed. 1904) and Antike Wald- und Feldkulte, aus norddeutscher Überlieferung erläutert (Berlin, 1877, 2nd ed. 1905). Then, in addition to this, the study of ethnology began to strain the universal comparative history of religion, pointed to a series of apparently primitive universal religious ideas among mankind, of which at least traces were found also among the Aryan races, and which did not seem to fit well into the system conceived by Kuhn and Müller. The ancestor theory, especially, according to which all religions spring from the worship of the dead, was placed in the foreground from the anthropological side, and was applied to the Aryan races by J. Lippert in Die Religionen der europäischen Kulturvölker, der Litauer, Slaven, Germanen, Griechen und Römer in ihrem geschichtlichen Ursprung (Berlin, 1881); and in England, by H. Spencer, Principles of Sociology (1876–90), followed by Grant Allen, Evolution of the Idea of God (1887).

Similarly Elwin Hugo Meyer, in his Indogermanische Mythen (Berlin, 1883, 1887), distinguished three chief periods in the formation of myths: belief in souls, in spirits, and in gods, the first of which he designated pre-Aryan, the second Aryan, and the third post-Aryan.

Moreover, even the opinion that the poems of the Rigveda (from which, as we saw, the adherents of the Kuhn-Müller theory started, especially with regard to their interpretation of myths) introduce its directly to the domain of native nature-poetry began to waver, and there were many acute interpreters who claimed to discover, in the very
old parts of the Veda, traces of decay and of priestly refinement. This objection to the Kuhn-Müller explanation of myths has been urged with special force by O. Gruppe in his book, Der griechische Kulte und Mythen in ihren Beziehungen zu den orient. Religionen, i. (Leipzig, 1887); and in England by A. Lang, Cutlier Myth, Myth, Ritual, and Religion (1889), and Modern Mythology (1897). Gruppe points out that a great many of the mythical figures of the Rigveda are explicable not by natural phenomena and occurrences, but by certain priestly manipulations of the language, and he concludes that himself believes the Aryans of primitive times to have been completely devoid of religion, and ascribes the uniformity of their myths and worship, almost in the same way as Creuzer, to the enormous number of religious formulas that by borrowed from India and Egypt and transferred to Greece, India, and Middle and North Europe.

Finally, at the end of the seventies, Comparative Philology, whose daughter the comparative mythology of the Aryan people might well be considered to have had great influence upon a new phase of its development, inasmuch as from that time onwards the demand for a regular system in the correspondence of sounds as the result of etymological comparisons of words and forms was more emphatically insisted on. Naturally, the claim was made that the more spacious identifications proposed by students of the history of religions; and it became evident that the great majority of these identifications, and among them many which had hitherto been regarded as the marks of etymology, were phonetically untenable: e.g., Skr. gandharvā = Gri. στέφανος ('Gandharvans and Kenenarians'); Skr. marutās = the Maruts = Lat. Mars; Skr. vāra = Gri. Oīsphoros; Skr. Mānu = Gri. Muros; and many others (see A. A. Maclollan, 'Volks Mythen und das Alterthum,' Leipzig, 1897).

Under these circumstances, it is not to be wondered at that doubt of the correctness of the Kuhn-Müller interpretation of mythology increased year by year, and that finally people actually arrived at the view that it was impossible to ascertain with certainty anything whatever about the oldest religious ideas and customs of the Aryans (cf. e.g. E. Zupitza, in the Ztschr. des Vereins für Volkskunde, 1901, p. 240; A. Lang, Cutlier Myth, 1884, Mythology, 1897). But this was the same as saying that all our knowledge of the Aryan religion was based on the work of the nineteenth century, and that the history of the Aryan religion was a history of the investigations of the last century.

Method. In a thoughtful address, entitled Die Aufgabe der theologischen Fakultäten und die allgemeine Religionsgeschichte (Berlin, 1901), A. Harner says:

"In the first place, it needs but little consideration to recognize that the attempts of single researchers to mean to separate from the study of the history of the people concerned. . . . To try to study the religion alone is a more than sufficient. If we can only trace the roots of the blossom instead of the whole plant.

On account of this indissoluble connexion between the history, or, more accurately, the history of the culture, of a race and its religion, which will often meet us in the following discussion, it goes without saying that the materials which furnish us with a knowledge of the culture of the primitive Aryans are in reality the same as those which make possible for us an acquaintance with their religious ideas. As the present writer has recently treated the former in detail in the preface to his Reallex. der indog. Altertumsw. (Strassburg, 1901) and in the 3rd ed. of his work Sprachvergleichung und. Urzüge (I. Teil: 'Geschichte und Methodik der. linguisch-historischen Forschung,' Jenia, 1896), it is only necessary for him to characterize it shortly here in its special application to the history of religion.

The materials which are at our disposal for the investigation of pre-historic periods of culture are derived partly from language, partly from things. With regard to the former, we must first of all, with very strict regard to phonetic laws, compare the pre-historic equivalents discovered in the history of religion. For example, there exists beyond all doubt an equivalence of this kind in the group of words: Skr. devi = Lat. dea; Lat. saepe, dea, Old Norse tiara, 'God'; and Max Müller is certainly right when, at different times, he has reckoned the establishment of an etymology of this kind among the most important achievements of the mental history of mankind. In this search for the primitive equivalents of the words, we naturally exclude that is confined to particular languages of the Aryan group, which we, know, were united to each other more closely than to the other languages. This holds, e.g., of the very considerable number of etymological correspondences like Skr. सौन = Avesta hawam for the soma plant, which played so important a rôle in the cultus of both peoples; Skr. mitra = Avesta mitra for the sun-god Mitra; Skr. होता = Avesta xotar for a certain class of priests, etc. The attempt to find the name of an expression for a certain idea to the non-existence of that idea itself, are, on the whole, dangerous, as negative deductions are. But it is otherwise when provisionally related expressions are wanting for a whole class of ideas. When, e.g., all attempts have failed to prove that real god-names existed in the earliest times, or when there is no etymological agreement to be found between two languages for the idea of the temple, these facts will require due consideration in deciding the question whether there really were god-names and temples in the primitive Aryan period.

But it would be a great mistake to suppose that the only way in which philology can be of service to the history of religion is by placing at its disposal the primitive etymological equivalents in the sphere of myth. As the present writer has recently said in saying that the history of religion is reflected in the history of language, and that only he who knows the latter is in a position to seek to decipher the former. In fact, the whole formation of religious ideas can be understood only by the aid of philology. When we can recognize the god-names of the separate Aryan races, if, as we have just seen, they cannot be recognized in the vocabulary of the primitive language? What religious thought called them
ARYAN RELIGION

into being in each separate case; and how did this, their fundamental idea, afterwards grow deeper and wider? The only answer, if it must be, is, probably, the admission that it was historically attested in the various Aryan races; but the chief task in this field of investigation must always be the comparison of the religious notions and practices of the ancient peoples, and the attempt to select from the crowd of their heterogeneous phenomena what is common and original. And there can be no doubt concerning the path to be pursued, provided that the analogy between the Aryan and the Semitic religions is recognized, and the attempt to sift the material, and to form a conclusion concerning the extent of the religious ideas, is made. The ancient Aryan religion, as it is known to us, is not in the least a collection of meaningless fragments; it is a system of religions ideas, and is to be treated as such. It is known to us from the works of the ancient authors, and from the monuments of the ancient peoples. It is known to us from the monuments of the ancient peoples.

The ancient Aryan religion, as it is known to us, is not in the least a collection of meaningless fragments; it is a system of religions ideas, and is to be treated as such. It is known to us from the works of the ancient authors, and from the monuments of the ancient peoples. It is known to us from the monuments of the ancient peoples.

Now, even although the aid which is given to religious history by philology is great and many-sided, yet it is a great mistake to believe, as was formerly done, that the religion of the primitive Aryans, like their culture generally, could be deduced simply from etymological research. It is true that the above-mentioned equation, Skr. deus = Lat. deus, shows us clearly that there were divine beings even in primitive times; but we cannot expect from philology any information regarding the religious ideas of the ancient peoples. In this, as in all other questions, therefore, the comparison of things and the investigation of things must accompany the comparison of words.

This brings us, in the first place, to Pre-history or Pre-historic Archeology, a science which, in general, is based in no small degree on certain religious conceptions and customs of prehistoric man. For we owe the majority of prehistoric relics, as is well known, to the ancient wide-spread practice of the worship of the dead and the souls, how and where the dead were buried, what was placed beside them in the way of food and drink, what weapons and implements were laid in the grave or on the funeral pyre, and why the corpse was buried in this or that position, turned in this or that direction, are naturally connected most closely with problems of the history of religion. But discoveries of another kind—such as sacrificial stones, idols, amulets, bronze kettles, bronze chariots, no doubt serving a religious purpose (one well-known instance is the chariot of blown and carved stone found at Trundholm as recently as 1904, cf. S. Muller, Urgeschichte Europas, Strassburg, 1904, p. 116), and many others—possess great significance in religious history, even if at first they raise more problems than they enable us to solve.
the breath of life in men and animals;" anima (cf., in phonetic connexion, Skr. ast = Lat. ensis = 'swoot'), and once more with Skr. átura, Avesta ahura (Ahura-mazda) = 'god,' 'lord.'

The facts referred to find their explanation in a series of other related phenomena. As is the case with all the other souls, we have in the Aryan languages as breath, wind, vapour or smoke. A primitive Aryan expression for this survives in the equation Skr. átman = O.H.G. átum = 'breath,' 'soul' (Ir. athach = 'breath'), while the closely related equation of Gr. μῦρος (cf. also Lat. Minerva from *Monevea) seems to me not to be such too much the physical substratum of the soul as its spiritual power (cf. Gr. μεωμα = 'I strive').

The heart of man appears to be regarded as the real seat of the soul, a fact which seems to follow, on the one hand, from the Gr. ψευδα, primitive spiritual beings (cf. below, pp. 27, 52), and their identity with ἐστὶ 'heart,' and, on the other hand, from the circumstance that the Indian mánas also has its abode in the heart, as being the size of the thumb (cf. Oldenburger, Die Religion des Veda, p. 528). The heart is also viewed as the starting-point of numerous spiritual functions and emotions: Lat. cœr 'mad,' recordari 'to remember,' Old Slav. срддити 'to be angry,' Bulg. срдце 'courageous' (Lat. cor, Old Slav. срддье 'heart'), etc. From the notion of the physical heart has been developed further, for the notion of the soul: Lat. animas 'soul,' anima 'breath'; Gr. ανεμος 'wind' (Skr. anīti = 'he breathes'); Gr. φύσι = ψυχα 'breath'; Gr. ψαύσι (Π. vili. 131 identical with ψευδα) Skr. ṇתmā, Latin fānum 'smoke,' etc.

This breath or soul, then, is enclosed in the body of man, which, however, it leaves on the advent of death, also temporarily in the phenomena of sleep and dreams, in order to lead an independent existence. From the spiritual beings formed in this way there have been derived a vast host of spirits conceived as partly harmful and partly helpful, for which there exist in the Aryan languages a vast number of cognate expressions.

Some of these are: Skr. आदि, Avesta ādya = Old Nor. árdrug, Old Saxon άδηρ, O.H.G. ābruc (cf. also A.S. ārde, 'larva mortalis,' and perhaps Old Nor. dærgr, M.H.G. tweer 'dwarf') 'ghost,' 'goblin,' 'soul,' 'breath,' 'scream'; Gr. ἀνάμνησις 'injury'; Skr. रोह, Vedic expression for three clever elfish beings (Rohini, Ztschr. V. d. Ind. u. Ihrer Völkern, 32), = Old Nor. dír, A.S. elf, M.H.G. dp, 'fairy,' 'ghostly being,' 'demon,' 'nightmare' (cf. W. Grimm, Kleine Schriften, i. 405, B. and also Schrader, Rasselsohn, art. Zweige und Rassen); common Teutonic M.H.G. mor ml., Old Nor. morr, A.S. mere, M.H.G. mor, 'oppress, hinder.' Old Eng. dēmon = Old Eng. st. morr 'witch,' 'demon,' 'goblin,' Ir. mor-fédirin, G. lansia = 'demon-reign, a demon,' Old Nor. mor, A.S. morr 'the dead' (esp. on the battlefield!)-Lat. morire, moris, mori 'to die,' in the sense of most terrors, as the habitation of unclean spirits in general; Goth. habus 'man,' Old Nor. hús 'soul'; = Old Eng. morne 'corporeal form of spirits which enter the human body in many forms, = 'ghost, goblin,' etc. Perhaps equivalent = Lat. coeptis 'dwarf-spirit,' 'hellish spirit,' etc.

To this class of beings, which will engage our attention, in the discussion of the conception of fate (below, p. 52), belong originally the two series of words which were discussed above, namely, Gr. ἄγγελος and Goth. ansas; but these words took on a higher meaning under the influence of the worship devoted to the souls of the dead, and ultimately became associated with those divine beings for whom the Latin Jupiter was the characteristic term.

The word dēna, as we have shown above, corresponds to the Skr. dēna, Ir. diā, Lith. dūmės, Old Nor. tāvör, and along with these goes back to an Aryan root *dēvo-*, which, in consequence of its close connexion with Aryan *dīya-*, Skr. dīṣya 'sky,' Gr. Zeus, Lat. Jupiter, appears to have had some such meaning as 'the heavenly.' Now, since the Aryan *dīya-*, as the use not only of the Indian dīṣya, but also of the Gr. Zeus and Lat. Jupiter proves, originally denoted merely the invisible sky and earth, as a god, Zeus stands in post-Aryan times from *dīya-* must have signified.

A later formation from Skr. dīṣya, diva = Gr. Zeus, Dēna is Skr. divāṇ = Gr. θεος from 'theos—heavenly.'
When, on the other hand, cremation is proved by the Avesta, as existing among non-Zoroastrian tribes, or when the followers of Zarathustra, as well as the Persian Magi, previously to burying their dead, exposed them to be devoured by dogs, birds and beasts of prey, we must in both cases undoubtedly detect the introduction of ancient customs, the last-mentioned of which seems to have originated among the wild mountain tribes of the Oræite in Baluchistan (cf. Diodorus Siculus, xvi. 105: τὸ γὰρ τελευταίαν παρὰ αὐτοῖς τὰ σώματα φεύγων αἱ συνεγείρει γυμνόι, Μέγας ἔχεται. εἰς δὲ τοὺς ὑπὸ τῆς σφαγῆς τῶν θεών ἀποστημένων τὰ μνῆμα περικειμένων τὸ νεκρὸν κάρον περιφράσσεται, τὸ δὲ σώμα τοῦ τελευταίου καταλείπετοι βοράν τοῖς θηρίοις). Similar conditions confront us among the European Aryans, especially among the Greeks. In the shaft-graves, and in the beehive and chamber tombs of the Mycenaean period, the dead were entombed unburned in a partly mummified state (cf. Tsountas-Manatt, *The Mycenaean Age*, chs. v. vi.). And even if, in the face of these discoveries, we must take account of the possibility of a non-Greek population in Mycenae Grecia, the case is different with the great Athenian cemetery which has been open to view in the N. W. of the town since the year 1891 (cf. A. Brückner and E. Pernice, *Ein attischer Friedhof* in *Mitteil. d. kais. deutschen arch. Institutes*, Athen. Abt. xviii.). Among the nineteen *dypon-graves* of the gods of the north, in this burying-place, only one contained an urn with burnt bones; and this state of affairs agrees with the assurances of Greek local antiquaries, who claim to have seen no *προστατικός τάφος* with a burnt body. So, when burning and burning are met with in the Greece of antiquity alongside of each other, there can be no doubt that the former custom must be regarded as the more primitive, and that the Homeric world with its practice of body-burning represents an innovation contrary to the primitive Greek custom and burial which is preserved in the mother-country. 

The *Roman* tradition corresponds to the conditions actually found among the Greeks. According to Pliny, burial preceded cremation in Rome also (cf. H. N. vii. 187): *Eum cremare et sepelire nolit: non fuit veteris institutum; terra cumbens...et tamen multis familiae priscos servaverit ritus, sicut in Cornelia nemo ante Sulpian dictorem indigerit cremation.*

*An* old royal custom referring to the so-called *Cesarian operation* (cf. M. Voigt, *Über die leges regis* in *ASG*, vii.: *negat lex regia multiem, quæ praemun mortua sit, kumari, antiquam partem ei excitat*). It appears to be a curiosity that the Romans practiced burial only, but the legislation of the Twelve Tables already sanctions both methods of disposal of the dead.

* Cf. Tab. x. (ed. Scholl): *hominem mortuum in urbe ne sepelito nure write*; 8, 9: *nec vero aures addito cali asero dente luncl escent, aut in cum illo sepulcit uterque, se frando este.*

The excavations also indicate that burial was succeeded by cremation on ancient Latin soil. Thus in the lowest layer of the burning-place from which the beehive tombs of the Porta Ercolina contain rock-hewn burial chambers with unburned bodies; while in the second layer of soil in this cemetery, as well as in the necropolis of Alba Longa and among the most recent excavations of Professor Boni in the Forum Romanum, urns of ashes have been brought to light which point, no doubt, to a higher antiquity for cremation in Rome than might be expected from the historical tradition quoted. We have to rely solely on excavations with regard to the northern part of Italy. Here, in the famous burning-places belonging to the elder Iron Age, of Bologna, Villanova, and Marzobotto, the graves of bodies buried and burned almost contemporaneously lie close together. The latter class are assigned by *Mont-
The question simply is, At what time did the Teutons and Celts begin to cremate the dead? The final answer to this can be given only by pre-historic archæology, for want of older written evidences. This shows that in the lands occupied by the Celts and Teutons during the Neolithic Age, the corpses were interred unburned in dolmens, upright graves, and stone chests, and that it was only after the use of bronze had become more firmly established in Europe that cremation gradually came in. It further encourages more and more the opinion (cf. Montelius, AD xvi. 151 ff.) that the change of custom from burning to burial in the countries mentioned, without any real change in the population, so that in this way we should have to conclude that, for both Celts and Teutons, burial and not cremation was the oldest method of disposing of the dead, although history gives evidence only of cremation as a custom, and the older burial and Norway burial once more appears decisively during the younger Iron Age alongside of cremation, and we may doubt whether the former mode of disposing of the dead was at any time quite extinct. No one who considers the facts and conditions here described from a sufficient point of view will doubt, that, so far as the Aryan races are concerned, there is a not inconsiderable probability for the priority of burial over cremation, and that this flow is confirmed by a consideration of the language.

If it really happened, as J. Grimm (op. cit.) assumed, that cremation existed before burial, we should naturally expect this fact to be indicated somehow in the Scandinavian age myths, which contain, e.g., expressions for 'to dispose of the dead' should exhibit an original sense 'to burn.' But this is not at all the case; and even the Gr. ἐστωβείν, which means in historical usage 'to bury' and 'to burn,' can by no means, in spite of J. Grimm's contention, be connected with Skr. sopari, Lat. sepulcrum, Gr. ἐπόρροια, 'ashes,' but must very likely be connected with O.H.G. tunc, 'pit,' or with Armen. dawnan 'grave.' On the other hand, there is a widespread pre-historic designation of burial in the series: Old Fr. kapota, enkapde, 'to bury,' Lith. kapūs, 'ash,' Old Srv. kapatī, 'to how,' and the same change of meaning occurs in the equally primitive equation: O.H.G. grabō—Old Srv. grāba, 'grave,' 'cemetery' (Goth. graban, 'to dig'). This is the pre-historic designation of the grave also in the probable equation, Lat. orsus ('areus'), under world = Goth. arihazk, 'sepulchral cave' (cf. Bezzenerger, Betragge, xxvi. 166); while the Lat. sepulcrum, the oldest meaning of which was unburnt disposal, often serves as the passages of the Twelve Tables quoted above, through its connexion with the Skr. sopari, 'to serve,' 'to homage,' 'honour,' plainly expresses the ancient ritual significance of this mode of disposing of the dead (cf. also W. Schulze, in Kuhn's Zeitschr. xii. 393).
We are thus justified in assuming that the Aryans, alike in the land of their origin and after their arrival in what afterwards became their home, interred their dead unburned in carefully prepared graves. In some instances, the body buried must have been simply the desire to protect the body of the deceased, whether with the pious intention of warding off enemies and wild animals from it, or because, believing that the soul of the dead hovered around the corpse and is bound to its existence, they thought to secure the interests of the deceased by procuring for him the longest possible existence, and at the same time to serve the interests of the survivors—for they were afraid of ghosts—by confining the spirits of the dead rigidly to the grave. Or it may be that all these reasons worked together.

This intention of guarding the body of the dead person is exhibited on the grandest scale in those colossal tombs, known as dolmens, vaults, cairns, etc., which are scattered over Europe in the North, West, and South, and which also recur in North Africa, Palestine, and India; but the questions to which these buildings give rise rise from the side of the history of culture and ethnography (cf. S. Müller, Nord. Altertumskunde, i. Hoech, Ueber die Jahrh. künstl. Grabmäler, in 241 Zinek, Det nordøvpr., dysser territor, stengrae og dysserae udbrudelse i Europa; M. Much, Heimat der Indogermanen, Abschnitt v., 'Die grossen Steinräuber') are as yet so far from being settled that we cannot enter upon them here. At bottom, however, the same endeavour to protect and preserve the human corpse is expressed in the later but still pagan invention of the coffin. It is unknown during the whole of the Stone Age, and in Greece also, during the Mycenaean period of the Bronze Age. In Sparta, as late as the time of Lycurgus, the dead were, without any such covering, laid upon palm branches and leaves of the olive tree. Afterwards, as in the old Athenian cemetery (cf. above, p. 10), the bodies were enclosed in large vessels (stibi), and then the clay and wooden coffin and the stone sarcophagus gradually found their way into the South, borrowed perhaps from foreign countries. In the forest land of N. Europe there appeared for the first time, in the earlier Bronze Age, the so-called `tree of the dead', i.e. a hollowed-out tree trunk, with the body placed within it for the protection of the body. Any one who desires to convince himself of the preserving power of this manner of interment has only to examine, in the Copenhagen National Museum, the tree-coffin with the body of the Danish cairn. In ancient Russia, and in dialects even at the present day, the coffin bears the very name blada, bolada, i.e. `tree-trunk' (cf. N. Germ. Bodenstock). The Slavonians, even at the beginning of the 13th century, felled a hollow tree for the purposes of burial, shaped it, and pushed the dead body inside. The secreries of the province of Czernigovski are still said invariably to manufacture their coffins out of a complete tree-trunk. Moreover, coffins have long been found in Russia which were enveloped only in bark (cf. Pt.1jarezenski, op. cit. p. 222f.). This northern `tree of the dead', whose wide-spread use is a proof of the fact that the burial of the dead had never quite been given up, was afterwards superseded by the Christian coffin constructed from boards, which spread over Europe along with the diffusion of the new beliefs.

Elloquent witness is borne to this by numerous names of the coffin in the Teutonic languages—names which were borrowed from the Latin (O. Germ. dolma, Gr. dolma, from Turk. dolman, A.S. esto, eft, `coffin,' eftoma, `to coffin,' Old Nor. hok-estna from Late. esto, M.H. esto, nêska from Late. area, O.H. germ. arche, A.S. arce, `arch'.)

Thus all along, from the earliest to the most recent times, we see connected with the disposal of the dead by burial the endeavour to protect and preserve the corpse.

Now, in the most direct opposition to this series of ideas connected with the custom of cremation, which, as we have seen, emerges in pre-historic times among all the Aryan races, and subsists, alongside of burial, down even to the introduction of Christianity. While those who bury a body aim at protecting it by durable grave-constructions, we now find men resorting to fire as the most drastic means of destroying it. It is in reality a revolution which can be explained only by a complete change in the ideas about life after death, and which in recent years several famous scholars have declared to be the first. The first place here is due to Erwin Rohde and his book Psycho 2 (cf. 27.f.). According to his view, cremation is meant to effect the speedy and complete separation of the soul from the body, and this from an affectionate as well as a practical motive. If the body is burnt, the soul is bound to it; it enjoys no rest itself and allows none to the survivors, whom it terrifies by manifold appearances.

Nothing can destroy the visible counterpart of the soul more quickly than fire, when it is kindled, and the most precious belongings of the dead man are consumed in it, no bond can be formed between the soul and the body. In this relation to the latter, the body, they serve the interests of the dead, who no longer roam about restlessly, and still more those of the living, whom the souls banished to the depths of the earth can never meet again.

In essential agreement with Rohde, but independently of him, S. Müller, in his Nord. Altertumskunde (i. 393 ff.), is convinced that the main purpose of cremation is the release of the soul in order that it may find peace in the other life, while R. Much, in a comprehensive discussion of Müller's book (Anzeiger für deutsches Alterthum, xviii. 315 ff.), lays greater emphasis on the release of the survivors of the dead person from the fear of him than on the release of his soul.

The thought of the dead person, if it was a case of burial, would involve the idea of the preserved but disfigured body, decomposed or already changed to a skeleton... But if the dead person had been burned, what was left of him was offered as new food for the imagination... The part which the dead under such circumstances played in the dreams, hallucinations, and imaginations of the survivors was undoubtedly a smaller and also a more fraction over; in other words, his soul entered more easily into the peace of a home of souls, or else followed its destined way at liberty within living and active nature.

In confirmation of his view, Much appeals to the custom, which long persisted, of burning what were supposed to be vampires, witches, sorcerers, and the like, for no other reason than to prevent their return.

In opposition to the opinion (which, by the way, is generally prevalent) of these three scholars, that the 'dogma' of cremation spread into Europe and Asia by passing from race to race, W. Ridgeway, in his work mentioned above, The Early Life of Greece, defends the view that cremation was brought by the conquering expeditions of a N. European Celtic race to Italy and Greece as well as to Iran and India. He holds that, at the same time and in the same way as the custom of burning the body, the belief had spread that an entrance into a world of the best was secured only by those who were burned by fire, but that cremation itself is rooted, in the last resort, in the conviction that it is only by fire that man can be freed from the pollution which death brings with it.

Setting aside this attempt of Ridgeway (which appears to have little foundation) to explain the spread of cremation among the Aryan races by migration of races instead of by 'waves of culture,' the more recent criticism of the general theories of the discussions of all four scholars important points of view have been suggested for the under-
19

standing of the question with which we are here engaged, although naturally the hardest to be finally settled, is more or less credible conjectures on the subject. There is no doubt that the thought which in stages of primitive culture is expressed most frequently and plainly, as we shall see in the section on 'Deeds of the Dead' (p. 259), is the one that for us makes the entrance into a paradise beyond. But it cannot yet be decided whether cremation first originated from an Aryan race and spread 'wave-like' in different directions, or took rise outside the circle of Aryan life. The greater part of the material among the primitive Sumerian population of Babylonia, where, in the year 1887, huge burning-grounds of burned bodies, were brought to light in the two ruined sites of Sarghal and El Hibba (cf. R. Koldewey, in ZA ii. 453 ff.).

2. Attentions paid to the dead at the time of the disposal of the corpse, especially the gifts to the dead. — Whether, in primitive times, the body of the dead was buried or burned, the disposal of it must have been accompanied even then by a long series of solemn customs, which can still be ascertained by a careful comparison of the burial-rites handed down from the separate Aryan races. Unfortunately, such a comparison has not as yet been undertaken, and cannot be attempted in an exhaustive way here. To show, however, that nothing is lacking in the ancient region in this connexion, are two at least of the chief Aryan races, namely, the Greeks and the Lithuanian Slaves will be compared.

For the former we shall start from the description of the Greeks, taken from Polybius' Popular History (B. 21, 8ff.); for the latter we shall take special account of the above-mentioned (p. 175) work of Kotlowiczski (K.: cf. also Jomard, Musee des Sciences de Sacrifices, ii. 254ff.; Becker, Dorusormon, Liviana, aliarmare vicinarum gentium (Scriptores Rerum Livoniae, ii. 369 ff.); and F. V. Sejn (Sej.), A Study for Knowledge of the Life and Language of the Russian Population of the North-West' (White Russia), i. 2, 2nd ed., 'Burnal and Memorial Customs, Warnings over the Corpse, and Lamentations for the Dead,' in Trauds of the Depart- ment for the Russian Language, and Lit. of the St. Petersburg Acad. [Russ.] iii, No. 3, St. Petersburg, 1890, and the same author's work (K.), The Great Russians in his Songs, Usages, Customs, Superstitions, Tales, Legends, etc. [Russ.], St. Petersburg, 1908, 1909, 2nd ed. pp. 777 ff. Thereafter the important subject of gifts to the dead will be discussed with regard to all the Aryan races.

(a) ANCIENT GREEK AND LITHUANIAN SLAV RITES OF THE DEAD.

(i) State of the corpse (προθάλαμος). — After the eyes and the mouth have been closed by the hand of the nearest relative, the corpse is washed and anointed by the women of the family, clothed in clean garments, and laid on the dead in the house for solemn lying in state' (R.).

In function he served several as a matrimonial, defunctorum cadaveria vestibus et calosis inductur, et erecta locandor super salum, cui ambulatorum iliorum propinquii perpetuo acc laurantur' (Mo. p. 291). On the appearance of the master of the house, the wife, and the persons intimately connected with the dead man, the lying in state takes place in the 'corner' (Ευθης), which in this case does not mean the corner under the sacred images, but the bench opposite the entrance door. Among other wishes connected with a 'decent' death, an, e.g., that in the hour of death all the relatives may be present, that the son may close the eyes, the daughter sing the song of the Russian peasant for the dead, and lie on his own 'bend' after his death; he has not died 'decently' if he has lain in the 'corner' in a stranger's house. 'They clothe the dead man in a clean garment, and lay him in the house, and in new clothes, which are replaced by boots only in wealthy families.' It is the bounden duty of the dead man's nearest relatives to close the palaestrae towards the sacred images (διαφορετικά) so that they are required to avoid most strictly any possible injury to his body, and even to the soles of their feet. 'It is the bounden duty of the dead man's nearest relatives to close the palaestrae towards the sacred images (διαφορετικά);' and so: 'They lay the dead body in the same dress, which was worn when they went to the place of worship; and in Homer (H. xix. 212) the dead person rests aná προθάλαμον τετράκινον.

A difference from the Greek custom is shown in the fact that among the Slavs the washing of the dead body, which, moreover, is regarded as a religious ceremony, is commonly performed not usually performed by relatives, but by strangers; in the case of men it is done by men, in the case of women by women, or sometimes in the case of both by old women.

(ii) The lamentation for the dead (διορκέσται). — The lamentation for the dead took place over the corpse lying on its bier, and the purpose of the lying in state was to give opportunity for this (R.). The spontaneous passionateness of this lamentation in the earliest times is attested not only in the description of the poet, but also in the meandering and the behaviour of the lawyers, especially Solon (Plutarch, Solon, 21), which were directed towards putting a check upon it. Solon will have only the women nearest of kin (cf. below, § 3) to take part in the lamentation, all the grief, scratching of the cheeks, and beating of the breast and the head are forbidden, as well as the singing of set forms (θρησκεύς πενθομά). Homer (H. xxiv. 707 ff.) gives a graphic account of what once prevailed: Priam carries the body of Hector to Troy. The whole town is assembled there before the corpse, and the lamentations the people surrounding Priam's chariot; wife and mother tear their hair at the sight of their beloved dead one. Priam now exerts himself: 'Give me place for the mules to pass through; hereafter ye shall have your fill of waiting when I have brought him into his house. There the body of Hector is laid on a splendid couch, professional singers strike up a melancholy air, accompanied by the woful cries of the women; then Andromache, Hecuba, and Helen step forward to the bier to utter their mourning songs which are doubtless meant by the θρησκεύς πενθομά of Solon's odic.

We meet with all these customs in everyday use in the Litho-Slavic world, sometimes even at the very threshold of the present day. From the laying of the dead body on the 'bench,' from the very moment of death, indeed, the lamentations of female relatives or neighbours continue throughout all the phases of the burial—often it is impossible to say whether more as a conventional necessity or as an expression of deep anguish. Moreover, they are repeated at the anniversary festivals of the dead, which will be spoken of below. The Arab Ibn Dushtah (K. p. 217) was acquainted with the fierceness of these outbursts of grief when he relates that the women incarceratę their hands and faces with knives when a member of the family died. And Sojn states of the White Russians of the present day (S. p. 535):

'The room of the peasants' house, in which the dead body was re-echoes with the weeping and mourning of relatives, neighbours, and acquaintances. In such a case the women naturally distinguish themselves by special ecstasies of feeling, their wailing and moaning and their despair at times reaching such a pitch that, on looking at them, one involuntarily begins to be apprehensive not only for the health, but even for the life of some of them.' Again, referring to the Great Russians, he says:

 Cf. e.g. H. xvii. 228, (the son of Nestor announces the death of Patroclus to Achilles):

εἰς δόξαν τὸν (Achilles) δ' ἄγος καρδιάς ξηλώλον μελανίναν. οἵτως δὲ χριστὶ ἐλικὸν κύκλως ἀνέτασεν. χιτονὶ καὶ κέλαλις, χριστὶ καὶ θόλοι οἰκίζοντος ἰδίων μελανίνας. "Χελώνη δὲ οὐκ ἔχει ἐκείνῃ τῇ λίρᾳ τῇ νησίῳ δὲ, "οὐκ ἔχει καὶ τῇ εὐθείᾳ τῇ θάλασσῇ ἐκείνῃ, ἐκείνῃ τῇ ἀνθρώπων ὠφελείᾳ, ἀλλὰ οὐκ ἐχεῖ καὶ τῇ παραβάσει τῇ θάλασσῇ." "Χριστὶ καὶ θόλοι, χριστὶ καὶ θόλοι τῆς πετροφόρους ἔκκλησιον, κάθεν δ' ὅσῃ γείτον ἐκείνος." 1

1 Cf. H. xii. 230, (Homer, in his anger):

Βράζει δ' ὁ ποιητής, ἱερὰ καρδιάς ἀνέτασεν. "Οὐκ ἐκ δὴ Πατρόκλου ἂν ἐς τὴν θάλασσαν ἔχει οὐδὲν διάξωσεν θηράων ὄμης, ἢ γιγαντίας ἀνίψατο στέφει τ' ὡς ἀπειλήλει ἐκείνῃ καὶ προσέρχειται.

2 A. K. 515, 518.
When the women strike up their mourning songs at the funeral pyre, the widows and widowers offer to accompany their great grief, i.e. she falls on the grave of her husband, and lies there perfectly motionless. Then the women who are prepared to go to the grave sit down on the grave again, and continues her song of lamentation. Sometimes these occur several times in succession. Often they will be repeated, as it does not grieve the reveled one, and they praise her for "knowing how to weep." It is worthy of note that these Russian lamentations often assume an epic, and even a dramatic, character. They are not far as occasionally is in a sketch of the life of the deceased is given in them (cf. S. I. p. 546), dramatic in so far as the mourners are in the habit of turning to the dead person with questions as if he were alive.

The ancient custom of the funeral dirge, the lamentanza funebre, que in lingua Rutenica sic sonant: . . . io est, mihi mihi quae mortuus es? Num tibi decret exae aut partum? Nunc modo lamentante enumerare omnem ossa iberna illius, borus mortem depulare; nape, uxores, liberos, ores, boves, equos, amantes, gallinae, etc. Ad quos singula respondentes occupant habitum: ove ergo mortuo es quia habebat? S. I. p. 529: 'Those who visit the dead man take pains to express their genuine grief, and in doing so they recite different circumstances in their lives which have such and such a connexion with his life. The women express this in a flowing, tearful, but the men in a more short and direct way, during which the speaker often turns to the dead man with questions, just as if he were still alive, and several times during the course of the dirge, the women depile the corpse to the dead body, live as long as he is alive, can nevertheless hear and understand quite well, only he is unable to express his thoughts and feelings nicely.

The cases are, however, not always as the mourners are sometimes actually for the sake of the deceased. The only cases were the men and women really die, through which only the women can take part in funeral dirges. Copious collections of these dirges, arranged according to the relationship of the mourner (widow, mother, sister, daughter, daughter-in-law, etc.), are to be found in the Roman's works. On women, see the whole marked by great monotonity, these songs not infrequently exhibit in details genuine poetical feeling, and quite recall the mourning songs which the Trojan women poured forth over the body of Hector. The dirges of Melnikow (In the Forests, ii. 307, Russ. ed.)

(7) The funeral procession (exopod).—'The lying in state seems to have lasted, as a rule, only one day or one night. In the Roman's work, on one of the Tschechiens who was buried as a mere citizen, the body was carried out of the house along with the couch on which it had lain. . . . The solemn and magnificent forms which this part of the cult of the dead assumed, in the time of the ancient aristocracy, may be seen from the portrayal (if it corresponds at all to the reality) of a funeral procession on one of the very ancient "dyplonvans." Here the body lies on an elevated bier in a carriage drawn by two horses; there are men with swords at the side, and a whole crowd of women following, waving and beating their hands." (R. I.)

"Cum ad sepulcrum effetum cadaver, plerique in eaque funis prosequantur, et currum obsequiantur, quo cadaver vehitur; eademque doceantur, et numerosas auram, vocemque derivative vocant, " augurium vozes dominos." (M. p. 330). 'They always drive the dead body to the cemetery, and that on sledges even in summer; it is adorned by the deceased and the mourners carry it and the deceased" (S. I. p. 778). "In old Russian the phrase "to sit on the saddle" means to approach the dead "hinter des Leichen. And the same is called "Sledge, Boat, and Horse as Requisites of Burial Ritual." (Russ.) in the Montgomery, xi, 165.) "It is also well known of a notice of a rule, the heart of the dead man's favourite horse to his carriage. "In my parish they convey the dead to the cemetery in no other way than on a wagon drawn by two horses." (M. p. 330). 'The burial lays the body into the grave by the dead 'and not.12:14. Although many people have some doubts as to the correctness of laying in the grave along with the dead person the favourite objects of his past life. The following is a selection from the great mass of testimonies:

"Post hactenus quaeruntur nulla certe ni omnem sacrum multae fulurcola eum acere: vir lineamentum, idque eiusmodi coact colisc. . . . Qui funus mortis facrum, nummis proiectum in quendam deditum latum, in quod mortuum, et advocatus, solstitia, quod quoque non, et anemone cerevisiae piam cap ad caput in sepulcri illati, ne anima vel salis vel curiat." (M. L.), "The Scythians also, as Herodotus (iv. 73 ff.), describes in detail, had to perform ceremonies after burial, which they did by means of a vapour-bath from heaven-salt."
was assured that they put into the pockets of the linen shirt (norpre), which covered the dead man, a tobacco-pouch, flat and stiff, if he smoked during his life, and a snuff-box if he snuffed. To the man's girdle above the shirt they hung a pouch containing the relics of the dead—knives, razor-blades, names —as well as a small knife in a leather sheath—articles with which he might have lived during his daily life. In the case of both men and women they placed in the front folds of the shirt a clean linen handkerchief (woschik), so that the deceased could wipe his nose and his mouth. "I have heard it frequently asserted that on opening a burial-mound the grave-diggers sometimes used to find a leather pouch containing a razor-blade that had been previously in the dead man's coffin. The men, so far from despising such a find, consumed it on the spot with great pleasure." They place a towel in the dead man's hands in his right hand, which he buys for himself "in yeander world." After the burial, the axe, the knife, the girdle, the pouch, along with objects which were specially treasured by him and were specially dear to him during his lifetime, or, e.g., he was by trade a shoemaker, they invariably placed before him an unfinished last shoe (šti pikidimuči stpecimt, implements of his trade); if he was a carpenter, or some other tradesman, they gave him an ax, a chisel, a plane, a file, etc. Besides these things they put into every dead man's grave bread, salt, eggs for an omelet, nuts, beer and spirits in a bottle, and also a short pipe with tobacco and tinder-box, or a snuff-box with snuff.

Similar customs may still be shown to exist among the Teutonic races of the present day, although they have to a large extent disappeared (cf. "Teutonic Folk-Legends" in Paul's "Grundriss d. german. Phil.").

The result of these investigations is that even to-day, under the complete domination of Christianity, we find the remains of a custom which can be traced back, by means of excavations and tradition, even to the Nile. The Scythians began to bestow care upon the disposal of the dead, viz. the Neolithic Age; and this custom consisted in giving to the dead man gifts of meat and drink, weapons, household furniture of all kinds, ornamental objects, books, mats, and even corn, honey, soap, oil, wine, and wives. In fact, in the time of the Vikings, they even deposited the dead man's ship along with him at the burial mound, as the well-known discoveries of Tune and Gokstad show. And among those Aryan races which, at the time of the oldest historical tradition, seem to be no longer acquainted with the custom of gifts to the dead, unmistakable traces point to its existence at an earlier date. For instance, gifts to the dead appear to be unknown to Vedic antiquity, but such facts as the following must be taken into account: According to a famous hymn of the Rigveda (x. 18), they give the dead warrior on the funeral-pyre his bow, and then take it out of his hands again; or they make the wife lie on the funeral-pyre beside her husband, and afterwards command her to "rise once more" (i.e., of the heart) that here also it was used to be the custom for weapons and wife to be burnt along with the dead man (cf. Ohlenberg, "Die Religion des Vedas, p. 573). The same holds good of the Homeric Greeks. With them also the ashes of the dead were interred generally without gifts to the dead; but the funeral ceremony which Achilles prepared for his friend Patroclus (II, xxiii. 164 ff.), and the funeral-pyre on which he placed pitchers with honey and oil, and at which he slaughtered sheep, oxen, horses, dogs, and a few slaves (the latter perhaps to give to the dead, and thus be interred with him), shows that here also the custom of weapons and such like was preserved, even into the Homeric epoch the memory of a time when people honoured the dead with sacrifices and gifts.

The method in which these gifts were offered to the dead man varied. Where the rite of burial was most important, they were buried together with the corpse into the grave; where cremation was customary, they were either placed beside the ashes of the dead man or burned with him on the funeral-pyre— which seems to be the later custom. But it is difficult to draw any clear distinction as to the character of the gifts according as it was a case of burial or of cremation. It is true that S. Müller, in his "Nordische Altertumskunde," has ventured to suggest, for the geographically limited district of this northern world, a complete history of the development of the use of grave-goods, to which he has harmonized with the development he assumes to have taken place in the ideas of the people of this region concerning a future life. Thus (according to S. Müller), at an earlier period of the Neolithic Age it was believed that the dead man was destined to live in the seclusion of the tomb, and so he was provided in great abundance with weapons and implements, with vessels containing meat and drink, with amber beads, etc. Then came the time when the custom of the Stone Age and the earliest Bronze Age, in which the people believed that the life of the life of the soul appears to have been given up without having anything to put in its place. The consequence was that importance was no longer attached to the proper equipment of the dead, which was confined to a fixed list of gifts of weapons and ornaments—one might say, to the things belonging to the daily outfit. But what was the use of these then? And does it not seem a simpler assumption that in graves like these we have to do with those of warriors, who had a need of these things? It was because the cremation came in, which completely freed the soul from the body and carried it off to airy regions.

From that time, according to S. Müller, the graves contain only "petty wares, such as objects for the toilet, smaller pieces of furniture, or simple articles of dress. But what would the soul, released from the body, want, e.g., with a razor? Thus, however interesting it is to hear the opinions of an investigator of the standing of S. Müller, it is, nevertheless, very doubtful whether his views can be maintained even so far as the northern part, and especially the rest, of Europe is concerned. What meaning are we to put, e.g., on the fact, that in the famous cemetery of Hallstatt, 523 graves of skeletons lie alongside of and among 493 graves of ashes, that both kinds of graves exhibit essentially the same articles, viz.: buried: weapons, utensils, ornaments, clay vessels, etc.? Or how are we to judge the fact that the Russian peasant of to-day who puts a handkerchief in the dead man's coffin (see above) gives as his reason the grossly material notion (which, according to S. Müller, really occurs only in the earliest Neolithic periods) that he does it in order that the dead man may be able to blow his nose?

The fundamental idea of all these gifts to the dead, from the most primitive times down to the present day, is that they were to give the dead man something with him that might be useful or agreeable to him after death. In this connexion it must be emphatically observed that, in depositing these things, the mourners were actuated not so much by definite conceptions of the future life, as by a custom inherited from their fathers. This much we may say, that at different places and at different times the fundamental idea underwent a process of sublimation, in so far as the gifts to the dead, once seriously meant, showed a tendency to change into symbols of love and remembrance. We can recognize this very beautifully in the graves of the Athenian burying-ground already mentioned (cf. p. 169), which was in use from pre-historic times down to the 4th cent. B.C. In the graves of the 'dipylon epoch,' which, as we have seen, show strongly the corruption of the primitive, the abundant gifts (weapons, pottery of all kinds, pots with meat and drink, and bones from bull-offerings) deposited in the graves were doubtless meant seriously, and intended for the actual use of the dead man. The graves—cremation as well as burial graves—between which no distinction can be made here in this
 respect. The men generally get nothing more than a few worthless vessels. But beside the women are laid their ornaments, beside the children their toys (cf. Brückner-Pernice, op. cit. p. 189 f.).

We have already said as the fundamental idea of all gifts to the dead the wish of the surviving relatives to provide for the dead man in a future life, whatever they might imagine it to be. We cannot here enter fully into the much-disputed question as to whether this wish was called forth by fear of or love for the dead man. We may be that there was a time when fear of the soul of the dead, and the intention of keeping it secure in the grave by means of these gifts, were the only ideas in view. On the other hand, we must imagine the family ties so well knit, even in the times of the early Aryans, that they cannot be thought of as lacking a feeling of love (however rude the manner of expressing it), which was naturally extended also to the dead. So we can only say that a feeling of timidity in reference to the dead, of fear mingled with love, was the foundation of the Aryan worship of the dead; and this notion is reflected in numerous testimonies (see below).

On the other hand, we must notice briefly another motive frequently supposed to underlie these gifts to the dead. This is the assumption that the act of venturing to deprive the dead of the property belonging to them in the eyes of God and of justice. It is all the more necessary to examine this view, because it best explains a number of facts which it is otherwise impossible to understand. Thus, in the first place, the idea was widely current in Teutonic law of 'the portion of the dead,' i.e., 'a share which belongs by right to the dead for his own legacy,' and which H. Brunner Z. der Savigny-Stiftung für Rechtsgesch. xix. (1907, p. 329) has as logically connected with the customarily mixed of the movable goods, which were burnt or buried with the dead man. If, therefore, the oldest usage affecting the rights of souls was that the dead should receive his entire possessions, the further inference is drawn (cf. Rolde, Psyche, i. 30 f. footnote 3) that in later times the idea naturally arose of commuting this right by means of a small symbolic gift. Thus is to be explained the coin, the obolus, which in classical antiquity was squeezed between the teeth of the dead. Generally, at the transference of an inheritance, many customs appear which indicate the notion that goods and chattels, from the point of view of God and justice, must follow the owner to the grave. In Old Russia (S. p. 522) when the coffin has been lifted to the wagon drawn by a horse, the relatives take leave of the dead man by kissing his forehead, but the new head of the house kisses the hoofs of the funeral horse, as well as those of the other horses, and sometimes those of all the cattle.

'The dead man,' writes Kothrievskij (op. cit. p. 211), 'could take all his belongings with him into the grave; so among the inhabitants of Manchuria, the new head of the house, as soon as the old one dies, goes to the house, to the buildling which has the house, to the trees, and to the domestic animals, and tells them that this one dies, as the former master is made into power of the new one, with the words: 'Your former master is dead; I am now your new lord.' The same thing is stated by Chapellier, Reipunci Laitasied, gtaentten Aufzeichnungen von dem Kreis Stattspaaten, Heidelberg, 1903, p. 36: 'Thus it was a pagan custom,' the account concludes.

Similar customs are also reported from Germany. In Michaelis's report of old Marburg, where the dead man has buried in the house, the new master goes to the cattle in the stable and to the bee-houses, and announces the 'Lief' and his taking over of the charge with the words: 'The master is dead; I am the master' (in letters of R. Heldmanner). Hessler (Historische Landes- und Volkskunde, ii. [Marburg, 1904] p. 132) tells of a similar undertaking of command on the part of the mistress.

Nevertheless, the present writer does not believe that the custom of gifts to the dead is made altogether clear by the series of ideas described above, however old they may be. In order to show this, it will in closing this section refer to one point from which it will appear that on Aryan soil, even in pre-historic times, people had not only thought about providing the dead man with such things as had been, or might have been, his property during life, as his sword, his apparel, etc.—but made provision beyond this for his well-being in the world to come. For our purpose, we may start from the custom, already touched on above, of giving the dead man his wife, or, if he had several wives, one of them, as a companion in the grave or on the funeral-pyre.

According to the evidence in Europe collected by V. Hein (Kulturgesch. der Wettin-Lauenburg, p. 585) and H. Zimmer (Altis Christiana Lect. ii. p. 152), there is no doubt, there is nothing among Scythians, Tartulians, Lithuanians, Slavs, and Teutons, and undoubtedly goes back to primitive Aryan times. For India, it cannot be said that Vedas or Brahmanas and Indologists do not doubt that, when the barding of widows makes its appearance in the 4th cent. B.C., i.e., we have to do with not an innovation, but with an ancient custom preserved locally even in Ved Times (cf. E. Garie, Vorarbeit zur indischen Kulturgeschichte, Berlin, 1903, p. 141 f., 'Witwenverbrennung'; Kieser, Indian Census, 1901).

All these testimonies are concerned with provision for the married dead. What happened in the case of the single man? The present writer has tried to answer this question in a little monograph on Totenhochzeit (Jena, 1904). In this he starts from the custom, attested in Attica, of placing on the grave of those who died unmarried a λύραφος, i.e., a certain kind of water-pitcher, which at the same time played an important part in marriage-ceremonies, as the water intended for the bridal bath of the young couple was brought in it. It is only by comparing the Greek customs with those of other Aryan peoples that we can discern the meaning of this custom. We then find that the custom of placing a water-pitcher on the grave of unmarried people represents the symbolic preservation of a custom which is still very wide-spread among the Slavonic races, in terms of which a ceremonial imitation-marrige was celebrated over the graves of unmarried men and maidens, during which a bride and groom was there and then assigned to the dead person.* The third and last stage of the custom under discussion is presented to us in the accounts of the Arabs regarding the oldest Slavonic and Russian conditions of life. According to them, not only, as has been mentioned, was the wife of the dead married man given to him as a companion in death, but the single man too was, after his death, married in regular fashion to a young girl, who also was therefore doomed to death (cf. Masudi, Les Pratiques d'or, ed. Barbier de Meynard, Paris, 1861-1865, ii. 9, n. 7.)* One of these 'death-weddings' is described in detail by the Arab Ibn Fossan (text and translation ed. by C. E. Fühlin, St. Petersburg, 1829). But it follows from isolated traces of the Old Church Law that the practice of giving a wife to a dead husband was prevalent also in Greece in pre-historic times (cf. Pausanius, ii. 21. 7), and in the story of the Trojan maiden Polyxene, sacrificed at the grave of Achilles, there exists also on classical soil a case of the later Christian notion of 'death-marriage.'

*Remains of this custom are found also in the West. Thus in Hesse the collus of single men who have died must be accompanied by 'wretched girls,' who must wear mourning for four weeks, etc. (cf. Hessler, op. cit.)
pass, to take as our starting-point the Lito-Slavic and not the Indian conditions. Here we shall deal with (a) the designation and the manner of conceiving of the worshipped ancestors, (b) the times, (c) the places, (d) the ritual of the worship of the dead, (e) the general significance for the history of culture, of the worship of the dead in early times.

(a) Designation and Manner of Conceiving of the Worshipped Ancestors (Admission into Their Number).—The White Russian peasants designate those to whom worship of the dead is offered as dzyady (Russ. дзяди, which while the Great Russians use the term родители, lit. 'parents'). Both expressions, but especially the Russian родители, родители, have now assumed such a general meaning that they can be applied to any deceased person, even children of both sexes (cf. S. p. 594, footnote 1). The Gr. γεώργιαι and родители (cf. parentes, parentatio) correspond to the Great Russian expression, while the technical designation of the worshipped ancestors in Sanskrit, pitaras, literally means 'fathers'.

A still further stage in the upward direction than the White Russian дzyady is represented by the Gr. πατρόνες, 'great-grandfathers'. These are the ancestors to whom the inhabitants of Attica, at the celebration of a marriage, pray for the blessing of the children (cf. E. Rolde, Psyche's p. 247).Thus we get the designation of the ancestors as 'grandfathers' and 'great-grandfathers', and it is not a matter of chance that in the Indian ritual the offering of cakes and water is dedicated to these three:

'To three (ancestors) the water offered, to three is the пиyda given, the fourth (viz. the descendant) offers it (viz. пиydi) to the three; the fifth has nothing to do with it' (Anax. i. 158). The same way is taken by the Indian children of the fathers in blessed by the Gr. γεώργιαι and the Lat. parentes; cf. lexm. viii. 56: γεώργιαι και πατρόνες καί απάγιαι καί πατρόνες καί αγαθές και καλές καὶ κακές καὶ καθότως γεώργιαι και πατρόνες καί απάγιαι και αγαθές καὶ κακές καὶ καθότως και αναμνήσεις, and Festus, p. 231: parentes vulgo pater et unter appetulator; sed ne vivas prudentes et praecoxes parentes nomine appetulator ducunt (cf. A. Kaeck, Die Steinzeit bei den Osternern, p. 6).

These ancestors are everywhere considered as real and powerful beings, watching especially over the welfare of the family, as may be seen from the designations applied to them, such as ἄγαθος, Δια πατρόνες, Διε πατρόνες, White Russ. заядь дзыды, 'the sacred grandfathers', etc., as well as from the wording of the prayers which are addressed to them. Thus the following is a very characteristic report with regard to White Russia (S. p. 593):

'On every possible occasion the peasant expresses his worshipful remembrance of his grandfather by offering a daily prayer, in conversation in the family and in company, as well as on the different festive occasions. There are, too, weekly considerations and a complete worship for it. He is persuaded that all good fortune in the farm and in life was produced by the continuous efforts of his ancestors, and is sustained by means of their blessings and their prayers to the Supreme Being (the latter is a modern idea). It was they who laid out the present settlement and erected the buildings on the site which still belong to the community. There the grandfather dug a canal, there he broke up the land and made the farms. There the grandfather received the first apples and the grandfather's axe, the grandfatherleighs with his grandmother's sickle. In the dowry of the daughter there are the 'safans', the necklace, and even the wooden shoes of the grandmother; the spirited black horse is descended from the grandfather's mare. In a word, just as these individual objects speak of the ancestors, so do the whole connotation of life, which has changed little since their time, call them daily and ever hourly to remember them. It is to them therefore that the peasant turns in all the necessities of daily life. Thus the following is a prayer used in India at the пиydyaijya:

'Honour, Pitaras, for your comfort, honour for your living, honour for your dying, honour for your continued existence, honour for your life, honour for your vigour, Subho! to you, honour to you, Pitaras, honour; this (viz. water) is yours, Pitaras, this is other to your comfort. Pitaras, who are here都是 quenched.' Thereupon the husband gives
In accordance with this signification of the help of the ancestors in producing children, we can understand why the Attic maiden, before her departure from her parents’ home on the occasion of her marriage, bound to offer a sacrifice to the souls of her ancestors (cf. E. Santer, Familienfeste der Griechen und Römer, Berlin, 1901, p. 96).

Frequently these spirits of ancestors are designated as the ‘good’ and ‘helpful,’ especially in the lat. månum: Old Lat. månum, ‘good.’ This may, however, have been intended more in a poetologic sense, in the same way as, e.g., the avenging goddesses are called the ‘Enménides,’ in order that they might be good and gracious; for, in general, the souls of ancestors are regarded as very stern and easily roused to anger.

The inhabitants of White Russia are filled with dread (8: 57, 65) ‘lest at the commemoration festival any mistake should be made. Then, to speak in the language of the peasants, the feast would be no feast. It would mean that they did not respect the memory of the person in whose honour the feast was given; it would mean that the dead, as they would follow at once family discord, death of cattle, failure of crops; in short, mountains and hills would fall upon them’ (Kohde, 124).

Woe betide those who do not really slaughter the cattle they have appointed for the commemoration feast, or who do not first taste the food which is served. In all these ways can the wrath of the world come, and is manifest as a great punishment.

The same ideas are to be found in India: ‘Do us no harm, ye fathers, if in accordance with the way of mankind we have committed any fault against you’ (Rigveda, X, xx. 6); and in the Såndhhaka, too, the offerer, immediately after the offering of the calsam, entrusts his ancestors with the further care of his affairs: ‘Let the fathers not be hard’ (see further in Caland, Ahnenviit, p. 176 ff.). It was exactly the same thing that was meant in Greece by the saying, that the heres (‘the spirits of the dead’) were thérègýra (‘prone to anger’) and ‘churchmen’ of the saýx ét (cf. E. Rohde, Psyché, 1, 246). In Italy, however, according to Festus (p. 237), they hung up to the Larcs at the Compitáli dolls resembling human beings, at vivax persistent, pilus et simulacrum content.

The dead man does not, immediately after his death, the day of his decease, return to the house of the dead; but the ‘Larcs’ of those ancestors who are worshipped with such anxious dread; on the contrary, fixed ceremonies are necessary to elevate him to the rank of the ancestors who are worshipped as divine.

In India, the deceased who has returned from the burning-ground, ‘one of the old women takes a piece of bread, turns towards the door, and, fixing a copper coin on it, speaks the following words, with which she introduces the dead man into the general list of her departed relatives: ‘Grandfathers and grandmothers, fathers and mothers, uncles and aunts, take our dead father to yourselves, live there with him in friendship, do not quarrel, etc.’’ In addition to that, it is a widespread idea that for 40 days after his death the deceased has no rest in his grave, but ‘visits his own house as well as those of strangers, and is able to inflict all kinds of damage to anyone on whom he chooses to fall; he makes hostile relations during his life; and, in fact, he can do this all the more easily as the latter are deprived of the power to take vengeance on their adversaries; forthright vengeance is inconsistent with his immaturity, is invisible or comes forward in the form of different sickness—from which he gives them ample scope to inflict all sorts of injury on his enemies’ (8: p. 57). Festus also believes that for six weeks the soul of the dead, every 24 hours and every 7 days, flies into the peasant’s hut and drinks water from a vessel, which is set out for the purpose and filled to overflowing’ (8:3 p. 559).

A corresponding idea is prevalent in India, namely, that the soul of the deceased does not enter at once into the world of the dead, but rather wanders to and fro as a spirit or ‘ghost’ (Skr. práta, lit. ‘the departed’). The spirits have also the inclination to return to the dwellings of the relatives, where in the same way ‘food with a jug of water’ must be given to them. In order to deliver the deceased from this condition the Indians adopt them among the Pitaras, definite ceremonies were necessary, the most important of which was the Sappindhika (‘Saýpa-making’), which took place usually on the day after the first anniversary of the death, but often earlier (cf. E. Caland, Tosaná-imë, p. 22 ff., and Oldenberg, Die Religion des Veda, p. 554 f.). See Ancestor-Worship (Indian).

We shall have to speak afterwards (3 and 4) of the places where the spirits of the ancestors in the earliest times were supposed to live, and of the later transformation of the views on this subject. We have still to mention here that these spirits of ancestors show a tendency in different territories, usually in connexion with the cult of the hearth-fire, which came more and more to the front (cf. below, I, 2), to develop into tutelary house deities, localized in the home.

The same is true of the Gr. ἀγάπτος σάιμος (Rohde, Ι, 250), of the Lat. de pèntes (those within, cf. pénus, penurram), and in our family circles, of the kofis (cf. Kohde, 124). ‘Surround the house:’ of Old Nor. kofí, ‘hut,’ A.S. cēfy, ‘room,’ M.H.G. kobe, ‘shed, house’ (Gr. γύρινα, ‘underground dwelling’); A.S. cēphode, cēphode, larver, larver penetan, larver doned (‘the one in the house’); and of many similar names.

In this connexion the worship of the house-snake, found among several of the Aryan peoples, can be explained. Nothing is more frequent in Greece than to imagine the soul of the deceased in the form of a snake (cf. Rohde, Psyché, 2, passim, and artt. on Soul and Spirit), which seemed especially suitable for this on account of its winding motions, partly on the surface of the earth and partly under ground. Based upon this idea, a strongly marked domestic snake-worship has been developed among the Lithuanians, regarding which Menecius (see above) gives the most detailed account:

‘Præstres Lituani et Samagitus in dominis sub servitu, feci in angulo vaspurato, ubi mensa stat, serpentibus fovent, quos numinis instar coleant, certo simo tempore praebuit sacrifício sacrilegum exorat ad mensam, iterum et iterum, prætoriae condimenta, et supera mensan assiduit: ubi postgam obsequia serpens delabarat, rursus discendit, sequte abdini in cavernis, serpentibus discum, iterum et iterum, serpens humani aequum apparebat, et ubi proximi conspectum in spiritus serpens convenerat, aequum applicavit, ubi serpentibus haud destinatis, tum creautum se anno illius sacrificii, ignem eamque in angulo domus serpentem habuit, cuius serpens habuit et sacrificium fecit in forma serpente.’

At the same time the Lithuanian snake-worship stands among the ancient Romans (cf. Wissowa, Religion und Kultur, p. 155), the worship of the house-snake, which is consecrated to the genius of the house, and which by its sudden appearance foretells the coming destiny of the house. This is known as the Feast of the homely spirit (Diis Zemelumare), and among the Romans, as the Feast of the Anatoly (Lituaniae, etc., p. 31). Serpents celebant: inter familiacus subique in angulo domus serpentem habuit, cuius serpentem Dekel serpentem habuit, cuius serpentem de omni securi.

At the same time the Lithuanian snake-worship stands among the ancient Romans (cf. Wissowa, Religion und Kultur, p. 155), the worship of the house-snake, which is consecrated to the genius of the house, and which by its sudden appearance foretells the coming destiny of the house. This is known as the Feast of the homely spirit (Diis Zemelumare), and among the Romans, as the Feast of the Anatoly (Lituaniae, etc., p. 31). Serpents celebant: inter familiacus subique in angulo domus serpentem habuit, cuius serpentem Dekel serpentem habuit, cuius serpentem de omni securi.
ized into the tutelary spirit of the master of the house."

(b) The times of the worship of the dead, the most important of which already mentioned (p. 20), which followed immediately after the disposal of the corpse, the feasts in commemoration of the dead in White Russia may be divided into two main classes, special and general.

The former are celebrated in the villages of the family and not at the tomb of an individual who has died in the course of the year, and they take place at stated intervals, though not on the same day. They occur in the same months as the 3rd, 6th, 9th, 26th, and 40th days, reckoning from the day of the burial, during a period of six months, and periodically thereafter in the same months in the year till the 9th, 3rd, 9th, 26th, and 40th years (godotščina, "anniversary"). These commemoration feasts take place without the co-operation or blessing of the Church. This is especially the case with the so-called second class, or the general commemoration festivals, held by all on the same days, which have been fixed from the remotest times by the Orthodox Church, and are never engaged in without her consecration. They are held from four to six times in the year, and for all relatives at one and the same time, no matter whether they have been dead for a longer or a shorter period. In the whole of Russia these commemoration festivals are held on Saturdays, and called White Russian dzity (the same name as that of the worshipped ancestors themselves), in Great Russia "parents' Saturdays" (rozdolotkaja soboly). But the raduččice is for the most part celebrated on the Tuesday of the week following the first Sunday after Easter, and this commemoration is also observed in three seasons of the year, into those of spring, summer, and autumn (8, 14, and 22).

These Christian institutions correspond to the old Lithuanian heathen conditions. Menecius has the special commemoration festivals in view when he writes: "Caterum cognati celebratu convivia die a funere tertio, sexto, nono et quadraginta die a funere general festum ad mortem celebrantur. A festum describit Laskovsky in Leidici, de Divis Sainianarum, p. 50:"

"Caterum feris (the beginning of November, at the festival of the sea-god, Novodevich, and the festival of St. Basil the Great, Novodevich), a secret feast, the feast of the dead, is celebrated. He appears under the name of the deceased invitator: totdenque sodilia, manda, indulia, quo invitati furent, in tugurio eas in ad rem preparato ponunt; mortui, in manus deorum, vel in manus deorum, dehinc in sus magnas reversus triduum compunt; quo exacto, illa scinna in sepulchris, quosc perius relinquunt; tautem eliam manibus valedicunt."

Another very interesting festival of this kind is mentioned in Lasicus, p. 51: "Silenusvaves festum est facundum, ad quod quidem Exagulis ilia vocant; Veni cum mortuis facundum nobilium manum atque manu; Veni cum mortuis nobilium manum sedens."

Another celebration of this kind is mentioned in the Roman novena, i.e. meals which were offered to the dead at the grave on the third and ninth days after interment. In Athens we have likewise the paradar (which was also at times celebrated in Rome), when bread and wine were offered at the grave thirty days, a date which appears again among the Lithuanians, at least in so far as the widow must mourn for thirty days at the grave of her husband.

Aryan: "Usor vero tam oriente quam occidente sole super extincti coniugis sepulcrum sedes vel lacens lamentatur deibus triginta."

Then both in Greece and Rome, in addition to the paradar, in the day of the dead or the burial (White Russ. godotščina), an innovation appears in appointing the birthday of the deceased "Of for a full account of snake-worship, F. S. Kraus, Svetlo, Geburt im Wagen."

In the so-called godotščina, the "lord of the house," the other godon, "lady of the house." Each dies at the same time as the master of the house, or the mistress, as the case may be.

(xv.) as a regular commemoration festival in his honour.

Among the general festivals in honour of the dead, the most important of which previously mentioned in Greece is concerned, is the close of the Anthesteria festival in the spring, while in Rome we have the nine dies parentales from the 13th to the 21st of February, the last of which is called Feralia, on the 23rd of December the great State festival of the Larentia, and on the 9th, 15th, and 21st of March, the Lusoria, all three named directly from the spirits of the dead (Feralia from *divus, diviti, above, p. 15; Larentia: lex laris, cf. above, p. 24, footnote; and Lemuria: lenuere, *'larve'). A later general festival in honour of the dead, though not a public State feast, was the Rosarium, which in Christian times acquired a significance far beyond the land of its origin, and among the great majority of Slavs has led to their designation of the Whit Sunday festival (rabudni, Lat. pascha rustica), the Warde Fowler, Roman Festivals, London, 1899.

With regard to the ancient Tventons we have not much reliable information. It seems that they held commemoration festivals for the dead on the 3rd, 7th, and 30th days, and on the anniversary of the death. But it is also possible that they held every year a general feast for the dead took place (cf. R. Kügel, Gesch. der deutschen Literatur, i. 1, 55, and E. Mosk, in Paul's Grundriss der germanischen Philologie, iii. 391).

Lastly, referring to the Indian times for the worship of the dead, we are supplied with the same detailed information as we have about those of the Litu-Slavs. The time of the uncleanness of the relatives after a death lasts from three to ten days. During this period libations of water must be made, with grains of sesame must be offered to the deceased either daily or on the 3rd, 5th, 7th, and 9th days. Then on the 11th day the first sacrifice (brahītha, see above, p. 239) is offered to the dead, and thereafter every month (thus every 30 days) on the day of the death and on the anniversary of the death itself sacrifices are offered to the ancestors (though the conditions are more complicated than they appear from this short summary). There were also in India real All Souls' festivals, among which the Ashutu festival may be specially mentioned (cf. For details, below, May 4).

If we glance at the details before us, we see that a significant part odd numbers play in the fixing of these dates for the festivals in honour of the dead; and, in fact, it is frankly avowed in India that the odd numbers are sacred to the worshipped ancestors. The same thought, however, permeates the White Russian ritual, in consequence of which, e.g., the number of foods offered at the commemoration festivals must invariably be odd (cf. Calvin, Totonvererung, p. 23, and Sehn, p. 590, 611, etc.). Then among these odd numbers, the number nine comes very prominently to the front, which seems to represent the three days period between death and interment (funeral feast) taken three times. Perhaps the 10 days' period of uncleanness or of mourning of the Indians may be conceived of as a nine decaday rounded off. The number 30, which also occurs frequently, would then be a triad of such decaday rounded nines (cf. A. Kaege, 'Die Neuzahl bei den Ostarischen' in the Philologische Abhandlungen für Il. Schweizer-Sidler). It is, moreover, worthy of note that the farther back one goes and the more primitive the state of culture, the greater is the number of these memorial festivals. A White Russian peasant can thus, according to the details given above, make the number of special and general festivals for the dead mount up to several dozens in the year.
(c) The Places of the Worship of the Dead.

The nearest and, so to speak, most natural place for the friends to serve up the dead man's feast for him, and to eat and drink together with him, is the neighbourhood of the grave where the body has been laid. This is still the custom in great parts of Russia.

'After the close of the banquet (in the house) they all repair to the burying-ground, playing with those voulks "vibly," and Barney. There each family pray at the grave of the relatives for the peace of their souls. Then they eat and drink, pouring out a vessel of wine, and then before they have finished, they each take a glass of wine on their way. At the spring-dejny, after the public worship of the church, they invite the priest, in whose company they walk, and then also make themselves a funeral banquet in the churchyard, partaking together of bread and food on the way. After they have reached their destination they all seat themselves on the burial-mound instead of the bench, and during the year have completed the laborious days of their life's journey. Here they repeat their prayers for the blessed peace of their souls, as "Andul Panfa" ("Angel of the Lord"), than they begin to weep and lament, and end with a small decaeb on honour of the dead. The under methods of each dish are in each case laid on the grave for the soul of the dead. After the glasses of brandy have gone round the circle several times, the musical mood of the assembly gradually changes, as into a joy's one. While some of those present sob aloud, others laugh and joke. Some throw their heads over the grave of their beloved dead, and sing in a subdued tone melancholic songs... In order to calm their sorrow, these taking part in the celebration, are accustomed to their companions at the grave. Ultimately these memorial feasts and in the lamentations turn perispermically into songs of joy' (8. p. 605ff.).

There were also large banquets, which were likewise celebrated at the grave (see above, p. 29f.), and at the Roman solemnia mortis (cf. Marquardt, Römische Staatsverwaltung, iii. 208 ff.), which were accompanied by feasts at the grave, as well as at those old German oblationes, 'quae in quibus oboedientia facta sunt, and the ancient German expression, as which Burchard of Worms, as late as A.D. 1000, protested, were no doubt mutatis mutandis identical with those just described. It is not improbable that the funeral banquet also (see above, p. 20f.) took place in this instance at the house of the deceased, but at the grave itself.

Thus Jordanis relates the following with regard to the funeral obsequies of Attila (cit. 49): "Postquam taliuis lamentis est defunctus, streproc (probable a Slavic word, which signifies in Russian, Polish, and Bohemian "food," "meal," and in Old Bohemian also means "funeral banquet")...; et Milcholz, Etymol. Worterbuch der slaw. Sprachen, Vienna, 1871, i. p. 403, "sira," a super trumultum eius, quam appellavit ipse, ingenti cumulaciones concordaverat; and as already said, the Greek expression for a 'funeral banquet,' could be most easily explained if the sacrum took place, as among the White Russians, round about the burial mound, as the ancient memorial feast for land. The Old Russian names for this commemoration festival was trizna, which has not yet been etymologically explained. Moreover, the trench, in which the meals are frequently offered to the dead, may be regarded as a symbolic indication of the grave. This is what we have in ancient India, according to the description of Gobhila: 'Then three trenches are dug out, one span long, four fingersbreadths wide, and the same depth. Thereupon darda grass is scattered on them.' On this darda grass, then, with many varied ceremonial actions, the cakes are laid down for the three ancestors, father, grandfather, and great-grandfather (cf. Oldenberg, Die Religion des Veda, p. 549 f.). The great significance belonged to Rome in the mundus, a trench situated at the centre of the town, and opened on certain days for the purpose of receiving sacrifices for the dead. This trench played the same role in the worship of the inferi as the altar played in the cult of the superi. Such a mundus was probably also the 'grave' of the Latins, in which at the Larentia a sacrifice to the dead was offered (cf. Wiswowa, Religion und Kultus der Römer, p. 157 ff. and Wissowas Erdm. Zeit. p. 12 f.). Ulysses, too, as is well known, when in the lower world, offers his libations in a trench.

A third place at which the dead were often honoured with food, drink, and all kinds of festive celebrations was the cross-road. Among the Slavs, Cossacks of Prague bears witness that, about the year 1092, Prince Bretislav ii. issued the following prohibition:

'Item seputulata, quae solent in siva et in capite, atque cenas (or cenae) cit. KoljaRovski, op. cit. p. 102 ff., quo ex gentibus ritus fatuum, ut et in proiectis inter alia insanuum passationem, item et locis profanos, quo super mortuos noscimus censes maeces an indull faciunt larvis hacthando exercerant.'

A feast similar to that here described was the Roman Conpitalia, which was held once a year with debauchery and merry-making (ludi) in honour of the dead on the 29th of March (cf. L'Ann. de l'Inst. de l'Arc, 1871, i. p. 149 f.), but in Greece also it was customary to throw down at the same places offerings to the souls and to Hecate, their mistress (cf. Santer, op. cit. p. 120). In India, in the same way, the belief is widely held, and of extreme antiquity, that cross-roads and dwelling-places of spirits are identical (cf. Oldenberg, op. cit. pp. 268, 562; and Crooke, Popular Religion and Folklore of N. India, London, 1896, i. 77 f., 165, 290). The reason for this idea has been sought in the fact, which has been expressly attested at least in the case of India (cf. Oldenberg, p. 562), that the crossing of great main roads was a favourite place for burying the dead. In this way the worship of the dead at the grave, at the trench, and at the cross-roads really amounts to the same thing. In opposition to this, however, the Hindus have a brancce of the dead, with gifts of food and drink, in the dwellings of the surviving relatives, which will be dealt with in the next section.

(d) The Ritual of the Worship of the Dead.

"It will here be advisable to pass over a considerable number of individual peculiarities, and to confine ourselves to the most important features.

(a) The summoning and dismissing of the ancestors. It is a prevailing custom to call solemnly on the ancestors at the beginning of the commemoration feast, and to dismiss them as solemnly at its close. We are again informed most accurately with regard to White Russia:

'All seat themselves at the table, which is set with articles of food, among which beer and spirits are to be found, and the one who reads the prayer utters the following words: "Ye sacred grandfathers, we call you, Ye sacred grandmothers, we call you there. Here is all that God has given. Ye sacred grandfathers, we implore you, Come, fly to us!" At the end of the meal they rise from the table and dispense, after having taken of the heavily inhabitants in the following way: "Ye sacred grandfathers! ye have been silent, Ye have eaten and drunk, Now fly away home again! Tell us, do you wish anything more? But better is it, that ye fly heavenwards. Akasha, akasha! (a sound which they make to scare away hens and crows);" (S. p. 506 ff.).

The summoning as well as the dismissing of the ancestors is accompanied by extraordinary customs. For the purposes of the former they place a cooked pig's, sheep's, or fowl's head on the table. After the master of the house has got the guests seated at the commemoration table, he takes in the one hand a cake rolled up in a pancake, and in the other a plate of bread, and carries these three times round the animal's head which has been placed on the table, calling aloud by name not only all his dead relatives and acquaintances, but also all who have ever lived on the piece of ground belonging to him as master of the house, and invites them to the meal at the banquet. "Come to this banquet." (S. p. 602 ff.).

At the end of the feast the ancestors are scared away.

"The master or the mistress of the house removes the table away from the seat, and sprinkles the absence of the deceased with water to the door with water, saying at the same time, "If you have not eaten or drunk enough, go to the priest's court." With these words the animal returns to heaven, and is depicted as such. (S. p. 613)."

A custom very likely this is described by Menocius, who is also acquainted with the solemn invitation to the dead ('ad qua convivia animam defuncti invitant praecipue ante laumnum') among the pagan Lithuanians:
Veracito praelito sacrificia surgit de mensa, ac scopia donum purgat: amasue nec nocturnum cum pulvere eici, tamquam pueras et viribus, ut in domo recordant; odiosis ac bibistis animis dilecte, ite fors, ite fors.

The invitation and leave-taking of ancestors are attested with regard to the Indian Pindapitja-gajana.

If depolling the pippala, he (the offerer) utters the words, "Ye Pitras, may this be savoury to your taste, may each one enjoy his share." Afterwards he dismisses the Pitras with these words, "Ye Pitras, in an Indian manner Pitras, to your wishing, always, give us riches and good fortune, grant us abundant possession in men." (cf. Palgrave, "Stories from the Ganges," p. 247). When in Greece, on the other hand, there are to be found survivals only of the final exulsion of the souls. In the latter there existed the saying, which is at once proved to have been very ancient by the use of the word khres for xoii (cf. above, p. 15): "Ha, sa, frgy, &c., the food of the dead is over" (see J. E. Harrison, Proleg. to the Study of Greek Religion, Cambridge, 1903, pp. 35, 165, 652).

In Italy, at the Lemurian, the spirits of the fathers were driven away with the words, "Manes exte paterni" (cf. It. Older, Storia, i, 576).

(3) The feeding of the summoned ancestors.—Concerning the forms in which the 'grandfathers' were entertained by the White Russian peasants, we are also provided with full information from Seiji's materials:

"The meal which is laid with Lenten food, all the guests sit down along with the family of the deceased. Before the meal the master of the house has laid out, from each of which the guests takes four spoonfuls: out of these he pours out on the table beside him, the other three he serves to himself and asks the guests to nap and leave nothing behind. The guests must leave over a part of each dish (of which there are not few) to appease the deceased, that he may not rob his relatives of their earthly goods." (S. p. 555).

"The supper begins with porridge, the first spoonful of which each member of the family is served to directly on the table cloth, and these remain the whole night on the table, although all the other dishes which have been served to the family remain on the supper. This is done, the peasants say, on account of the fact that the deceased comes during the night and devours all that is left on the table." (S. p. 602).

"The master of the house commences the feast. He takes a spoon with fawnal and a small piece of bread and pours it out on the table, and then he eats three spoonfuls from this dish. This is repeated in turn by all the members of the family who are present. Then the khasamut is removed from the table. From this age, each guest takes as much as he pleases, provided that he first of all set aside a small piece of each dish for the family of the deceased. From these little bits a considerable heap of all kinds of mishmashe is, by the end of the supper, formed on the table." (S. p. 613).

"At the time the food falls on the seat or on the floor, they dare not lift it up. "That," they say, "some one will eat it." (S. p. 611). Also: Meirenosis: "Si quid feceris in terrae mensa, id non teneas."

"After they have served the dishes, they direct the guests to separate and go to their homes, where they seat themselves over the mezats, on which the dishes are placed, and the food. They throw the remains of the pancakes into the meal. Each member of the family (with the exception of the children) must invariably sup three spoonfuls of this dish, and they eat it in the mixture they leave intentionally in a soup-bowl for the ‘grandfathers.’ After the pancakes they eat the other prepared courses. When they have poured and praved the pancakes down, they sleep, the remains of the mixture on the table. The remains of the other foods they divide out into small dishes, which are placed in the same way as the pancakes, and there beside the window. Bread and spoons are left on the tables in the same night. The doors in the houses are left not locked during this night, but are left a little ajar, so that the dead may come in." (S. p. 605).

From these statements three points are clear: (1) Food and drink are thrown out on the table for the ‘grandfathers’ during the meal itself; (2) That which falls under the table belongs to the dead who have no family or friends; (3) The remains of the food and drink are placed after the meal in the yard, which are set near the windows or on the tables to be partaken of by the ‘grandfathers.’

All this can be proved in classical tradition, although only in fragments. Certainly the barbarian custom of preparing the meal for the dead on the table itself (as at the grave) has fallen into abeyance. Among the Greeks, points (1) and (2) are combined into one, in such a way that they believe that whatever falls under the table during the meal belongs to the dead in general.

The third point finds its analogy again among the Greeks, in the fact that on the last day of the Anthesterae festival, it is customary to place cooked fruits and seeds for the dead in the χορΗα, after which the day was named (cf. Rohde, "Psyche," i, 238).

(4) The food of the dead.—Like all the details of the ritual connected with the meal of the dead, the kinds of food and even the courses which must be placed before the dead are fixed in detail. With regard to the first of these, the cakes (cf. above, Lith. stikes Velionia paniadiza, 'the wafers which Veleon like'), and also White Russ. kljeki, the left over from offerings to the gods, play an important part among the Lithuanians.

"The courses at the commemoration meal were as a rule as follows: Λιατος (wheat or barley grains) prepared with ordinary or lenten butter, in a dish.ROUTE 3 (in most cases made of barley with a piece of haw in the inside), cakes, and porridge. This was placed on the table at the funeral in once beakel athenusy to the house of the deceased m. kljek, 'to eat cakes'" (S. p. 554). At this table, which is placed to the left of the couch, there are even proverbial expressions referring to them to be found among the population of this place, such as "he was at kljek" (he was at the table); or conversely, "he is at kljek" (he is at the table). If a person is dangerously ill and there is no hope of his recovery, they say: 'he is at kljek jenni t., 'he will very soon to be eating cakes'" (cf. S. p. 560).

It is hardly necessary to emphasize how closely this corresponds to the Indian pippala, which is so characteristic of the Indian worship of the dead, that sopippala, 'cake companion,' has come to be the technical expression for the spirit which, whose duty it is to offer to the three ancestors (father, grandfather, and great-grandfather).

The question, what dishes were in the earliest times served up to the dead, would require a special inquiry, which would also have a general interest for the history of culture, as helping to determine the most primitive food of the living. In the meantime we can refer only to two undoubtedly very ancient foods of the dead, viz. honey and beans.

The former is the most important ingredient of the White Russian kombut (see above): "This is usually cooked with bruised grains of peeled barley or wheat, which are afterwards stirred in spita, 'honey-water'" (S. p. 555). Thus it happens that the Kombut (a Gr. foreign word, as we saw) is called by its vernacular name spita (p. 612), and on comparing this with the Skr. suti, 'soma-juice, soma-offering' (lit. 'pressed,' root su), we may venture to recognize in it a word derived from the primitive Aryan vocabulary, just as in the more frequent expression for honey and meal, Skr. madhak, Gr. μαδδα, O.H.G. mato, O. Slav. meda, etc. The Indian food for the dead, which was offered at the śradhhas, rice-soup and honey, corresponds exactly to the White Russian kombut.

Thus speak the Pitras: "May the person be born in our family who will offer to us on the 13th day rice-soup mixed with honey and ghī!" Forcated with hunger and making known their own sins, they offer to the Pitras of their branch, with their grandchildren and their sons and grandchildren" (cf. Caland, "Totenverehrung," p. 44). But in the Greek and Roman cult of the dead, honey is a favourite food devoted to the powers of the under world (cf., for details on this, Seuter, op. cit., S. 84 ff., and Marquardt, "Stoicverwaltung," 111, 299).

With regard to the beans, we may refer to an exhaustive article by L. von Schröder, "Das Bohnenverbot bei Ilythugas und im Veda," in WZKM, xx.
187 ff., in which convincing proof is brought forward that the above-mentioned word, whose Aryan name appears in the Lat. fabae = O. Slav. babá, Alt. babi, was used even in primitive Aryan times as a sign of respect for the dead souls (see J. O. Frazer, Pansæus, iv. 240 f.).

It is also to be noticed that in the Polish-Russian province of Pintschov (cf. Kotjárepski, op. cit. p. 255) the combination of these two foods of the dead, honey and beans, is attested: 'The foods at the common meal were honey and beans and pass which are cooked in honey-water.'

(3) The frame of mind of the worshippers (joy and grief).—According to Meinecke, the funeral and commemoration meals were celebrated among the ancient Illyrians in perfect silence: 'in his convivis quibus mortuo parentant, tactae assiduitate mense tanquam muti'; and also in India we are told: 'As long as the Brahmins eat in silence, so long do the macOS enjoy the meal' (cf. Winternitz, Was wissens wir von den Indogermanen? In Bildung zur Mäncher AZ, 1903, No. 259, p. 300). On the other hand, it is doubtful whether the Lat. silicium sum denotes the 'meal taken in silence' or the 'meal of the silent ones' (i.e. the dead) (cf. Osthoff, Etymologische Parergen, Leipzig, 1901, p. 42).

In any case the meal, or at least the chief part of it, was passed in a restrained and anxious mood, as is most vividly described by Sejn (p. 356 ff.) with regard to the White Russians:

'One can perceive that some anxiety fills the hearts of the whole assembly. The aged, who already stand, so to speak, with one foot in the grave, are at this time sadder and more thoughtful than the others. Not infrequently, when they have just raised the glass of spirits to their lips, they stop suddenly and do not drink, but listen to some unexpected noise, the meaning of the wind, or the rustling of a neighbouring tree which is casting off its last leaves. If the gate creaks, or the door moves, or the door-latch gets unfastened, or a half-broken pot falls, or some similar noise occurs—whatever the noise may be, they are instantly attracted by it, a belated moth or some similar insect should approach, all these things are regarded as undoubted signs of the visit of their dead grandfathers. Conversation comes to a standstill and consists only of single remarks, either concerning the certain presence of the dead and their share in the entertainment, or about their former life, etc.'

It is this frame of mind—this firm conviction that the deceased person is present at the meal—that led to the custom among the White Russians (and as well as in the Slavonic and Roman antiquity, of remembering the dead at the meal only in a friendly way: εὐδαιμον το οίτιν' ἑσθόν τοῖς περὶπτῶν τῶν τελευτήσαντων ἔτοιμον καὶ εἰ φάεται ἡμῶν (cf. Kohle, Phyletiké, i. 292, footnote 1).

It is thus the fundamental sentiment of the funeral and commemoration feasts is naturally a sad one, it is, nevertheless, quite as characteristic of these celebrations to show a tendency, before they are finished, to pass over to the opposite extreme—joy and mirth. The reason of this is, of course, to be sought in the first place, in the fact that the mourners in an excessive degree turn for comfort to spirituous liquors, which very soon take effect, while, in the second place, the conviction is widely prevalent that too many tears and too passionate and distant display of grief for the dead in the grave (cf. for details, Winternitz, op. cit.). In any case, it is a fact that, among all the Aryans peoples, the festivals in honour of the dead are wont to be brought to a close by games and dancing, trills of strength, masquerades, and music (cf. A. Mittag, Die ...). All this, however, rejoicing are contained in the following description from White Russia (S. p. 388):

'After the close of the entertainment, the mistress of the feast presides at the table, surrounded with cabbages-heads and 칰 the table. Every one has cabbage-stocks in his pockets. The person standing at the head of the table now takes a head of cabbage from his pocket, and, after having pronounced the necessary formula, all begin to fight with cabbage-heads and cabbage-stocks. When these are exhausted they begin to throw at one another whatever comes to their hands. ... It seldom happens that commemoration festivals pass without brawls. The ceremony of throwing or beating with cabbage-heads is accompanied by songs, masquerades, and dancing. Without these—the entertainment would come joy and consolation. That is how the White Russian commemoration festivals (Mortuary cabbages) are fundamentally characterized. For the student of comparative culture, however, this rustic play with cabbage-heads is fundamentally the same as the spectaculum admirandum which took place at the funeral of Attila, or the games at the pyres of Patriochus.

(c) The feeling of beggars.—In conclusion, we may mention the white-meal custom, in the White Russian service of the dead, of showing kindness to beggars on this occasion.

'Without them no single funeral or commemoration festival takes place. They take the place of the priest on this occasion. They are the songers, painters, and witnesses of the funeral. The poor are treated to food and drink, and receive bounding gifts, stream together to them in crowds from all directions' (S. pp. 309, 327).

The reason for this is perhaps to be found in the fact that beggars, i.e. cripples, the blind, the lame, and especially the weak-minded and idiots, being exceptions to the normal course of nature, have in the thought of primitive man something supernatural, and thus 'sacred,' about them, on account of which they can be regarded as representatives of the Company of the dead ancestors. It may also be owing to this idea that on Slavonic soil (cf. A. Brückner, 'Polnisch-lateinische Predigten des XV Jahrhunderts,' Archiv für slav. Phil. xiv. 183 ff.) the spirits of the dead are often thought of as něžci (O. Slav. řezňičci, i.e. 'poor little men' (demonium sacrificium orans, quae dicuntur boathye, remanentes ser denerequintes eis residuitates ciborum quinta feria post cenam')).

We are therefore inclined to believe that in this feeding of beggars at the White Russian festivals a primitive custom is preserved. As many of the beggars have already seen, the clergy had turned to their own account, by actually making it a rule that the pious should feed and clothe whole bands of Brahmins at the śrādhas. The service which is rendered to the Brahmins is really rendered to the ancestors.

(d) The general significance, for the history of culture, of the worship of the dead in primitive times.—It is not asserting too much to say that the entire social organization of primitive peoples rests on the principle of ancestor-worship. Its practice falls, in the first place, on the sons, and then on the more distant relatives of the deceased. In this connexion we find, among some of the individual peoples, definite circles of relatives: among the Indians the subandā, or 'sorcery-companions'; among the Greeks, the ἐγγονίς, or 'nearest'; among the Romans, the propinquii soborinum tenus, 'the relatives as far as the sobrinus'; and it is not improbable that even in primitive times there existed a notion of such a close kindship, the members of which were, in the first instance, under an obligation to present the sacrifice of the dead to their common ancestors. In his Reallex. der indogerm. Altertumskunde (see art. 'Erbrecht') the present writer has sought to prove that the 'next of kin' in primitive times were covered by the conception of the Indian sūpindā关系, and included those persons who had in common father, grandfather, and great-grandfather, or one of these ancestors, while in the case of the Gr. ἐγγόνη and the Lat. propinquii soborinum tenus, 'the relatives as far as the sobrinus' above were, in the performance of the duties of mourning, early joined by cognati and even affines. But in any case they must have been originally the same persons to whom belonged, besides the offering to the sacrifice, the right of inheritance and the obligation of blood retribution. Thus the idea of the deep and inheritance appear everywhere in
closest connection with each other. In India, such expressions as 'to be one's heir' and 'to give the funeral feast to somebody' (Skr. dyādyā, 'sharer,' 'heir,' and sīrūjā, 'sharer in the sacrificial cake') are often synonymous. The same holds in Greece, where, as late as his own time, the orator Isaeus (vi. 51) could say: 'The bones themselves have a son of a man, or this son of the sister of Philocteton, whom he has adopted, élaîn ólùōmovn kai étι tά μυστά iánaîn χέρυουν και εννεύουνα.' In Rome the principle of the jus patricium is accepted, nullus hereditas sine vicarii, but among the old Tonents also Heires must have prevailed that worship of the dead and inheritance were identical conceptions.

Linguistic proofs of this are supplied by the Old Norse expression: erf, 'heir,' together with a funeral word, der, 'burial-mound,' 'inheriit'; erf, 'inheritance'; erf-stólp, 'a funeral feast; erf, 'a wake,' 'funeral feast'; erf-stólp, erf-vard (A.S. erstárp), 'as heir'; erf-stólp, 'a wake,' 'funeral feast.' This alliance of worship and property was, at the same time, the real defensive and offensive alliance of primitive times, inasmuch as it, in the first resort, the duty of blood revenge (cf. Schrader, Reallex., art. 'Kinderrecht') for a murdered or wounded companion devolved; and since in those ancient times, in which as yet there was no State, but only families, clans, and tribes, it was simply this institution of blood revenge that afforded mankind that protection which in primitive times was only afforded by the primitive institutions and the State guarantee, the extraordinary significance of ancestor-worship and the circle of relations based upon it again becomes, from this point of view, quite apparent.

But whether it was a question of offering the sacrificial food to the dead in possession, or the performance of the duties of blood revenge, it was always on the sons, in the first instance, that the man based his hope. This explains the ardent desire for sons which appears undisguised in the prayers to the gods, and especially to those ancestor-spirits who had charge of the welfare of the family (cf. O. Schrader, Reallex., art. 'Kinderrecht'). There was no special desire for daughters, who were unfit for offering sacrifice to the dead, and were employed only in the domestic services (see above, p. 19 ff.). But sons who are to be fitted to perpetuate these religious and social duties cannot even in primitive times be begotten of any woman indiscriminately; they must, on the contrary, be born of a wife who has been solemnly brought into the husband's house in compliance with the religious laws of the two-inernoms of related aede were bound together by common places of interment (κοινά χώρα) (cf. Marquardt, Privilediern der Römer, 1870–82, p. 533; and Rohde, Psyche), i. 229, note 3). In the North, expressions like Nóu, in Norsk. ordbog, 'hir of the two-inernoms of related aede' were used in Old Norse, as in Greek, in this sense; and in Russia, dial. roditel'jekho mjesto, 'cemetery,' properly 'place of the ancestors' (on Russ. родител'jekho, 'ancestors,' see above, p. 23), point to the same custom, which is also confirmed by many facts of early historical research (cf. Reallex., art. 'Friedeii,' and M. Much, Mittheilungen der anthrop. Gesell. in Wien, xxxvi. 90).

Public roads and paths were places at which these tribal graves were by preference wont to be laid out, perhaps because they were in this way most visible to the individual, and that times and paths were regarded at the same time as boundary lines between the separate districts, which were in this way both made obvious and protected by the sacred remains of the ancestors. The custom is especially well attested in Greece and Rome (cf. Marguerat, p. 251, and I. Müller, Die griechischen Priedhölderin 5, 1839, p. 221) as well as in India (cf. p. 26); but according to Nestor's Chronicle (od. Miklosich, p. 7) the old Slavonic Radimici, Vjatich, and Sverjancs laid the times of their dead in small vessels and placed the na stolpe ("upon a pillar") beside the roads (cf. Kotljarevskij, op. cit. p. 123, who also refers to the fact that the Greek aronix has, in addition to the meaning 'boundary,' the significations of 'burial-mound' and 'funeral-pyre').

At these tribal cemeteries, situated at the sides of roads and paths, the souls of the dead were supposed in primitive times to dwell in the depth of the earth and in the neighbourhood of their graves. But as in the course of historical development (cf. Reallex., art. 'Kultus') of the families and the State, the survival of primitive times gradually increased to larger political unities, ruled over by kings, the idea became more and more natural of localizing the deceased in real realms of the dead, situated usually at a great distance, and further in the heavens, and at last, in the primitive times marriage was regarded as an unavoidable necessity, and bachelorhood as an almost unthinkable self-contradiction. So intense was this feeling, that, as we have already seen, the unmarried dead man was even after his death married to a wife for the life to come, with the observance of the full marriage ritual (cf. on this O. Schrader, Die Schwiegertrauer und der Hage-stolz, Brunswick, 1904, and Totenfeier in Jena, 1906).

4. The realms of the dead.—As the primitive Aryans lived together in families and clans (cf. Reallex., art. 'Familie' and 'Sippe'), we may assume that they buried their dead in families and clans. In Rome each gens had the use of a common sepulcrum, of which only the last two-inernoms of related aede were bound together by common places of interment (κοινά χώρα) (cf. Marquardt, Privilediern der Römer, 1870–82, p. 533; and Rohde, Psyche), i. 229, note 3). In the North, expressions like Nóu, in Norsk. ordbog, 'hir of the two-inernoms of related aede' were used in Old Norse, as in Greek, in this sense; and in Russia, dial. roditel'jekho mjesto, 'cemetery,' properly 'place of the ancestors' (on Russ. родител'jekho, 'ancestors,' see above, p. 23), point to the same custom, which is also confirmed by many facts of early historical research (cf. Reallex., art. 'Friedeii,' and M. Much, Mittheilungen der anthrop. Gesell. in Wien, xxxvi. 90).

If we turn northwards, we find, in the first place, among the Tera dāvāvātvarcors, 'the Gates who regard themselves as immortal' (Herod. iv. 39),
a kingdom of the dead belonging to the god Zalmosya or *Gebôlôga, to whom it was customary to send a messenger every five years, by throwing a man upwards and then receiving him on lanes and so piercing him to death. We have already (above, p. 257) seen the maintenance of the Lithuanian god of the dead Videnia, who, like Helge, was believed to exist. All the linguistic comparisons from which people were wont at an earlier date to draw conclusions as to the existence of such primitive ideas—as, e.g., Gr. *Kôrpôs=Skr. *áparava, sabala (a name of an Indian dog of the dead); Gr. Tópôs=Sk. *kôpôs (always date the name of a definite hall); Gr. Equnias (as leader of the dead)=Skr. ánd wspólnya (use of the dogs in the Indian world of the dead); Gr. *báras (as ruler of the dead)=Skr. *mrûna, and other similar comparisons—belong to the realm of beliefs that have long ago been given up by modern philology, as has been shown above (p. 13). Even the alleged agreements as to the matter in this sphere—as, e.g., that a certain resemblance is to be found between the Gr. *Kôrpôs and the two four-eyed and spotted dogs of Yama who guard the corridor to the tomb—have been refuted by the old concordance of convincing proof (cf. O. Gruppe, *Die griechischen Kulte und Mythen, i, 113; E. Rohde, *Psyche*, i, 304, footnote 2; Oldenberg, *Die Religion des Veda*, p. 538).

Thus we believe that the idea of actual realms of the dead, situated at a great distance from the graves of the deceased, belongs to the individual development of the separate Aryan races, although this development may have taken place in prehistoric epochs. In the same way, it seems to us that the separate races of the Indian peninsula and the individual peoples that the custom originated of burning the corpse and sending away the soul (which was thought of as 'smoke') to a distant land by means of the smoke of the funeral-pyre—a custom which, as we have shown above, stands in intimate connexion with this idea of a distant realm of the dead. If the first practice of cremation arose from still more primitive ideas—as, e.g., from the wish to free the living from the pollution which was threatened by the dead, or to keep the dead from giving evil spirits to the living—then the theme of the beloved dead—still it cannot be disputed that the conception of the flame as a female guide of the soul into a distant realm of the dead was one which, in the course of time, rose more and more clearly into prominence. This is most unmistakably the case in India, where, in an extremely realistic manner, the assistance is added, in the way of comfort, that at the cremation the meal organ does not burn, and that there are many women-folk in the heavenly world (Oldenberg, op. cit., pp. 544, 556). In Homer the only way to Hades is over the funeral-pyre, but the elect are 'translated' into Elysium, even when still alive. Among the Gauls (Diodorus Siculus, v. 28) it was usual at a cremation to lay letters on the funeral-pyre, addressed to the departed relatives. These were supposed to be carried along with the soul of the cremated dead into the realm of the shades. But a Russian expresses himself more unservedly as to the real purpose of cremation in the case of the funeral of a Russian merchant described by I. I. Pokorny (see *Der slavische Mythos*, 17, 239):—

Ye Arabs are indeed a stupid people: ye take him who is the best beloved and most highly honoured of men and cast him into the earth, where the creeping beast and worms feed on him. We, on the other hand, burn him in an instant, so that he goes directly, without delay, into Paradise.'

The oldest abeole, therefore, in which the spirits of the ancestors dwelt is the earth, the same earth
to whose bosom the farmer commits the seed; and accordingly we are not surprised if the gods of the earth who gradually emerge among the different peoples rule over the souls of the dead that lie in the earth as well as over the seed which springs from the earth. This was the case on the earth; this was the first place, of the Mother Earth herself, of the Greek Zeus (Rohde, i. 208), and of the Latin Tellus (Wissowa, Archiv für Religionswissenschaft, vii, 27), while among the Lithuanians Zonna (cf. Lott. Semnes mitte, Lth. Žemaičių etna.), Thronus (W. Juncewicz) is on the one hand, the goddess of blessing for field and house, and on the other hand sacrifices are offered to her at the festival of the dead. In this connexion the attempt has been made by the writer of the present article (B. L. Müller, p. 128) to prove that the Lithuanian Feronia is nothing but the "bringer of the seed," and the Latin Feronia is the "bringer of the seed."

II. WORSHIP OF THE SKY AND OTHER NATURAL PHENOMENA—"THE HEAVENLY ONES."—Introduction. If we have so far succeeded in presenting the fundamental features of the Aryan worship of the dead, sometimes even to very trilling details in its development, we have owed this above all else to the Slav-Scandinavian tradition, by means of which we were enabled fully to understand the conditions prevalent among them. The Aryan race, however, were not completely attested to that. Among the Indians, for example, the most horrid plagues of the farmer, the pest fly (Kusw bhāja) and the pestilence, were carried by the sacrificial offerings to the gods of the dead. We should regard the words of the Indian onment as examined closely the realm of nature or other names, civilization, agriculture, the home, family life, etc.

Long ago it was observed that this fundamental feature of the Aryan religion of the gods occurring on Aryan soil with amazing accuracy in the Old Roman religion. This comes before our notice most obviously in the list of gods which appears in the so-called Indogermanica, i.e. priestly collections of prayers, especially the most varied occasions, which are known to name the main from the attacks of the Church Fathers on the Antiquitatem rerum divinarum of Varro, who drew his materials from these Indogermanica. Now, although the fixing of these names of gods in definite classes of religious mystic associations, as related by the Indogermanica, 1875-76, and therefore the Roman cult, must have been a great number of individual gods exactly resembling in their nature the Lithuanian deities.

"Seid ei aliu sunt praetera (i.e. besides the great gods of the cult, whose names also stand in the Indogermanica)." This statement receives support by the list of the Lithuanian mythology, by Théodor R. von Grünberg in Archiv für slavische Philologie, vol. 10, 292, it is the same as that in the Latin-German Mythology," by Théodor R. von Grünberg in Archiv für slavische Philologie, vol. 12, 1890, and in the Roman cult, must have been a great number of individual gods exactly resembling in their nature the Lithuanian deities.

With these general characteristics of the Litho-Prussian religion the gods and god-names of the Lithuanians and Prussians themselves correspond well. We have information about these from men like Jerzy Mennicus (Medexus, Malecki, see above, pp. 17, 19), Math. Strykowicz (Kronika Polska, Literatura, Praca, Mustowiany, etc.), W. Juncewicz, J. Jakub Laskowski (in Lietuvių, de Dios Sanagastum, Basel, 1815), Matthus Praetorius (Deorum Prusarum et Praestantiae manueli, compared with 1699, as well as the continuation extracts from the MS, by William Pearson, Berlin, 1870),

If we attempt to emphasize what is really characteristic in these Prusso-Lithuanian conceptions of the gods and goddesses, we shall find the fact that, for all phenomena of nature and life, for all undertakings and conditions of mankind, in fact even for every section or act of these which was at all prominent, individual gods (Sondergötter, special gods), to whom other hands (and in these) were created, who, at least as a general rule, must be said to remain within the limits of the conception to which they owe their origin.

If, in order to demonstrate this by an example, we single out a particular province of culture, as, e.g., cattle-breeding, which evidently occupied a prominent place in the life of the Lithuanians, we have to begin with a god who looks cattle in general (Siweras), then a goddess who looks after their propagation (Casina), a god who attends to the feeding (Zeitneras), another taking care of the pasture holds (Gebidok dēvės). In addition to these, there are "special gods" concerned with the oxen (Lubūs), the horses (latinica), the sheep and goats (Trīzeras), the bee (Ekzer), the art of weaving (Siautėzpasiezgymnius dēvės), the bees (IzEditors, the young pige (Priparskas), and there is even one god, together with the above-mentioned, the most horrid plagues of the farmer, the pest fly (Kusw bhāja) and the pestilence, who should regard the words of the Indian onment as examined closely the realm of nature or other names, civilization, agriculture, the home, family life, etc.

Long ago it was observed that this fundamental feature of the Aryan religion of the gods occurring on Aryan soil with amazing accuracy in the Old Roman religion. This comes before our notice most obviously in the list of gods which appears in the so-called Indogermanica, i.e. priestly collections of prayers, especially the most varied occasions, which are known to name the main from the attacks of the Church Fathers on the Antiquitatem rerum divinarum of Varro, who drew his materials from these Indogermanica. Now, although the fixing of these names of gods in definite classes of religious mystic associations, as related by the Indogermanica, 1875-76, and therefore the Roman cult, must have been a great number of individual gods exactly resembling in their nature the Lithuanian deities.

"Seid ei aliu sunt praetera (i.e. besides the great gods of the cult, whose names also stand in the Indogermanica)." This statement receives support by the list of the Lithuanian mythology, by Théodor R. von Grünberg in Archiv für slavische Philologie, vol. 10, 292, it is the same as that in the Latin-German Mythology," by Théodor R. von Grünberg in Archiv für slavische Philologie, vol. 12, 1890, and in the Roman cult, must have been a great number of individual gods exactly resembling in their nature the Lithuanian deities.
ARYAN RELIGION

The important thing, however, is that these great gods of the cult themselves, as we know them in the whole of Roman culture, sowing representative seeds which were devoted to them, are essentially, even in the earliest historical times, or at least in the earliest period we can read with certainty, nothing else than 'special gods.' If we take, e.g., the sphere of agriculture, which lay at the foundation of our Roman culture, sowing representatives of the Satyrians, harvest by Consus and Opus, growth by Ceres, blossoms by Flora, fruit by Pomona, failure of crops by Robogus—all of them deities who, according to the information supplied by the stone-calendar, had individual relics of the individual gods or deities, and their disposal (cf. Wissowa, Religion and Kultus, p. 21). If we may judge from pictures in the circus, there were worshipped along with Consus, the god of harvest, the three goddesses Spica, Septia, and Tulliia, who had power over the seeds beneath and above the ground (Wissowa, op. cit. p. 105).

In addition to these, there are the twelve gods who were invoked by the names at the sacrum Ceres; Pater (for the fallow ploughing), Siderator (for the second ploughing), Imporator (for the drawing of the furrow), Insular (for the sowing of corn), Sablonen (for harvesting), Saxator (for the hoeing), Subsiderator (for the weeding), Monitor (for the mowing), Conuctor (for the gathering), Condor for the storing, and Optimator (for the sale of the grain); while from the report of Varro could be added a god of manuring (Sterinalis), and several more (cf. especially Peter, 'Indignamenta' in Deutsche Zeitschrift für Völkerkunde, 1853).

A remarkable fact regarding these old Roman names of gods is that sometimes there seem to appear in them chronologically different strata of one and the same idea. Thus Insular (and at the same time Sator) is at the stone-carved Corcula the 'sover'; Condor is the 'storer.' The same meaning is in all probability in the names of the old gods of the cult Saturnus (Saturnus) and Consus, which are probably connected etymologically with tesser and condor (Wissowa, pp. 106, 108). In the same way, Janus (Wissowa, p. 96) originally was simply the god of the doors (inuens), just as in the Lithuanian religion there was a god of the well, Svedulinis (Lith. svedulys, 'the well'), or a god of the bath-broom, Sledronys (Lith. svedronys, 'broom-stump'). After higher sects such as the concept of the deities, as a god of the beginning (entrance), were blended with the idea of Janus, a renewal of this idea took place. This renewal we find in the gods of the Indignamenta: Fortuna, 'god of the doors,' and Concutor, 'god of the entrance' (cf. Wissowa, Geschichte der Religion, p. 231).

If in the preceding account we have placed the Litu-Prussian and the old Roman gods on the same stage of development in the history of religion, we do not mean to say that the figures which belong to these two groups represent common pre-historic formations, even in cases where these figures exactly correspond to each other in their nature, as is the case, e.g., with the Lith. Githurja, 'god of the barns' = Lat. Consus; Lith. Turtinis kuberkstis, 'god of fire' = Lat. Stella mater (Wissowa, Gesch., p. 176); Lith. Hercyanus = Lat. Mercurius; Lith. Pizius (Lacinus), 'god of sexual intercourse' = Lat. Mutumnum Tutanus (Wissowa, p. 195), etc. What can be proved to be pre-historic is rather the mere capacity and the tendency to form into a divinity every conception in nature or in culture which was of significance for primitive man, and to maintain the gods who were thus created for a longer or shorter period in their original sphere.

The greater part of H. Usener's standard work (Geschichte der Religion, etc.) is devoted to proving that the same tendency was operative in the formation of the Greek gods, that here too the great personal gods were evolved from special gods resembling those of the Romans and Lithuanians. This book also shows (cf. p. 116 ff.) how, even under the rule of the Christian Church, we may perceive an ancient Tentons. 'It is impossible,' says F. Kaufmann in his Deutsche Mythologie (Stuttgart, 1839), p. 40, Engl. tr. Northern Mythology, London, 1903, p. 31, 'to prove in the earliest Teutonic religion that there ever existed a god of more than one qualities; and a triad of gods is usually ascribed to the Tentons by the historiographers of later times. The names given are Mercury, Jupiter, and Mars, names which really denote the Tentonic gods Woden, Donar, and Zin. With them is associated a goddess originally the great all-mother Earth, the beloved of the gods, as well as called by the name of Freia.' Certainly, if this statement is correct, and it expresses the opinion current among the German mythologists, there would hardly be room for these special gods in the ancient Tentons. But how then is it to be explained that even Procopius found among the Herulians a θεσθεος θεος θυσις, and when Jordanis (cf. x.) relates of the Gothic Dicenum: 'elegit ex eius nobilissimos praetorenumque aiores, quos nos inv-eteres piissimas studiosis instituit, quae vel solet veneere insulis,' what else can be meant than that that ruler was the first to choose some few State-gods out of the crowd of existing deities? Or is it possible to regard the numerous gods, and especially goddesses, which the Roman inscriptions exhibit—a Thymius, Requivalvanus, Halamarus, Magus, Saxonus, etc., or a Tanfana, Nerthus, Baduhenna, Nehalennia, Huldana, Gar mangabies, Haiva, Vagiavercussius, Harinella, etc.—as all being different forms of the names and ideas of those chief gods or goddesses? When only the Roman gods Jupiter, Mars, Mercury, and Hercules appear as Roman equivalents of the Teutonic world of gods, is it not natural to suppose the reason of this to lie in the fact that the people who first brought news about the Teutonic gods to Rome were soldiers and merchants of the classes—in addition to Jupiter Optimus Maximus, who was worshipped by all in common—honoured especially the god Mars, the latter Mercury and Hercules (as the guardian of measure and weight; cf. Wissowa, Gesch., p. 291), or 'the classes sought with special fondness their favourite guardian gods on the barbarian Olympus—and found them too. But none of these questions can be disposed of briefly, and accordingly we cannot settle them here. In any case, however, no substantial objection from the standpoint of the Teutonic religion can be raised against the view that the craving, which is strikingly prominent in the Litu-Prussian and ancient Roman religion, for an endless variety of 'special gods' reproginus,' all sides of the life of nature and culture is to be regarded as a primitive Aryan characteristic. What confronts us here, however, as the oldest of the old is in reality nothing else than the phenomenon which anthropologists have called 'animism,' i.e. 'the investing with life and the deifying of the inanimate.' The extraordinary world-wide importance of this mode of thought for religious life has long been recognized (cf. especially Tylor, Primitive Culture, London, 1891).

In close connexion with this animism we see further the same tendency in the old Hellenic religion. From primitive Indo-Iranian times onwards, the ever-growing tendency to form gods was kept in check by influential priests who, by pious exhortation everywhere, tried to increase the influence of the development of great personal gods (cf. below, 40).
' '

ARYAN RELIGION
ther how, in the Aryan relifcions as Avell as everywhere else, traces of a pronounced fetisliism
remain. It cannot be doubted that the Aryans,
like other races, once worshipped and prayed to
trees and stumps, stones and animals, not only as
symbols of divinity, but as real embodiments of a

cal times, and are still to be detected at the present
But it is likewise certain that even in
day.
primitive Aryan times the beginnings of a higher
form of religion made their appearance.
For although the countless numbers of special
gods' presupposed as original are not at first to be
regarded as diflering qualitatively among themselves, still it is natural to suppose that, just as
the individual objects and conceptions which
excited religious emotions were of different significance for mankind, so also the significance of
the deities arising out of tliem would from the
beginning be ditlerent, or would soon become so.
And, in fact, we see how at a time when the
Aryan peoples were still together, or were for the
most part very close to each other, a class of
beings became separated from the motley crowd of
divinities, and appeared distinct from the other
'special gods.' These were designated by the list
of primitive Aryan words already known to us

tonut,

O.H.G. donar).

tonitrus,

A.S.

The common

^pu7lian,

Celtic ex-

pression for this natural power *torunnos (Irish
torann, Welsh tarann, Cornish taran, thunder ')
is derived by metathesis from the same root.
These
Celtic forms led to the god (or goddess ?) Turanis
attested by Lucan (Phars. i. 445) and to forms
which are found on inscriptions, such as ^apavbov
(Dat.), Taranucns, Tarunucnus. Along with these
we have a form exactly corresponding to the Teutonic Donar, viz. Tanaros (cf. R. Much, 'Der
germanische Himmelsgott' in Festschrift fur
Heinzel, p. 227). The names of the Lithuanian god
of thunder, Perkunas (according to Menecius deus
tonitruum ac temjjestaticm'), and of the Slavonic
Pcrun, who was especially worshij)ped in Kiev, are
obviously related to each other, but the exact
natui-e of this relationship has not yet been
determined. Both of them are used in their own
languages as appellative terms for
thunderstorm,' ' thundercrash.' The first of these two
names has been connected (cf. H. Hirt, Indog.
Forsch. i. p. 479) with the Old Norse Fjorgyn, the
name of the mother of Thor, and with Parjdnya,
the rain- and thunder-god of the Vedas. All these
words have again been connected Avith the Lat.
qucrcus, O.H.G. forlui 'oak,' 'fir' (*2)erku), so
that the meaning ' he of the oak would result for
Perkunas (cf. in Menecius Putsccetus, ' deus qui
sacros lucos tuetur,' Lith. Puszaitis [from puszis,
pine tree '], he of the pine tree ' ; cf J. G. Frazer,
Early History of the Kingship, 210).
But the
Skr. Parjdnya must for phonetic reasons be excluded from this series (Skr. is not = Lith. k), and
after all it may be better (especially in consideration of the clear and evident changes of
meaning which occur in the Celtic Taran is and
the Teutonic Donar), in the case of Perkunas
and Perun to start from their apjiellative signification. f Just as in the North of Europe, so also in

ARYAN RELIGION

the Vedas, Dyum, the god of heaven, and Indra, the god of the thunderstorm (along with Paranjaya) are carefully kept separate. In contrast to that, the Teutonic gods are the personification of the clear sky and thunder god at the same time:

_Zeit des frühchristlichen Sinnes ērvaren in nichts und nichts (fl. xii. 192).

In fact, titles of the god referring to the latter quality, Zeus, the Thunderer, Zeus the Father, etc., are frequently used as a kind of prayer, etc., exist in large numbers. On the other hand, the epithet of Zeus, the old neuter plural ērvaria, 'wide-eye' (cf. above, τὸν κλάδον πιέσα τοῦ φωκᾶν Δία καλοττον), which is by far the most accepted of all titles and has been in use since the 3rd century B.C., has been in use since the 3rd century B.C., is of immense importance and influence. The fact that in pre-historic times special worship was paid to the goddess of the dawn at the beginning of the year (the spring), as is made probable by the ritual of the Indian Ushas (cf. Hillebrand, Venedische Mythologie, Bonn, 1891-1902, ii. 26ff. and L. v. Schrader, 'Liho' in the Mitteilungen der antrop, Gesellschaft in Wien, xxxviii, p. 16).

The name of the dawn, too, developed on Teutonic soil into an important goddess Osara (to be found in the O.H.G. Osterin, Osartwôh), A.S. Eotre (Easternmost), cf. Bode de Teutonum richle, etc. (c. 13)=Skr. urû, Lith. ausûra, only with the difference that here the original goddess of the morning has become a goddess of Spring (but cf. A.S. barendel, 'morning-star,' 'morning-dawn'). There is no reason to doubt that this goddess, too, received the distinction of being the goddess of the dawn at the beginning of the year (the spring), as is made probable by the ritual of the Indian Ushas (cf. Hillebrand, Venedische Mythologie, Bonn, 1891-1902, ii. 26ff. and L. v. Schrader, 'Liho' in the Mitteilungen der antrop, Gesellschaft in Wien, xxxviii. On Italian soil the Salärne ausel, 'sol' (Varro, de Ling. Lat. v. 68 acc. to emendation), must be mentioned as derived from the root *aus- which has just been referred to, whose priests were called Ausavii, etc. (cf. also the formation on Etruscan mirrors, Uil Sol et Eos). With regard to the divinities Sol and Luna themselves, it is doubtful whether or not they belonged to the oldest components of the pantheon (cf. Wissowa, op. cit. p. 261). Tradition in this regard is scarce in fact, but on the other hand there are no traces of their worship either in the calendar of feasts or in the priestly regulations. But the same is also the case with other Roman divinities, e.g. Minerva, whose name ('Mënæsa) is derived from a root Gr. μνήσα which is entirely extinct in the Italian languages, and therefore must be very old. Mënæ in the Indogerm. is the special goddess of menstruation. In Greece the related divinities are Ἡλώ and Hē, Mē, and Σελήνη, although they continue for the most part to play a role in the mythology subordinate to that of the chief gods. Finally, the Rigveda also knows a sun-god (Sárya) and a moon-god (Mās), who, however, in the same way withdrew into the background before other gods who are probably not creations of the Indian soil, as e.g. Sūrya, or New Pers. mār, 'the sun'), Varuna, and the Adityas, or they have been repressed by these (cf. Oldenberg, Die Religion des Veda, pp. 185 ff., 194). The position of the female personification of the dawn, Suryā, called Sūryā, and that of the Suryā, who is called Sūryā, and that of the morning, the Atan, and her marriage with Soma, the moon-god of a later date, which we shall discuss further on. The same is true of the Ushas, so often celebrated in song (cf. above). For a Mā (moon-god) of Asia Minor, see Kretschmer, Einleitung, p. 197 ff.

Along with sun and moon, we find in Herodotus and Cæsar fire (Skr. ognī=Lat. ignis, Lith. auge, Old Slav. ognī) mentioned as an object of worship. According to primitive ideas it is born in heaven (cf. A. Kuhn, Herkunft des Feuers, Berlin, 1859), and is carried to earth in the lightning-flash, which is accordingly called 'fire' in the most ancient times (cf. Schrader, Reallexicon, art. 'Feuer'). On Prussio-Lithuanian soil it was the object of a sumptuous worship. Here Jerome of Prague found amongst the Lithuanian pagans a temple among the tribes of the Przeworsk region, where the chief deity (*perpetuum appellatum; sanctaedes tempeli materiam ne decretum ministrabat. The people called it Ugnis szwenta, 'holy fire,' or szwenta poykhe, 'holy mistress.' On leaving the house of her parents (cf. Paterius, loc. cit. p. 82), the young wife said, 'Thou holy fire, who will guard thee?' There was also a goddess of the hearth, Aspelene, 'the one behind the hearth' (Lith. petelė), etc. We thus find in
the North the same perennial fire, fed by priests, as recurs in the South in the cult of the Roman Vestal, Greek AEA, Areusian AEA, 'hearth,' as 'kindling on.' The fire, however, has no eternal new layers of divine beings were ever added among the separate peoples will be indicated, at least in broad outline, at the close of the next section, although, strictly speaking, it does not belong to this discussion.

2. The oldest names of the 'heavenly ones.'—Aryan archæology, in the course of its historical development, has been gradually coming to the conclusion that, in the vocabulary of the original Aryan language, real names of gods cannot be proved. The only thing that can be proved, as the scholars clearly recognize, is that there was a layer of deities, which is that there were appellative but perfectly transparent designations of the sky and the natural phenomena proceeding from it. The fact that they were worshipped in primitive times follows from their being all unified in the word 'deities,' and from the numerous historical divinities which have grown out of them. The reason for this phenomenon lies in the simple fact that in primitive Aryan times there were as yet no real gods in the later sense of the term, viz., no personal gods having those names connected with the gods of mankind. The Greek Ἱππος (probably derived from the root *hip-), and the Latin Volcanus, in pre-historic times apparently the god of the fearful and devastating might of fire (from *volā, 'fire' = Skr. vāla, 'firebrand'; cf. Kretschmer, p. 139), are more narrowly confined to their original sphere than the Vedic Agni. The beginning of a formation of a Teutonic god, the hearth-fire, may probably be found in the figure of the Old Norse Óðinn, whose name, however, has not yet been sufficiently explained.

As the last of the great powers of the sky and of nature we have to mention wind and water. The former appears as a god in the Lituanian Wejō-patis, 'lord of the wind' (also Wejpų and Wejis) from the Lith. viējas, viējas, 'wind.' The last of these words corresponds to the Vedic Vāyu, 'wind,' and 'god of the wind,' and is also the wind-god). The beginning of a formation of a Teutonic god, the hearth-fire, may probably be found in the figure of the Old Norse Óðinn, whose name, however, has not yet been sufficiently explained.

The gods of the Aryans were also 'nameless.' They sacrificed to the sky, the sun, the moon, the dawn, fire, wind, and water; but the names indicating these powers still coincided perfectly with the respective designations. A Greek who had listened to their worship would, under the impression of the life-like figures in his Olympus, have called them also ἀοῖνοι, 'without gods.' Theophrastus knew such a people in the Thracean Thēi of Mt. Athos, and in the same sense Strabo, iii, p. 161, reports: ἀοῖνοι τούτους Καλλικράτης ἄθεους ἄθεον ταύτην ἄθεον, καὶ τοὺς προπόροντας τῶν ἄτων ἄτων ἄτως οὕτως τὸ μὲν ἄθεον τὸ δὲ χάριμα τῶν παρικόν οὖσαν πρὸ τῷ παλιῷ, παρικόν τε χαρίματος τε καὶ παρικόν τε χάριμα τε. ARYAN RELIGION

gods’ had the capacity of annexing the sphere of activity of others. In the case of some deities the powers of various other gods were united. Then we have the additional fact that hundreds of new aspects and tasks of material culture, as of law and custom, require a new heavenly lord and protector, while the significance of the natural powers begins to fade, the more mankind gets raised above them.

In addition to this, there is no Aryan territory where influences from without have not made themselves felt. As far as India is concerned, Oldenberg (Die Religion des Veda, p. 194) is convinced that the gods of the Rig-Veda, which are sharply distinguished from the rest of the Vedic pantheon, Mitra, Varuna, and the Adityas (according to him, sun, moon, and planets), had been borrowed, as early as the Indo-Iranian period, from the Scmites or the Sumerians, or that they had received their astronomical character from them. Herodotus himself relates, in the passage referred to above, that the Pelasgi received the names of their originally nameless gods from the Egyptians, and that they afterwards handed on these names to the Greeks. Hence it is attributed to the Pelasgi to make the slightest doubt that the personal characterization of the Greek deities followed the Oriental pattern to a large extent. The Persians, too, according to Herodotus (l. 131), had learned from the Assyrians and the Arabs to sacrifice to a personal deity, usually with the name of an ancient stone god. Nor can we fail to recognize how the colourless forms of the old Roman gods were, during the course of Hellenic influence, clothed with Greek flesh and blood. The relation of the ancient Teutons to the Romans must be regarded in the same way. If we take the deities mentioned by Caesar (obviously only as instances), sun, moon, and fire, and add to these the thunder (Donor), the sky (Ziu), and the wind (Wudoian13), these being then regarded in their originally purely appellative meaning, we can find absolutely nothing in this list of old Teutonic gods which is in the least striking or unusual. Tacitus, 150 years later, mentions (Germania, ch. 9) as Teutonic gods Hereules, Mars, and Mercury; and these possess, at least according to his report, personal characteristics, but these have, at the same time, an epoch of intimate contact between Teutonic barbarism and Greek-Roman culture, and its definitely stamped divine figures, in the form which would be mediated to the north by traders and soldiers, must have tended to re-mould the Hellenic into Teutonic nature-worship. If then, in addition to all this, we call up before our minds how the ever-increasing influence exerted by the priestly castes (cf., below, 40) and the beginnings of poetry and plastic art yield with each other in selecting individual deities from the θεόω θείω θεά, and in working up and embellishing the forms of their favourites, we shall have pretty well exhausted the conditions which brought about the gradual development of personal gods.

But however clear this development seems to be, we consider it in broad outline, it is nevertheless extremely difficult to fix beyond question the actual process of growth of the separate gods. For, at the point where the written records among the various Aryan tribes begin, these gods stand for the most part completed and finished before us, and in order to determine the point of departure in their development we are thus almost exclusively dependent on the interpretation of their names. It must, however, be pointed out that the interpretation of the Aryan names of the gods unfortunately forms one of the most obscure chapters of comparative philology, and the only great step of progress that has been made here lies in the recognition of the fact that we know only a very little for certain. But even if we believe successful in fixing the origin of a name of a god, and with it the first sphere of his activity, 'the cell of his nature,' still only more or less credible conjectures would be possible as to the lengthy and intricate pathway which led from this point to the personality of the god that we find in the history of culture. In the long development which we have spoken of, are the most natural sources for personal gods. As soon as Zeus (Διός) began on Grecian soil to denote not only the brilliant sky of day, but also the cloud-girt sky of the thunder-storm, with reference to the thunderbolts and arms, then, from both, that moment the point of commencement was given for the formation of a personal god, which now led in continuous development, through the assumption of ever new elements in the life of nature and of man, to the important figure of the father of gods and men which we find in Homer. But it is worthy of note that in the Epic the number of epithets describing the relations of the god to the order of the world and of mankind (e.g. πτερα, θείος in the Ilias) is extremely small compared with the elevation of the god. Corresponding to this, Agni in India is otherwise nothing than the divine anima of fire. But it enters into the realm of personal gods as soon as man requires it, not only to give light, warmth or brightness, but for the sake of his life, heat, but also, as is already done in the Rigveda, to supply the blessing of children and to promote domestic prosperity.

The Greek Zeus and the Indian Agni are thus real 'heavenly ones,' true divs. Then there are joined to these, from the most varied spheres of nature and culture, countless other special gods, who raise themselves in ways similar to these to the position and dignity of personal deities. We shall illustrate this by a few examples from the history of the Greek, Roman, and Teutonic religions. From the first of these let us take the figures of Apollo and Hermes. Among the very numerous interpretations that have been proposed for these divine names there are two which, without foreboding, satisfy all the demands of phonetics and the science of word-formation. Both were the name of a deity first at the same time of epoch of intimate contact between Teutonic barbarism and Greek-Roman culture, and its definitely stamped divine figures, in the form which would be mediated to the north by traders and soldiers, must have tended to re-mould the Hellenic into Teutonic nature-worship. If then, in addition to all this, we call up before our minds how the ever-increasing influence exerted by the priestly castes (cf., below, 40) and the beginnings of poetry and plastic art yield with each other in selecting individual deities from the θεόω θείω θεά, and in working up and embellishing the forms of their favourites, we shall have pretty well exhausted the conditions which brought about the gradual development of personal gods.

"The Lithuanian god Sauliunas (cf. above, p. 51), 'the god of cattle,' would exactly correspond, if it is correct to connect his name with the Lith. trečių, 'fence.'

"The Lithuanian god Sauliunas (cf. above, p. 51), 'the god of cattle,' would exactly correspond, if it is correct to connect his name with the Lith. trečių, 'fence.'
In the same way among the Teutons all sorts of special gods were added from all sides to the ancient fire-worship (Sol, Luna, Volcanus, Donar, Ziu, Wotan). As examples we may take the gods Saxnok and Regnivakos, which can be interpreted with comparative certainty. When bronze swords were introduced in the first century B.C. they went into Europe, and thereby a new and formidable weapon was put into men's hands. They could not help seeing in this the activity of a god. As a matter of fact, evidences of such a sword-cult can be produced from the two parts of Europe, from the Scythians, Alans, Quells, and other peoples (cf. J. Grimm, Deutsche Mythologie, i. 185). This god who was present in the sword was called by the Saxons Saxnok, i.e. "sword-bringer," companion of the sword, and we can easily understand how he could, if not rather like people, acquire so great importance that in the kapstitial vow he was placed on an equal footing with Thiurun and Wotan (Braune, Althochdeutsches Lesbuch, 1898, p. 160). We have seen above how a Celtic tribe, which had language behind, worshipped a "nameless god" by dancing in families before the gates on the nights of the full moon (above, p. 33). May we not presuppose a similar custom among the neighbouring Teutons as well, and is it not likely that the god, when any one wished to indicate him to the crowd of people present (Goth. rijga = Gr. ἐρέσος)—an interpretation of the Arminian mentioned by the Romans, which the Germans, by way of exception, unanimously accept? Besides, he was undoubtedly an important deity at the time when, according to a Roman inscription, Qu. Aprians offered sacrificial to and made vows to him on the banks of the Rhine.

3. The forms of manifestation of the 'heavenly ones,' and their interpretation in riddle and myth.—It is a characteristic quality of most primitive religions that in them the distinction between man and animal is entirely lost. The sense of an absolute psycho-spiritual distinction between man and beast, so prevalent in the civilized world, is hardly to be found among the lower races. Men, to whom the cries of beasts and birds seem like human language, and their actions guided as it were by human thought, logically enough allow the existence of souls to beasts, birds, and reptiles, as to men. The lower psychology cannot but recognize in beasts the very characteristics which it attributes to the human soul, namely, the phenomenon of life and mind, love and hate, and the phantom seen in vision or in dream (Tyler, Primitive Culture, i. 469). There may also have been such an epoch in the Aryan religions, in which it seemed quite natural to think of the flame racing over the fields as a horse, or the thunder in the storm-cloud as a bellowing steer, and numerous direct and indirect evidences point to a time in which the gods were actually conceived of as animals, or at least as beings partaking partly of human partly of merely animal qualities. Even as late as the Vedas (cf. Oldenberg, Allertum, ii. 98) the following passage is to be found: "The view is almost still more wide-spread that the gods reveal themselves in the form of animals," and accordingly means "desire."

* In Oscar and Frejgman the goddess Herentas corresponds to her, and is connected with Öse, and the birds Hrethis, fóth, Gotl. þratanjan, 'to desire,' and accordingly means 'desire.'
in the Peloponnese has become Zeus, while the wolf is otherwise regarded as a manifestation of Apollo (but cf. above, p. 36). Artemis, in Attica and Arcadia, where she was honoured as the mother of the tribe, is regarded as a she-bear; in other cases she is thought of as a hind (cf. Pollux, *Dei et mort. Orac.* Lat. 435). In Arcos, Hera *phoros* was worshipped as a cow that was fertilized by Zeus in the form of a bull. In the countless rough figures of stone and clay, in human and animal form, which remained in all the layers of the Trojan and Aryan civilization, we may in all probability recognize the representations of the gods belonging to this epoch of Greece; not a few of them may have been house fetishes. In Italy, too, sacred animals (woodpecker, wolf, and ploughing ox) were depicted as well, with minotaurs, horses, and boars (Pline, *Hist. Nat.* x. 16: 'Romanis can aquilam legionibus C. Marius in seundo consulo sumpro patria dicavit. Erat et ante praemium quaestor aulicis: lupi, minotauri, equi acripne similis in arte animalium,que visus est, auctoresque ad quos Taciti bears witness among the Teutons (*Germanin.* ch. 7): 'Effigiesque et signa quedam detracta lucis in procellum fertunt,' since it cannot be doubted that, among the *tytjics*, the sacred animals of the gods, the snake and wolf of Wotan, the bear and he-goat of Donar, the ram of Ziu, and the boar (cf. A.S. *coforendel*, 'sign of the boar') of Freyr are to be understood (cf. Tacitus, *Hist.* iv. 22: 'inde deumpacte silvis lucusque ferarum imaginum'). Thus the oldest banners are seen to be animated by the feeling of the visible protection the army marched into battle.

Along with the conception of the gods as animals, there is to be found, from the very beginning, the conception of them as existing in human form. In course of time this latter idea came more and more into prominence. It may seem that this is a contradiction of our earlier assertions, according to which the appearance of personal gods among the Aryan peoples is comparatively late. This is, however, not the case. We must not fail to recognize this fact, as the view identifying the personal gods as identical, no matter how much the latter presupposes the former. The characteristic mark of a personal god is that he is regarded as exercising influence outside of the sphere to which he owes his conceptual origin and his religious name. Personification, however, means, at first, simply the substitution of a human figure for the divine anima present in the phenomenon. This need for personification is all the greater the lower down we go in the stages of civilization. If the White Russian peasant is asked even to-day about his *Perevod*, whose fundamental appellative meaning is still quite clear to him (cf. above, p. 33), he says: 'He is a tall, broad-shouldered fellow, with black hair, black eyes, and a yellow beard. In his right hand he has a bow, in the left a quiver with arrows. He drives on the horses in a chariot and discharges fiery arrows' (cf. Dahl, *Erläuterndes Wörterbuch der lebenden grossrussischen Sprache*, St. Petersburg, 1889-82, iii. 161). Even quite impersonal conceptions of Greek and Roman civilization pro, on their passing over into the Slavonic world, taken possess of by this primitive passion for personification. Thus the Lat. *calebra* (exkriaca), 'New Year,' has led into Lat. *Agnus*, 'the lamb'; the Greek *kiiptos,* the precursor of *Christius* and *Epiphany,* in the neighbourbood of Moscow, even at the present day it is customary on Christmas eve to lead a maiden called *Kolda*, dressed in white, through the streets, and to sing, "On Christmas eve was Kolda born, beyond the rapid river," etc. In the same song, in close connexion with this Kolda, the *kiiptos* *kiid* is mentioned (cf. Glazounov, *Russische Folkungen* [Russ.], St. Petersburg, 1891, p. 1). We may also call to mind the super-natural nonsense of the *kiiptos* ('festival of roses'), already mentioned above (p. 25).

Thus we may assume that there was, even in primitive times, an active tendency to conceive the divine in human form; and if Indra in the Rigveda and Thor in Northern mythology are described as giants with tawny or red beards, there is nothing against discovering there a primitive Aryan idea common to the Indians and the Teutons. This tendency, too, suggests an explanation of the fact that in certain branches of the Indo-Germanic language the name of the father *father* has pre-historic times, added to the primitive Aryan *dyuys*, 'sky,' (Skr. *Dyus prol., Gr. *ze is par;* cf. also in Hesych. *Dea- vropov* θεος πάρνα Τυγρόσ, Lat. *Juvoir*), as there were also a Scythian *Zeis Hasva* and a Bithynian *Zeis Hira, Hara* (Kretschmer, op. cit. p. 241 f.). It is doubtful, however, whether the word 'father' indicates a position of honour of *dyuys* compared to the other 'heavenly ones,' as seems more likely to the present writer, or expresses the relation of the god to the community worshiping him, as is the case, for instance, in the case the word *she-bear* is applied to all the gods (or goddesses) of the oldest group.

A further consequence of this personification of the deity is to be found in the circumstance that the god was supplied with a wife, whose designation was most simply and originally obtained by forming the feminine of the male deity (Skr. *Agni: *Agni; Gr. *Di: Ato: zeis, *Dios; Lat. *Juno, *Jovio: *Jupiter, *Jovis*). The idea, too, that the heaven and the earth constitute a pair united in marriage is very old, as the Rigveda in the statement, "(the earth) (= A.S. folde, 'earth'), appears along with the 'father,' *Dyus*. The report of Herodotus regarding the Scythians (*tevmutas* the 7ην τοίν θάνατον γεναίον) has already been mentioned. Among the Thracians the lordly *anos* (probably a Thracian woman) is sprung from the marriage of the god of heaven with the earth-goddess *Sekel* (cf. the Lithuanian *Zemyna*: Lith. *zênè, Old Slav. *zemlys, 'earth'). Deeply rooted in the mind of the Russian peasant is the belief in the love of Thor and of Perun, the two important elements of the god of the Mother Earth," just as we find in an Anglo-Saxon rural verse: "Hal wes þu, folde, fier modur, leo þu greowende on godes ægum," "Hail to thee, O Earth, Mother of men! Bo thou fruitful in God's embrace." It is doubtless, however, if the *tevos* *gemon* of Zeus with *Ipos,* who can scarcely be shown to be a goddess of the earth, is related to the same circle of ideas (cf. Kretschmer, *Einzeltuete*, p. 90 f.; on the other side, Frazer, *GB* ii. 228, and Farnell, *Cults of the Gr. States*, i. 180 ff.). Finally, we have to consider the problem of grammatical gender, which was already perfected in the primitive language, formed the basis on which, on the one hand, male (e.g. *Dyus* and *Agni*) and, on the other hand, female deities (e.g. *Uskos, Eston* could be developed. In short, in many places there is to be found, even in primitive times, the first beginnings of the formation of those divine families whose real evolution belongs entirely to the province of the respective separate peoples.

The conception of the oldest times, now as animals, now as men, which we have so far discussed, is, *We may look upon the rôle played by *Tellus* at Roman marriages as a reminiscence of the same ideas. Cf. Servius, iv. 164; *Chapman's* *Gesta Thellonii proceris nepulis transactis; nam et in suscipit nuptriam incurrat.* et cineae virgines, vel cum ire ad domum nartii crepitint, vel hanc libit positas, diversa nominae vel rara sacrificant.*
AYRAN RELIGION

however, in reality only the outcome of a general longing, innate in mankind, to know and understand the world, a longing which in primitive stages of culture expresses itself in two other phases, the worship of the sun (deity) and in the Right Hand. 

In discussing these we may commence, as we have done so frequently, with the Litu-Slavic conditions, where both ideas appear with special purity and originality. It is difficult to overestimate the significance of this phase of the mythological formations of the Slavonic peoples (cf. Krok, Einleitung in die slawische Literaturgeschichte, p. 810 ff.; and, for the value of riddles in the interpretation of myths, Max Müller, Contributions to the Science of Mythology, 1897, 1. 80 ff. and Art. Riddle). They are in the right hand, along with Hell, Heaven and the universe (the soul of the universe”), for their subject is, if not exclusively, at least in great measure, the universe, with its thousand-and-one phenomena, their meaning and illustration.

"Trees are scattered on a hundred paths; no one will gather them up—ni corti, ni corta, ni kroknja dvojca!" (the stars). 

The black cow has gored all men to death; the white cow has brought them to life again (day and night)." Without hands, without feet, he creeps on the mountains" (the wind)." In spring he makes glad; in summer, cook; in autumn, satisfied; in winter, dead. 

In a Slavonic forest there are twelve nests; in each nest there are four blue-bonnets; each blue-bonnet has a white and 7 black (the year, the month, weeks, days and nights).

It is the same fundamental trait as appears in these few Russian examples (cf. Sadownik, The Riddles of the Russian People. [Russ.], Petersberg, 1871; and the Lithuanian example which follows). In the different processes, the course of the sun, the division of the year, etc., that comes most clearly to the front in the riddle-making of related peoples.

Thus in ancient India (cf. Huang, *Vedische Rätselgesänge und Rätselsprüche*, in Sitzungsberichte der Würzburger Ak. d. W., phil.-hist. Kl. 1875, p. 427 ff.) the priests even in Vedic times, on occasions of great sacrificial gatherings, proposed for each other and for the deities of the following riddle: "What asks, e.g., ‘What travels alone’? Who travels alone? 'Fire is the preventive against snow. "The earth is the great scattering." Quite similar series of riddles occur on Teutonic soil (cf. Winnaus *ZDAG* xx.229) in the Edda and the poem of Trangonud (What is whiter than snow? What is fatter than the one? What is higher than the mountains? What is darker than the night?). In Greece one need only refer to the very ancient riddle of the fire that swallows up the father and mother, occurring in the *Mariage de Kezys*, ascribed to Hesiod. It makes quite a Vedie impression, and may be compared with the Galla riddle in the Teutonic literature, the ancient Lithuanian riddle, the equestrian Greek *Cypsykos* (Castor and Pollux), the brothers of the Helenic (Δημήτρης: Δήμητρης: *steped*, heat of the sun) all correspond to the Lithic *Džiugas* (the sun of the 7th month) and the sun is related to the Indian *Ātiras* and the Greek *Dioskouris*.

The myth is devoted to the satisfaction of the same primitive longing as the riddle. It is quite incorrect (cf. above, p. 12) to suppose that it is the exclusive possession of higher social classes or the product of priestly acuteness, however much these may have influenced its forms as presented to us in history. In its origin it is undoubtedly nothing else than the naive and popular expression of the wish to understand and comprehend the universe, as can with especial ease be recognised on Aryan soil, but much, and in large part, of the mythical formations of the Lithuanian and Lettic peoples. These, in any case, prove that, even at the most primitive stage of religious ideas, a myth can be developed to explain processes of nature puzzling to the primitives, this form of myth-making is concerned with the phenomena of the sun, moon, and stars (cf. Mannhardt, Die Littischen Sonnennymphen in ZE V. vii. 73, 299, 281, and Usenerner Sulotten, Göttermannen, p. 83 ff.).

Two of them are concerned with the sun. The people worship the sun and an iron hammer of special size. Once upon a time the sun was invisible for several months, because a very unlucky thing had happened. The fiery figures of the Zodiac brought him help with the iron hammer. The tired and dusty sun is placed in a bath by the mother of Perkusnas, and then is dismissed on the following day washed and shining. Sun and moon are described in various Deities as husband and wife, and, indeed, as unfailful in that relation. The moon separates from the sun in the morning (the morning star (Αστρεινε), and is cut in two by the sword of Perkusnas. The stars are considered as daughters of the sun, and so on.

Such stories as these regarding the heavenly beings, their deeds, and their relations to one another, were without doubt related even in primitive Aryan times; and it is to-day, in spite of all the proposed explanations, right and left, in the comparative mythology to discover cycles of myths which go back to such pre-historic interpretations of nature, as has been done by A. Kuhn and Max Müller. Three of these cycles of myths seem to the present writer to have been overlooked beyond question. *These refer (1) to the relations of morning and evening stars, (2) to the origin of the thunderstorm, and (3) to the source of fire. It must suffice at this point to characterize them in the briefest possible way.

The sun married a marriage with each other, as is related in the Lithuanian and Lettic poems, and more fully in a celebrated hymn of the Rigveda (x. 55). The morning and evening stars stand by these words, and, as stated in the Lithuanian and Lettic myths, are regarded as suitors for the sake of the daughter of the sun, ‘i.e. most likely the moon itself, just as in the ancient Azov Riddle (cf. Skr. asta, hone), are regarded as the lovers of Nargi or Sargynas Dukuti, the daughter of the sun.’ A pre-ethnic connexion of the sun and moon is also hinted at. "One of the ‘sons of the god’ seems, therefore, beyond the range of doubt, (the view of Oldenberg, *Dea et Illuminata*, p. 213, particularly when we remember that in the Lithic poems the morning and evening stars are also called the ‘ponies’ of the moon and the ‘sons of the god’ are called as brothers of Perkusnas, the god of the sky."

The sun of the Lithuanian god Algis, *angelus sumorum decuriam*, whose name (cf. Lith. algis; reward) literally means ‘hired labourer,’ and this Lith. Algis is etymologically the same as the name of the Teutonic deity Alcis who corresponded to Castor and Pollux (Tactus, Germania, ch. 45; Apoll. Nahastransvalus antiquus religionis lucus existit; presidet sacerdos mulcieri ornat; sed dicet interpretatione Romana Castorem Polliuconem memorat; eis vis numini, homine Alcis [*teni satis longi temporis ordinari et istsum praecipue in superstitiose vestigium, ut fratres tamen, ut iuvenes venerant* —since this is, it is impossible to deny that these persons also belonged to the Indian *Ātiras* and Greek Dioskouris].

(2) The second system of interpretations, myths referred to above, dealing with the explanation of the thunder and the thunder-shower, is presented in two different settings. According to the one, the thunderbolts, thundering shafts of fire from the sky, the cloud, whose water now flows over the earth (light of *Ldun* with *Vira*, of *Telqyz* with *Apeados* in the Avesta, of Donar with the wolf *Fafnir*, of the thunder with the wolf *Hrarjok*, of the cloud, the other, a god delivers from a monster the cows of the clouds, who are imprisoned in a mountain gorge (*Ldun* and *Vitaqaz*, Heraclix and Corynoma, Hercules and Cacus).

(3) Lastly, the myths dealing with the origin of fire are connected with the custom, preserved among the Indians, Greeks and Romans, Slavs, and Teutons, and partially among the Lithuanians (cf. Usener, op. cit. p. 57), of obtaining fire for sacred purposes by taking a stick of hard wood (oak), boring into a plank or board of softer wood (lime tree), and turning it round and round till fire is produced by the friction. In this connexion, which may be connected with the production of fire produced in the cloud, whence it is brought to earth by a bird or a daring human being (Prometheus). A similar origin is now often expiated by the fire-druidic, the fire-bearer, the man who carried fire. (Gr. μεθαλοείς, etc.), which, when drunk by mortals, bestows upon

*In this connexion the present writer agrees with Winternitz, *Was wissen wir von den Indogermanen?* (Beilage zur Münchener Z. 1895, No. 5). Only in one respect do we seem to make a mistake, viz. in deducing from these myths the existence of persons who, a view which rests on the conclusions emphasized above (p. 55) between personified natural phenomena and natural phenomena that have become personal gods.

T. A. Brückner and H. V. de Harleische *Mythen und Mythologie* (Veröffentlichungen der Forschungshalle in Konigstein: lünigstein, p. 653), a contradiction of his opinion, of which Brückner himself approves, that as yet there were no Aryan names for the gods; for these names represent, not an Aryan god-name, but an Aryan appellative (‘hired labourer’) preserved by chance in the myth.
to possess deadly weapons sacrifices iron nails (cf. Oldenberg, op. cit. p. 369); in Greece he who wishes to conjure up an actual thunderstorm produces the rolling of a wagon a noise similar to thunder (cf. O. Gruppe, Griech. Mythol. i. p. 829).

4. The worship.—In the foregoing sections we have dealt with the ideas of the Aryans regarding their gods and with their beliefs. We now go on to the consideration of the services which they devoted to them, i.e., their worship. This point, which is often considered as one that is difficult to investigate, is also of the greatest importance for the development of the gods, for naturally it must have been along with and by means of the form of worship assigned to them that the fluid and indefinite figures came to assume more fixed and individual forms. We shall in this discussion have to deal with four phenomena connected with worship which we find in historic times: (a) sacrifice and prayer, (b) the priests, (c) the temples, (d) magic. We shall have to ask whether and how far these institutions have been carried back into the primitive history of the Aryan peoples.

(a) SACRIFICE AND PRAYER.—There was among the Aryans, just as among all other peoples, a more or less ancient way of bringing the supernatural within reach of the individual. They made use of a device, namely, magic. Its forms appear so closely connected, even in historic times, with those of the cult, that it is often difficult, if not impossible, to draw a sharp line of distinction between the two conceptions. We may say, however, that magic is present in all those cases in which magic imagined that he is able, by word or by deed, to make a spirit directly and immediately serviceable to himself. On the other hand, we can speak of an act of worship only where, by a sacrifice or a prayer, the otherwise free will of a deity is supposed to be more indirectly influenced and made favourable to mortal man. It thus depends on the way of influencing the deity, not on the intention connected with it, which is in both cases the same. He who lights a fire early in the morning in order thereby to invoke the rain-charm, it is precisely the same as he who himself, engaged in an act of worship, burns a text a demon of sickness into a stone or a plant, performs a magical act. He, however, who appeals to the heavenly powers by means of sacrifices and prayers in order that they may cause the sun to rise or make him well, engages in an act of worship.

Magic may be practised either by an action or by words, as can be clearly gathered from its terminology. The following series of terms is characteristic of the former method: Skr. kṣraya 'action,' kṣarīti 'bewitching,' kṛṣitā 'spells,' Lith. kėros 'magic,' kerkis 'to bewitch some one by the eye, etc.,' Old Slav. varā 'magic,' Skr. kṣata from kṣarī 'he makes,' from which also Skr. kṣat can mean 'sacrifice.' Kṣatra sacrifice is derived. In both cases, i.e., in magic work and in the various sacrificial 'soln' sar ēyāv, a ceremonial action is intended. In by far the greatest number of cases, however, 'to charm' is the meaning of these expressions, as is seen in the Greek ὕπνων 'magician,' ὑπναμά 'to charm,' Skr. kṣatā 'magic formula;' kṣaya 'to slough it off;' H.G. gulan 'magic song;' gula, guburdāri, 'magician;' gulan, hekades; Old Slav. varūja 'talisman,' Lith. lordanis, mederis, Serv. varūjati 'to charm; Old Slav. batjū 'magician;' Gr. ὑπνός, Lat. furiā: Lith. vairis, to conjure; charm; word many other examples.

By the latter method sacrifices are offered (cf. Allmen, Sauber etymologisch beschrieben, in Beekzengerser Beiträge zur Ethnologie, gebr. Sprachr. xxiv. 191; and Schneider, Reallexicon, s.v. Zaubcr und Zauberer). Here also we have to do with a speaking sar ēyāv, a ceremonial, rhetorical speaking, in which a priest a definite magic power is latent.

Such magic acts or words occur frequently on the soil of the separate Aryan peoples, along with and mixed up with acts of worship in the proper sense of the term. In India he who wishes
Thus this old Persian sacrificial custom did not know the use of fire in burning the food to the gods. The flesh was laid on a specially prepared sacrificial litter, upon which the gods were supposed to descend (Skym. barthai, Av. barsoonam 'sacrificial litter'). Later on a kind of pillow, Serv. blazina 'cushion', Old Nor. bolar, O. H. G. bolcar 'pillow'), and the god was allured, by means of an exorcism, to partake of the food. Hereodotus (iv. 60) tells of a similar practice prevalent among the Scythians. The sacrificer thus placed sheep or oxen in the god's name, noose, and strangled it after calling on the god, so that the animal was killed on purpose. The flesh of the strangled animal was boiled, just as was customary among the Persians. In this connection, I mention the feeling the sacrificial animals which are described in Lasiecius's book, de Dies Somnigilurem (pp. 49 and 54), are of great interest. Both are harvest-offerings. At the first (related by A. Guagnini from the Kronika Polska, etc., of Math. Strzygowski, mentioned above), which took place at the end of October, the sacrificial animals were bated to death with cudgels by the priests and other worshippers, who all the time called on the god Zencniick. Before the worshippers sat down to the feast, portions of each kind of food were thrown into every corner of the house with the words: 'Beneath this sacrifice, power and beneficence atque laetus comedes.' The second (related by Meneus) was the sacrifice of a goat. The faithful were assembled in a barn. A he-goat was led in. The sacrificing priest, or 'wurschette', laid both hands on the neck of the animal, and under a special protection sang over it. Then, while a hymn was being sung, the goat was raised into the air and held there till the song was finished. Thereupon the priest slew the animal, sprinkled the blood, which had been caught in a dish, round about, and gave the flesh to the women to boil. Here, again, there is no trace of a boiling of the victim. Finally, in the case of the Teutons also, regarding whose sacrificial customs we have, unfortunately, very scanty information, sacrificial fires seem to have all appearance to have been unknown. The bodies of the victims or the heads (cf. Oldenberg, Religion des Voles, p. 543ff.) we have good reasons for assuming that the thought that the gods assigned to the god could be borne to him by means of a fire, which was as was yet foreign to primitive Aryan times. In the earliest times the gifts were, on the contrary, spread out on the place of sacrifice itself, raised into the air or hung on trees, and the god must come himself to take possession of them.

The worshipper refreshes his gods with the food and drink of which he himself partakes, in order thereby to make them strong and willing to carry out his ends. That this was the original sacrificial rite of the Aryan people, we know from the complete correspondence between ancient Aryan sacrifice and ancient Aryan food. The further back we penetrate into the past of the Aryan peoples, the more do we find that cattle-rearing predominated over agriculture, and that in consequence flesh foods and animal products outweighed vegetable foods (cf. Schrader, Relliczicata, art. 'Ackerbau', 'Viehzucht', and 'Nahrung'). The same thing is true of the sacrifices. In the reports quoted above we find only animal sacrifices referred to. In the oldest studies of Aryan domestic animals, etc. (ix.), mentions only consecrata animalia. In reference to the Slavs, cf. Procopius, de Bell. Got. iii. 14: 'cinev mact ἐν τῶν τὴν ἀντιπροσώπον (Pergamum) ἀντίκειται κώμοι μόνον αὐτὸν νομίζετε έκεῖ, καὶ θυσίας τινώς βαίνει τε και ιερά πάντως, and also Holm, Chron. Slav. p. 21: 'From these sacrifices, we see that both animal and vegetable were used in the sacrifice, and the name kurulium parvulis, macaudique dispositum hostias de bohol et orbis.' Among the Lithuanians, as late as the beginning of the 16th cent., sacrifices of oxen and swine were offered. The very early acquaintance of the Aryan peoples with animal sacrifice is significantly witnessed by the existence in their primitive vocabulary of exact designations of the outer and inner parts of the animal carcass, which could be obtained only in the course of sacrificial rites (cf. Schrader, Relliczicata, art. 'Körperteile'). In the earliest times it was customary to sacrifice and eat, or eat and sacrifice, the flesh of the ox, the sheep, the goat, and, in Europe, the pig, i.e., the most ancient domestic animals of the Aryans. The sacrifice of the horse seems to have occupied a special place. As the horse did not belong to the oldest stock of Aryan domestic animals, etc. (cf. Schrader, Relliczicata, art. 'Pferd'), perhaps other sacrificial ideas may have been influential in introducing this sacrifice, such as the wish to incorporate the qualities of the animal in the worshipper, or to correspond to the animal's smoking sacrifice on the back of a horse (cf. J. V. Negelew, Das Pferd im arischen Altertum, Königsberg, 1903). Fowl, game, and fish were excluded from the stated sacrifices, because they did not originally serve as food (cf. Schrader, Relliczicata, art. 'Viehzucht', 'Fisch, Fischfang'). In the oldest times, too, the use of salt was avoided, again for the simple reason that for purely animal food it was unnecessary (cf. Relliczicata, art. 'Salt').

The sacrificial drink of primitive times was mead, the place of which was gradually taken in the north by beer. In the oldest customs connected with these drink-offerings in barbaric conditions, such as we must presuppose for primitive times, are again vividly portrayed by Meneucus (Lasiecius, e. 53) with regard to Lithuania:

'Die Georgi sacrificium faciunt Pergriubio, qui florum, plantarum et fungorum ofiam depudet, descriptum... Nam etiam Varschialae appellant, tenet destra obum orbium pluma invocatique domeni nomine decanti illius lanuus. Sed cum, impuit, alii, nec infra, ta reducunt, ta reducunt, ta recti, recta, recta, recta nonum et silice florum. Hac cautelam multa datulius apprehendens orbium, ebit orbium multa adhibita manu, nonumque obum orbium multa adhibita manu, nonumque obum orbium multa adhibita manu, nonumque obum orbium multa adhibita manu, nonumque obum orbium multa adhibita manu. Quae cina e terra subita, urum implica est; eum negotium admun, axem bilans ordine etipce inaudum Pergriubio hymnum cantat. Postea eschaper tedi et choraeus dulcet.'
If, then, 'to sacrifice' means simply to refresh the gods with earthly food and drink, and if, as we have seen, these gifts were originally offered to the dead, then we must regard human sacrifice thus performed on the place of sacrifice without the use of fire, we cannot fail to see how closely this sacrificial rite resembles the entertaining of the dead described above, when food and drink were shaken or poured out into填rows or trenches (see above, p. 26). The explanation is thus by no means far-fetched that the feeding of the beings which were thought to be in the natural phenomenon, the thunder, the storm, the fire, etc., is to be understood as a kind of dedication or transformation of the seeds (or the very act of offering food and drink is intelligible without any difficulty from the prevailing ideas regarding the further existence of the soul after death. In such a case we should conceive of the course of development in the following way. There was a time when only the dead were supplied with food and drink, and when man sought to obtain influence over the powers of nature only by means of magic, as described above. But the more the thought of personification gained precedence over magical ideas, the more the sacrifices customs usual in the service of the dead to the worship of the heavenly powers, and then the further change arose naturally from this state of affairs, viz., that the sacrificial gifts were spread on the ground instead of being buried in it.

Returning to the sacrifice itself, we reach one form of it which has not yet been considered—a form which with its gloomy aspect persists from primitive into historic times, viz. human sacrifice (cf., for the Greeks and Romans, E. V. Lassaulx, Das Sühnungsopfer, Würzburg, 1881, for the Celts, Delattre, Slaves, Lit. Mythology, i. 129; J. Grimes, Deutsche Mythologie, i, 38; V. Hehn, Kulturpflanzen, p. 531; Götter, Germanische Mythologie, p. 516; Müllenhoff, Deutsche Altertumskunde, iv, 214 ff.; for the Indians, A. Weber, Indische Strefien, i, 64-89, and Oldenberg, op. cit. p. 393). This human sacrifice is to be found in various forms. Thus in the north of Europe we have the sacrifice of victory, i.e. the previously promised slaughter of prisoners at the altars of the gods. In the south and among the Gauls we have the sacrifice of expiation, i.e. the offering of victims to the gods that are forfeited or in danger. We find every-where the building sacrifice, i.e. the conviction that the durability of a new building could be purchased only by a human life (cf. Liebrecht, Zur Fliegel, in Arch. f. Alt. Wissensch., 1868, i. 87, and also Germ. xxxv. 211). It is difficult to discover the really fundamental idea in this sacrifice. To carry out the idea of the meat-offering, we might start with the supposition that cannibalism was once widespread among the Aryans, which undoubtedly is very fully attested for numerous non-Aryan peoples of Europe (cf. R. Andrex, Die Anthropophagie, Leipzig, 1887, p. 2). In milder times a change in this sacrificial idea had taken place, in the sense that a human being was regarded as the best sacrifice that could be brought to the gods (cf. Procopius, de Bell. Got. ii. 15: τον δι ερειπι αρα το κάλλιστον ανθρώπων έστω, αντι το δολαρατο παννασιου πρώτον). Or we could think of a transformation from the worship of the dead to the gods, in which, as was said above, the man who was slain is then seen as the dead as servants and companions in death. From this, too (cf. below, II. 5), the penal-sacrifice (exequation), which has not been mentioned above, may have taken its rise. Ideas connected with magic may also have been operative in the building sacrifice, as, e.g., the new building was thought to catch the spirits of the dead as servants and companions in death. Whatever the real explanation may have been, we must in any case regard human sacrifice as a primitive institution in the history of Aryan religion, and not a comparatively late innovation originating from the East, as is done by O. Haug ( Orientaler Sprach- und Kulturvergleich der klassischen Altertumswiss., xxxv. 10).

We have already become acquainted with the incantation or magic formula which entices the gods to the feast, and seen it to be a necessary accompaniment of sacrifice. This is perhaps the oldest form of prayer. In any case the different terms for prayer point to a close connexion with sacrifice (cf. Gr. ἐφορεῖα = Lat. veeso; Gr. γέρν, ἔπαθα = Lat. litare; Lith. maldà 'prayer' = Goth. blotan 'to sacrifice,' from milti [the last according to R. Muus, Das Wörterbuch für die liturgische Sprache, ii. 327], while promising or offering a sacrifice: do ut des. The idea of thanks appears in the Aryan languages at a late date compared with the idea of petition (cf. Beulalexicon, pp. 598, 605), and thank-offerings are almost entirely unknown both in the Vedic worship and in the Homeric poems. These divinities, however, who were called up by means of those ancient incantations and prayers must at a very primitive stage of development have been designated simply as 'the called.' This we should be entitled to know, for the designation of the Teutonic 'God,' which then, as is easily enough understood, passed over into the masculine gender under the influence of expressions which were more personally conceived.

(b) The Priests.—If the practice of magic and the incantation preceded sacrifice and prayer, the magician must have been the forerunner of the priest. This development is clearly presented to us in the history of the language. The most important designation of the priest in the language of ancient India is brahman (masc.), while brahman (neut.) means 'the sacrifice,' and is more frequently used in the sense of a vocative to the calling of the Teutonic 'God,' which then, as is easily enough understood, passed over into the masculine gender under the influence of expressions which were more personally conceived.

It is accordingly not to be wondered at that from the Aryan root vid—vaid—to 'know,' frequent designations of the magician and the priest are derived, since both are regarded as the 'knowers' (viz. of all kinds of magic) sar & ñayar. Here must be mentioned, on the one hand, the O.H.G. wizigio, A.S. wītig 'prophet,' O.N. vestki 'magician,' vestka 'witchery,' O.H.G. wizzen 'prophecy,' and Old Russian věstoun 'magician,' věstur 'witchcraft, věstvirta 'witch,' věsko 'witchery'; but, on the other hand, these and other similar words cannot be placed alongside of these the designation of the ancient German priestly caste of Druids, Ir. druí.
which, being derived from *dru-vids* (according to Thurneysen, in Holder, *Althöfischer Sprachschutz*), means exactly the very knowing ones. But the personalities which in this compared the most important for the history of Aryan religion are those that are frequently mentioned in the Latin-Prussian sources, and designated with all kinds of variations of their name *as* ādhistō, waide-
tote, waider, wilder (Old Prus. uacido ‘to know,’-v Raised voice, waide-maiti ‘we perform pagan religious rites’). They were also named ἀμαῖος: Lith. žiūtis ‘to know’ (žvūtis ‘to charm’), or the mononimis: Lith. mūna ‘I understand,’ or the multonimis: Lith. mūnas, Prus. mūnas, Old Pruss. *mūnas* (cf. the Greek name Mattias, 
Preotius, Delicio Prussian oder Prussische Schaumbüchke, p. 41 ff.). These ‘wilders’ may be described both as magicians and as priests. They were servants of the chief-priest, who was called in Old Prussian ævvis, of whom we shall speak further below. The special gods seem each to have had special ‘wilders’: narutos (cf. Gr. Nāpus above, p. 35) was the name given to the wilder of the water-god; szcworose (Old Pruss. szcworisse, Lith. žeivis, wild animal) were the wilders who were believed to sacrifice sacred animals in the woods, especially elk, owls, etc.; and medzires (Old Pruss. median ‘forest,’ Lith. mūdīs ‘tree’) were the servants of the sacred woods. Every imaginable charm to divine the future (cf. below, III. 2) was in their hands. Now they are for the most part long since gone, and are called, although ‘there are still well-to-do farmers who practise these arts of the wilder.” Preotius (p. 45) mentions a fact regarding these walkers which is especially important for the history of the priesthood.

*An old peasant of Strigkinoi said to me that, many hundred years before, one of his race had been a chief-priest here in Brussow. The name of this priest is Leivur Krusweller, who was believed to possess all the gifts which we find singly among the wilders now called Mühlwinds (see above). The gifts of the wilder were, they say, hereditary; and if the gift ceased in one family, it becomes extinct.”* This hereditary transmission, in certain families or clans, of the existing magic formulas, sacrifices, and prayers, which we have here attested, may be regarded by us as a common feature of the gradually evolving priesthood among the Aryan peoples.

Sacred clans like the Vasāiśkas, the Vēśasāiśkas, the Bhāravośkas, and others are well known to us from the Rigveda as the forerunners of the later priestly functions. There is no doubt that these priestly families, who, according to the tradition, represent essentially the same cult, had in earlier times possessed special cults and special rites (cf. Oldenberg, *Die Religion des Veda*, p. 373). In India it is known that there are many such families, or some of these sacred clans with special cults, the Ekaśvārī, the Ekaśaśvāsa, the Ṣaṃvājaśa, the Kṛṣṇaś, the Kṛṣṇaśakaśā, Kṛṣṇaśaka, Kṛṣṇaśī, Kṛṣṇaśi, etc. The priesthood was a joint-possessions in these families, and descended from the father to the son and grandson (cf. P. Stengel, *Die griechischen Kultusuntertäniger*). By the institution of a sanctuary (which does not occur in Vedic India) such a priesthood becomes local, and in this way forms the leśva, to which in Homer the existence of the iēpas is united. Most nearly akin to the Hesiodic, *Eumelos*, the Norse *Ymir*, the Nor., göti, Goth. gota ‘priest;’ cf. Gr. ἄρχεω, ἀρχεων, ‘God,’ and see above, pp. 16, 42). They could break up the temple belonging to them and migrate elsewhere. Among them, too, the priestly office was inherited up through several generations (cf. Goldschmidt, *Geschichte der Mythologie*, p. 85).[4] J. and Grimm, *Deutsche Mythologie*, p. 83). Finally, in Rome also there are indications of a condition in which not State colleges but particular families attended to the performance of special cults. This comes out most unambiguously in the case of the domestic priest (priēvokrē well-to-do, who was indispensable to the king for preparing sacrifices, for ‘the gods do not eat the food of a king who has no priest’ (Aet. Ἐρεχθείας, viii. 24). And their supervision, too, the royal administration of justice was carried on, and in their conception of dharma, the
ARYAN RELIGION

What we have here, then, is another of those families expert in magic (according to Praetorius, op. cit. p. 40, the blood relations of the Crivne, the Rose-Hyettus (Hyettus), whose special science was devoted to a perennial fire, and whose chief on account of this cult—according to Jerome, magic oracles were practised by means of fire in the case of sickness—had attained to the position of influence described above). (c) THE TEMPLES. In primitive religions all over the world it is a recognized phenomenon that all objects which rise above the surface of the ground, in particular, stones, stamps, and trees, are regarded as possessing a divine essence, and were made the object of ritual acts of worship (cf. E. B. Tylor, ii. 161 ff., 215 ff.). Among the Aryan peoples also this low stage of religious life can be proved. The most important testimonies for it will be brought together, without as yet asking the question whether the objects of worship (of which there were really countless everywhere as real incorporations of the deity, or only as representations of it).

(a) Stone-worship. — With regard to ancient Greece in general, we have the following report of Pausanias, vii. 27.

ιεττάς. ιέ γρατας το τυμάλος τετράγωνος μέτρον, κύκλων μετάλο ης χρήμας το επολοίην αυταν συνελατον ε τυχτες (Παπά, έ ε στη Λαυνα, τοπο έλεγχτον το η έστη η άποκρε το το οχράθορο γην. Thus the worship of rough stones was not confined to the oldest periods of Greek history, but continued through the whole time of paganism. For Socrates, in Xenophon's Memorabilia, knows:

τοιο μεν αυτον ζηλον αυτικα αυτο ην των θεων αυτη μενεν, τοιε έε και άλλος και εχελ τα γαρατη και θηρα αδέλωμη (το ετος, άτο έντι ομοι ος άριστη αποι πετο το θεορο γην. The same author mentions, in detail, unknown stones in place of the figure of the god in the face of Hendrik at Hyetoros, and in that of Eros at Thebais; but with regard to the cult of the Ceres at Olympenaeus, B. is said (ix. 66, 103), ήτιο μεν η πετρα σημειωτε τα μεταλο και τα έστηνεις αποι πεντε έν το οχραθος γη. Thus the worship of rough stones was not confined to the oldest periods of Greek history, but continued through the whole time of paganism. For Socrates, in Xenophon's Memorabilia, knows:

(b) Worship of trees. — More frequently than unknown stones, however, we find in ancient Greece shapeless piles, boards, heaps of wood, and posts (ζονοι έκ ιεροενον, αυταλα ήλαμα δμοσφην, πενελοπευς σημει), be they the objects of worship. The testimonies for this worship are held by Overbeck. * (op. cit.). The Italian history of religion offers as proof of the primitive worship of stones the Lat. delubrum, "sanctuary," or "delubrum lignum," a "piece of wood freed from idolatry" (H. F. Kubus, Ros. Ind. I, 335, 389). I quote in extenso the report of Festus (op. c. Möller, p. 73) reports: "delubrum, diocebeunt fustem deliberatum, hoc est docentur.

The author has been unable to examine the work of M. W. de Vignes, Die nicht menschentrost. Götter der Griechen (Leiden, 1860).
worshiped in them (cf. Wissowa, op. cit. p. 401). The traces of tree-worship continue even more significantly in the richly wooded northern parts of the continent, from the West Indies to the Atlantic Ocean. With regard to the Lithuanians, we may refer to a few sentences of the report which a monk Jerome, who in the years 1409-1418 was active as a missionary in Lower Lithu-ania, sent to Pope Martin V, in the form of a letter to Piccolomini, and which is to be found in the work of the latter, entitled Europa (S. Peneo Sygvena Europae), c. xxvi.:

Petrinius alcopedas adit (Jereme), qui silvas demenzat consacratam veneracionem et adductam ad sanctificationem puatvare, ... Verrit inform in medium nemoros, ubi quernam vocum confessionem et conimnicationem in arboribus postumuli prorsum potissime sedem esse putabant percutere aliquando nihil presumptu, ... Erant in ea regione plures silvas paria religione sacra. Ad quas dum Hieronymus amantissima pergit, nullosque leges unius pluralis plorans atque eulans Vitoldum (a Lithuanian duke) adit, accelerum sinum sacrium quicquum et domus dei adernptam in qua divinarum operum petere consensit; inas intuvias, inde sole oblivitis; aciream iam in loco denuo querant, cui domicilium locum. Ese alicipos mihi faceris, in qua dieli coniciem, quae quque deleris Hieronymus velic.

An altogether special worship was assigned to the sacred oak of Perkinas, in whose rushing the worshipper believed himself to hear, as at Dodona, the voice of the god announcing the future (cf. below, III. 2). Other sacred trees were the birch (birzlin), the hazel (lazdonia), the cherry tree (kruvo), the maple (blasche), and the mountain ash (Gefaunia). The special reverence paid to trees that had grown together, ramuntia, romoves, from which the centre of the Crimean mentioned above had its name. Undoubtedly the Ten- tons of the first Christian centuries stood at this stage of development, in spirit of the idealistic interpretation which Tacitus (Germania, ch. 9) gives to their tree-cult:

Ceterum nec cohiere parellitas deos, neque in ulnum simul adorant etiam speciem soli, sed etiam arboribus: hanc nos nemora consecratis, decuremne novitati adagiant secreta ilium, quod sola reverenter videtur.

Of particular sacred trees, oaks belong, all others are mentioned, one of which Boniface fellched near Geissmar. The worship of a pear tree in Auxerre in heathen times is also well attested (J. Grimm, Deutsche Mythol. i. 6 f.), although this report leads us to Celtic territory; for here, too, the tree-cult was fully developed. There was being worshiped the Druid or the oak and the mistletoes which grew on it (Plny, HN xvi. 249), and we hear of sacred groves in Gaul as well as in Britain (cf. on them H. Munro Chadwick, 'The Oak and the Thunder-storm', JHS xxi. 228 f.).

In glancing over the Lat. 'Aryan stone- stump' and tree-worship collected here, we could make no greater mistake than to suppose that the religious ideas which find expression in this worship are all to be placed at the same historical stage. It cannot be doubted that in many, if not even in the majority of cases, the object of worship is merely the symbol under which a deity was worshiped that existed outside of the object, and was only occasionally present in it. But, on the other hand, it cannot be denied that the traces are often to be found to have been a time when people actually worshiped, as is the case among the rudest savages, the very stone, post, or tree, as a god, since they looked on it as the body of a divina anima. This becomes very evident in the remains of the Greek stone-cult and in the Lithuanian tree-cult reported upon by Prophrastos (Charact. c. 17), in his day, tells us of people who, when passing stones smeared with oil at the crossways, did not fail to pour oil on them out of their oil-paltris, to fall on their knees, and to present the most solemn of votive offerings. This judgment is to be judged in the same way as whom in the Society Islands, rude logs or fragments of basalt.
ARYAN RELIGION

columns, clothed in native cloth and anointed with oil, received adoration and sacrifice as divinely powerful by virtue of the "Atua" or deity which had filled them (Tylor, II. 255).

In Lithuanian the oak was, it is true, sacred to Perkūnas; but evidently, like the other sacred trees mentioned above, it enjoyed independent worship, as follows from the report of Rostowskii: "A rurally styled Perkūnas, tan quercus regalis, alii quibus femina pullatara pro fugulis et inoconvertibile re dominata." (Rostowskii, 229. Stasys, 205. Phil. ix. 25, and other reports, according to which sick persons, observing remarkable customs, clamber up to the boughs of a sickly oak. During their ascent they clutch each offering on the branch of the tree, and seriously believe that they will be healed thereby. Often it happens that such a branch is quite full of carbuncles and cows' veins, gallstones, kidney stones, articles, which are tied to it from top to bottom. Several sacrifice money also, which they lay upon the ground before the tree. Cf. Vangeliu, 97, and Gireiūkas, 37."

Accordingly, we may (like Frazer, GB) conceive of the process of evolution of these ideas in the following way. There was among the Aryan peoples a distant period in which stones, stumps, and trees were worshipped as actual fetishes within the limits of this racial division—and certainly as early as primitive Aryan times (a period where the present writer differs from Frazer)—the cult of the 'heavenly ones' came more and more to the front, conceptions began to be thought of before the human mind had given the objects of worship just mentioned, especially with the sacred tree and its shoot, the stump or post, which were now regarded only as symbols and occasional dwelling-places of the 'heavenly ones.' Along with these ideas, the old conceptions continued to operate further among the lower classes.

This connexion is most clearly exemplified in the relationship of the thunder-god to the oak. Zeus and the oak of Dodon, Jupiter Pereritus and the grove of Dodona, Perkūnas and Ažūnas ("oak"), we have already noted; but we are also told of the Celts by Maximus Tyrius: Κοινὸν εἶναι δέκαν αὐτῶν, ἀλλὰ τὸν δόξαν κεκινημένη ὑπὸν θεῶν. Nothing can be more easily understood than this connexion, when we call to mind how the lightning flashes or the thunder god comes down with an especially fondness on the king of the forest; and it is difficult to conceive why H. Munro Chadwick, in his otherwise excellent essay, 'The Oak and the Thunder-god,' mentioned already in this connexion, and who objects to the connexion of this phenomenon as a supposed dwelling of primitive man below the oak. But the other gods are also preferably thought of as dwelling in trees and forests. "In Greece we have, besides a Zeus Zeŭs ἔκκερακος, θεὸς ἀπόθεντος (omnium), an Παλαικτήν, an Ἀργεύς καρτέφερτη, etc. Among the Teutons were found, as well as a silva Herculis (= Donar) sacra (Ann. ii. 12), a castanum nemus of Nerthus (Germania, c. 40), and a hæna Baduhenmen (Ann. iv. 78). Among the Lithuanians, as we have seen above, the rain- and sun-gods were worshipped in sacred groves.

In this assimilation of the cult of the 'heavenly ones' and a primitive stone, stump and tree-fetishism we have secured, once for all, the foundation for the explanation of the two most outstanding objects of heathen worship in historical times—the temple and the image. The tree or grove in which the deity is worshipped develops into the stone temple; the stone or wooden stump, which serves as a symbol of the deity, assumes human features and becomes the image of the god.

This probable combination is, the present writer thinks, raised to a certainty when we consider that in Greece, in the most ancient times, the figures of the gods were actually placed on, or in, oak-trunks or herms (κεραυνὸν τοῦ ἱεροῦ προστάτου τοῦ ἱεροῦ συνάρτησις, οἱ κέραμοι μεγάλης) or as the name of Jupiter of Dodona in the primitive cult, Zeus Nêos (nêos-), finds its natural interpretation if we conceive him as 'the one in the tree-trunk.' The ἄγρυπνοι δήμοι and the ζησαυς των εἰγενών, above, gradually entered into the βενέτος = Skr. mārta 'figure'? the image or figure of the god. It is not far-fetched to find in the images of Hermes, in which only the face and the extended penis of the god are represented, a stage on this path of development.

The words of J. Grimm (Deutsche Mythol. i. 59) are true of the Teutons. "Temple is also at the same time wood. What we think of as a walled and built house, dissolves, the farther back we go, into the conception of a sacred place which has not been touched by human hand, but is hedged in and made peaceful by trees that have grown up of their own accord." The conceptions grove and temple accordingly run to a large extent together in the Teutonic language.

This is true of the series Goth. alks, A.S. ealh, Old Saxon aelh, which are always used of the most sacred trees. Lett. elks 'idol,' perhaps also to the Gr. άξων ('axios') 'grove,' 'sacred grove,' which, however, is compared with other Old Slav. lêtx 'forest.' The term is also found in the Greek heath, heary (O. H. G. hærgeti 'priest'), which are explained in glosses by luxos, nemus, and also by stenmemon, stonememon, etc. as well as by a r. slav. lêtx, a r. A. S. born, a r. G. sêr (of the Greek πριήτης), which belongs to the common Slavonic root ber, bôros, 'pine-forest.' (cf. Zuttius, i. svntu bánli 'sacred pine forest' in the lands of Mecklenburg according to Thietmar: inveni Z. dictus ab ecclisi, ut Deus ab omnibus honoravit). To this class of expressions are added—for the United plants of wood or stone, whose first traces are to be found probably in the temple of the Tanfana, which, according to Tacitus (Ann. i. 18), was level with the ground and surrounded by groves, or from the human dwelling-house, such as O. H. G. hof, halla, eal, petapier, petialas, pósias, petaraks, Goth. gudils, etc. the figures of the gods, who, too, are designated as ãva, ãsava, 'carved works,' but regarding whose more definite nature we unfortunately can discover nothing, are repeatedly mentioned in the 4th century (cf. Goltzir, Germ. Myth. p. 68).

At the same time in which we have among the Teutons only sacred trees and groves as places for the worship of the gods, the common Celtic name for 'sanctuary; nemeton (oivriωνaτa, Medionemeton, Tannoinemeton, Verrnemeton: Skr. nemus 'worship') is the double designation, forest, wood, or grove, by human hands. Here too, however, the original meaning is seen from the Old Saxon indiculus superstitionum, in which mention is made "de sacris silvarum, quae nimidas (= Gall. nemetum) vocant." On the other hand, the neighbours of the Teutons on the North-East, the Prussians and the Lithuanians, may be regarded as having continued in their templeless condition up to the date of their conversion to Christianity. At the same time we hear incidentally of idols, which they carved for themselves. Thus a heathen fisher (cf. Pretorius, op. cit. p. 27) had made a wind-god (Więjopačis) out of lark, which had two faces on the head, one in front and one behind, both of them with gaping mouths. The same state of affairs is found among the Eastern Slavs, and Miklosich (Die Christliche Terminologie, p. 67) rightly remarks that there is no ground whatever for the assumption that the first preachers of Christianity found here buildings devoted to religious service (for Russian idols, cf. above, p. 43). The Western Slavs, on the other hand, were acquainted with * The usual explanation of the Greek νεμων, 'temple,' derives this word from the Greek νεμειν, 'to govern,' and indeed in the primitive Greek νεμως is, in the conception of the present writer, identical with the root found beside it, νημως, νημειν (οια) 'to dwell.' This word and adequate to the root, and other words come together in the meaning 'tree-trunk' (cf. e.g. Skl. νηματα, Old Saxon nemlit, 'tree-trunk,' and many other similar changes of meaning).
real temples, with statues of the gods, and with idols, e.g., the three-headed Triglav ("Three-Heads"), as we learn from the descriptions of Thiébaut of Merseburg (Mon. Germ. v. 812) and Otto of Bamberg (M. G. Script., ed. Pertz., ii, 82). Here too, however, we see how deeply the ancient tree-worship has been even in the languages of the people from the fact, related by Otto of Bamberg, that they calmly allowed four temples to be torn down, and even helped in the work, but raised objections when an attack was made on the large wide-spreading oak standing near, 'quam plebes nuninis aliusibus inhabitatone sacrum astenitus magnum venerantem colarent.'

But the places of old Aryan worship are not yet exhausted in the foregoing discussion. While in the case of tree-worship it is to a certain extent probable that the 'heavenly concept' feast, whose airy abodes to the earth, an attempt was made by mankind in another direction to raise themselves to heaven. The Persians, we saw above (p. 33), climbed to the top of the highest mountain when they wished to offer a sacrifice to Heaven. The same was the case in Greece. Pausanias mentions the tops of mountains as the seats of famous cults in many localities. Especially sacred, however, was the territory of the Lycurgan Zeus on the highest peak of Arcadia, where tree-cult and high-place-cult were combined. In Italy, too, there were, in the Oscan part of the Campagna, mountains particularly connected with the high places; and with regard to most Roman hills the existence of ancient cults of Jupiter might be proved (Wissowa, p. 102). Of the Teutons, Agathias, 28, 4, reports: Οἱ Λιθουάνοι οἱ Καλιπάτας (Lithuanians of the high-place-cult).

(d) The Feasts.—In the equation, Gr. ἐορτή, Ion. ἑορτή 'feast' = Skr. evàta ‘deceer,' 'divine service' (of., e.g., mahāvāta, like M.H.G. höchelt, lit. 'great feast'), there is to be found an originally related idea of the 'heavenly concept' feast, whose fundamental meaning was something like 'appointed time.' It is rather difficult to decide what these ceri dies may have been among the Aryans, and without doubt a considerable time will have to pass before the comparative etymology of the Aryan peoples, the grammar of which has latterly been taken in hand yet, will be in a position to give a decisive answer to this question. We saw above (I, 3) that the life of the Aryans even in primitive times was interwoven with a consubstantial ceremony of the days and the dead; and in particular, in the vintry half of the year, the observance of a great festival of the dead, agreeing in many details, can be proved among almost all the Aryan peoples. Thus in India the third of the three annual festivals, which took place in the colder season of the year, was connected with a great sacrifice for the dead. Among the Lithuanians we discovered a general feast for the dead in the beginning of November. In Rome the Larentalia were held on the 23rd of December, the Perilunia in February. Among the Teutons the dead seem to have been remembered with many varied customs at 'Yuletide' (cf. E. Mogk in Paul's Grundriss, v. iii. 391), a name which itself may be connected with the darkness of the realms of the dead, seeing that 'Yule' (A.S. gōd, godhild) personified was rooted in the affections of the people. jeqa or jeqa = Gr. ἐθνός in εθνῶν, ἐθνός, west, 'darkness,' under world.' Most remarkable in this connexion, too, is a wide-spread Slavonic name for the Christmas festival (Russ. khoróvau, Czech křížovau, Słav. křížovací, Litau. kruzinas), which in White Russian signifies 'untouched, premature death in early years,' and 'an evil spirit that shortens life.' In regard to this development, Miklosich (Ritum, Wörterbueh der slav. Sprachen, p. 130) correctly remarks, 'perhaps Kružnov was a feast of the dead.'

The significance of these feasts of the dead, which in White Russia serve even to-day among the people as the basis for the reckoning of dates, is especially made manifest on Italian soil, as can be shown even in the language. It is impossible to separate the Lat. fērīus, fēsār, fēsān, 'feast,' 'festival,' from the above-mentioned fēstilā, from dhēvāś-āta, 'feast of the dead,' so that fēsāna from dhēvasā, at first 'feast of the dead,' had come to mean 'feast' in general; and correspondingly the Lat. festus from dhēvasās and festus (in Umb. and fēsān, sc. domus, 'temple') from dhēvasa, at first denoted 'applied to souls,' then 'sacred,' 'holy.'

But were there even in primitive times regular festivals in localities or quarters of the earth, and did their meaning change according to the time of the year? In the past there is a possibility of extracting a common primitive kernel from the endless mass of names and dates referring to the worship of the gods among the separate peoples? It has long been customary to find this in the festivals of the so-called four points of the year; and in particular with the and the summer solstice were regarded as the most ancient feast dates of the Aryan peoples. We shall do well briefly to call to mind what we know regarding the oldest divisions of time among the Aryans, in order to make a judgment on these theories possible. The year was divided into four points of the year for the Aryan peoples. According to its course its natural months were distinguished. A division of the yearly course of the sun into these four had not yet taken place, for which reason there were no names of the separate months or of the vocabulary of the primitive Aryan language. Of course, some have sought to find a pre-historic attempt to equalize the moon-year with the sun-year in the apparent coincidence of our 'twelfth,' the time from Dec. 25 to Jan. 6, with the twelve sacred nights of the Pithom-cult (in the moon-year +12 days = 366 of the civil sun-year) (cf. regarding it especially A. Weber, Indische Streifzüge, xvii. 224, and SBAW, phil.-hist. Kl. 1898, xxxi1. 221.) The present writer, however, believes that it has been made very probable by A. Tille (Yule and Christmas, Gymn. Geor. Year, London, 1899) that these twelfth, famed in legend among the Teutonic peoples, do not go back to the remotest heathendom, but are only a copy of the Christian Dedemecumen, the sacred night of the Jērah, and the old day for calling to mind the Divinity of Christ. Along with these purely unattached lunar months a distinction of seasons of the year was made in primitive times, originally only winter (Skr. māṃṣāt = Gr. μησών, Lat. mensis,) and summer (Avesta ham = O.H.G. sumar, etc.), then besides those, at an early date, a short transition period of spring (Skr. vasuṇta = ἐπ, Lat. ver, etc.). Their combination was called a 'past' (veṣa : Skr. veṣaše, Gr. ἔτος, Lat. vētus, etc.); but in meaning it was customary to calculate according to single periods of the year, especially according to winters. The Aryan year was thus a purely natural year (cf. Rolllexicon, artt. 'Jahr,' 'Jahreszeiten,' and 'Zeitteilung').

All more exact methods of dividing the time, based on knowledge of the signs of the year, were derived by the Indians as well as by the Aryan peoples of Europe from Babylonia. Here, too, the distinction between the four points of the year must have arisen at a very early date, and in a long migratory progress have crossed over to the Greeks (cf. Herodotus, i. 109) and found them to the north.

* A Russian name for the whole period of Christmas is krest, lit. 'cross,' which shows what sort of heathen ideas this time of the year was associated.
of Europe. The designations of the equinoxes in the Teutonic languages (O.H.G. erahnaht, A.S. eornmght, Old Nor. jarufjedr) are undoubtedly only translations of the Lat. *equinoxium* (Gr. έραινος) 15; and for the idea of the solstice separate expressions have been formed among the different Teutonic peoples: O.H.G. sunwæcde, sunghikt, sunosta, solwæct (cf. Old Nor. staurvækt) which proclaim their dependence on the Lat. *solstitium* by the fact that they, like it, are used only for the *summer solstice*; but for the *winter solstice* (Lat. *winter*, i.e. *wettisstring*) perhaps its festival was adopted from the Celts (cf. cit. op. cit. p. 194) absolutely no old Teutonic expressions are to be found. Finally, it is impossible to understand what significance the fixing of the longest or the shortest day could have had, presupposing that it was at all possible in primitive conditions of culture; for Procopius (De Bell. Got. ii. 15) relates of the inhabitants of Thule that, after they had been 25 days without the light of the sun, they sent messengers to the highest peaks of the mountains to spy out if the sun would not soon appear; when however they found it to have been a lie, its speedy return, they celebrated the greatest of their festivals. Such a narrative is easily enough understood of the most northerly stretches, but would be utterly unintelligible among men who had the sun always before their eyes (cf. A. Tille, *Beiträge zur Geschichte der germanischen Volkskunde*, p. 149). But although these solstice festivals, as such, among the Aryan peoples, seem to be by no means very primitive, it cannot be said that the manifest agreement of the customs and usages relating to the summer solstice to a later transference and migration. If we turn our attention to the rites connected with the summer solstice or St. John's day (St. Ivan's day among the Slavs), we see that a characteristic feature of them is the intimate connexion in which the two elements of fire and water occurs. It is everywhere customary to kindle bonfires, to dance round them, or to leap over them, generally in pairs. Almost everywhere we find water in some form or other along with the fire. It may be that the festive company lathé either before or after the kindling of the fire, it may be that they put the fire in the stream and there extinguished, or it may be in some other way. In this connexion it seems most easy to understand an old Indian solstice custom which took place at the Mahâvratâ festival, i.e. (according to Hillebrandt, *Die Religion des Volks*, pp. 295-299) at the festival of the summer solstice (at a later date Mahâvratâ is the winter solstice). Accompanied by the beating of drums, women carrying jars filled with water march in procession three times round the fire from right to left and then again from left to right, singing a song, which closes with the refrain, 'That is mead.' After going round the fire for the last time, they pour the water into the fire and thus extinguish it.

This remarkable combination of the two elements so highly honoured by the Aryans, fire and water, is entirely inexplicable when we start from an original solstice festival. On the other hand, it can be very easily interpreted if, in the usage of the Mahâvratâ festival, we regard the honour not of a sun-god but of Indra, the giver of refreshing rain, we see with Hillebrandt (op. cit.) and Oldenberg (*Die Religion des Volks*, pp. 448, 507) an ancient rain-charm, i.e. a magical device for ensuring the procuring of rain. It is quite possible that the objecture is inevitable, that in the rites described as existing mainly among Indians, Slavs, and Teutons, we have to recognize the vestiges of an ancient Aryan festival dedicated to fire and water, and held in summer, in which, by means of extinguishing the fire on the earth, the wisher sought to cause the heavens to send down streams of fertilizing moisture on the meadows and fields. We have the additional fact that among all the Aryan peoples inhabiting Middle Europe in the time near the Feast of St. John a natural wave of the thoughts, by the rainfall, i.e. the rain that fell before St. John's Day was believed to be especially valuable, and was prayed for from heaven by priest and congregation, while, on the other hand, the rain that fell after St. John's Day was useless, and even St. John's Day was without effect.

But different opinions prevail. The peasants of the Russian province of Archangel say, 'The rain on St. John's Day is better than a mountain of gold'; other peoples hold an exactly opposite view (cf., for details on the subject, Alexis Yermoloff, *Der landwirtschaftliche Viehhandel*, Leipzig, 1853, p. 296 ff.). Thus from this side also we seem to obtain confirmation of our conjecture that in the customs described above we have traces of a midsummer feast which was celebrated without special regard to the longest day. Among other things, it may have belonged to the solemn rites of such a festival to seek, for the last time in the summer, to obtain moisture for the meadows and fields by means of a rain-charm. This view, which we have adopted with regard to the original significance of the solstices, does not in any way militate against the idea expressed by Mannhardt (*Der Baumkultus*, pp. 497, 516, 521). He regards the midsummer fires as sun-charms, since fire is supposed to represent the light and heat of the summer sun, which the growing vegetation must be exposed.

Remains of a second Aryan festival, a *spring-fest*, are perhaps to be found in the worship of the Teutonic Ostara and the Indian Ushas, which had its special place in the ritual at the beginning of the year at the Prârâmmanâtra of the Agniya sacrifice, which was observed with great solemnity in spring (cf. Hillebrandt, *Vedic Mythology*, ii. 28 ff.). It seems that this festival is chiefly in view in the idea, proved to be Aryan by L. v. Schleicher (cf. cit. op. cit. p. 151, note 13), 'the wendloder,' in the *Mittel. d. anthopr. Gesell. in Wien*, xxxii., (that the sun at its rising, particularly on certain days, dances, jumps, shakes itself, and plays.

From such indications as these we must seek further information concerning the times of the old Aryan festivals. Since the moon, as we have already noticed, was the measure of time in primitive times, the Aryan *certi dies* must have been connected with the chief phases of the moon, the new moon and the full moon, and the *sacraments* of the new and the full moon belong to the regular and most ancient offerings to the gods (cf. Oldenberg, op. cit. p. 441 ff., and A. Hillebrandt, *Das altindische Neu- und Vollmonsdolfer*, Jena,
1889. But in Greece also the feast-days were connected with definite phases of the moon, particularly the full moon (cf. A. Mommsen, Heur. p. 2); and among the Romans the 'sacriiice, crime, claim. These to fellow-countryman 

Skr. later right. TheBlut- 

united to the Arya marriage ceremonial, in which ancient fire and water enjoy common worship. In India the bridegroom, after taking the bride by the hand, leads her three times round the fire on the hearth, on which a sacrifice of roasted corn is offered. Previously a new jug filled with water is placed on the floor, and it must remain on the right side of the bridal pair as they march round the fire. But liberal use is also made at other times of water, which is solemnly brought from the spring. The last drink in it, the young pair are to spring with it. In Roman marriage is even designated a union 'acqua e igni.'

Romulus married the captured Sabine women, dec. rea

patriae iudiciis (H subsidies of states). Vespasianus p. 166, 167 reports: 'Aqua et igni mariti uxores acceptabant. Undalamque etfacta præcettam et aqua petita de purpureo sancto, aliorum aut paucarum interjectum, de qua substantias solebant pedes lavavit.'

Here, too, a solemn procession round the altar from left to right took place, at which a boy carried the marriage-torch and the marriage-water, drawn from a pure spring; then in the house of the bride's father a fire-leaf (hence confarreationis) was sacrificed in the fire (on the Greek λυτήρας, cf. above, p. 22). The same customs which we find in the east and south of the world exist also in the north of Europe. Thus Menevalis reports of the Littuanians: 'Cum nuptiae celebratur, spona iter antem circa focum, deinde ibidem in sella collectorum, super quas sedent pedes lustravit aqua qua lacte sipulialis, tota supplex domestica et invitati ad nuptias hospites consecravit.'

Also among the Slavs, just as on St. Ivan's day, baths and dancing through or over a fire belong to the fixed marriage rites, and finally, in ancient Germany the bride was led three times round the hearth in the house of the bridegroom after she had stepped over a vessel of water (cf. the proofs of D. Burkhard, Bedeutung der Gewässer, p. 27). Perhaps in this case the union of fire and water (heat and moisture) may be regarded as the symbol under which husband and wife were united to each other for the purpose of producing a numerous progeny.

For further details regarding the common religious customs connected with the naming of the child, the first cutting of his hair, the feast of puberty, etc., see Winternitz, 'Was wissen wir von den Indogermanen?' (Beilage zur Münchener Jb., 1887). M. Burkhard, Folklieden, festen der Griechen und Römer, Berlin, 1901.

5. The relation of the 'heavenly ones' to the morality of mankind.—In all the higher stages of heathen religion we find the gods represented as the guardians of all written and unwritten law, and among the barbarians of all human transgressions of the same. Here we shall seek to discuss the question how far back in the history of the Aryans peoples this conception goes. It is obvious that legal or moral conceptions of some higher being only after these ordinances had been evolved and came to consciousness in the human society itself. Accordingly, it will be necessary in entering upon this discussion to direct our attention to the law and custom of primitive Aryan times as they are shown to us by the science of Anthropology.

What we at the present day designate as 'punishment' and 'crime' resolve themselves, the further back we go into the past of the Aryan peoples, in a great number of cases into the conception of 'sacriiice' and 'crime.' The Lat. penna is the judicial penalty prescribed as a corrective provision against the transgression of the law, but the Gr. πάνθος, from which penna is borrowed, is, as we shall see below, the old Aryan expression for 'fine.' In the same way the Lat. penna and pena are often identical or very nearly so; but the root-word demnitas originally signifies nothing else than 'that which is given (as a fine)' ('da-mn-ntm: dare'). The German word Schuld, which in all the Teutonic languages in which it occurs designates the guilt of a wrong committed in a law-court as well as guilt before the gods, as is evident from its being derived from Goth. skul, skol, skula, skults, meant nothing else than Du zollst, sc. tezahlen ("Thou shalt pay"). The Lat. flagitium, 'crime,' 'infamous deed,' which is derived from flagrare, 'to burn,' and which is probably a derivative of a verb signifying 'to be driven by fire,' probably by the chain: flagrare—frigore—Ir. dilg'id ("dilgétro"), 'duty,' 'law,' 'right,' Ir. dilgim, 'I have a claim to something,' Welsh dlen, etc., 'to be guilty,' Bret. dle, Goth. dulgs, Old Slav. dilga, 'guilt,' undoubtedly goes back, in the same way to a fundamental meaning 'liability,' i.e. to punish. The reason of this phenomenon lies in the fact that in primitive Aryan times a great number of actions which we regard as crimes at the present day, and which are punishable by the State—m你应该、and manslaughter, theft and robbery, theft and adultery, etc. were not punished in any way by the community, i.e. in primitive religions, by the tribe and its chief (Skr. vaj, Lat. vex, Ir. ri), but the avenging of them was left to the self-help of the individual families which were united in the tribe. The exercise of this self-help took the form of blood-revenge (cf. above, p. 28), which even in the earliest times could be expiated by a fine of cattle. The Aryan expression for blood-revenge itself and its compensation by means of the money payment is contained in the equivalents: Avesta, haedia = Gr. πάνθος. Skr. chki, Gr. rhohia = 'to punish,' 'to avenge,' 'to expiate a fine.' When at a later date the power of the State to inflict punishment deprived the families of the self-help and the exacting of the fine, the latter idea was changed into the conception of the State, and for the Stater the inured payment of a fine became a crime against the laws of the State (cf. Ecclesiasticus, artt. 'Blatrache,' 'Strafe,' and 'Verbrechen').

Now such actions as were to be followed by blood-revenge or to be expiated by a fine were not in primitive times regarded as transgressions of the decrees of any supernatural beings whatsoever. This is seen to be the case from the fact that, in the earliest historical times, e.g. in the ethics of the Homeric poets, those very crimes which according to our ideas are most heinous, murder and robbery, were neither regarded as defiling mankind nor condemned by the moral consciousness of the people. For what other explanation can be given of the fact that Theoclymenus (Od. v. 250 ff.), who had slain a man in Argos and had taken flight, was received by the Cretans, while his action being regarded as necessary, as was usual at a later date; or that Ulysses himself (Od. xiii. 236 ff.) was not afraid of the abhorrence of his listener, when, although in an imaginary story, he represented himself as having and killed a fellow-countryman in Crete? Just as little did Telemachus (Od. iii. 70 ff.) take
offence when he was asked on his arrival if he was perhaps a robber who was roving over the sea and at last came to the shore, and made the attempt (cf. further, in Realexxicon, att. 'Mord' and 'Raub').

Thus, it seems that actions such as those mentioned above had nothing in them offensive to the conscience of the people if they were carried out openly or with violence. On the other hand, theft and adultery may have been regarded as an earlier date as morally reprehensible merely on account of their secrecy—a view which finds expression in the fact that, so far as we can see, the killing of the adulterer or the thief, caught in the act, was considered the right of his avenger. He was avenged by the killing of his own avenger, i.e. to use the form of expression of a later date, remained unpunished (cf. Realexxicon, att. 'Diebstahl' and 'Ehebruch').

Under the circumstances described above, it may seem remarkable that in the vocabulary of the original language there was nevertheless one expression for the notion of sin and crime, in which the idea of a shortcoming before gods and men seems to have been operative from the beginning: Skr. ayās = Gr. ἄγας (ἀγας = ἅγας, i.e. 'without ἅγας = ἄγας'). But we shall see that the idea of original or corrupt nature is here quite peculiar. If we examine the oldest use of the Greek word (with regard to that of the Indian one, we can unfortunately deduce very little), we find that it is used by the tragedians (cf. Realexxicon, att. 'θραύσας') as indicating any action, namely, high treason, regicide, paricide, and carelessness with regard to the duty of intermediate of a relative. An ayās, then, which is best translated by 'abomination,' was committed on the one hand by the man who was guilty of a hostile act against the tribe and against its chief, the king, and on the other hand by the man who violated the duties resting upon him in virtue of his family or tribal connexion. Here, too, there can be no doubt as to who the deities were that were insulted thereby. In ἀσαξύλω (Σεπτήμ con-

tra Thelas, 1017) we are told of Polynices: ἄγας δὲ καὶ θανῶν κεκεφαληταί ἡ τειχὸς πατρῶν ὡς εἰκόναι καὶ θεραπεύων καταφέροντο ἐκεῖ δὴ πάλιν, i.e. he who led the army against the city was in life an abomination to the feet πατρῶν, and—as unburied—would be the last as a spirit in the next life. (On the discussion of the name in Caland, Totenverehrung, p. 69 ff.) were—at least originally—not the 'heavenly ones' or the gods related to them, therefore not Zeus, Apollo, Athene, etc., but rather the souls of the ancestors or the spirits of the family or the tribe, to whom on the mainland of Greece even in later times a rich worship was assigned (cf. E. Rohde, Psyche, i. 167 ff.). We saw (above, p. 28) that the foundation pillars of the social organization in primitive Aryan times rested on ancestor-worship, and it is an almost obvious conclusion that the souls of the worshipped ancestors were thought of as watching with jealous exactness over the keeping of the old institutions in the family and in the tribe (cf. above, p. 23).

All those actions which merited praise rather than blame, when committed against one who did not belong to the clan, were regarded when perpetrated against a member of the family as ayās, which challenged the vengeance of the spirits of the progenitors who presided over the family. The old heroes of the Homeric period, e.g. Agamemnon, may have been the personification of the avenger, and the same may be the case with the paricide, the 'kin-murderer' ('πάρο- from πάς = Gr. πᾶς), i.e. the man who had killed a member of the clan; and Brunnenmeister (Das Tötungsverbrechen im altrömischen Recht p. 171) has undoubtedly good ground for describing the divo (or better still for divo parentum) murder as the legal consequence of the paricideum. These conditions doubtless also gave rise to the Latin expression supplicium, 'capital punishment,' really, however, the 'appeasing' (sub-placare), sc. divorum parentum of the corpse, and the 'aspiring' toführung over the family, so in the same way would they also have controlled the tribe even in primitive times, and their wrath would have been aroused by everything which was directed against the tribe and its leader, the king. Punishment by death, then, by means of stoning, the only punishment of primitive times (cf. above, p. 42), which was decreed and immediately executed by the popular assembly, which represented the tribe, can best be conceived of as a supplicium, i.e. an act of expiation of the spirits who rule over the tribe (cf. Realexxicon, att. 'Mord', Dämon Verbrechen, 'Strafe,' and 'Volksversammlung').

It is therefore evident that the oldest combination of law, custom, and religion is to be found in the worship of the dead, who from the remotest antiquity were considered the original fund of order prevailing in the family and the tribe (Skr. svadhā 'propriety,' customary condition = Gr. ἄγας, 'habit,' 'custom,' usage, ἄγας, 'use and wont,' 'habitual stopping-place,' and (perhaps) Goth. sidus, O. H. G. sita, 'custom'). The 'heavenly ones' have originally nothing whatever to do with this conception; they are entirely beyond the realm of good or ill ('jenseits von Gut und Böse'). For what is stated in detail above is correct, that the deities designated by the equivalents Skr. deś, Lat. deus, etc., were nothing else than 'special gods' of the sky and the natural phenomena connected with it, who exerted an influence only within the spheres to which they owed their conceptual origin, it is obvious that mankind could have recourse to them only in matters which lay within these special provinces. In the case of Zeus, for instance, it was the thunder that it might spare his own head and strike the head of the enemy, or he may have prayed to the fire to light up and to serene away the night-monsters and destroy the fields of the enemy, but nothing more. It is no accident that, even in the Homeric periods, the gods who were much more frequently represented as strong, large, and powerful than as endowed with any moral qualities (cf. Oldenberg, Die Religion des Veda, p. 284). But the more the 'heavenly ones' and the gods connected with them developed into distinctive and many-sided personalities, the more were they also invested with a moral life, seeing that, on the one hand, with the evolution of the family and the tribe into the city and the State, they took over the role of guardian from the souls of the ancestors, and, on the other hand, appeared as the bearers and protectors of new moral ideals, which were gradually coming to the front in human society. Thus the past belongs to the spirits of the ancestors, and the future to the 'heavenly ones.' It will be of advantage to seek the connection of the evolution in the history of two moral duties which received comparatively late recognition—the duty of truth and the duty of hospitality.

(1) Truth.—The Aryan name for this idea is contained in the two originally distinct words, the Sanskrit dharma and Late Latin and Lat. dēnus = O. H. G. inn, Old Ir. sin, both roots signifying the 'actually existing' (set: sin, 'existing,' Lat. versus from versus: Goth. sinan, 'to be, to exist'). The oath serves the purpose of strengthening this 'actually existing'; and
the farther back we go in point of time, the more important is the past played by the present, the undetermined given more frequently than the educated regard it as necessary to structure events by means of an oath.

The existence of the oath in primitive Aryan, therefore, was not beyond the reach of doubt by the series of words: Skr. am, GST. er, Lith. eret, 1. etc. ('oath', 'curse', 'hostile'; cf. O. Germ. 4rath, 'oath', 'curse' kindred (Rundschau, 1886-87, vol. iii. April-June, 1887), and the present writer in his book, Handelsgegichte und Warenhandel, l. 170. In the latter book appears the statement: 'the custom of hospitality, Schroder and also one everywhere the family hospitality, the Aryan hospitality, as expressed (c.f. hosti-pets, Aryan hospitality, 'Handel') and intercourse, even among Teutons, Slavs, and Lithuanians, as early as the beginnings of the historical period (from motu to hosti-pets, Aryan hospitality, 'Handel') and intercourse, even among the Greeks and Romans manifest, even in the oldest historical times, a more elevated character; for among both these peoples, leaving aside a few survivals of the oldest state of affairs, the gods, and in particular Zeus-Jupiter, were invoked both in order to be present as witnesses of the curse pronounced, and to carry it out in the case of persecution or to light from the realm of magic to the sway of religion; the 'heavenly ones'—particularly Zeus, the god of the bright, all-sky sky of day—have become the bearers and the guardians of the community of truth.

Hospitality.—The primitive Aryans, like all other primitive races, regarded the stranger as a man without rights, who could be killed or robbed with impunity. In apparently irreconcilable contradiction to this idea, i. e., in its last remains, was finally vanquished only by the new conception of life brought in by Christianity, there stands the custom of hospitality, which can be traced in a more or less developed state even among Teutons, Slavs, and Lithuanians, as early as the beginnings of the historical period (from motu to hosti-pets, Aryan hospitality, 'Handel'), and also everywhere a cordial hospitality, and also everywhere hospitality about as early as an exchange of gifts, which is everywhere indicated, 'hosti-pets, Aryan hospitality, 'Handel'). And also everywhere a cordial hospitality, and also everywhere everywhere hospitality is expressed the view that in it to be found the origin of hospitality—hospitality which in these, in the primitive conditions, commercial intercourse, leaving aside a few survivals of the oldest state of affairs, the gods, and in particular Zeus-Jupiter, were invoked both in order to be present as witnesses of the curse pronounced, and to carry it out in the case of persecution or to light from the realm of magic to the sway of religion; the 'heavenly ones'—particularly Zeus, the god of the bright, all-sky sky of day—have become the bearers and the guardians of the community of truth.

being came in the course of pre-historic times to be combined with the primitive god of the shepherds, Zeus, etc. (cf. H. VII. p. 23). We shall wait with interest to see what grounds L. v. Schröder is able to bring forward in support of this contention, which, to us at least, seems very daring.

III. Fate.—More even than by questions concerning the origin and relation of life and death, or by reflection on the nature and descent of the heavenly gods, has the mind of man from remotest antiquity been exercised by the gloomy power which mysteriously surrounds him from the cradle to the grave; it is a power that are the souls of ancestors or the spirits that reveal themselves in the powers of nature can be reconciled and made serviceable to man. But inaccessible and incomprehensible seems to be that unknown power which appears ever to lavish its smiles on one and to bear an everlasting grudge against another, and which without distinction overthrows with weal or woe 'now the curiously-bred boy in the innocence of youth, now the grey-haired sinner in the guilt of old age.' Only rarely, and at certain late stages of its course, was the curiously-bred physical significance is reinforced by the thought that, in the Christian faith, peace of soul—the thought, namely, that in reality God and fate are one and the same. Before that, however, mankind had proposed other solutions of the dark problem. What are these? Again the Christian faith, to be sure, has improved the old notions and in the certainty that all that befalls him, as being sent from God, must be for his best here and hereafter, declines the attempt to probe the unsearchable will of God by human means. On the other hand, there runs through the whole heathenism an irrepressible longing, appearing in a more intense degree the further back we go in point of time, to penetrate with inquisitive and premature vision into the dark land of the future, to bear the covering from the veiled picture. In what ways was this attempted?

Thus there are two questions which we have here to consider in reference to primitive Aryan times: 'What idea did they entertain of fate?' and 'How did they seek to divine the future?

1. The conception of fate.—In this discussion we shall only touch upon the问题 of the Zend (xii. 208 f.). Achilles has pursued Hector (three times round the walls of Troy: ἈΛ ὦ τὸ τάττεν τε ἐκρωσος δίκαιον, καὶ τὸν ὠφειάνα πατρί τε εὐπρέπεστα τάστα, ὁ ἰδίαν ἐκήρυγμα ἑαυτῶν τῆς ἀδελφῆς παρατατόν. ταύτα δὲ ὁμοίως ἤμασον ἤμασιν ἄλα μὲν Ἀργεῖον, τοῦ δὲ Ἐκτορος ἱπτήρα. Φέρες δὲ μέσα μαυρών ὑμῖν ἄλα τούτου ἅμαρ. The expressions that are of interest to us here are, first of all, the kηρ, which are laid by Zeus on the balance of fate, and, secondly, the σάρα involved in the σάρα ἡμῶν. The synonym of σάρα is μῆνα, which is not mentioned here, but which is identical with it, representing the power that moves the balance of fate. As far as the word kηρ is concerned, we have seen its exact meaning at an earlier stage (cf. above, pp. 15, 27), where we were speaking of the driving away of the spirits designated as κηρίων on the occasion of the Anthesthea festival in Athens. kηρ is, accordingly, the soul, or better, a soul of man, for Tycho (I. 427 f.) has shown that as belief in the existence of several souls in the human being is a characteristic of the Greek mind. The soul designated by the term kηρ is specially regarded as the bearer of the fate of death to men, whether that death be peaceful or fraught with violence (cf. Π. ix. 411). Every man is invested at birth with his kηρ, and the consequences of his kηρ are kηρείας κηρίων (II. xii. 526 f.). But every people as well, in so far as it is thought of as an individual, e.g. the Trojans and the Achaean (II. vii. 98 f.), possess such a kηρ; and the word is finally used, and that, too, very frequently, as a personification of the goddess of death, Kηρ, the daughter of Hades, who, in the course of the night, whose brethren are Μήθος, Ωκαντος, Τυρνος, and the φιλον Ὀρειφωρ, 'the people of dreams' (cf. Hesiod, θεος, 211 ff.). A series of ideas from the north of Europe comes more or less near this Old Norse kηρ, 'soul' (cf. p. 13, and see also W. Heer, Geschichte der Idee der Seele im nordischen Sagesschatz, Leipzig, 1890, p. 36). They are called ‘followers,’ because the soul, like the φίλις in Greece, follows the man as his second ‘self,’ his ἐναντίον. They often appear to the dreamer as animals (birds, horses, fishes, wolves, lions, white bears, bears, hares, oxen, goats); and if they appear, they announce certain ruin. As there was a kηρ of the Trojans and the Achaean, so among the old Norsemen there was a kym- or atorferfjoga, i.e. a fjoga of the tribe; and, according to the story of the three sisters of Skog, there could have several fjøga. On the other hand, the latter word has a wider signification in so far as it designates the guardian spirit of the man generally. The latter is also the meaning of the Old Norse hamingja, 'the many-forced' (Old Nor. haurr, 'a haunt'), which is the human soul taken from its capacity of transforming itself, for the hamingja appear frequently as animals or as women. Especially characteristic is their hereditary transmission in the family, passing over from father to son, as often appear first as giant women, offspring of the Norns, who are the hamingja of the world (cf. Vigfusson, Iceland-Eng. Dictionary, Oxf., 1874-76, p. 236). Finally, we may mention the characteristic features of the southern Slavonic vjetroponog, who are conceived of partly as animals of the house and partly as guardian spirits dwelling in each man. Probably their name (Slovenian vjetroponog) is connected with Old Slav. vjetri, 'wind,' in which case the wind-like nature of the soul would be indicated (cf. P. S. Krauss, Skons, Glück und Schicksal im Vokalquoten der slowakischen, Vienna, 1886, p. 19 f.).

We have thus made acquaintance with a series of souls of fate and souls of fortune, a knowledge of which will assist us in the following consideration of σάρα and μῆνα.

Both of these terms signify not only etymologically (σάρα from σαρειν: Lat. oreus; μῆνα; μῆς, νεφω, ἵμαιρα), but also in actual usage, nothing more in the first instance than 'share' without any reference to fate, and then the share assigned by fate to every individual man at his birth (τὸ μὲ τὸν μῆνα) (II. xx. 128; Od. vii. 183). Thus they correspond exactly to the Slavonic expressions, Russ. ведь, 'part,' 'lot;' 'fate,' 'fortune,' 'fate, 'fortune, 'nepoveste, 'misfortune' ('ведь; Gr. κχια, Lat. scendo, lit. 'the part split off,' 'the share'); and dolja, 'part,' 'portion,' недолга, 'misfortune' (Old Slav. dole, dolé, 'part,' Goth. dalis).

This 'share' is, according to the popular Slavonic idea, innate, and it is natural to make the mother responsible for it if one is dissatisified with his 'share' (cf. A. N. Veselovskij, 'Fate in the popular thought of the Ukrainians' in The Academy of Science of St. Peters burg [Russ.], xvi. 173 f.). There is thus a slight distinction between μῆνα (σάρα) and dolga (dolja, 'in that the former is received at birth, the latter by birth. The latter is the idea, however, that the share is an assignment of fate from the circumstance that among many Aryan peoples, in connexion with the assignment of fate to the separate individuals, there are deities who
are designated as 'mothers' or 'child-bearers.' On Slavonic soil this is true of the Old Slav. rodícenje (roditi, radožati 'parce,' roděnje, 'generatio,' roděnicenje, 'natalities,' 'obstetrix,' 'matrix,' 'mater,' 'generatio'), deities to whom, just as to the Perun and the Rodít, i.e. the personifications of the clan, some of the religious festivals were offered. At the present day among the Bulgarians of the Rhodope mountains the woman in child-bed is called roděnicenja, but among the Slovenians and the Horvátians the women of fate are called roděnicenja or rojicenja (cf. Krauss, op. cit. p. 301). Among the Greeks, the goddesses of fate, or rather of the goddessess of fate, are to be mentioned in this connexion. They occur in intimate alliance with the Moïpa (cf. Preller, Griechische Mythologie, i. 512). Among the Romans, we must note the Paroce, whose name (Pitar, etc.) is the most intimate relation to the birth of man. From the Slavonic region we may mention the Bulgarian naradvice and the Servian sudvice, sudenice, both so called from the roditi and suditi = sudice (see above) which they announce. From Lithuania the larāne (of unknown derivation) must also be mentioned. The most important phenomenon for us, however, is to be found in the fact that in many regions the conceptions of division, fate, fortune, etc., at first abstract, show a strong tendency to become transformed into beings regarded as persons. This is true in particular in Polish and Little Russian of a fate (cf. note 1) as mentioned above, in Servian of the sreća (cf. Krauss, op. cit.), a word which literally means 'coming-together,' 'meeting' (sp. -jel). In Latin, from the fatum, as we saw above, the word spoken (by the Paroce), we have evolved, particularly on Celtic soil, the demons of fate designated by the name fett and fata, the latter of which became Old French faie, M. H. G. feie, German Fee ('fairy'). The same process went on also with regard to the Greek ἀρά and ἰώπα ('portion of fate,' to the consideration of which we now proceed), signs of fate how both have evolved into personal powers of fate, Aisa being thought of only in the singular, Moira being also used in the plural (cf. Preller, Griech. Myth. i. 500). The Moira, as is well known, play a specially important part in the life of the individual even at the present time, and it is not unlikely that primitive features of ancient Greek life are here preserved (cf. B. Schmidt, Das Volkstaum der Neugriechen, i. 210 ff.). Besides the form ἰώπα, there is also a masculine form ἰῶπα, ἰῶπα, a fate especially 'misfortune,' to be mentioned. Not all these forms lead back to an Aryan *moro—* moria (perhaps on account of εἰρωμα, εἰρωματικα, there was a form in the primitive language equivalent to this, viz. *moros—* morios), which corresponds phonetically to the primitive Teutonic names of the demons of the nightmare, O. H. G. mar, mara, Old Nor. mora, A. S. moræ (=*moria, *pojas); the terms most nearly connected with these in the North of Europe we have already discovered (p. 15, above). Since then, on the one hand, we have just seen, in the Russian *mori, voses, signs of fate becoming spirits of the nightmare, and on the other hand, Laistner ([Rätel der Sprache, ii. 342 ff.) has shown in detail how many spirits of fate and fortune have their origin in demons of dreams—(cf. dreams and nightmares)—and how they have stood from the close connexion between the spirits of the departed and those of fate on the one hand, and the phenomena of the departed soul and those of dreams (nightmares) on the other—we need not hesitate to assume in the Gr. ἰώπα (=A. S. moræ) the existence of a group of primitive Aryan words bearing the meaning of the share allotted to man by fate, which was either innate or bestowed at birth. From this group beings were evolved who in Greece became spirits of fate, while in the Teutonic countries they were the spirits of oppression, although, even in the latter case, their connexion with fate could not be concealed.

The details given above prove that the faith of the Aryan peoples was permeated by a deeply fatalistic trend of thought. The fate of each individual is born with him, transmitted by his mother, or is bestowed upon him at the hour of birth by spirits who at first have nothing to do with the heavenly gods, but much with the realm of departed souls. It was only gradually that the more advanced idea came to the front which united fate to the immortal gods; and whereas this appears, it is still in conflict with the older conceptions. This is the case in Homer. Now Zeus is subject to Moira, and again he takes her place as

---

**ARVANY RELIGION**

9. Thus here, too, the women of fate stand in

The report of Procopius (de Bell. Goth. iii. 14), that the Slavs did not know the ēuvar, must, with Veselovskij (op. cit. p. 174), be understood to mean not that at that time there was still no abstract Fatum, but that only beings or deities of fate.

1. According to Wissowa (p. 213), Lat. fatum was only a "transliteration" (cf. paper above). Thus, the fatum cannot be correct, seeing that fatum means 'that which is spoken' and ēuvar 'share,' as we saw above. Fatum, like Parce, must have been a living religious conception among the people.
Aryan Religion

he 'spins out' to mean their fortune (Ov. id. 208). That this latter idea could only at a later date have been transferred to Zeus, follows at once from the metaphorical expression, 'be stretched out,' by which this type of prophecy is exceedingly far removed from the activity of the highest god of the heavens, and it finds a satisfactory explanation only in the primitive cycle of ideas regarding mothers and women of fate. Thus we may hold that the belief which finds expression in the oracular responses, in Herodotus, and, at least very often—in the tragedians, the belief, namely, in a supreme law of the universe, the Moira, which rules over gods and men and from which none can escape, represents the ancient condition (i.e. from which the Homer), in which the world had begun to rise itself, just as it did in other religious matters, e.g. burning of corpses instead of burial, disappearance of gifts to the dead and of a real ancestor-worship, realms of the dead, Hades and Elysium, etc. (cf. above, I. 4). In this way it was possible for demons of fate to become immortal gods. An instance of this evolution is afforded by the Greek ἄρτα. The word, probably connected with ἄρτι, 'divide,' signifies the 'divider,' and as it is used by the oldest tragedians (e.g. Aeschylus), to indicate the fate of the part of some dead person, and by Hesiod (cf. Rohde, Psyche, i. 146) in the sense of glorified human souls, we see that ἄρτα is originally one of the many spiritual beings that determine the fate of individual human beings in homon and especially in mediam partem. These ideas prevail also in Homer, but in addition ἄρτα is a common name of the immortal gods, because, according to the belief which gradually came into favour, they were responsible for the decrees of fate. This fatalistic trait of the Aryan religions has in Europe been faithfully preserved by the Slavs (cf. Krass, op. cit. p. 89 sq. 'Gott und das Schicksal') Nor is this merely a matter of accident. Of all the Aryan, the Slavs are the race that remained nearest the original home, and are thus the last to enter into history. Nothing, however, frees the soul so certainly from the dull depression of fatalistic ideas as the great deeds of historical life.

2. The Divining of the future.
   — A primitive Aryan expression for this important idea is to be found in the terms of the sacrifice, 'interpretation of signs,' seidones, 'interpreters of signs,' Old Nor. sølt, 'a particular kind of magic for investigating the future,' Middle Welsh hwct, New Welsh hidd, 'prophecy,' Old Corn. hulod, gloss. magna = Gr. ἀρτός (Ionic for ἄρτος), 'fate' or 'fortune,' 'the complete auctor,' but all the uses mean by the Aryan peoples to divine the future cannot be given here; still, we shall prove that among the Lithuanians and Prussians, from whom we have so often started in this discussion, the majority of all kinds of divination practised among all the separate Aryan peoples is also to be found. The Baltic tribes, of whom Peter of Dusburg reported: 'Prutheni raro aliquod factum notable incohaent, nisi prius missa sortis sequens vitrum ipsorum a diis suis, natum bene vel malo, dilecti esse succedere, sciencientur' (Script. rer. Pruss. i. 54), come once more (cf. above, p. 31 f.) nearest to the Romans, of whom Cicero reports in almost identical terms: 'Nihil fere quoniam maioris rer. nisi suspicato ne primitivum quidem generis greacie expulerent, ...' (Letters, 38). The account of this topic we are indebted to the repeatedly mentioned work of Matthias Prœtorius, Delicia Prussianica, oder Preussische Schaubühne (ed. by W. Pierson, Berlin, 1871), in which the 'wadiers' (cf. p. 43, above) of the ancient Prussian expansion are treated. At the same time, admit, and upon which we shall base the following discussion.

(c) The flight and the cries of birds. — Lekbusted is the Lith. lek, 'bird;' and it is clear that this type of prophecy from the flight of birds and predicted future events from them, also called Aussepticia (Lith. paškiautiš, 'bird'), Eagles, ravens, hawks were also attributed to them as signs (especially in case of good fortune) (Prœtorius, p. 48). 'A lekbutas, or bird-diviner, when he is to prophesy, dresses in white, takes a golden ring, (i.e. the ring from which it goes to a puitskiss, i.e. a mound of earth, prays with his face to the east, and waits till a bird comes' (Prœtorius, p. 48). It is in accordance with the custom that the person who discovers the crows and the ravens, understands languages the words for 'bird' mean at the same time bird-omen and omen generally; cf. Skr. ādakāna (ādakāna the science of interpreting birds), as well as the Greek ἄσκησις, ἀσυπίστις from ἀσυπιστία, and probably also αὐτόρ (haut) (the interpretation of the word on the head) Observ. (in Latin: foavit, 'a press'; or, in Latin: foavit, 'from the water') are water-diviners, who divine from the bows, waves, etc. of these there are different classes (Prœtorius, p. 45). It is enough to refer to these classes. To our tracery, the cœlestia auguría, as well as the report of Ptolemy (Ptol. cœlestia auguría, c. 69), that in Teutonic a very important office was in the hand of the seers. Also divination of the birds in the temples of Midaic and ἀρχαία ἱέρα. 

(d) Sacrifices, haruspices, and blood. — With给别人 (Lith. sidurilai, 'entails') were soothsayers who could predict the future from the entrails of the animal sacrificed to the gods. At the present time, the judgment of the entrails, when the liver is examined, is still in use. By looking at the liver, of a pig, a man is able to say what kind of a winter it will be, what kind of a sheep (or, whether the early or the late seed will flourish. For augur (Lith. krainia, 'blood'), who could predict good or evil fortune from the blood of men and cattle, from the way it flowed, from its colour and changes, and who prophesied also from the menstrual blood of women, were the mediæ of the ancient Prussians. At the present date, in Ladonia we find įužlauti, who bet blood from the veins, suck it by means of a small horn, and tell from the taste whether the person will remain in good health or not. Before they were murdered, a Lithuanian would tell the future.

(c) The flight and the cries of birds. — Lekbusted is the Lith. lek, 'bird;' and it is clear that this type of prophecy from the flight of birds and predicted future events from them, also called Aussepticia (Lith. paškiautiš, 'bird'), Eagles, ravens, hawks were also attributed to them as signs (especially in case of good fortune) (Prœtorius, p. 48). 'A lekbutas, or bird-diviner, when he is to prophesy, dresses in white, takes a golden ring, (i.e. the ring from which it goes to a puitskiss, i.e. a mound of earth, prays with his face to the east, and waits till a bird comes' (Prœtorius, p. 48). It is in accordance with the custom that the person who discovers the crows and the ravens, understands languages the words for 'bird' mean at the same time bird-omen and omen generally; cf. Skr. ādakāna (ādakāna the science of interpreting birds), as well as the Greek ἄσκησις, ἀσυπίστις from ἀσυπιστία, and probably also αὐτόρ (haut) (the interpretation of the word on the head) Observ. (in Latin: foavit, 'a press'; or, in Latin: foavit, 'from the water') are water-diviners, who divine from the bows, waves, etc. of these there are different classes (Prœtorius, p. 45). It is enough to refer to these classes. To our tracery, the cœlestia auguría, as well as the report of Ptolemy (Ptol. cœlestia auguría, c. 69), that in Teutonic a very important office was in the hand of the seers. Also divination of the birds in the temples of Midaic and ἀρχαία ἱέρα. 

(d) Sacrifices, haruspices, and blood. — With给别人 (Lith. sidurilai, 'entails') were soothsayers who could predict the future from the entrails of the animal sacrificed to the gods. At the present time, the judgment of the entrails, when the liver is examined, is still in use. By looking at the liver, of a pig, a man is able to say what kind of a winter it will be, what kind of a sheep (or, whether the early or the late seed will flourish. For augur (Lith. krainia, 'blood'), who could predict good or evil fortune from the blood of men and cattle, from the way it flowed, from its colour and changes, and who prophesied also from the menstrual blood of women, were the mediæ of the ancient Prussians. At the present date, in Ladonia we find įužlauti, who bet blood from the veins, suck it by means of a small horn, and tell from the taste whether the person will remain in good health or not. Before they were murdered, a Lithuanian would tell the future.

This explanation seems more likely than the one previously given by the author in his Idiologia, p. 29 f.

which we predicted the future from glass, mirrors, plants, etc. It would not be difficult to find parallels to these kinds of divination among the other Aryans. On the other hand, there were several kinds of oracles attested among other peoples which have now been carefully deciphered and corrected. There were the tree-oracle, or oracle of the tree-oca (cf. Real-

lization, art. "Loci"); which is found among Scythians, Teutons, and Celts, and also among distinct traces among the Shaks and Romans; the significance of monsters as foretelling misfortune (cf. Realizations, art. "Orakel"); the horse-oracle, found among Indians of the West, and the German "V. Hehn, Basis," etc., and also the peculiarly Roman "signa ex tripulis." Still, the horse was also held in Italy as a source of information (De
dutoris: "salutem asplinum, quidam alios vel alterias coloris propter deos non audebat aliquis equester equitare"); and the dawn was regarded as involving the fate of the day. The harvest was announced to the people by the corn in the houses, and their chickens under certain circumstances were understood to foretell misfortune (Lascius, p. 48: "nato equorum generis vel coco vel dehli pulsul actuorum sedem mutandem").

The facts respecting divination here set forth can be regarded only as characterizing, and in no way be supposed to exhaust the corresponding number of customs of this class. And they will arouse deeper interest if we can only succeed in discovering the motives by which this proceeding, viz. divining the future, which seems so absurd to modern minds is therian (Kitching, der Inlandesquerter, Leipzig, 1894, p. 441 ff.) is, as so far as the present writer is aware, the only one who, although confining himself to the practice of taking the auspices among the Romans, has dealt with this fundamental and central question in detail. He has given the (undenably correct idea that the supposition quaedam serpentis) makes are considered as quadrupeds. This settles the doubt expressed by R. v. Theuring (Vorgeschichte der Information, p. 444 f.) with regard to the passage of Festus quoted above that auspices of this kind revealed the will of the heavenly gods is secondary and transmitted, and that every attempt to connect divination with the higher religions of the ancient world, as has been commonly done, is, accordingly, seeks to deduce the origin of oracular divination from purely practical grounds. Thus, according to his opinion, the oracle from birds (signa ex avibus) takes its rise from the observation of birds. He has shown, in passing, that a great part of the work of the Arians in their migrations the passes of the mountains, the courses of the streams, and the islands in the ocean which invited them to rest. The inspection of the entrails (signa ex extensis) is explained as a kind of examination which was made of animals of an unknown region. The entrails were healthy, and consequently whether the fodder of the land was satisfactory, etc. Thus we should obtain the remarkable result that this divination becomes the more sensible the further back we go in primitive times. No one will hesitate to conclude that the solution proposed by Theuring cannot be the correct one, no matter how difficult it may be to show it to be impossible in detail. No one, however, who considers with unskeptical mind the material presented, will fail to be impressed with the different complete and unambiguous. This does not rest on a basis of rational consideration, but has its roots in the childlike, dream-

encircled, and imaginative mental condition of primitive man. To the priestly dogma and rigor, say
d. (2) Most sentences have the key, or at least one key, to the understanding of oracular divination. For primitive man only the smallest part of his inner and outer life is eo thes. Everywhere wonders and signs terrify him. The phantoms of his dreams, and especially those of the horrible nightmare, which, in the rooms of primitive times, filled with nostrous charcoal fumes, must have been very frequent (cf. Hofler, Centralblatt fur Anthropologie, vi. 1), are realties to him. In the plants and animals, in the stones and stars, there live, as in men's own bodies, souls to which, as we saw above, fate is united. We can be surprised, then, that in the world of dreams, in the rustling of the trees, and in the flight of birds, the shadows of the future were supposed to hover mysteriously round the life of man! This anxious, timid, and nervous condition of primitive mental life called to its aid the art of priestly diviners, who—in other cases—were always devising new means of obtaining some mysterious message with regard to the future. These pseudo oracles rests in the dream and one fundamental thought, namely, on making the probability or improbability of a future event dependent on the incidence of another occurrence which was independent of human volition, such as the approach of a four-footed animal or a bird, a flash of lightning, or hearing the sound of animals or the human voice. All this had, originally, nothing to do with the heavenly gods, and it is only at the close of a long period of evolution that we find the Roman auspices announcing the will of Jupiter or Pythia, and prophecy in its name. All that remains of the ancient temple

=.

CONCLUSION.—It has been our aim—and nothing else was possible—to present, in this discussion regarding the religion of the Arians, not the opinions and the usages of a perfectly definite and distinct period of antiquity, but rather a series of developments in the history of religion taking place on the soil of primitive Aryan peoples. These developments depend upon the insight of the pre-historic period, and the inner life of the people, as brought out in the various traditions of the time. The author of the present work, by this method, has endeavored to bring out the evolution of the Roman religion itself, as it is reflected in the Roman literature. This is done by describing the various methods of divination, such as augury, dream interpretation, soothsaying, and divination by animals and plants, and then by showing how these methods were combined and developed in the Roman religion. The author has endeavored to do this in a way that is both scientific and interesting, and he has succeeded in doing so with great success. The result is a book that is both scholarly and popular, and it is sure to be read with interest by all who are interested in the history of religion.
Arya Samaj

The fruit of his profound grief on account of the death of his sister; and third, his flight from home at the age of fourteen, on the night of his initiation into the mysteries of the Kaula sect, in which he was initiated by guru Gangadhar, under the image of Siva and deluding it; second, his resolve to abandon the world and seek salvation.
ARV INDOR

In the ancient lore of the Hindus. He talked only Sanskrit, and our conversation was conducted through an interpreter (T. J. Scott, *Missionary Life among the Villages of India*).

After about two and a half years, Swámi Dayánand emerged from his "retreat" and plunged at once into public controversy and discussion. In the great centres of idolatry his usual theme was, "Can a man live without God?" Against this practice he thundered with all the force of his strong will, impressive personality, and unusual eloquence, and, according to his biographers, uniformly carried the day.

It was at Bombay, on the 10th of April 1875, that Swámi Dayánand founded the Arya Samaj. He visited Delhi in 1877 at the time of the grand Darbar, where he met certain gentlemen from the Punjab, who invited him to visit their province. This was his first visit to the Punjab, the scene of the future triumphs of his Society. From 1878 to 1881 there was the curious episode of a partnership between the Arya Samaj and the Theosophical Society. Both parties were disappointed, for a split soon took place on the question of the personality of God. For the historians of religions it is a short cut. From this incident an Arya point of view, the various biographies of Swámi Dayánand; and for the point of view of the Theosophical Society, Col. Olcott's chapter on "Swámi Dayánand" in Old Diary Leaves.

Dinanda came is contact with many different leaders of spiritual thought in India, e.g. Dabendra Nath Tagore and Keshub Chandra Sen of the Brahmo Samaj, Madame Blavatsky and Col. Olcott of the Theosophical Society, Bhikhánu Sarbhai of the Prátrthma Samaj, Sri Saiyid Ahmad of Reformed Islam, and Dr. T. J. Scott and Rev. J. Gray representing Christianity. There is evidence that Swámi Dayánand made overtures to the leaders of both the Prátrthma Samaj (see Krish-narao Bhikhání, *Life of Bhikhání Sarbhai*, p. 7f.) and the Brahmo Samaj, with a view to organizing a single union, the martial body to be called "The Arya Samaj." But no union with any other organization was even temporarily effected except with the Theosophical Society.

In 1882-1883 the Swámi visited Rájpútnád, and while there became the friend and counselor of princes. According to his biographers, he acted the part of a modern John the Baptist in rebuking the Mahárajá of Jodhpur for being under the influence of a courtier. A few days later the Swámi fell ill. Some think that a slow poison had been given him because he had criticized the Maharaja, and some think that he was killed. He died at Ajmér on the 30th of October, 1883, in the fifty-ninth year of his age.

Swámi Dayánand was, from all accounts, a man of splendid physique, impressive personality, and great strength of will. T. J. Scott speaks of his "magnificent presence" and "impassioned zeal," and tells how "he would crush an ordinary opponent with a sledge-hammer style." The epithet mahá-márkh ('great fool') was often on his lips when debating with the defenders of idolatry. Olcott speaks of him as "tall, dignified in carriage, and gracious in manner," and gives a general estimate of him in these words: 'The Swámi was undoubtedly a great man, a learned Sanskrit Pandit, with immense pluck, force of will, and self-reliance—a leader of men' (Old Diary Leaves, p. 406).

2. Doctrine. — The official creed of the Arya Samaj is in the form of a Decalogue, and it reads as follows:—

I. God is the primary cause of all true knowledge, and of everything known by it.

ii. God is All-Truth, All-Knowledge, All-Beatitude, Incorruptible, Immutable, Merciful, Unconditioned, Infinite, Unchangeable, without a beginning, beginningless, without a support, and the Lord of All, All-pervading, Omniscient, Imperishable, Immortal, Exempt from fear, Eternal, Holy, and the Cause of the Universe. All knowledge is from God.

iii. The Vedas are the books of true knowledge, and it is the sacred duty of every true Arya to read or hear them read, to teach and preach to them.

iv. One should always be ready to accept truth and renounce untruth.

v. All actions ought to be done comformably to virtue, i.e. after a thorough consideration of right or wrong.

vi. The practitioner of the Arya Samaj is good to the world by improving the physical, spiritual, and social condition humanity.

vii. All ought to be treated with love, justice, and due regard to their merits.

viii. Ignorance ought to be dispelled and knowledge diffused.

ix. No one ought to be contented with his own good alone, but every one ought to regard his prosperity as included in that of others.

x. In matters which affect the general social well-being of the whole society, one ought to discard all differences and not allow one's individual worth to be given up, but in all personal matters every one may act with freedom (Handbook of the Arya Samaj, 1908).

It will be noticed that of the 'Ten Principles' given above, the first three, which deal with the existence and nature of God and with the doctrine of Vedic Scripture, are theologically the most important. The last seven are ethical principles. The Creed of the Arya Samaj, it will be observed, is a short cut. Combining principles i. and ii. of the Creed, namely, 'God is the primary cause of all true knowledge,' and 'The Vedas are the books of true knowledge,' we have the doctrine of the Divine Origin of the Vedas, which will now be considered.

In approaching this doctrine, let us first notice the problem of the regeneration of India, religious, political, and scientific, as it presented itself to the mind of the founder of the Arya Samaj. He found himself confronted by a variety of faiths both indigenous and foreign. Of religions of foreign origin there were Islam, introduced in the 10th cent., and Christianity, a comparatively recent importation from the West. The indigenous religion of India, namely, Hinduism, presented itself as a variety of faiths of India, ranging all the way from the strict *adwaita* doctrine of Saúkara-chárya to the crudest and grossest superstitions embodied in the Tantras, the whole being held together in a kind of external unity by the vast hierarchical organization of caste. Such was the religious and social condition of India (p. 21). There was also a political environment furnished by the vast and impressive administration of the British Government in India, and a scientific environment consisting of the spectacle on all sides of railways, canals, telegraph wires, steam-engines, etc. Thus, as Swámi Dayánand wandered up and down over India, he studied not only the past but also the present, not only the thought of India as embodied in *Veda* and *Upanisad*, *Sutra* and *Puraka*, but also the thought of Europe as embodied especially in the inventions of modern science, everywhere manifest in India.

The problem which confronted him was how to reform Indian religion, how to effect a synthesis of the old and the new, of the East and the West, in such a way as to guarantee the intellectual and spiritual supremacy of the Indian people, do full justice to the attainments of other nations, and provide a universalistic programme of religion. The solution of this problem was found by Swámi Dayánand in the doctrine of the *Veda* as the revealed Word of God.

There are many points of contact between Dayánand Sarasváti and Martin Luther. As Luther the German monk was a child of the European
Renaissance, so Dayānand the Gujārāti monk was a child of the Indian Renaissance. Both alike felt the tug of the new spirit. Whereas the earlier exponents of the new spirit, Luther attacked indulgences, while Dayānand attacked idolatry. Luther appealed from the Roman Church and the authority of tradition to the Scriptures of the Old and New Testaments. Similar arguments were put forward by the Brahmin church and the authority of smṛti to the earliest and most sacred of Indian Scriptures. The watchword of Luther was ‘Back to the Bible!’; the watchword of Dayānand was ‘Back to the Vedas.’ Dayānand’s theory of the Vedas may be outlined as follows:—The word Veda means ‘knowledge.’ It is God’s knowledge, and therefore pure and perfect. This transcendent and heavenly knowledge embraces the fundamental principles of all the sciences. These principles God revealed in two ways: (1) in the form of the four Vedas, which were taught to four Reśis, Agni, Vāyū, Sīrāj, and Aṅgīra, at the beginning of Creation over one hundred billion years ago; and (2) in the form of the world of nature, which was created according to this model. The Veda, somewhat as the Tabernacle is said to have been built according to the pattern shown in the mount (Ex 25:18). Mark the doctrine of correspondence involved. The book of Vedic Scripture agrees with the book of nature, so that the latter confirms the former. Dayānand says: ‘I regard the Vedas as self-evident truth, admitting of no doubt and depending on the authority of no other book, being represented in nature, the Kingdom of God’ (Vivadha Nitya, p. 25).

Note the ambiguity in the meaning assigned to the word Veda. It is (1) God’s knowledge, the content of the Divine Omniscience, which is one thing; and (2) it is the collection of Aryan literature known as the ‘Four Vedas,’ which is quite a different thing. One may believe in the Veda in the first sense, without accepting it in the second sense. The Vedas, then, being regarded as ‘the Scripture of true knowledge,’ the perfect counterpart of God’s knowledge so far as ‘basic principles’ are concerned, and the ‘pattern’ according to which Creation proceeded, it follows that the fundamental principle of Vedic exegesis will be the interpretation of the Vedas in such a way as to find in them the results of scientific investigation. As E. D. Mâlagian remarks: ‘The bases of the Arya faith, the Vedas, represent the Vedic interpretation of the Vedas, and the revelation of God in nature, and the first practical element in this belief is the interpretation of the Vedas in conformity with the proved results of natural science’ (Census of India, 1891, xix. 175). In other words, there is involved the assumption that the Vedas as ‘the books of true knowledge’ must contain ‘the basic principles of all the sciences,’ and accordingly that every scientific discovery and invention of modern times must be found expressed, generically at least, in the Vedas. The science of the West, then, is but the ‘Zeitgeist’ both in their different prismatic anticipated by the seers of the East, over one hundred billion years ago. To the ancient East belonged the faculty of seeing; to the modern West belongs the faculty of doing. The programme comes from the East; the realization from the West. In this way Swāmī Dayānand sought to render to the East the things which belong to the East, and to the West the things which belong to the West. Thus the West, in realizing the principles laid down in the Vedas, is endeavoring to follow the Vedic religion.

The principle that all the sciences have their revealed source in the Vedas is enlarged by the further principle that all religions have their original and inspired source in the same early period of the human race. It results that there is no such thing as ‘primitive revelation given once for all to mankind, and so ‘the fountain-head of religion,’ reminds one of the similar doctrine of ‘primitive revelation’ held by some Christians. Diversities in religion are explained as due to the influence of different environments, or external circumstances, upon the intuitive Biblical revelation, in the other theory, upon the primitive Vedic revelation.

The Arya doctrine of Vedic Scripture may now be summed up: (1) The Vedas are a revelation from God, as is proved by their correspondence with nature. (2) They are the sole revelation from God, since no other books show this correspondence. (3) They are accordingly the fountain-head of the science and the religion of all mankind. Such is the doctrinal basis of the two great duties of the Arya Samāj, namely, (a) to recall India to the forsaken Vedic paths, and (b) to preach the Vedic gospel throughout the whole world.

It is evident from all this that Pandit Dayānand Sarasvāti was a man of large views. He was a dreamer of splendid kind. He had a vision of India purged of her superstitions, filled with the fruits of science, worshipping one God, fitted for self-rule, and honoured as the primeval source of the world’s science and religion.

All will admit that the vision of a regenerated India, which Pandit Dayānand Sarasvāti propounded in the Arya Samāj is a splendid and inspiring one. But what about the means to be employed for the realization of this vision? As above stated, it is a return to the Vedas, but, be it noted, to the Vedas as interpreted, not by the theoretical exegesis of pure Indian orthodoxy or by the critical scholarship of the West, but by the scholarship of the Arya Samāj alone. The Scripture basis of the Arya Samāj then, while formally the Vedas, is in reality a certain interpretation of the Vedas, which is not recognized as legitimate by a single Sanskrit scholar, either Indian or European, outside of the Arya Samāj. This interpretation must be characterized as highly subjective and fanciful, different meanings being applied to the same word according to the caprice of the interpreter. One can readily imagine how much was involved in the attempt to find in the Vedas the programme of modern scientific inventions. Thus Swāmī Dayānand’s interpretation of the Vedas is marked by (1) great emphasis on the etymology and neglect of meaning, (2) the interpretation of irregularity in the Vedic moods, tenses, persons, and cases. For the proof of these statements it is sufficient to consult Swāmī Dayānanda’s Commentary on the Rig Veda. The pamphlets on Pandit Dayānand’s interpretation of the Vedas, written by T. Williams of Rowari (1833-1894), and a pamphlet entitled The Dayānanda Interpretation of the word Deva in the Rig Veda (1897) may also be consulted. In this connexion the opinion of Max Müller is worth quoting: ‘By the most incredible interpretations Swāmī Dayānand succeeded in proving that whatever was new, everything worth knowing, even the most recent inventions of modern Science, were alluded to in the Vedas. Steam-engines, railways, and steamboats, all were shown to have been known, at least in their germs, to the poets of the Vedas; for Veda, he argued, means knowledge, and how could anything have been hid from that?’ (Max Müller, Biographical Essays, ii. 170). In a word, the Vedic interpretation of Swāmī Dayānand is interpretation in the interests of a theory—the theory, namely, that the Vedas teach a pure and exalted monotheism, and contain ‘the basic principles of all the sciences.’ It is as if one should attempt to
find a pure monothelism and a complete programme of scientific inventions in Homer's Iliad or Virgil's Aeneid, this doctrine has no place. Enough has been said to show that the doctrines of the Arya Samaj are based not on the Vedas themselves, but upon an unscientific and unscientific interpretation thereof.

In this land, it is only fair to say that Swámi Dayánanda has shown a sound instinct in rejecting the manifold absurdities found in smruti, or tradition, and in seeking a basis in the early literature for a purer and more rational faith. That in his ignorance of historical and critical methods he set up a method of interpreting the Vedas which must constantly remain the target of the critical spirit, may in charity be regarded as his misfortune rather than his fault. Nor is this all that can be said. For, as in the case of those who are not able to understand Sri Krsna as an incarnation of deity, it is better that they should, by peculiar tricks of interpretation, read into the text a fairly consistent theism, than on the basis of a rigidly scientific interpretation find therein only a vague Henotheism or Pantheism. So much for the Arya doctrine of the Vedas, which from its importance has been treated at length. The other doctrines of the Arya Samaj may be dismissed with a word.

The theology of the Arya Samaj is the religious philosophy of the Sákhya-Yoga. The fundamental principle of the Sákhya is the dualism of prakṛti and puruṣa, 'matter' and 'soul.' The Yoga, or theistic Sákhya, takes one of the innumerable souls recognized by the non-theistic Sákhya and makes it the Supreme Soul. The religious system of the Arya Samaj, which from its importance has been treated at length. The other doctrines of the Arya Samaj may be dismissed with a word.

As regards the soteriology of the Arya Samaj, the great means of salvation is the effort of the individual, and for this a sufficient sphere is allowed through the doctrine of Transmigration, or repeated births. Salvation is conceived as virtually an eternal process. There is no remission of sins. Karma is inexorable. As regards the freedom of the will, the Arya Samaj holds that 'we are not free to will an act, if we were subject to some one else. In order to be free, we must be believed to be eternally acting as we thought best, or as our previous karmas determined the course for us, receiving, according to God's eternal laws, the fruits of our good or bad deeds, and shaping in accordance with the laws of the universe how we are to meet it in our future destiny' (Arya Patrīka, Dec. 14, 1901).

It is evident from all this that the God of the Arya Samaj is conceived as a great Cosmic Executive, whose business it is to preside over the inexorable processes of the universe, and he is regarded as it were, a constitutional monarch, whose reign is limited and defined by the eternal existence of two other 'estates,' namely, soul and matter. Thus 'absolutism is denied even to God.'

In the Arya Samaj, as I understand, there is an attempt to settle the age-long conflict between science and religion. The doctrine of correspondence between the book of Vedic Revelation and the book of Nature is used for this purpose. Miracle is rejected. Ethically, there is one doctrine of the Arya Samaj which is most objectionable. This is the doctrine of Niyoga, which may be described as a virtual recognition of the principle of free love, sanctified by a temporary arrangement. Thus, in the English translation of the Sákhya Prakṛti (ch. iv. p. 159), we read: 'A man may also contract Niyoga with eleven women (one after the other), just as a woman may enter into the relation of Niyoga with eleven men (one after the other). Swámi Dayánanda's doctrine of Niyoga has been correctly summarized as follows by Lélā Rúči Ráñ in the Niyoga Doctrine of the Arya Samaj (p. 34):

The Arya Samaj allows even married men and married women to enter into the Niyoga, or mating with eleven widows and widowers. The Niyoga is solemnized publicly even as marriage is. It is defended by the Arya Prákṛti (p. 174), and thus differs from prostitution. It is evident from all this that Swámi Dayánanda, like Plato, held strange views as to the proper relations between the sexes. In this respect both alike seem to have been theorists. The members of the Arya Samaj have not been slow in practising Niyoga in the manner prescribed. Says the editor of the Arya Prákṛti (Sept. 27, 1902): 'We have to confess with regret that even the Aryas have not been able to set a single example of the higher kind of Niyoga."

Before leaving the doctrines of the Arya Samaj, it is proper to sum up the things also which are commendable in the doctrines and practices of this Society. Briefly stated, they are: (1) negatively, the rejection of pantheism and of some of the doctrines included therein, such as illusion and absorption, the casting over of the Panrání superstitions together with idolatry, and a more or less vigorous fight against certain hurtful social customs such as caste, child-marriage, and incontinence; and (2) positively, the promotion of a fairly conceived and well-defined identity of the soul, belief in prayer and in the need of the social worship of God, and a certain enthusiasm for education and for social and political reform.
applied to the members of the three 'twice-born' castes. As such it was fitted to make patriotic sentiments cultivated in the political mouth of a religious name. In this respect it differs from the names of the other theistic and reforming movements of modern India, as, e.g., the Brahmo Samaj, or 'Society of Brahmans (God)', and the Prarthana Samaj or Society of Prayer.

Some account will now be given of the history, organization, government, worship, methods of work, statistics, and future prospects of the Arya Samaj.

(1) History.—The chief event of the period succeeding the death of Swámi Dayanánd (1833) to the present time is the division of the Arya Samaj into two sections. The two sections are called respectively the 'meat-eating' party and the 'vegetarian' party; and from the point of view of the second, the 'College' party and the 'Gurukula' party. The latter was founded in the name of the Mahatma, or the Mahatma party is conservative. The educational work of each section is carried on in harmony with its special theory. The 'Cultured' party has a College at Lahore, the Dayánaídž Anglo-Vedic College, which it admires as the highest possible, and with a considerable degree of efficiency. The Mahatma party, on the other hand, has an institution at Hardwar known as the Gurukula, in which ancient ideals of education receive the emphasis.

Organization and government.—The organization of the Arya Samaj provides for the local Samaj or congregation, the provincial assembly, and a general assembly for all India. The conditions of membership in a local Samaj are (a) implicit faith in the Arya 'Decalogue', or Ten Principles, and (b) belief in the use of Vedic interpretation laid down by Swámi Dayanánd. The minimum age for membership is eighteen. There is no special ceremony of initiation for members of the 'twice-born' castes, but outsiders, such as Christians and Muslims, are inducted into the Samaj by the approbation of the purified. The members of a local Samaj are of two kinds, proselytes, or non-voting, and approved, or voting, members. The period of probation is one year. Sympathizers are also mentioned as a separate class. The officers of a local Samaj consist of a President, Vice-President, Secretary, Treasurer, and Librarian, elected by the voting members. The officers, it will be observed, are those of an ordinary secular association. The provincial assembly is a representative body composed of delegates appointed by the local congregations. Each affiliated Samaj is represented by one delegate for every twenty members. Thus, the form of government of the Arya Samaj is clearly representative.

(2) Worship.—The weekly religious service of the Arya Samaj is held on Sunday morning, since the Government offices are closed on that day. It is a long service, lasting three or four hours. Directly in front of the speaker's platform in the place of worship is the Vedic Fire Altar, which occupies the central position. The Arrangement Table in many Christian churches. Religious worship begins with the burning of incense (the home, 'sacrifice'), accompanied by the chanting of Vedic verses. This is followed by prayers, the exposition of the writings of Swámi Dayanánd, hymns, sermons, and the recitation of the Creed. With the exception of the use of incense, the constituents of worship are those of an ordinary Protestant service. The service is Puritan in its simplicity. There is no public prayer, and the service is conducted by the priest or priest who is qualified take their turn in conducting public worship. The prayers are mostly extemporaneous, and the sermon is long. For a very graphic account of the devotional services of the Arya Samaj, see J. C. Oman, CULTS, CUSTOMS, AND SUPERSTITIONS OF INDIA, pp. 152-166.

(3) Methods of Work.—In its methods of work the Arya Samaj follows in general the methods current among the various Missionary Societies working in India. It uses preaching, education, great distribution, newspapers, etc. There are two types of organizations, the local and the party. The local Samaj is an organization of the Arya Samaj which is the minimum number of members, the paid are itinerant. The first class consists of men in regular employment as clerks, teachers, physicians, and other business men, mostly English-educated, and many of them College-bred. The paid preachers, on the other hand, give all their time to the work of preaching, and are, as a rule, educated only in the vernacular. The 'Cultured' party, it is interesting to observe, emphasizes education, while the Mahatma party emphasizes preaching. Each section of the Arya Samaj maintains a number of high-schools in its own enclaves, and also some newspapers and reviews. The Arya Samaj has by this time a membership of considerably over 100,000. The largest number of members is found in the Punjab and the United Provinces, nearly 96 per cent., according to the census of 1901. There are a few branches in Burma and in British East Africa, the fruit of work among Indians who have emigrated to those regions. Lahore is the religious centre and capital of the Arya Samaj, although Ayodhya, the birthplace of Swámi Dayanánd and the seat of the Vedic press, is a close rival.

As regards the future of the Arya Samaj, it is difficult to predict the prophet. It is undoubtedly one of the most popular religious movements in North India to-day. In the matter of female education, temperance, and other reforms, it is in the line of progress. It also ministers to the patriotic spirit through its claim that the Vedas are the original source of all the religion and science of the world. It contains many earnest and good men who sincerely desire the welfare of their country. By its emphasis on education and social reform it is playing no minor part in the regeneration of India. It keeps in close touch with orthodox Hinduism through the fact that comparatively few members of the sect have broken caste. Will it ultimately be absorbed into the aghors of Hinduism, as some think probable, or will it advance to a still more rational and enlightened position?

YUAN CHWANG (Hinen Tsang) (7th cent.), Tsiang (do.), and Taranatha (16th cent.). From these we can gather the following data. He was born of the Kausika family in Purasapura in the north of India. He was the eldest of three brothers, of whom the youngest, known as Vasubandhu (q.v.), was intimately associated with him in religious and literary activities. The school in which Asanga was ordained as a monk was the Mahayana and was an influential school of the ancient Buddhist; but he was afterwards (we do not know how or when) converted to a more idealistic phase of Buddhist philosophy, which is now known as Asanga’s idealism. Still we see that his idealism is much influenced by his former faith.

According to Yuan Chwang, Ayodhya (the modern Oudh) was the chief scene of his activity. Here it was that he taught publicly and wrote books, etc.; and here probably in Ayodhya, on the bank of the Sarasvati, he converted his brother Vasubandhu to the idealistic Mahayana, though, according to Paramarth, this took place in Purasapura, their native town. In any case it is clear that both Asanga and his brother were closely connected with the court of Ayodhya, and that they were contemporaries of King Palladiya and his father Vikramaditya. If we identify this Vikramaditya with Chandragupta II. of the Gupta dynasty, his date can be fixed in the first half of the 5th cent. A.D.; if with Skandagupta, in the second half of the same century. The latter is the more likely source. Yuan Chwang tells us that his master Silabhadra, was 107 years old when he saw him in 633 A.D. Silabhadra’s master, Dharmapala, was a great systematizer of Asanga’s teaching, but he was not his immediate disciple. Thus we have sufficient grounds for fixing Asanga’s date in the 5th cent. of our era.

Many writings (śāstras) ascribed to Asanga are enumerated by Yuan Chwang. They are all handed down to us in Chinese translations. Although not one of the originals has been dis-covered, and there can, therefore, be no question of any strict criticism, nevertheless the authenti-city of their tradition is assured by the fact that most of them were brought to China by Yuan Chwang himself, who was the greatest apostle of Asanga’s philosophy in the East. The most important are the following:

1. Yogacharya-bhūmi (Sanjo, No. 1170). This contains descriptions of the practice of Yoga, and of the stages one successively attains through it. The text is ascribed to the tradition of Maitreya, and though the Buddhist enlightenment consists, according to Asanga, in release from attachment to the objective world, his philosophy postulates the reality of each man’s personality and also of the external world. In this respect his system is very near to that of Śāṅkhyayāna.

Asanga terms mind the alāya, i.e. abode or nidus where all things, both subjective and objective, are latent, and whence they are projected and manifested. This nīrūda produces from and by itself intelligible phenomena (nīrmanakāya) with the three marks (sāyadhyātya, uddesātya, sāyadhyātya) which views (vādānta) in succession. It is, therefore, called the eighth (astānya), just like the Śāṅkhyayāna pūrṇa. Each of the sense-organs projects or manifests its own objects, both line and gross, by virtue of the seed (śūrya) stored up in the alāya; and the world thus manifested or objectified reacts upon the eighth (the alāya) through the seven subordinate mind-organs, by ‘perceiving’ them. The nīrūda, or source of the world, the alāya, acts, in this way, as the physical tabula rasa of the objective world, i.e. of the tādāhāna. Illusion in human life thus consists in regarding the objectification of one’s own mind as a world independent of that mind which is really its source. To get rid of this fundamental illusion, we must study the true nature of our own mental operations. Right knowledge of its true nature, the dharmalakṣaṇa, leads us to the full development of the ‘seeds of enlightenment,’ and, as a conse-quence, to the absorption of the whole world into one’s own self. Following, therefore, on right knowledge, this absorption, first of thought and then of objective phenomena into the inner self, i.e. the yoga-āchāra, is the necessary step to the attainment of Buddhahood (see Bodhisattva).

Asanga teaches seventeen grades (bhūmi) of this attainment, and also the three personalities or bodies (trikṛtyā, see Adibuddha, i. 97), and JRAJ, 1906, p. 943 ff.) of the Buddha (see Tīrīyāds [Br.]); but neither of these doctrines was originated by him. The characteristic feature of his system is the elaborate and scholastic systematization of a theory of mind and of a system of mental categories which account the Buddhist sect founded upon his system is called the Dharmalakṣaṇa, i.e. the wisdom which shows us the true nature of all phenomena. It is, therefore, a philosophy rather than a religion; and religious undertones as we find in it are but loosely connected with the system.

In Asanga’s Buddhism, faith in Gautama Buddha had declined, being gradually superseded by the worship of Maitreya, the future Buddha. This worship maintained its ground for a long time in India and the East, but it was at last overwhelmed by another sect of popular Buddhism, the worship of Amitābha (q.v.), lord of the Sukhavati in the West. In this way Asanga’s Buddhism lost its hold on India and China, and is now preserved simply as a branch of learning among the Japanese Buddhists.

ACSE'TICISM.

Introduction (T. C. Hall), p. 63.
Celtic (E. Anwyl), p. 71.
Christian (O. Zöckler), p. 73.
Egyptian (W. Capelle), p. 80.
Hindu (A. S. Gedan), p. 87.

1. INTRODUCTORY DISCUSSION AND DEFINITION.—'Asceticism' is derived from the Gr. word ἀσέτις—'training.' The 'athlete' was one trained, and one might be an 'athlete' in virtue (παρά ἀθλητή ἀθλητήν), Diet. Eucr. 559. So very early the ascetic became the spiritual athlete of Church History. He has often been pointed out and variously explained (Neumann, Lehrbuch der Psychiatrie, pp. 50; Kraft-Ebing, Psychopathia Sexualis, pp. 9-11); and in diseased conditions insane impulses to inflict pain and to suffer pain mark the mind controlled either by religious or by sexual excitations. It is not now difficult for the modern psychiatrist to recognize in the standard saints, stories of the Middle Ages many impulses familiar to him from his experience in the Insane Hospital, but which were, of course, at that time regarded only as evidence of pious and disciplined self-mortification, and self-denial as a means of training (Psychology, Vol. ii. p. 392; cf. also pp. 579-592). One of the latter conceptions dis-trusts the body altogether. Asceticism has then as its function not the training but the destroying of the body or the negation of its importance.

1. Pathological elements in asceticism.—From the beginning, we have been in mind that in the history of asceticism we are often dealing with phenomena distinctly pathological. The fact that this has only recently been fully recognized makes a critical investigation of all the phenomena exceedingly desirable. Whether we deal with the 'flagellants' or with instances of perversion vice sexualis, we must recognize a distinctly psycho-pathological element in much of the self-torture and self-alienation that goes by the name of asceticism. The close connexion between the excited emotions in the regions of love and religious impulse, which are instinct almost with perversio vitae sexualis, we must recognize a distinctly psycho-pathological element in much of the self-torture and self-alienation that goes by the name of asceticism. The close connexion between the excited emotions in the regions of love and religious impulse, which are instinct almost with perversio vitae sexualis, we must recognize a distinctly psycho-pathological element in much of the self-torture and self-alienation that goes by the name of asceticism. The close connexion between the excited emotions in the regions of love and religious impulse, which are instinct almost with perversio vitae sexualis, we must recognize a distinctly psycho-pathological element in much of the self-torture and self-alienation that goes by the name of asceticism. The close connexion between the excited emotions in the regions of love and religious impulse, which are instinct almost with perversio vitae sexualis, we must recognize a distinctly psycho-pathological element in much of the self-torture and self-alienation that goes by the name of asceticism. The close connexion between the excited emotions in the regions of love and religious impulse, which are instinct almost with perversio vitae sexualis, we must recognize a distinctly psycho-pathological element in much of the self-torture and self-alienation that goes by the name of asceticism. The close connexion between the excited emotions in the regions of love and religious impulse, which are instinct almost with perversio vitae sexualis, we must recognize a distinctly psycho-pathological element in much of the self-torture and self-alienation that goes by the name of asceticism. The close connexion between the excited emotions in the regions of love and religious impulse, which are instinct almost with perversio vitae sexualis, we must recognize a distinctly psycho-pathological element in much of the self-torture and self-alienation that goes by the name of asceticism. The close connexion between the excited emotions in the regions of love and religious impulse, which are instinct almost with perversio vitae sexualis, we must recognize a distinctly psycho-pathological element in much of the self-torture and self-alienation that goes by the name of asceticism.

2. Survival forms in seeming asceticism.—We must not also deal with survivals forms which are falsely called as ascetic. Customs are classed as ascetic even by so critical an historian as Zöckler (Aszetic und Mönchentum, 2, 1897) which may more correctly be connected with the survival of older moralities. Thus the Essenes saw the hope of Israel in desert life and in return to a semi-nomad communism. How far this was ascetic, however, it is impossible to say. To be ascetic this type of communism must be shown to be connected either (a) with a disciplinary process for the attainment of righteousness, or (b) with a complete negation of the body by its mortification. Even granting that the Essenes were ascetics (cf., however, art. 'Essenes' in Hastings' DB, in which this is not emphasized), all their peculiarities are not to be connected with their asceticism. Professional men in our age wear black coats, not from motives of asceticism, but as survivals of past fashions. The robes of the monks, the communism of various sects, the treating of vegetable diet as superior to meat diet, may all be connected with ascetic modes, but they may also be mere survivals of past customs, or a reocurrence of old ideals. In new social and economic situations past moralities see much to blame, and can find hope only in reverting to the outward simpler life of the past and its forms. Such reversion is, however, only in a sentiment, and not in the ascetic. It is, nevertheless, true that the ascetic finds a ready discipline in such reversions; and cave-dwellings, communism, vegetarianism, primitive dress, etc., all play their part in the history of asceticism, but they must be always examined carefully when they occur, for they may be appointed of otherwise the same motive proper can be shown, simply as survivals.

LITERATURE.—Ritschl, Entstehung d. altkatholischen Kirche, Bonn, 1857, pp. 179-203, for discussion of Essenes as ascetics; see also Natüruforscherenarmung, vil. 154, Hamburg, 1893; Boussert, Beim. des Judentums, Berlin, 1906, pp. 494-499; Laclun, Der Essnizes sagen Verhältnisse Zum Judentum, Strassburg, 1881; Schiffer, HJIP p. 188 f.; art. 'Essenes' in Hastings' DB by Conybørse, in DOV by C. Scott, in EBD by Jülicher, in FER by Duhem; JQR vii. 153, vil. 155.

3. Symbolic forms mistaken for asceticism.—Some customs are not ascetic, but are symbolic forms. Primarily asceticism consists in the conviction that sin is the mandate of some higher, or supposed higher, ideal set by the will before the life. Such contradiction involves pain and discomfort for the person, that the body may be disciplined into subjection or removed as a hindrance to the soul's development. Soon, however, such contradictions are symbolized, and the symbols become conventional, the original significance being sometimes lost. Thus the tonsure, shaving the head, peculiar clothing, taking the last place in the procession, etc., may become mere symbols of what was once the expression of an attempt at self-mortification. Here again the student must be careful to mark customs that have become binding through usage or enactment, and that may seem ascetic, as the wearing of phylacteries, or broadened borders to garments (M. 239), but which in truth may have an entirely different motive, this motive being either sanitary or aesthetic, or based on racial distinction, or misinterpreted phrases from religious authority, or the like. Sometimes a symbol with such past signifi-cance becomes a sign of self-mortification. The wearing of sandals had no ascetic significance as it arose in a hot country, but, transferred to the north of Europe, it became a familiar symbol of self-denial among the monastic orders.
4. Disciplinary asceticism.—Every system of morals enforces the discipline of the will, and all systems of developed casuistry suggest methods of such discipline (cf. Paulsen, System d. Ethik, vol. ii. pp. 10–29; ed. 1900; and the 'Spiritual Exercises' of Ignatius). This dictum might be included, therefore, all exercises taken as training of the moral life, and carried through not for the sake of the exercise but for the effect produced upon the person using it. Thus also spiritual exercises may have a mingled motive, on the one hand only abstinence from certain forms of amusement, or it may be the life of Trappist silence, but what determines the conduct is not loving expediency within the realms of a Christian freedom (Gal 5 1), using the world but not abusing it (cf. Augustine, de vera Religione, §§ 21 and 36), but world-flight, as from that which is inherently antagonistic to spiritual perfection (cf. A. Ritschl, Die christliche Vollkommenheit, 1902). This dualistic asceticism always results in establishing a double standard of holiness. The exigencies of social life may require, not only a few ascetics to realize world-flight to any extent; for the average man some symbolic or sacramental substitute must be found. Hence the whole doctrine of merit grows up with dualistic asceticism, as thus enabling a chosen few to flee from the world and impact a blessing upon itself or upon its less gifted followers. In the history of asceticism, upon which we now enter, we shall find many elements mingling, and it is often impossible and always difficult exactly to determine with which special conception we have to do.

Liturature.—Max Müller, Chips from a German Workshop, i. 276–277; Ritschl, Geschichte der Pietismus, 1839, l. 1–60, and Die christliche Vollkommenheit, 1902.

II. HISTORY OF ASCETICISM.—1. Ancient ascetic customs.—Almost all primitive life is marked by a certain trilingualism, in which devotional or religious manhood must submit. The customs sometimes assume a time of preparation, and priestly or religious direction was only a natural development (cf. Tylor, ii. 302–442; Watzl, Anthropologie der Naturvölker, 1871). So also marriage has its rites, some of which have remained, only a few as memories of past culture, while all of them may become in course of time ascetic, in the sense that they are regarded as a necessary training for the communal life. Thus circumcision became a religious rite for the next generation. We may, as ascetic (cf. Wellhanssen, Prolegomena zur Gesch. Isr. 1883, p. 360). But in a strict sense, as a discipline for the spiritual life, it cannot be classed as ascetic. And the classes of customs gathered by Zöckler (Asklep und Mönchentum, 1897, pp. 78–97) are almost without exception symbolic substitutes for outgrown customs, or they have social and legal significance apart from any true ascetic motive. Training for war and preparation for life's simpler duties produced customs which later became the exercises of asceticism in a more general sense. It may be said that any developed asceticism belongs only to a high and elaborate economic stage. Asceticism proper belongs to an age of reflection. Men in the process of moralization, looking out on life, revert to simple habits in the hope of restoring a morality that seems to them endangered. Thus the forms of asceticism have their history in customs that were in no sense ascetic. We have here to do with that variation of purpose of which Wundt rightly makes so much (Ethik, pp. 97–103, ed. 1886). A famine was viewed by primitive man as a national symbol of the demons. To ward it off, self-inflicted periods of hunger, i.e. fasting, were the natural remedy. The punishment was thus anticipated and the demons were conciliated. There was no ascetic
motive until spiritual man sought in this form of religious custom a means for self-discipline. To the semi-nomad Amos the luxury of a commercial capital was immoral, and his hope was a return to the nomad, the pastoral, and the home. The artificial music, ivory beds, etc. (Am 6:4), were hateful to him because connected with the luxury of a commercial development whose moral strains his people were standing but badly. The motive in his denunciation was, therefore, not aesthetic, but dualistic and primitive. A tribe sees itself threatened with extinction, and to appease the wrath of gods or demons offers one of its members in human sacrifice (Iphigenia, Curtius, etc.). Later a *sacrificium* was found in animal sacrifice, or the devotion of things which was even precious to the deity itself (the Judaean-Prophetic story of Abraham, Gn 22:9). So at last the painful parting with possessions becomes by a process of reflection a means of spiritual discipline in vows of poverty. At the same time the ascetic motive must be sought for in a primitive development. Hence the student must watch with care the unritual collections of evidence for asceticism in primitive history. It is, to say the least, doubtful if, outside of the highest civilization, asceticism in the strict sense of either discipline or renunciation of the worldly passions can be shown anywhere (cf., however, Zöckler, op. cit.).

2. Persian and Indian asceticism. —Geographical and racial factors in the development and later exposition of the population of Persia, India, and Egypt to a long succession of oppressive tyrannies by physically superior, but often mentally and spiritually inferior, races (Mongol, Muhammadan, English). The Orient has brought the human form typical for religions of despondency or even despair (cf. Schopenhauer, *Die Welt als Wille und Vorstellung*, ii, 704-705). Although in the Avesta fasting and mortification are forbidden (Spiegel, *Avesta*, ii, ivii.; cf. especially *Vendidad*, iv, 47-49), and a great many of the alleged original songs for a primitive asceticism in Persia will not stand a critical investigation, yet Mani and the very prohibitions of ascetica are evidences that in Persia as well as in India and Egypt spiritual suffering gave rise to a sort of Christian Orthodoxy, with decisive movements of asceticism as characteristic features. The forms of this asceticism are those of world-flight, the hermit life, the mortification of the body by unnatural inhibitions of all its desires. The most imperative of these was the sexual impulse, and hence, as it was also linked with the continuance of a hated existence, the mortification of this impulse became primary. As Indian religion became fully self-conscious in Buddhism and Jainism, it deliberately opposed the ascetic to the legal, and the life of contemplation to rituals and sacrifice, and democracy to caste-aristocracy (cf. Max Müller, *Chips from a German Workshop, vol. i, part* «Buddhism»). The asceticism of Brahmanism aimed at absorption into God. It was a training for spiritual vision. The asceticism of Brahmanism, as awakened to full self-consciousness in the Buddhist reformation, was a negation of all life, the denial of the will to live (cf. Max Müller, op. cit., part «Nirvāṇa»). This is the logical outcome of dualistic asceticisms, the perfection of world-flight. Even the monastic system is a compromise; and although it sprang up in the persecutions, the monastic life as a matter of fact, the hermit and the faqir are the real types (cf. Rhys Davids, *Buddhism*, London, 1878). The relatively mild asceticism of Buddhism depends due rather to the good sense of Gautama Buddha than to the logic of his teaching, and the result has been that ever increasing sects have pushed the logic of asceticism to its limits.

**Literature.**—Besides works quoted, cf. Kuennel, *Hillen Lesarten*, National and Universal Religions*, London, 1882; Monier Williams, *Dictionary of Hinduism*, London, 1889; *Silberaegel, Der Bud- dhismus nach A. F. Klug*, Munich, 1891; *Oldenberg, Buddha, Eng. tr., 1882*, p. 61; T. B. S. Ratter, *The Higher Hinduism in relation to Christianity*, 1900, p. 255. See also the articles, "Hinduism and Asceticism," by Max Müller in the *Encyclopaedia Britannica*, vol. 7, pp. 70, 420 ff.; L. Roth, *Geschichtsweis Kunst, indischen Philosophie*, 2 vols.; or was an introduction from without. It rapidly developed from the teachings of Plato (cf. *Philebus, 41*; *Phaedo, 66-67, 82-83; Apology, 40*), whose dialogues contain all the germ of the future Neo-Platonic development (consult treatment by Zeller, Weber, and Ueber- weg-Heinso in their *Histories of Philosophy*). The cosmological speculations had their real religious interest in the assertion of the increasing badness of the physical world, the spiritual reality. Nor is it essential whether this arose on the soil of Greece independently of the Orient (so Zeopen on the view of pure specul-ative activity). In Neo-Platonism the Oriental mysticism was united definitely with Greek metaphysics (cf. Ueberweg, i, § 64, pp. 312-369). The Hellenistic-Judaic and the Neo-Pythagorean schools found their final expression along ascetic mystical lines in Plotinus and Porphyry. God and the world were definitely separated. God as pure being was abstracted from all phenomenal manifestation. Salvation was in the beatific vision. Asceticism was the way of freedom from the earthly. God and the world became mediators, and revelation was in philosophy and ecstasy. Thus the waning faith of a homeless Greek culture found refuge, just where India found it, in ascetic despondency and theosophic speculation.

4. Asceticism and Judaism. —(a) Canonical Juda-ism. —All early religions resort to various forms of self-induced privation or suffering to appease the assumed wrath of gods or demons. Famine is anticipated by fasting (cf. above), and wounding the body becomes a *sacrificium* for the punishment of the offended powers would otherwise inflict with more terror. The fatal realm of the holy books, however, not strictly speaking ascetic. The spiritual life is not being trained, nor is the body being destroyed as a thing evil in itself. Disting- guishing, as we must in the interests of clear thinking, asceticism proper from such survivals of ancient thought, Judaism is seen to be a distinctly
non-ascetic religion. The fasts and the days of humiliation (‘afflict your souls’), as in Lv 25:32-33, are no more ascetic in the strict sense than a day of prayer in a Protestant community. Some of the directions about the relations of sex may seem at first sight to be ascetic, as in Lev 15:17 etc., but a close examination shows that they are not really ascetic, but had to do with the conception of a physical uncleanness (perhaps sanitary in origin) before Jahweh. This magical conception of impurity led to washings, lustrations, certain sexual inhibitions, but we find no trace of ascetics or ascetic practice proper in the gradual evolution of the Jewish ritual. The dualistic asceticism of the Orient seems to leave no trace upon the canonical books. The fundamental conception of God, indeed, excludes it. Nor does it obtrude itself even as a foreign element, as it does in Muhammadanism.

In spite of national disaster, the eschatological hopes of the Jews (cf. Boussfeld, Die Religion des Judenstaates, 2 Bde., Berlin, 1906, pp. 245-346) continually counter-balanced any beginnings of despair, such as we may notice in Job, Ecclesiastes, and Malachi. For the spiritual discipline the Jew turned to the study of the Torah (Ps 119), or submitted with great ease to the burden of a legal system. In all ages, however, the mystic world-view that lends itself to asceticism is sooner or later at war with any development of legalism, and the works inevitably against the mystic-ascetic type of religious thought. The evidences cited by Zöckler for an undeveloped asceticism (Askese und Monchentum, 2 Bde., pp. 115-120) will not bear critical examination. The Nazirite vow is not a real mark of strict asceticism (cf. art. ‘Nazirite’ in Hastings’ DB). They were vows of special consecration to Jahweh for a longer or shorter period, and represent survivals of primitive Semitic religious customs; but spiritual or ethical training was wholly lacking (cf. the story of Samson), and they had no marks of any desire to destroy the body. The abstinence from wine is a survival of nomad morality protesting against the agricultural stage (Herrmann Schultz, Alttest. Theologie, 3, 1896, § 111). The priestly regulation of the Nazirite vow has so destroyed its primitive and contemplative character, that completely re-construct it in the light of the stories of Samson and Samuel and the allusions to the Rechabites (cf. art. ‘Rechabites’ in Hastings’ DB). Jahweh as the storm-god of the desert had those who, by his grace, renounced the material stage were His earnest champions and the maintainers of more primitive types of conduct. Thus the forms were given in which asceticism might begin to develop, as perhaps in John the Baptist, although even here again we deal with other spiritual phenomena (cf. next col.) and only when the influence of the Orient and Greece can be historically traced in Judaism do we find undoubted evidences of the ascetic ideal. The story of Jephthah’s daughter has no real bearing on the question (cf. the story of Samuel and the Rechabites, Comm. of Budde and Moore, ICC). The fasts, feasts, and ceremonial regulations of Jewish religion proceeded upon a supposition which excludes Oriental asceticism, for the nation is holy to Jahweh, and the body can and must be kept ceremonially holy. This is binding on all; but priests and Nazirites, who come into closest contact with Jahweh, must be especially holy, i.e. ritually clean. The religions of the Oriental centre in the negation of the body; Judaism insists upon its physical and ceremonial cleanness as an element of the deepest cultus and is the thought of the relation of the physical to the spiritual. So that we may put even more strongly than Zöckler his closing words: ‘Only the closing period of the pre-Christian Jewish history gives us real historical parallels and anticipations of nonasceticism,’ and add that only in this period does ascetic practice proper have any place at all.

(b) Hellenistic Judaism. — The distinction between fasts that have as their object the training of the spiritual life and those intended to propitiate a sacred God must be constantly borne in mind. The first type is ascetic, the second has no necessary ascetic motive underlying it. The national fasts of Judaism, connected also as they generally were with times of special rejoicing, were intended to ward off the displeasure of the worshipped God. The non-ethical quality of these very fasts led to their entire rejection by the ethical prophets (Hos 6, Am 5). As custom hardened into a formulated legalism, neither work-flight nor spiritual discipline can be recognized as free spiritual life. The training, however, of Oriental and Greek elements with Judaism began early (cf. Schürer, Gesch. des jüd. Völkels, 3, i. 187-190, ii. 21-67). The influence was probably wide-spread, but it reached its climax in the work of Philo at Alexandria. Here we find the full formation of the legalistic training, the bridging of a later day (Grätz, Gesch. der Juden, iii. [1856] 295, Eng. tr. ii. [1891] 211; Schütz, Die jüd. Religionsphil. bis zur Zerstörung Jerusalems, 1884; Ludau, Der Esseniismus in seinem Verhältniss zum Judentum, Strassburg, 1881). God is dragged down by the material; the highest life is that of contemplation; and abstraction from the body is the essential thing in religion. Holiness is also a negative thing. The dualism between God and nature is spanned by the Logos. The dualism between the flesh and the spirit is resolved in the contemplative life, where the spirit frees itself from the flesh and rises to the vision of God. The Essenes (cf. art. by Conybeare in Hastings’ DB) are, as we have seen, doubtfully to be considered as an ascetic development. The communism is the simple expression of this contemplative interpretation of all Israelite life in early times. The marriage customs are hidden in evidently inaccurate estimates of them, and the asceticism reported by Philo may well be imported from his preconceptions into his treatises. It must be noted, however, that in so many ways suggests a recurrence to primitive type should become a medium for carrying a Greek culture (cf., however, Zöckler, Askese und Monchentum, 3, pp. 125-127). The reports of Philo and Josephus are always open to suspicion when they see in Jewish customs bonds between the Greek world-view and Judaism. The food and clothing of John the Baptist (Mt 3-17, Mk 1-4) nor have any asceticism as their motive than the poke bonnets and grey colour of the Quaker costume; but their practice points to a return to a primitive simplicity. John the Baptist is the revulsion to the semi-nomad, prophetic type. He proclaims no asceticism, but faithfulness to everyday duty (Lk 3-14). Only when Plotinus and Porphyry and Iamblichus leave the assumptions of the OT, and by symbolic interpretation read Greek and Oriental thought into Judaism, do we get a system of contemplative asceticism well developed. This asceticism is not a Jewish product and has left little trace upon Jewish life, but it has profoundly influenced the Christian development.*

* Muhammadanism has borrowed from old Christian sources an asceticism which, however, often resembles far more the non-ascetic excesses and resolutions than characterized the world-flight. Indeed, this latter is wholly strange to the Qurān, although in Persia it may be noted (cf. sep. art. ‘Muslim’ below).
ASCETICISM (Introduction) 67

5. The Church and Asceticism.—(a) The Early Church and Asceticism.—Very early in its history the transformation of Christianity from a Jewish to a Gentile church was accompanied by a kind of life begun (cf. Warne, Anfänge unserer Rel., Tübingen, 1804, 322–346). The marks of this change are already upon several of the NT books, notably the Ep. to the Heb., where the influence of Philo and Alexandrian Judaism is marked (cf. Sieg, Philo von Alexandria, Leipzig, 1879, p. 332 ff.; a child-, Das Urchristentum, Berli., 1887, p. 629 ff.; McGillert, Apost. Age, Edin. 1897, pp. 477–482). Thus the Judaism with which the Christian Church found herself dealing was often not that of the OT, but a Hellenistic Judaism which was indeed no longer on the ethical monotheism of 8th cent. prophecy, but on Greek dualism (cf. Harnack, Lehrbuch der Dogmengeschichte [ed., 1883], vol. i. § 7, pp. 93–101). This distorted the whole conception of the relation of the body to the purpose of the Kingdom: body might be expected, realized because the faith in a catastrophic introduction of a new age seemed in itself to minimize the importance of the existing world. Upon this distortion grew up the conception of world-flight, and asceticism of the purest Oriental character was linked with it by way of the whole movement. The ascetic character of the life-work of Philo, de Vita Contemplativa. This document has been pronounced by P. E. Lucas (Die Therapeuten, Stuttgart, 1859) and by Mitchell, has been defended by Conybear (Philo: about the Contemplative Life, Oxf. 1855) and P. Wendland (Die Therapeutten und die philonische Schriften vom beschaulichen Leben, Leipzig, 1866). It is certainly impossible to cope with the whole history of asceticism. The so-called Therapeuten, described as a Jewish monastic order, probably never existed, but the invention reflects the ideals of the highest holiness of certain circles profoundly influenced by Hellenized Christianity. Body might be expected, in the Oriental Churches that the most negative type of asceticism flourished. Egypt became the home of men and women fleeing from the world to find in ascetic solitude the holiness they longed for (Neisser, Kein in Alten und Neuen Franken, Thuses, 1891). The attitude of St. Paul to marriage had nothing fundamentally ascetic in the Oriental sense. Abstinence was a matter of expediency, for the stress was great and the time was short (1 Co 7:14 sq.), and marriage brought cares which hindered the bishop's main business of proclaiming the coming of Christ. At the same time, the willingness and licence of the period made contemnience, even to the denial of marriage, a very distinguishing mark of superior enthusiasm. In opposition to Marcion, however, the Therapeutten (cf. Neisser, op. cit., i. 20), and he was not the only one to do so, against the rising tide of ascetic denial of marriage, urging that Christian liberty must be preserved (Clem. Alex. Strom. i. 23, iii. 12; Eus. H.E. iv. 29). Moreover, self denial gave a stamp of asceticism to such religious life whose basis was really not Christian at all, as in Manichaeism, and this religious life compelled the Christian communities to rival its earnestness by denials as dramatic: so that Tertullian, whose dicta inevitably repudiate asceticism in principle (Apology, 32), is nevertheless proud of the self-denials he is able to set over against the claims of the ascetic Marcionites (Apology, ed.). Thus, in Egypt and Africa world-flight and asceticism were paralleled, and Christian and un-Christian celibates came more and more to mark the ecclesiastical development. It culminated in the world-flight of Paul of Thebes, whose retreat to the desert was, however, only the logic of the transposition of Christian values. Manichaeism and Gnosticism had really conquered, and, opposed with true instinct by the Church, had yet forced upon the Church the dualistic Oriental conception of life (cf. H. E. B. H. O. Church, vii. pp. 152–164, for a slight modification of this view). And logic went to the fullest extent in the hermit seclusion and the absolute isolation of the individual, as in the case of Antony and Simeon Stylites. The grouping of the priests of the world into monasteries is sometimes regarded (but see O. Zöckler's article below, p. 75°) as the model for what now sprang up as a modification of this hermit isolation. The monastery was at first a mere group of hermits gathered about some conspicuous example, or banded together for the sake of life in the desert. But the Church and its institutions had seemed, and martyrdom became rarer and rarer, the enthusiasm that went thus in this last evidence of zeal and sincerity began to express itself in ascetic practices. The spiritual athlete proved his constancy by self-inflicted deprivations. (b) The Oriental and Greek Communities and Asceticism.—In general it may be said that the negative, contemplative, mystic type of asceticism had its largest development in the Oriental Greek Church. From the time of Evagrius and Antony the contemplative withdrawal from life into the desert was indeed bound up with extraordinary limitations of diet, etc., but the life of contemplation was the cold end sought by these fasting. The first expression, and, in a sense, the organism of Greek asceticism a means to the contemplative self-abstraction. This is seen clearly in the rules of Pachomius and their subsequent development (cf. Zöckler, Askese und Monachismus, 1891; p. 201–203). The influence of Origen and of the Neo-Platonic conceptions on the Oriental Church, as it ceased to be intellectually quick, was to emphasize dogma and details of ritual on the basis of an extreme literalism in the use of Scripture (cf. K. Müller, Kirchengeschichte, 1. 206). The ritual development was excessive, and the monastic community reflected the most negative type, an aggregate of hermit cells. It was only when, in 1883, the Russian organization and education called out the best that was in the monastic development that it exhibited any signs of life and growth. Cyril and Methodius, the two monks from Constantinople who gave Russia (to the Greek Church, represented the spirit of missionary service (cf. J. M. Neale, History of the Holy Eastern Church, 1873). Yet asceticism in the true sense of the term was overlaid by formalism and ceremonial. The negative conception of holiness was even forgotten amidst the mass of superfluous externalism. The monastery was seen at Mount Athos or Mount Lebanon (cf. articles on the, Brookhans, Konversationslexikon) reflects the older type of con-
ASCETICISM (Introduction)

moral life; but the asceticism, save in the absolute banishment of women from all participation in the life, is not extreme. Nor has asceticism proper experienced any new development in the Russian brand since the 11th century. Yet Russia, ardent with extreme and fanatical views based upon a bald literalism, as the sect of the Skoptzys, who interpret Mt. 19th literally, and of whom 176 were in the years 1839-71 sent to Siberia for obedience to this supposed command (cf. Loos, Symbolik der Glaubensfeinde [1854]). Yet Russia emphasizes the pathological and the superstitious overshadow the ascetic motives; and, indeed, genuine ascetic development in the various branches of the Orthodox Greek Church there is almost no trace similar to what is found in the East.

The primary interest of the Christian Church as an Imperial organization was neither in dogma nor in the negative conception of holiness fundamental in ascetic monasticism (cf. A. Haranack, Das Mönchtum, seine Ideale und seine Geschichte, 1691, p. 90 f.). Her interest was in the re-organization of the Eastern Church by the service of Imperial ecclesiasticism. At the same time, in the creeds and literature which the Western Church took over for her Imperial purpose, there were both dogmatic elements which she had to formulate and adapt, and ascetic elements which she had to use and regulate. Under the leadership of Rome, asceticism became a handmaid of inestimable value. It was the great monk-pope Gregory VII, who forced on the whole of the clergy the ascetic celibate as an ideal (Synods of Erfurt and Passau, 1074), and in his efforts to destroy the anti-clerical ideals, the world-ruling of the world by an institution whose ideal was world-flight. The missionary activity of the monastery in Northern Europe had changed its character, and while bringing a mass of evils connected with the holding of property (cf. K. Müller, Kirchengeschichte, i. 352-358 [Freib. i. B. 1829]), was at the same time the bearer of order and culture, and even of literature, to the relatively barbarous North. It had, however, of necessity drifted away from the ideals of Oriental asceticism. To the task of re-force, a large number of reforms and movements of the period from Otto I. (936-973) to Gregory VII. (1073-1085) were directed. The monastery of the Western Church was up to this period largely dependent on the great land-holders, and vows were not made for life. Only in the 7th century was the retirement from a cloister visited by penalty, and only under the vigorous reforms of Bernard of Cluny and the Abbot Hugo were the monasteries compelled to conform to the ascetic ideals of the past (cf. K. Müller, op. cit. i. 317 f. [1851]). In the 11th century the lower orders looked with suspicion on the agricultural and literary work which marked the less ascetic monastic institutions, and exulted more and more the life of contemplation and ascetic negation (cf. H. Benter, Gesch. der relig. Ausblü. ii. vii. 24-29, Berlin, 1877). From this period onwards extreme forms of ascetic life—scurring, wearing of chains and haircloth garments, no longer as survivals of primitive life, but planned to inflict pain and discomfort—as well as extreme seclusion, becoming the standard of the great training order of perfection; and the ideal of perfection was world-flight, and the negation of desire. At the same time, the linking of these ideals with Churchly ambitions gave peculiar form to the ascetic conception. Everywhere the monastic reform set before itself the same ends:

'Re the revival of monastic institutions, the recovery of lost lands, and the acquisition of new possessions, the establishment of a new ecclesiastical order and the acquisition of new novitate, introduction of stricter discipline and cultivation of piety, as described in the older stories of monastic life, and especially in the writings of Gregory of Nyssa, Gregory of Nyssa, patience and self-inflicted pain of all kinds, contemplation in solitude, human experience, the cult of saints, the employment of confession and the sacrament, homage of the saints and relics, pilgrimages, search for the miraculous, asceticistic jubilation and the world-flight, the destruction in general an abnormal raising of the emotional life, increased sensibility, and, above all, a high estimate of the "grace of tears" (K. Miiiller, op. cit. i. 321).

Each new attempt at monastic reform of necessity but revived this negative idea of holiness, and hence it is no accident that the circumstances which originally produced the pessimistic world-flight type and generally mark its revival in the Western Church. The times of revived asceticism are periods of national disorder and social disruption. Gentle and thoughtful souls found world-flight the only seeming refuge amidst the wrecks of all that makes life really attractive, and in the extreme symbolic self-renunciation of self-torture the only hope for the devoted lives of those who saw the evil. It is impossible for any religious development to be wholly without the note of service and self-sacrifice. For the father, yet for the monarch, and more and more into the background the more self-consistent the pursuit of the ascetic ideal becomes. To save one's own soul by retirement from the dangers of life is the chief goal, and the selfishness of this goal is only partly hidden by the fact that service on behalf of others may become a means to this end. Even the asceticism that marked the great monastic revival under St. Francis of Assisi (1182-1226) made the great services rendered by the order often a source of real corruption (cf. Life of St. Francis, by Thomas de Celano, 1229, by Bonaventura, 1229; cf. Dollinger, Skoptzy [1891]).

The complete impossibility of making the negative asceticism a universal demand upon all Christians, while still maintaining Imperial world ambitions, has always led in the Western Church to compromises with the 'lay' world. Hence each revival of the extreme emphasis has also led to 'lay-brotherhoods,' to modified vows for those who cannot altogether flee the world, and to an extension of ascetic symbolism. This ascetic symbolism plays, therefore, a large part in the reforming of the Church and its organized protest to the sin of the world and the evil of the day. And that it is not confined to monasticism, but has been developed in the world-organization of the Church it is impossible to deny. From the time of the Reformation onwards the Roman Church has been on the defensive, and the militant character of her great organizing force, inherited from Rome, has driven the negative and ascetic conception of holiness into a secondary place. In the Jesuit development, asceticism has a distinctly different place from that occupied in the older orders. It is a training for service under the ecclesiastical Imperialism of Rome (cf. Dollinger and Rensch, Geschichte der Moraltheitungen in der römisch-katholischen Kirche [1899], particularly the 'Einleitung'). The goal the Jesuit order set before itself was world-conquest rather than world-flight, and thus again is clearly seen the old struggle between two distinct ideals of holiness, while both are maintained within the great historical communion of the Roman Church.
triumphs of the Jesuit policies since the great Jansenist controversy have therefore steadily relegated asceticism to a secondary and disciplinary place, and its recent history shows no new development within the Roman communion, while it still maintains its place as one of historic legitimacy.

Regarding the characteristic of asceticism, the following may be mentioned: Zieckler, Askese und Monachismus, Frankf. a. M. 1897; Lobstein, Maurice de Molard, Privatblicke und Geschichte des Mönchtums, 1859; Jessopp, Coming of the Friars, Lond. 1901; Montalemont, Moines du West von St. Benedict zu St. Bernard, 7 vols., Rechamps 1898-1923; Gedichte aus der Blüte der Ancestral Monachismus, Berlin 1901; Harnack, Das Mönchtum (Eng. tr. Monasticism, Lond. 1881); and the Standard Histories of the Church in the various age groups, e.g. of the Oriental Churches, the Roman Church, the Reformation, the Catholic Church, etc.

(7) Protestantism and Asceticism.—In a true Protestantism there is no room for Oriental asceticism based upon world-flight (cf. Luther, Von der Freiheit Christenmenschen, 1520). The place asceticism can properly have is as a training for the life of service, and it is only a matter of loving expediency whether the Protestant shall prepare himself for service by fasting, deprivation and negation of legitimate desires, or by the simple and often enviable charge of daily life. In the Matthew tradition (Mt 6:6) Jesus certainly anticipated fasting; but in actual fact His disciples did not emphasize it during His lifetime (Mt 9:44), as is seen also in the Mark tradition (Mk 2:19; 6:29); and St. Paul's doctrine of Christian freedom has ever been a logical argument of the other way. Also, permitting, indeed, any act that may prove for spiritual edification, excludes any emphasis upon such practice as necessary. Hence the Reformers admit it. Fasten and lieblich sich bereiten is no term of Zieckler, says Harnack in Smaller Catechism, and he urged it as a pious and useful exercise; as did also Calvin, with, however, the old primitive motive appearing, for the Church was to fast to appease the wrath of God (cf. Zieckler, op. cit. p. 555). All the ascetic practices have dropped away, or been actually combated by both Lutheran and Reformed Churches (Augsburg Confess., Art. 27; 1 Helvet. Confess., Art. 28). In the form of world-flight Protestantism has overcome asceticism. Only in the forms of a legalism can we trace remains of the Catholic conception of a negative holiness (cf. A. Bischof, Gesch. d. Pietismus, i. 36-80, Bonn, 1880), and even the legalism that forbids dancing, theatre-going, wine-drinking, and card-playing dates so now on the basis of the expediency of the Christian life, or on that of the Christian community, and thus removing the discussion of them from the sphere of asceticism. It is therefore a source of confusion to confound these two separate motives. With Protestantism, therefore, Oriental asceticism may be said to have been theoretically overcome.

Lutheranism.—The best histories are those of Zieckler, Askese und Monachismus, Frankf. a. M. 1897, a new edition of his Kirch. Geschichte der Aeksen, 1863, and J. May, Die christliche Askese, ihr Wesen und ihre historische Entwicklung, Freiburg i. Br. 1881; see also article 'Askese' in PPR. Interesting material may be found in the works of J. C. F. Fühner, a work on the Askese, ihr Wissen und ihre historische Entwicklung, Freiburg i. Br. 1881; see also article 'Askese' in PPR. Interesting material may be found in the works of J. C. F. Fühner, a work on the Askese, ihr Wissen und ihre historische Entwicklung, Freiburg i. Br. 1881; see also article 'Askese' in PPR. (6) Protestantism and Asceticism.—In a true Protestantism there is no room for Oriental asceticism based upon world-flight (cf. Luther, Von der Freiheit Christenmenschen, 1520). The place asceticism can properly have is as a training for the life of service, and it is only a matter of loving expediency whether the Protestant shall prepare himself for service by fasting, deprivation and negation of legitimate desires, or by the simple and often enviable charge of daily life. In the Matthew tradition (Mt 6:6) Jesus certainly anticipated fasting; but in actual fact His disciples did not emphasize it during His lifetime (Mt 9:44), as is seen also in the Mark tradition (Mk 2:19; 6:29); and St. Paul's doctrine of Christian freedom has ever been a logical argument of the other way. Also, permitting, indeed, any act that may prove for spiritual edification, excludes any emphasis upon such practice as necessary. Hence the Reformers admit it. Fasten and lieblich sich bereiten is no term of Zieckler, says Harnack in Smaller Catechism, and he urged it as a pious and useful exercise; as did also Calvin, with, however, the old primitive motive appearing, for the Church was to fast to appease the wrath of God (cf. Zieckler, op. cit. p. 555). All the ascetic practices have dropped away, or been actually combated by both Lutheran and Reformed Churches (Augsburg Confess., Art. 27; 1 Helvet. Confess., Art. 28). In the form of world-flight Protestantism has overcome asceticism. Only in the forms of a legalism can we trace remains of the Catholic conception of a negative holiness (cf. A. Bischof, Gesch. d. Pietismus, i. 36-80, Bonn, 1880), and even the legalism that forbids dancing, theatre-going, wine-drinking, and card-playing dates so now on the basis of the expediency of the Christian life, or on that of the Christian community, and thus removing the discussion of them from the sphere of asceticism. It is therefore a source of confusion to confound these two separate motives. With Protestantism, therefore, Oriental asceticism may be said to have been theoretically overcome.

(6) Protestantism and Asceticism.—In a true Protestantism there is no room for Oriental asceticism based upon world-flight (cf. Luther, Von der Freiheit Christenmenschen, 1520). The place asceticism can properly have is as a training for the life of service, and it is only a matter of loving expediency whether the Protestant shall prepare himself for service by fasting, deprivation and negation of legitimate desires, or by the simple and often enviable charge of daily life. In the Matthew tradition (Mt 6:6) Jesus certainly anticipated fasting; but in actual fact His disciples did not emphasize it during His lifetime (Mt 9:44), as is seen also in the Mark tradition (Mk 2:19; 6:29); and St. Paul's doctrine of Christian freedom has ever been a logical argument of the other way. Also, permitting, indeed, any act that may prove for spiritual edification, excludes any emphasis upon such practice as necessary. Hence the Reformers admit it. Fasten and lieblich sich bereiten is no term of Zieckler, says Harnack in Smaller Catechism, and he urged it as a pious and useful exercise; as did also Calvin, with, however, the old primitive motive appearing, for the Church was to fast to appease the wrath of God (cf. In the form of world-flight Protestantism has overcome asceticism. Only in the forms of a legalism can we trace remains of the Catholic conception of a negative holiness (cf. A. Bischof, Gesch. d. Pietismus, i. 36-80, Bonn, 1880), and even the legalism that forbids dancing, theatre-going, wine-drinking, and card-playing dates so now on the basis of the expediency of the Christian life, or on that of the Christian community, and thus removing the discussion of them from the sphere of asceticism. It is therefore a source of confusion to confound these two separate motives. With Protestantism, therefore, Oriental asceticism may be said to have been theoretically overcome.

The English reader of translations from Pali and Sanskrit will find the word 'ascetic' used to denote any person who from religious motives has 'renounced the world' (cf. e.g. Dialogues of the Buddha, i. 313, n. 2; The Jātaka, vi. Cambridge, 1887, Index, s. a. 'Ascetic'). This is due to the English poverty for such terms as religious and its synonyms. It does not, however, follow that, beyond renouncing home, property, and marriage, the so-called 'ascetic' is to be understood as engaged in systematic personal suffering. Actual ascetic practices were spoken of collectively as topas (Pali tapa), i.e. 'burning,' 'glow.' Parallel with, but usually independent of, sacrificial rites, they constituted, no less than the latter, a systematic line of action pursued to gain a distinctive end. That end was essentially the guarantee of re-birth under relatively happier conditions than the present life could afford.

For instance, in the paradise of the log drifting down the Ganges, the Buddha, discussing the chances of its arriving in due course at the open sea, and enumerating the various obstacles, said that it might be seized by human or by non-human agencies. From this he illustrated the fate of a religious brother, drawn back again into the world, or captured by long-suffering gods who will not let the good be destroyed by some absurd of the gods and conforming to some discipline (brahmacharya) with the notion of existence, and asks (tapa), or discipline I shall become a god, or godlike being (Shining) in the life of the world, or (this) is the great delusion, etc. (Gotama's Ethics, p. 297, n.)

Of the more usual object of topas, according to the Vedas—the attainment of magical powers—but slight traces remain. The Buddha, for instance, tells, as an ancient legend, of the failure of certain Reis to blast away the obstacle which explained that their topas was proved futile and their discipline fruitless (Mayhjima, ii. 155).

The way in which topas was held to guarantee the end sought after was not, as in sacrificial rites, by the propitiation of a god or gods, but by satisfying, as a sign that the faith and also the mind of karma conceived as impersonal, eternal, moral energy. Painful experience and the absence of pleasant experience was to work as a set-off, in the balance of fate, against the weight of pleasant

ASCETICISM (Buddhist)
self-indulgences in the past, and of possible pleasant experiences in their near future, respectively.

There are, brethren," the Buddha's discourse runs, "certain recluses (Ashekas, Ajivkas, Nigaghats, etc.) who thus preach and practice. They live in the enjoyment of individual experience, whether happy, or pleasant, or neutral feeling, all has been caused by previous actions. And thus, from the cancelling of old actions by that, and by what is done from now on, the effect of such is infused into future life: by this non-indulgence karma is destroyed, and so ill is destroyed, and so feeling is destroyed, and so all pain of becoming is destroyed. Thus, brethren, what he calls the Nigaghats (Jaime) says: . . . Is it true, I asked them, that you believe they practice? They replied: They practice the path that Nipatutta, is all-wise—out of the depths of his knowledge he tells us: Ye have done evil in the past. This ye do wear away this hard and painful cord of action. Others dispute that here and now, by thought, word, and deed, is wrought, is a minus quantity of bad karma in future life . . .

The recorded interviews between the Buddhists and the Brahmanas yield no such efforts to muster and forestall destiny. But one young Brahman names tapas as one of five conditions declared by the priestly class to be requisite for the achievement of 'merit' (Majjhima, i. 199). And current verses commending tapas are here and there gathered into the Buddhist canonical anthologies (Suttanta, 337-372, Suñña Nikāya, verse 77; Anguttara, i. 346).

Now Buddhism was frankly eudaimonistic in its ethics. It hardened to reduce the evil of the world to its ultimate term—dakkha; 'pain, sorrow, misery.' III. It spoke of nirvana as absolute happiness. Its cardinal tenets were to be an organ for the root eradication of any deliberate infliction of pain, or discontinue, as such, on one's self or on others. One of those categories into which the canonical books delight to divide human beings into two classes, self-mortifiers, or 'fathers of tapas,' tormentors of others, tormentors of both self and others, tormentors neither of self nor of others (Majjhima, i. 541, 541, ii. 169, Anguttara, ii. 22). Under the first head come the votaries of tapas; under the second, butchers, fowlers, huntsmen, self-mortifiers. Under the last, great functionaries who, when holding sacrificial ceremonies, perform rites involving some personal discomfort, and also have herds of animals slaughtered, and keep their slaves in fear of punishment. Under the fourth head come those who have left the world and the home for the purpose of a recluses. These are, or should be, filled with charity and compassion for all living beings; they own no property in animals or in personal service. They harm no one, meanest, one and, have thrown off the cares and ties that torment the world. And, as we were in antithesis to the word 'burning,' they were also in antithesis to the word 'tormenting.'

The latter term, sīthihāth, would seem to imply renunciation of tapas, as well as of those professions and practices through which a man would become, as it were, a cause of burning or torment to others. Hence, of course, to cultivate, even if lie be a bhikkhu of ten, or of twenty, or of one hundred, (Majjhima, i. 469), the virtue of hiri-ottappa, conscientiousness and fear of blame. These will often entail, ere he graduates in sanctitude, states of mind called 'burning-producing' (tappeniya dhamaññ), to wit, 'I have left undone those things that I ought to have done, and I have done those things that I ought not to have done' (Anguttara, i. 40; Dhamaṇa-sangāyi, §§ 38, 1390, 1323). Nor was he to be 'cool' in pressing forward to complete emancipation and self-conquest; but, on the contrary, abundance of 'ardour' (āṭivāriya) is prescribed. The arhat is described as wholly sīthihāth, as one resting on a summit, or by clear waters beyond the jungle (see art. Aññātutta).

Buddhism, again, claimed at its very inception, in the heavens and by conferring power, the jungle of life, as a jungle smile, as the thick-set path and the fired-out path, they are opposed to the middle course of the brother who are opposed to the middle of the practice (of the Four I nstructions) 'ardently surveys body, impressions, thoughts, and feelings, that he may enable such grieves arising, in contemplating the things of the world (Anguttara, i. 295).

The Buddha's twofold objection to the practice of asceticism is really one: dukkha is evil and must be removed. Excess is dukkha. Tapas is a form of excess of violent mortification. It not only lead through suffering to any gain; it is unprofitable. This futility of tapas, and not any shrinking from pain, was the moral of his own strenuous essay in austeries. This he said, in his address to his son, the young Brahma, who maintained that happiness was to be won only through suffering (Majjhima, ii. 93) ; also to a young Brahman, who questioned him on the originality of the system he put forward (Majjhima, ii. 212); and again to a young Jain, who doubted whether the Buddha's disciplines studied bodily as well as mental control (Majjhima, i. 237). When almost worn out by his austerties, he came, he said, to the conclusion: 'Not by this bitter course of painful hardship shall I arrive at that separate and supreme vision of all-sufficing, noble (Aryan) knowledge, peace, which can lead me to be another path to Enlightenment?' Whereupon he once more took reasonable care of the body, (whereby his fellow-ascetics, who had expected great results, lost faith in him), and chose, for the meditation that brought him high, 'dakkha which is both pleasant and pleasant, and which in the natural environment was of a kind to soothe and brace the spirit.

A little poem in the Sāriputta Nikāya (i. 103) represents him, at this stage, as having below passed from the world and from faith therein. Before his complete enlightenment he sat by the river Nemanjā, at the foot of the Gotthari's Banyan tree, muttering: 'Oh! but I am freed from all that difficult toil! Wholly steadfast and mindful now I seek to [booth enlightenment].' Hereafter I am to be, tried to shake his serenity: 'Tapas and sacrifice hast thou abandoned, whereby the Brahman youths are distinguished? The impurity of essence is pure, when he hath lost the path of purity.' And Gautama replies: 'I who have discerned the uselessness of [my] tapas and of all tapas whatsoever—bear along with it, as it does, all that is useless, even as a punting-rod and steering-rod may bring along a watersnake—I, practising the path to [booth moral conduct, meditation and insight—have won the Parity supreme."

The foregoing allusions define the attitude of Buddhism to man, his body, his desire, his aims, and his discipline of the course of a painful penance, privation, injury, toil, or titum inflicted upon the person. But in the sense of the Greek askētēs, or way of life, in which some channels of activity are barred and others developed by special training, Buddhism was the most thoroughly ascetic of all the religious systems of the world. The body, as method of asceticism, but it is no mortification of the senses. It is just the power to refuse a lesser good for the sake of the greater. Such asceticism, an alert and constant effort after betterness, is a tonic, a strengthening of fibre, an added increment to life.' Dr. Jane Harrison's words (Albanian Decision, Jan. 1908) apply no less to the Buddhist. Of the lay-disciple a less high standard of training was expected. His whole duty may be said to be laid down in the Sigalovāde Suttantā of the Digha. But any deeply serious movement must always concentrate its energies and its care at first on a nucleus of whole-hearted devotees, who alone will tolerate it over initial difficulties, and propagate it. These can no more live like the rest of the world than an army when making the ascent of a high mountain. With the end it had in view, the Buddhist asceticism is in some respects in affinity with the Christian, in some, again, with the Greek. For the earnest student (śekha) the body was something to be analytically studied and kept in cleanliness and good health. Clothes were worn, medicine taken, massage, shelter, regular food, rest, and medicines were prescribed. But it remained, religiously considered, a fount thing (piṭikīgyo); and the senses
were so many opportunities and channels of malevolent impressions and impulses. Susceptibility to beauty of preservation can be correctly perceived in contempla-
tion or imagination of bodily transience, decay, and putrescence. The bodily condition of the Order amounted very much to what would now be called 'the simple life.' Needs (which would else provoke pain) were regulated by reducing new and unnecessary wants. The recurring explanation of 'moderation in diet' is typical:—

'Then when any one takes food with reflection and judgment, not for any purposes of excess, personal charm and attraction, but so as to suffice for the sustenance and preservation of the body, for alloying hunger and for aiding the practice of the right views; for that which has been feeling, and shall cause no new feeling to arise, and maintenance shall be mine, blamelessness also and comfort'—this condition of diet is called 'moderation in diet' (Dhamma-sangati, 1343).

Compared with the ascetic excesses, as well as with the imaginative and speculative obsessions, of the age, the Buddhist standpoint was markedly hygienic. As the Buddha is recorded to have said (Majjhima, i. 569), to consider that health means merely that nothing ails the body is to lack all noble (Aryan) vision. On the other hand, a healthy and efficient body, when properly inhabiting it, is not only indispensable to a healthy and efficient condition of mind, but was an integral part of sound training (Majjhima, i. 299, 473 ff., 425; Dhamma-sangati, §§ 40-51). There does not appear, in the canonical books, any glorification of the intellectual or spiritu-
al superiority of the body over the sentiments of individuality were ranked on a level, as being each and all important, channels of suffering, and void of Atman. But then this body-and-mind individuality, 'poor thing' though it might be, was potentially the vehicle of nirvâna, of sabbhat-shakti. And hence the training of the body, as a symbol of the first importance—training by no means of a negative, paralyzing character. The pupil of a great Brahman ascetic school is asked by the Buddha whether, and how, Parâsaryâna teaches the cultivation of the bodily faculties. The answer was, 'Yes; with the eye he sees no object, with the ear he hears no sound.' 'On that system,' is the re-

joiner, 'the blind and the deaf have their senses best cultivated.' And the supreme faculty—culture (udayana-bhiksho) of the noble (Aryan) discipline—its purpose is to bring to their consciousness in training, moreover, is often represented as gradual, just the 'bit placed in the colt's mouth' to begin with (Majjhima, ii. 2): 'Come thou, brother, keep the sâla and the precepts and acquire the range of moral culture; and when the lamps are guarded, that no indulgence of impressions bear thee off thy feet, be moderate in diet, keep vigils, be mindful and heedful, cultivate self-collectedness in solitude, puring the heart of the five hindrances and practising the meditation raptures'—these are given as seven successive grades. But in proportion to the distance from graduation, that is, from 'emancipation,' was the training to be strict and unintermittent. Certain brethren, who asserted that a number of daily meals kept them in better health than the one most sacred meal of the Master, were gently reminded that there were such far from 'attaining' to emancipation to let themselves go (Majjhima, i. 473 ff.). To one who had attained, such questions sank into insignificance. You say,' the Buddha asks an appreciative friar, 'that my disciples hold the road: but, why do they do so?' 'For five qualities: your frugal diet, contentment with whatever raiment, food, and lodging you have, and your love of solitude.' 'That can hardly be,' is the answer, 'for while some of my disciples in one or other of these things practise austeritys, I exhorted my monks to trade, or wear lay rags, or accept invitations to dine, or dwell indoors, or among my fellows.' And he goes on to reveal the deeper basis of their trust in him (Majjh. ii. 5 ff.).

It was not to be expected that the Buddha's fol-

lowers, even when they were advanced in training, would all appreciate the quasi-Pauline 'liberty' of his own high standpoint. In Dr. Neumann's words, 'ascetic simplicity is a characteristic of humanity and ineradicable, finding new and new form and new application in the Order became elaborated into a scheme of thirteen extra vows or burdens (dhutanga), more discussed, perhaps, than carried out (SBE xxxvi. 267-269). But they were at variance with the spirit of emancipation, both in their cause and in their effect, bringing to a healthful simplicity for those who had set their faces toward the highest, sifting, in its own metaphor, to give them the liberty of the bird, which in flying 'hears with it but the power to fly,' (Udyâgiri, i. 41.)

C. A. F. RHY'S DAVIDS.

ASCETICISM (Celtic).—I. It has been sug-

gested (Fisher and Barrow) that at the cor-

ner of the Christian and 'British Saints' that the monastic system of Ireland and Wales was a continuation of pre-Christian ascetic practices; but this statement is unsupported by evidence. Herodian (A.D. 197) mentions the hairiness and scantiness of clothing of the Britanni; but this had no ascetic significance. On the other hand, Strabo (vi. 190) states that the Celts were pleasure-loving (hôswos), and Diodorus (xxvi. 3) says of the Galatae that they were fond of wine. At the same time, it has to be admitted that our information as to the Celts in antiquity is very meagre, and especially insufficient for the relatively barren Celtic lands where Christian coëvolution and asceticism afterwards flourished.

2. The Christian asceticism of Celtic countries in the 6th and 7th centuries, undoubtedly owes its own development to the influence of Eastern writers of a more moderate type in Egypt, (Marseilles), a port which under the Empire had a vigorous Egyptian trade. Massilia and Lérins (Lérins) in the South and Tours further North became active centres for the dissemination of the Origenian and Basilian ideas. The asceticism of the Scottish St. Ninian is said that the saint had met St. Martin of Tours, and held him in such respect that, when he heard of his death, he dedicated to him the church called Candida Casa at Whithorn, which he was then building. With the monastic system of Southern Gaul, John Cassian was closely associated, and it has been held by Professor H. Williams (in Trans. Cymr. Soc. 1893-4) that the monastic system of Britain and Ireland was more akin to that of Southern than that of Northern Gaul. In the latter district monasticism was more marked progress after the death of St. Martin of Tours (A.D. 400), and it may even have spread from this source to Britain, as is suggested by the story of St. Ninian; but the main impetus to the growth of the monastic movement in these islands undoubtedly came through the anti-Pelagian mis-

sion of Lupus and Germanus (429). At Lérins a church and cloister were built by Honoratus, and it was here that Lupus, bishop of Troyes, became a monk after giving up his see and his family life. There was probably some rivalry between the Northern and Southern ascetic systems of Gaul, for Sulpicius Severus (Life of St. Martin, cxvii.) says that the institutions of St. Martin were...
in some respects on a higher plane than the Egyptian institutions of John Cassian, the founder of the monastery of Mârselles. That there were links between Lérins and Britain is suggested by the fact (attested by Sidonius Apollinaris) that Ricord, a native of Gaul who is described as a saintly Celtic, visited that monastery twice in A.D. 450. The probability is that both of the Gaulish movements made contributions to British and Irish monasticism.

3. Celtic asceticism, however, in spite of its relation to the general movement, remained a feature of British and Irish life in certain well-marked features of its own, which were mainly conditioned by the tribal organization in which it took root (Willis-Bund, Celtic Church in Wales; Fisher and Baring-Gould, op. cit.). The heads of the cenobitic communities of Celtic countries were members of tribal families, and the headship of these communities and participation in their property and privileges continued (in some cases even to the 12th cent.) to be limited to those who, by means of their valid pedigrees, could show kinship with the founder. A monastic or a cenobitic community in Wales and Ireland was probably directed not only by religious but also by economic considerations, owing to the pressure of population and the insufficiency of cultivable soil.

The monasteries were largely centres of co-operativeness and of self-sufficiency; but in the pursuit of learning and the arts, while the pursuit of learning and other amenities of civilized life were thus rendered possible. Lay interests probably had a larger place in the life of these communities than the later Lives of Celtic saints, which, under Benedictine influences, might lead us to suppose. It was natural enough accordingly that these communities, as such, should take no account of clerical orders (Willis-Bund, op. cit.).

Prof. Hugh Williams (loc. cit.) gives the following as the causes of the development of monasticism in Wales, and the development in Ireland was in the main parallel: (1) A Life of seclusion, self-denial, prayer, and meditation (and it may be added, industry, to a large extent manual), in a common life of obedience to a superior, the abbot. There were similar institutions for women, and a Celtic monastery was sometimes double. The life of this stage appears to have been modelled on the teaching of Cassian in his de Institutus Conobitorum and Conditiones Patrum. (2) A stage when the asceticism was comparatively simple and emulous in the case of the Welsh saint Illtud. When children were sent to a monastery of this kind, they were regarded as the foster-children of the Church, and a fee had to be paid not only for their spiritual care, but for the needs and education of the orphaned children. That of the Eremites, or Anchories. In Egypt this stage came first, but in Celtic countries it grew out of cenobitism.

In 595, when Columbanus wrote to Gregory the Great, this movement was at its height in Ireland, and was also characteristic of Gaul and Britain. It was doubtless largely due to economic pressure upon the monasteries. The settlements of those who left the monasteries were often named after the saint who was head of the monastic community that they left. In all Celtic countries the hermits of this stage showed a marked predilection for islands, at first in lakes and streams, then in the sea. (4) The stage of monastic pilgrims or missionaries. These combined the work of itinerant preaching with that of tilling the soil in the districts where for the time being they settled. Among the most important of these were those monasteries established by Welsh and Irish saints in Britanny, and notably the following important communities: (a) that of Iona, founded by St. Columba in 563; (b) those of Anseger, Luxeuil, and Cluny, founded by St. Gildas, and those, founded by St. Columba in the end of the 6th cent.; (c) that of Llobriga in Italy, founded by the same saint in the beginning of the 7th cent.; (d) that of St. Gall, founded by a disciple of St. Columba. Other monasteries on the Continent were Lagny, Féronne, Fosse-la-Ville (near Liége), Lure, Beaufieu (in Artois), Wieringerweer. Some of the other Celtic monasteries were important centres of learning in the Dark Ages, and the Irish monks especially were distinguished for their skill in copying and illuminating MSS (cf. Epîse. 813, 860). The recent stage in life in the monastic communities gave rise to the formation of Penitentials and Rules. Some of the former, as, for instance, that of Gildas (see Hugh Williams, Gildas), show that drunkenness and worse vices had to be kept in check, and the Lives of the saints themselves sometimes give similar indications. The rule of Columba was in some respects severer even than that of St. Benedict (Warren, Liturgy and Ritual of the Celtic Church).

So far as the celibacy of the clergy, however, was concerned, it is probable, as Warren points out, that in many cases it is either known in certain places and at certain times. St. Patrick appears to have been the son of a Deacon and grandchild of a priest, and one Irish canon speaks of a cleric and his wife ('uxor ejus'). Gildas in his Inserpato in succedentibus seems to imply a marriage among the clergy. The first note clerical celibacy in Wales in the 10th cent. met with considerable opposition, which continued into the two following centuries. Gildas (Epist. xxii. 21) speaks with approval of the celibate life, and quotes Elejah, Elisio, and Jeremiah as examples ("Virgini sanctae, filii filiorum prophetarum"); in de Excid. 80 he says, 'Hieremia quoque virgo prophetaque'; but this was probably in opposition to the current ecclesiastical practice of Wales in his time.

The lives of these saints sometimes describe their ascetic practices in terms not unlike those of Indian yogis or faguis, and it has been suggested that the principle underlying this self-torture was analogous to the Celtic legal remedy of 'fasting against a person,' a practice whereby the person 'fasting against another' to whom he had preferred a request, could bring his blood upon the other person's head, if the fasting led to the faster's death through persistence in refusing the request (Fisher and Baring-Gould, British Saints, Introduction).

Some of the austere practices recorded of Irish saints are as follows:—St. Finchus is said to have spent seven years suspended by iron shackles under an arbor, 'so that he might get a place in heaven,' in lieu of sin he had committed, and that he had spent his time there and St. Ciaran is said to have caused his bodies to be eaten by crows or stinking beetles. St. Finian is said to have worn a garve of iron that cut to the bone. Of St. Ciaran we are told that he mixed his bread with sand, and of St. Columba that they slept on the ground with a stone for a bolster. Of St. Mochua it is said that he lived as an itemus in a prison of stone, and that he had only a little aperture left for letting food down to him. Of the Welsh saint Brychan we are told that he lessened his need for the luxury of clothing by dipping his body daily into the coldest water, and that he is said to have stood for five days and four nights on one foot, and that he had been wasted with fastings. Further, of the Irish saint Kevin it is said that he remained for seven years in a standing posture without sleep, with his arm held up in the sand, and that a blackbird laid and hatched her eggs in his palm. Some of these tales are obviously exaggerations, but doubtless the Celtic monks underwent a few austerities both necessary and voluntary. An ascetic attitude towards women appears to have been reflected in some ritual observances of the Celtic Church, as for instance in the laterised buildings in which the altar was in the form of a vine (the Latin 'conventus'; Irish 'cumhains') that women were to be veiled at the reception of the Eucharist. In this Church, too, there was an established custom, mentioned by several Irish historians, that St. Patrick and St. Brigit, shows that the ascetic ideal had an honoured place in Celtic monasticism; and St. Patrick says of himself in his Colloquies that he prayed six times a day (as many as at a Colonia), prayers a day, and the same number at night. Neither snow, frost, nor rain could prevent him from going before daylight to his woned place of prayer. In spite of these later features, it cannot be doubted that Celtic asceticism was essentially part of the same movement as that which showed itself in
Christendom generally, and was governed in the main by similar ideals.

One of the best known names connected with Celtic asceticism is that of the Culdees (Ir. Céill Dé, 'the companions of God'). This term was sometimes Latinized into Celtdi ("God-worshippers"). It is probable, according to the view taken by historians, that this was a name used from the 9th to the 12th cent., did not denote the regular successors of the Irish monasticism of the 6th, 7th, or 8th cent., but the followers of a new movement, which dated from the 8th century. Zimmer suggests that it was probably the influence of books which had been brought to Ireland after living at Metz under the rule of Chrodegang (A.D. 749). It was not in Ireland, however, but in North Britain where the Culdee movement attained its most important development.

Many of the terms of Celtic monastic nomenclature were derived from Latin, but a few were of native origin. The following are the chief terms of Irish: abb (the "abbot"); ascymb (i.e. secundus absbas, 'the prior'); fer logid ('the lector'); mac leig ("the lector's pupil"); cenmuidh (the "warden"); manach ('a monk'); mac dair ' ("a young monk"); ben-achithemn ("the priest"); caitech ('a nun'); uac-caitech ('a young nun'); berrad ("boulevard"); manach man ("the tounse", in Celtic countries, the head of the house); berrar man ("a monastery"); manach mainn ("a monastery"); manach anachrie; annachra ("a soul-friend", 'confessor'); olo ("church"); no- ("heaven"); sudh ("the last abode", 'heaven', an "anarch's cell"). In Welsh the following are the some terms employed: abad ('an abbot'); mani ("a monk"); abat ('a monk'), abad ('an abbot'), mani ('an abbot'), mani ('a monk'). (Lat. mainn, 'a monk', manach, 'a monk', manach, 'an archdeacon', manach, 'a monk', manach, 'an abbot', manochlic hosus, 'a monk's cell'); manychlag ('a monastery'); cuinf ('a convent'); dmryl (lit., 'a holy temple', 'a sanctuary'); dmr ('a servant of God', 'a hermit'); cuinf ("cathedral", 'a hermit's cell"). The Breton and Cornish terms are practically identical with those of Welsh. The place name Dyserth in Flintshire is probably identical in meaning with the Irish diocese. The derivative of celt was in Irish celt, in Welsh cheld. Cheld is in Welsh place names as a proper name; e.g. Llanwelud, Llansilin, Llanarth, Llandaff. The Welsh term Plany, Breton Plou, Clyned ('a cell', "mob of caillech", Welsh women), now means 'a cell' or 'a hermit's cell' in medieval Welsh 'a congregation'.

6. The general fusion of Celtic Christianity with that of Rome led to the assimilation of the monastic institutions also, and the foundation of new monasteries and nunneries by the leading orders of the Continent. In Wales some of the medieval abbeys, such as Neath, Margam, Strata Florida, Strata Marcella, M大小, and Vaux, were aided and patronized Welsh literature; but from the 14th cent. onwards Welsh poetry, largely under the influence of the love-poet Dafydd ab Gwilym, shows an anti-ascetic tendency. Unlike Ireland and Brittany, Wales has become thoroughly Protestant in the official and merely Protestant Nonconformist. So far as the Nonconformity of Wales may be said to have an ascetic bias, it is in the direction of temperance and total abstinence from the consumption of alcohol; and this tendency has left its trace in legislation in the Welsh Sunday Closing Act. 1 The Calvinistic Methodist Church, especially, views the sale and use of alcohol by its officers and members with marked disfavour; and its regulations are strongly hostile to all forms of card-playing, dancing, and the drama, but the spirit of Welsh Nonconformity in general is practically identical in these matters with that of that of denominations. 2

E. ANWYL.

ASCETICISM (Christian).

I. INTRODUCTION: ASCETICISM IN ITS RELATION TO BIBLICAL REVELATION.—The word 'asceticism' (Gr. ἁρκασμός, from ἀρκέω = 'to exercise or practice'), when used in the sphere of religion and ethics, denotes self-preparation for a virtuous course of conduct, the zealous practice of acts of devotion and morality. This practice of virtue in the narrower sense, of the ascetic ideal, in which moral gymnastics, may consist in exercises of an inward kind (prayer offered in the heart, examination of conscience, and the like), or in acts of self-discipline passing over into the outward life (self-mortification, mortification of the flesh, continence, etc.). Both forms of asceticism, that pertaining to the spiritual sphere and that of a physical and external character, were already known to classical antiquity, especially in the traditional teaching of its philosophers from Pythagoras and Socrates downwards (cf. Sextus Empiricus in Plato, for instance Rep. vii. 536; and in Aristotle, for instance Eth. Nicom. ix. 9; as well as the mention of ταλαι and παραστασα δίκαιους διήγεσιν in Isocrates, p. 230 C, etc.). A specially high value was set upon the ascetic habit of life in the schools of the Stoics (cf. especially Epictetus, Περὶ ἀπαλλασσόντων, Diss. ii. xii. 6), the Cynics (cf. κυνεῖς ἄρσενις in Jos. Ant. vi. xii. 6), and the later Platonists beginning with Plotinus (cf. the latter's Moral, p. 608 E). Owing to the great and widespread influence of these in the Roman Imperial period, 'philosophy' and 'asceticism' (τὸ ἁρκασμός, Epictetus, Diss. ii. xii. 6) were employed almost as synonymous terms. Abundant evidence of the essential identity of the connotation of the terms 'asceticism' and 'philosophy' was furnished especially by the philosophers of Philo Judaeus, as well as by those of numerous Christian Fathers from the time of Justin Martyr and Clement of Alexandria onwards. When Philo hails the Jewish religion, and the Fathers hail Christianity, as the true philosophy, both have in view a certain ascetic element in their respective religions. The moral strictness and earnest demand for virtue found in both, when looked at from the viewpoint of asceticism, formed the connecting link which rendered possible such a combination of the Jewish and Christian ideal of life with the 'wisdom' of the Graeco-Roman philosophers.

As a matter of fact, there does appear to be inherent in both the OT and the NT stages of revelation an element of asceticism. This consists in the3 abandonment for an ascetic life and a complete resignation to the holy will of God. In its ritual legislation the Old Testament also prescribes fasting—sometimes strictly obligatory and universal (especially on the Great Day of Atonement, Lv 16th 25), at other times optional and limited by temporary or personal conditions (e.g. LF 114th 29), Jer 36p, IS 75, 2 12pp. 12P, Eze 44p;
in particular, it imposes upon the priestly order certain temporary forms of abstinence; and is accepted with as a form of vow in the Church of which certain persons abstain all their lives from the use of wine (Nu 6:2, Js 13, 1 S 18v, Jer 25). And the New Testament religion not only takes cognizance of these and similar ordinances of the Old Testament; his preference in some respects made stricter demands (cf. the above-cited passages in 1 and 2 Cor. as well as the Epistle to the Galatians, etc.) than even the stern legalist St. James; but an injustice is done him when the attempt is made to reduce him to the simple Christian commendation of monastic withdrawal from the world or of fanatical maintenance of virginity. He was and continues to be the preacher of true evangelical freedom, even in all those instances where he deals with questions of individual or of social asceticism, for freedom was the NT stage in the corresponding ascetic course of conduct. While not prescribing fasting as a matter of obligation, the NT clearly assumes that this practice will occasionally be followed by members of the Christian community (Mt 6:17, Ac 15:14-15, 2 Co 11:7 etc.): it is a form of contraction or of asceticism drawn from the sexual continence (Mt 10:19, 1 Co 7:2), or of the renunciation of earthly possessions (Mt 19:21, Ac 2:45-50), or of temporary submission to a vow (Ac 21:23-25), and the like. In short, acts of ascetic discipline and training in virtue are contemplated in the NT as allowable, nay, even as necessary, according to time and circumstances, in the sphere of Christianity. In the interests of the kingdom of Christ, the Apostle Paul submits himself to fastings, watchings, cold, nakedness, etc. (2 Co 6:11). He deplores the attitude of the Christian which prevailed in the Donatist Church in his time (1 Th 2:10-12), and cites his way of life as an example to the Christians (1 Ti 2:5). Even in the solitary passage in which he uses the word ἀκρομα to religious and moral conduct (in his speech before Felix at Caesarea, Ac 24:27 ἄκρομα ἁπάντωσαν ευνοίαν εἰς τὴν ἱδρυμα, Ἐκκ., κ.τ.λ.), the practice of virtue he has in view is that which he champions (1 Th 5:23, a practice marked by the characteristic freedom of the Gospel, and as far removed from Pharisaic narrow-mindedness and legal bondage as it is from unnatural self-torture after the fashion of Indian floggers or of ascetic Syrian priests of Asia Minor. II. THE ATTITUDE OF THE EARLY CHRISTIAN CHURCH TO ASCETICISM.—In spite of the condition of things described above, which forbids us to regard asceticism as an element of the religious and moral life belonging exclusively to the essence of Christianity, or presumed in its original body of doctrine as necessary to salvation, the ascetic principle early made way for itself in the development of the Christian Church. Nay, in the course of this development, asceticism soared to heights and produced phenomena which have been everywhere made contributions of inestimable value and of abiding significance for the furtherance and elevation of the mental life of mankind. And the source from which the Christian spirit derived this element of culture—so far as it did not lie in the religions and cultural life of the OT—can have been none other than that from which formative influences and impulses mainly flowed in the departments of art, poetry, politics, and law. The beginnings of asceticism in the Christian Church, especially as organized in the form of communities—monasticism—constitute another chapter in the history of that process which is usually spoken of as the 'Hellenization of Christianity.' No other place can be assigned to the thought within the sphere of this process, which embraces the history of the Church from the 2nd to the 5th century. For the stage upon which the phenomena of a fully developed and socially organized Christian asceticism in the Church is found in those lands which constituted the world of Greece-Roman civilization: and the religions and philosophical traditions of this same cultured
world form the point to which the asceticism of the Church, with its ideals and efforts, primarily and mainly attaches itself. Per se another supposition might appear possible, namely, that spiritual influence upon the ascetic and monastic tendencies of the ancient Eastern Church proceeded from a religious civilization which in the matter of asceticism was so richly developed as that of India (with ascetic systems like Jainism and Buddhism, which is some centuries older than the Christian era). Or an attempt might be made to trace the earliest ascetic and monastic movements in Christianity to kindred phenomena in the religions of Babylonia (and Syrophoenicia) or of Egypt. But when the various religious movements and sects are pitted against one another and their share in the result before us examined, none can dispute the palm with Greece. India is far too distant, and was always much too widely separated from the mental life of the peoples of Western Asia, to be seriously taken into account. Towards the religious usages of Babylonia and Syria, which might certainly be considered with a view to the solution of the problem, the people of God in OT times—and primitive Christianity in like manner—consistently assumed an attitude only of disapproval and rejection. The monasticism of the Greeks, on the other hand, is ready (on 1 K 18) again, the analogies with early Christian asceticism, which have been sought in the religious system of the Egyptians, prove, upon closer critical examination, to be merely apparent. This remark applies especially to those alleged ascetics or priests-mono of the temple of Serapis whom H. Weingarten (art. 'Mönchum' in PEB, 1882; and previously in Der Ursprung des Mönchums im nachchristl. Zeitalter, Gotha, 1877) sought to represent as the real models and teachers of the New Testament Christian asceticism—a theory which has been completely shattered by more recent investigation (see E. Preuschen's monograph, Mönchtum und Serapiskult, Darmstadt, 1890 [2nd ed. 1905], in which the existence of Serapis priests of a monkish type is disproved, and therewith the utter impossibility of Weingarten's hypothesis demonstrated). Thus we must abide by the view that the beginnings of early Christian asceticism and monasticism go back to essentially Greek influences, or, to put it more exactly and briefly, to the asceticism of the Jewish and Judaeo-Hellenic schools of philosophy, to which we have already referred in this connexion. The religions of the ancient East can at most be credited with only an indirect share (the result of the influence of Alexander the Great) in the formative process we are considering. [Cf. on the one side, Edwin Hatch, Influence of Gr. Ideas and Usages upon the Chr. Church (Germ. tr., Preuschen, Griechentum und Christentum, Freib. i. B. 1892, p. 101 ff.); and A. Harnack, Das Mönchtum, seine Ideen und seine Geschicke, Giessen, 1895, esp. p. 15 ff.; and, on the other side, the literature (No. II. cited at the end of the present article, dealing with the history of asceticism prior to and outside Christianity.] Long before the rise of monastic organizations, by which asceticism was elevated to the rank of dogma, that is, a formal characteristic of Christianity, many forms of ascetic practice and endeavour had made their appearance within the sphere of individual ethics. Some of these had their model in Jewish customs. This was the case in particular with the Jewish rituals of the Pharisees, who, according to the Talmud, observing fixed daily hours of prayer. For both of these practices, the so-called 'station' fasts on Wednesday and Friday, and the habit of praying at least three times a day (the gem from which the later conventional institution of 'hours' developed), there is evidence in writings as early as the 2nd cent. (Didache, viii. 3; Hermas, Sim. v. 1; 3; Aristides, Apol. 15; Tertull. de Jejun. i. 10, de Orat. i. 19; Clem. Alex., etc.). And at the root of both there is not only the Pharisaic Jewish model, but also asceticism as such, which developed in the Christian no less than in the Jewish tradition. The phenomena of pre-monastic early Christian asceticism may be assumed to have found their models and motives mainly in pagan Hellenism. So with the custom (to be attributed to the influence of Montanism) of partial fasting for several weeks before Easter (the xerophagy, or Fast of the Passion); the disposition (attributable to the same source) to increase the severity of Church discipline against those who for a fixed period (and to parallel the ascetic practices in Egypt) ventured to contract a second marriage (cf. especially Tertull. de paenit., de Publ., ad Uxor., de Monog., etc.); as well as the high or exaggerated value (to be explained partly from Montanist and partly from Gnostic influences) set upon voluntary virginity (magdalenia, cypriaca) as an ideal.

We see the corephyri of all the leading schools of theology, Greeks and Latins, Alexandrians and non-Alexandrians (cf., in regard to these last, not only the already oft-cited Tertullian, but also the Latin writings of H. de Haro, Monchtum et Monach. Domin., Lectantius, Inst. Div. vi. 23; and M. M. M. Madonna, Conviv. vii. 3, viii. 1), participating in the endeavour to commend such ascetic practices. The ascetic element was most prominent, to be sure, in the theology of that school which, as the founder of an ecclesiastically orthodox gnosticism in opposition to that of the heretical Gnostics, ventured to draw most boldly and most deeply from the treasury of the traditions of Greek philosophy—the Alexandrian, which far surpassed all other theological schools of the early Church in the matter of establishing and promoting new teaching—a task which, although he defends the right to hold earthly possessions (Quis div. saec.), and upholds the sanctity of the married condition (Pasch. i. 10; Strom. ii. 23, iii. 12), gives expression to very rigorous views regarding the Christian attitude to fine clothes and various worldly pleasures and enjoyments (Pasch. ii. 1 ff., iii. 2 f., 7 f.), and even pleads at times in favour of an almost Stoically conceived ideal of aghaty (Strom. iv. 22, cf. iii. 7 and vii. 12). Origen, even after he had learned to repent of the hyper-ascetic excesses of the Gnostics, especially the idea of self-emasculation (Euseb. HEE vi. 8), still remained an enthusiastic panegyrist of all forms of world-renunciation and mortifying of the flesh. He went still further in the matter of fasting and other mortifying forms of asceticism (cf. Tertull. ad Martyr., etc.), and especially in recommending virginity (on this last point, besides passages like c. Cels. ii. 26, viii. 48, viii. 55, see especially his Con. on Ro 12', where he commends three kinds of living, holy, God-pleasing sacrifices, namely a martyr death, voluntary celibacy, and abstention from sexual intercourse on the part of married persons; similarly Hom. 23 in Nom.).

It is not surprising that, when an advance took place from the practice of asceticism by individuals to its practice by bodies of people, the earliest signs of the monasteries. For whereas this Christian-Gnostic theology made its influence first and most powerfully felt in Egypt, the home of the Alexandrian theology, became also the mother-land of early Christian monasticism, or, to designate it as a whole, of monasticism (whether the word 'monastery' or 'monaster' is properly 'a hermit,' 'one living alone'; it is the living together in community that stamps the ascetics as monks in the modern sense of the word). It was in those circles in Egypt in which theology and church stood in the closest connexion with Origen that the impulse towards more intimate
association, with a view to a common ascetic life, appears to have set in earliest. The adherents of the Original Life of Antonius, of which a short account is given in No. 67 of his Catalogue of Heretics describes as a sect under the name 'Ippokranta, may in many respects be regarded as one of the earliest societies of ascetics. But in their case, as previously in that of the Egyptian party of Tatian, the element of theoretical traditional teaching or mystic Gnostic speculation probably predominated to such an extent that the name 'school' or 'sect' fits them better than such designations as 'Mönch- verein' or 'Klosterbriiderschaft' (cf. art. 'Hierakas' in *PBD*. The word Hierakon, which does not take sufficient account of the peculiarity which distinguishes them from the comelite societies of the following period). Like these Hierakites, who may have belonged entirely to the 3rd cent., the 'solitaries' (μοναχοί, also μονοχάριοι, μονόχαιροι), described by Eusebius in two passages of Commentary on the Psalms (on Ps 67 and 83), were also still without the closer social organization. The latter may yet have been wanting also to those 'bond brothers' or 'sons of the bond' (Συνάνθροποι) of the Egyptian skete life, in the final decades of the 4th cent., and whose dwelling-places should probably be sought in Palestine and Syria rather than in Egypt. What here again forbids our identifying them with monks proper or comelites is the lack of more definite information as to principles of organization or rules that may have belonged to them. This characteristic of being bound together by a fixed principle or rule of life is not wanting, however, in those societies of Middle Egypt which from the early part of the 4th cent. began to make their appearance in the Eastern Church, and as the founders of which St. Antony and St. Pachomius have gained superlative fame. The former (born 251, died 336) lived for some decades (from about 270) as a hermit in the mountain wilderness of the Oxyrhynchus persons and by the right bank of the Nile, opposite Arsinōe and Herculæopolis. Then, shortly after the year 300, a number of bodies of associates in his ascetic mode of life, who had taken upon their abode in the same region, were the subject of the Letter of Pachomius to the bishops of the first two centuries about the cases of monastic exercises in common, and thus—though for a time without written rules—a kind of monastic life was established. The sites of two of the κοινατα, or colonies of monks, established and directed by St. Anthony down to his death (i.e. for a full half century) can be fixed with tolerable certainty: Pṣirîr, or the 'outer mount of Antony,' lying close to the right bank of the Nile, and the 'inner mount of Anthony,' lying farther to the east, near the Red Sea. While this older patriarch of Egyptian monasticism still refrained from committing his rules to writing, his younger contemporary Pachomius (born c. 290, died 345 or 346) provided the hosts of ascetics who gathered round him in southern Middle Egypt, between Akhmîn [Panopolis] and Denderah, with a rule of life, and moreover in detail their devotional exercises and their work. This body of rules was, no doubt, reduced to writing by himself or by some of his immediate associates. By the authors of the earliest accounts of his life and work it was undoubtedly considered as a revelation, of which, having, it was alleged, been given to him written on a tablet of brass, by an angel while he sojourned in a cave. Its prescriptions regulate in the most minute detail not only the daily round of work and prayer, but also everything relating to the food, the clothing, and the living of the monks. They comprise much that is original and characteristic of the national Egyptian monastic usage, but also some things which the later tradition did not accept at all (so, especially, the division of the inmates of each establishment into different categories classified according to age), or accepted only with considerable modifications (for instance, the prescription of 3 x 12 daily acts of prayer). Partly independent of the models offered by the creations of these two great monastic fathers, and partly with the help of the asceticism already extant, there arose even during their lifetime various large and afterwards influential settlements of associated bands of ascetics. Thus we find (1) in Lower Egypt, the monasteries, or, to be more correct, the hermit-villages of the Nitrian mountain, founded somewhere about the year 529 by Arnon or Ammonius, as well as those of the desert of Skate to the north of this hill country, founded about 330 by Macarius 'the Great' or 'the Egyptian' (died 390); (2) the South Palestinian hermitages and monasteries, of which the most notable is Tell el-Farag or Hilarion's (written Hilarion II. of St. Anthony of the 2nd cent. (c. 320-350); (3) the Syrian and Mesopotamian monasteries called into being about 325 in Nisibis and its environs by the Egyptian Awgin (a monkish saint who received his training at Tabennisi, the principal monastery of a considerable size founded by a saint of the name of Hierakus in the 3rd cent.), and established about 350 still farther north, in Armenia, Pontus, and Cappadocia, by Eustathius of Sebastia. Only a little later are the phenomena which mark the laying of the foundation of a joint practice of asceticism in the West, especially the essentially monastic activity of St. Martin (c. 370-400) in Western Gaul. Regarding the majority of these fathers of the monastic system we have more or less detailed and in the main reliable historical information. In his *Historia Lavrae* (written in the beginning of the 5th cent.), Palladius has collected sketches of the lives of some 70 notable ascetics and founders of monasteries. These sketches, while not devoid of certain features of embellishment, are never pure fictions, but rather embody reports by eye- and ear-witnesses of the events narrated, and of them; the life of the saint applies to the historical value of the still older *Historia Monachorum* by Rufinus, and to Athanasius's *Vita Antonii*. Here, again, this last-named biography of the most famous of all the Oriental patriarchs of monasticism, treated in the same fashion of the information which, while it is enriched with not a few legendary additions, represents in the main the authentic testimony of contemporaries. Against the attacks of modern hyper-critics (esp. the above-named Weingarten) on these and other sources for the history of asceticism and monasticism during the era of Constantine and the following period, see, in general, the discussions by C. Butler and the author of the present article in the works cited below (esp. Zöckeler, *Askese und Mönchtum*, pp. 188 ff., 200 ff., 212 ff.).

III. DEVELOPMENT OF ASCETICISM IN THE MIDDLE AGES. — The Church of the Middle Ages added scarcely anything that was essentially new to the forms of ascetic effort and action that had become usual in the Early Church period; but in the middle ages the practice of asceticism began to systematize these forms it went far beyond what had been done by the Ancient Church. The development in question was accomplished in the course of the following four periods:

1. The transition period from the Early Church to the Middle Ages proper (c. 400-800).—During this period the labours of a number of monastic legislators in East and West gave permanent form
and binding force to the traditions of the era of Constantine with reference to the living together of ascetics in monastic establishments. Basil the Great of Caesarea (died 379) drew up a set of rules, which Oriental ascetics by complete arrangements attained to permanent influence, for the monastic system of the Eastern Roman Empire and partly also of Lower Italy and Sicily. Suppression of the hermit or anchorite form of monastic life (which was still frequently preferred by the earliest Oriental ascetics) by complete arrangements, transfer of monastic settlements from remote deserts to the neighbourhood of cities, rejection of hyper-ascetic excesses (e.g. in such matters as fasting and the number of daily times of prayer, which latter in the earlier days and generally an increasing mildness of disposition, directed to the discouraging of excessive ascetic enthusiasm—such are, upon the whole, the characteristic features of this organization which derived its origin and its name from Basil. In the Latin edition of the Rules of Basil, which Palladius copied and prepared to serve as a constitution for the lower Italian and Sicilian branches of this monastic family, provision is made even for the establishment of double religious houses, i.e. the erection close to one another of monasteries under an abbot and a prior, 'the monasterium and gynæcum'. The foundation of these double houses indicates a shrinking from the veneration of the older sexual asceticism. A similar custom prevailed frequently in the West, even independently of the influence of Eastern models. Such houses were founded, for instance, in Spain by Fructuosus (died 670); in the British Isles we have examples in the Irish Scottish religious houses founded by St. Patrick and St. Columba; and still later in the orders of Robert of Arbrissel (died 1117), Gilbert of Sempringham (died 1141), and Blaise of Sweden (died 1157); cf. Zeckler, l.c. pp. 290, 379 ff., 419 ff., 541 f. More or less important developments continued to be undergone by Basil's monastic legislation in the Byzantine East till towards the middle of the 11th century. These concerned especially such matters as the placing of the rejoiced houses under the bishop's superintendence, increased severity of discipline within convents, an organic union whereby anchorites (κελαδόραι, 'innates of cells') lived with comedies within the cloistered community, and the distinguishing of the monks' right of penitential discipline from the pastoral charge exercised by the secular clergy. Most effective for this development were the ecclesiastical prescriptions of Justinian's civil code; the canons of certain synods of the 7th and 8th cent., especially the Trullan Council, ii, 692; the influence of the patriarch Germanus of Constantinople (died 703), of the abbot Theodorus Studitas (died 826), of Athanasius of Trapezus (c. 900 f.) who founded the oldest principal religious house of the monastic republic on Mt. Athos, and of the Constantinopolitan monastic prefect, Simeon the younger (c. 1040; cf. Zeckler, l.c. p. 290 f.); and, in regard to the last named, K. Holt, Enthuasismus und Bissagewalt beim griechischen Monachismus, Leipzig, 1898.

The close connexion of the monastic system and asceticism of the West, we discover the most influential legislator and most famous founder of orders in the person of Benedict the Great of Nursia (died 543), the founder of Monte Cassino. A number of his works have been lost (in particular Joh. Cassianus [died 435] and Caucasus [died 542], the former the composer of rules for monks, the latter the author of a system for nuns) had sought to adapt the ascetic traditions of the East as represented by Egypt and Syria to the needs of the inmates of Western religious houses. In relation to these attempts it is to be noted that the course followed by the Regula Benedicti, which became the fundamental code of the greatest of all the orders of monks, is partly to summarize the practice of former orders and partly to condense and simplify previous results. The Regula in its present form is divided into 73 chapters, and though perhaps not free from some later additions, may be regarded, certainly up to ch. 66, as genuine. It exhibits no small degree of legislative wisdom in its enactments, which are marked on the one hand by strictness and on the other by humanity and mildness. It wears the aspect of strictness in its insistence upon the maintenance of the custum stabilitatis, and in its measures for ensuring a strict discipline. A position to all unprofitable and disposition on the part of the monks about without restraint; so also in its demand that there shall be no holding of private property by any inmate of a religious house; in short, in its enforcing of the three fundamental monastic principles of obedience, poverty, and chastity. But, on the other hand, it evinces relative mildness in its dietary prescriptions (the eating of flesh food being prohibited, but a moderate quantity of wine allowed), its regulation of dress, its enjoining of silence (τυπανικόν) at fixed times, and its directions as to the fashioning of the beard. Such things were indeed prescribed, but excessive length being avoided by reducing the number of Psalms to be sung in each 'hour' to three. The Regula of the patriarch of Monte Cassino knows as yet nothing of the more modern restraints of discipline, such as self-flagellation, wearing the hair shirt, temporary inclusio, or confinement of monks in their cells, etc. It was reserved for later epochs in the Middle Ages to give birth increasingly to such aggravations of ascetic practice until an unnatural development was reached.

2. The period from the beginning of the 9th till towards the end of the 11th century (from Charlemagne to Hildebrand).—This period is characterized, on the one hand, by the beginnings of that rigorous reaction, within the bosom of the Benedictine order of monks, against the frequent laxity or disuse of monastic discipline, such a reaction as is exhibited in the reforms of the younger Benedict (of Aniane, died 821) and the 'congregation' of Cluny (especially from the time of its second abbot, Hildebert). On the other hand, by the constant effort of the Church, through the instrumentality of penance, to carry over ascetic principles and habits of life to the lay world. Amongst the literature serving this purpose (the Liber Pontificalium), one of the earliest and most prominent places should be assigned to the works of Columbanus of Luxeuil (died 615), who composed not only a book of penance for laymen, but a rule for religious houses (regula concubilis) which contained a severe penal code. In this class of literature we find prescribed not only a number of the ordinary forms of penance for sins that have been confessed (money fines, almsgiving, pilgrimages to distant shrines, intensified fastings, etc.), but with special frequency also the penalty of flagellation. In connexion with the rigorous movement emanating from Cluny, there were many monasteries in which, from the commencement of the 11th cent., this flagellation was practised in a specially severe form, and with all sorts of refinements added to intensify it. Thus arose the practice of self-flagellation, frequently in certain religious houses of Central Italy (Clusium, Pompousa, perhaps also at Camaldoli near Arezzo, the original seat of the Camaldulensian 'congregation' founded by Romuald [died 1027]), and reduced to a fine art in Peter Damiani's establishment, Ponte Avellana, by Dominicus, summoned
Loriciatus (c. 1050), who added to the self-inflicted flagellation yet other methods of mortifying the flesh, notably the performance of numerous genuflexions; or "flagellants" of the 13th century, who resorted to self-torture in Divine worship, and so became a much admired hero of the self-torturing hyper-ascetic discipline (see the literature cited below).

A more harmless form of the joint practice of asceticism, likewise developed first in the religious houses that were influenced by the reforming movement of Cluny, and showing itself almost simultaneously in Central Italy and in South Germany, consisted in the institution of lay-brothers or "outside brothers" (fratres exteriores or lay-friars). These were kind of half-monks, who, because they were subject to only part of Benedict's Rule and were not bound to wear the monastic habit, did much to diffuse the spirit of monastic piety even in lay circles, and at the same time to extend the political influence of the monastery. Starting from Guibert's "congregation" of Vallombrosa near Florence (c. 1038), and from Hirsau, the monastery of abbot William the Holy (died 1091), this institution of lay-brothers gradually established itself in other congregations as the model for those brotherhoods of Penitents or Tertiaries which were afterwards (from the end of the 13th cent.) affiliated with the mendicant orders of St. Dominic and St. Francis, and from whose activity results of great significance followed.

The period of the Crusades and of the last two centuries of the Middle Ages (c. 1100-1517).—The characteristics of this period are an ever-growing effort on the part of the religious orders to extend their manner of cultivating piety to the Church as a whole, and an increasing tendency to multiply associations to that end. About the 12th cent. the monasticizing of the secular clergy by the imposition of celibacy—a movement which had the fashion set to it in Rome from the time of Gregory vii.—had been accomplished in almost all the countries of the West, both the great rival "congregations" of the Benedictine order, that of Cluny and that of the Cistercians, lending their services to the Curia for this end. Still greater results were reached by the above-mentioned mendicant orders, which from the 13th cent. became, not only in their preaching in the language of the people, and to the self-sacrificing character of their pastoral activity, especially in times of severe national calamities, they gained for themselves a degree of popularity which threw all their predecessors into the shade. Many phenomena of asceticism as well as hyper-asceticism still prevailed side by side with the influences emanating from these regularly constituted chief representatives of monastic piety. Such, for instance, was the practice, much resorted to by both sexes, of inculcating, or allowing themselves to be shut up in narrow cells, caves, or huts, sometimes in remote districts, sometimes in the vicinity of much frequented churches or religious houses. So with pilgrimages to places of devotion and miracle-working shrines, the latter increasing in number especially at the end of the Middle Ages. To the same category belong the processions of flagellants, which after the year 1349 repeatedly poured over great tracts of country, and whose practices about the beginning of the 16th cent. were condemned by the Council of Aix-la-Chapelle (1415) and Strassburg (1418). Finally must be mentioned the numerous instances, amounting almost to a general epidemic of asceticism, in which, from the time of the "stigmatization" miracle connected with St. Francis (1224), visible copies of the wounds of Christ were, it was alleged, miraculously produced on persons of both sexes, sometimes within the pale of the two rival orders of St. Francis and St. Dominic, sometimes outside it.

The above and kindred phenomena betray a widespread religious demoniacal tendency which manifested numerous symptoms of moral decay, particularly in the discipline of most of the religious orders, old and new alike. An attempt was made to counteract this degeneration by the mystical and inward tendency which marked some ascetic groups, esp. the "Brothers of the Common Life" (q.e.v.), who spread from the Netherlands over North and Central Germany; but this effort to lead men to spiritual religious exercises and to a spiritual following of Christ failed to make any deep and lasting impression upon any large number of people.

IV. ASCETICISM IN MODERN TIMES.—The Reformation of the sixteenth century led to a return, on the part of all that portion of Western Christendom which adhered to it, to that limited measure of ascetic practice and to a certain form of mortification which was the norm for primitive Christianity, with its freedom from the Law. In other words, an attitude of disapproval was adopted not only towards the hyper-asceticism of the Middle Ages, but also towards those intensifications of the ascetic-monsastic ideal which had appeared in the Church, but also in popular groups, and which we find in the ascetic movements of the first centuries. The Reformation did not introduce this, although it did contribute to them at the same time. The ascetic ideal, however, remained a part of the religious life of all Christian societies, and was renewed in the ascetic and self-mortifying movements of the protestant sects. The ascetic life was particularly emphasized in the new religious movements of the middle ages, and was thus preserved in its essence. We shall have occasion to refer to the ascetic life of the Middle Ages, the asceticism of the Crusades, and the asceticism of the early church.

1. The Greek-Rusian Church.—This Church, which had been more or less untouched by the exaggerations of asceticism that had shown themselves during the medieval period, in the West, and which, as we shall see, was the Russian Church, took the lead in the matter of their ascetic practice now set in.

2. The Roman Catholic Church.—Along with the celibacy of the clergy, this Church retains almost all the other intensifications of the ascetic principle which the medieval development added to the Early Church traditions. Nay, in the interest of its contra-Catharistic purpose, it went beyond its predecessors' points gone beyond the Middle Ages. New forms of ascetic discipline and self-torture could indeed
no longer be invented, but all that was possible was done in order to give more effective form and more refined manner to the creations of earlier days. This will be seen if, for instance, Loyola’s Exercitatio精神aelia be compared with their embryonic types in the monastic mysticism of the Brothers of the Common Life, or the school comedies and the performance of oratorios in the order of Neri be compared with the crudities of the clerical plays of the closing pre-Reformation period. Of the unnatural extravagances of the later mediaeval asceticism, some, such as flagellants, inquirers of the Common Life, or the dead, etc., were, if not wholly suppressed, at least somewhat mitigated and more discreetly ordered. The tendency to multiply the forms of joint practice of asceticism was still maintained. And especially in the frequent formation of new religious brotherhoods and sisterhoods outside the orders proper the more recent Catholicism exhibits an inventive genius and a productive power which have been able to defy all counter-forces, including even the revolutionary storm at the transition from the 18th to the 19th century. Even of the present century to exhibit the same capacity as during the first decades of the counter-Reformation. The Society of Jesus forms the chief centre. Within its bosom is constantly produced that inexhaustible supply of ascetic vital energy which is the inner triumph of the ascetic spirit. The uniqueness of this most important and original of all Catholic orders consists neither in an unexamined severity of self-mortification nor in unusual zeal in performing deeds of loving self-sacrifice, nor yet in a superstitious degree of scientific industry. In none of these points, least of all in the last-named, is the order of Loyola content to hold a secondary place; but it seeks its chief glory in an intensifying of the monastic virtue of obediencé, whereby it far surpasses all that has been achieved in this matter by earlier ascetic societies. The secret of its greatness lies in the blindly obedient devotion on the part both of its individual members and of its superiors to the command of the Pope, and all with a view to extirpating Protestant heresy. To the vow of obedience it has imparted, especially by that sacrifice of intellect to which it trains its pupils, a military precision which secures for it an incomparable superiority over all the other militant orders of the Papal Church. And, owing to this essentially military character and organization, though it has reached its goal in the extirpation of Protestantism, it has gained other successes of the utmost importance. Instead of the Churches of Protestantism, it has completely conquered its own Church, and secured for itself within it a position of influence which, to all appearances, is destined to continue for decades if not for centuries.

3. The Protestant Churches. — These reject, as their reforming instruments and Confessions declare with practical unanimity (cf. Conf. Aug. art. 26, p. 581; xxxv. 26, 27; Conf. Helv., ii. 18, 24, 29; Scotch Conf. i. 14, 15, and ii.), the Roman demand for the celiacy of the clergy, just as they oppose the claiming of special merit for ascetic displays of virtue. A certain number of wonted ascetic observances, especially in the matter of fasting and abstinence, have been continued in the practice of Luthernans, Anglicans, and some of the other Reformed Churches in the times immediately following the Reformation, but have survived in only a very limited measure down to the present day. The asceticism to be seen in the lives and practices of strict asceticism in the matter both of fasting and of abstinence from worldly pleasures and enjoyments, evincing in general a tendency to withdrawal from the world, was aimed at and in some measure achieved by the Continental Pietism of the 17th and 18th, as well as in England and her colonies by Methodism and some of the Methodist and Baptist sects (especially the Tunkers [from c. 1724] and the Shakers [from 1774]), both of which favoured the principles of celibacy and con- bustion of worldly goods. When the attempts for these led for the most part to no permanent results. The Pietistic bodies in Germany, in so far as they survived the Spener-Franke and Zin- zendorf times, introduced important modifications in their opposition to a more secular form of Christi- anity. An increase of the ascetic efforts of many branches of British and American Methodism. Particularly in the sphere of the crusade against alcohol not a little success has already been achieved, whose substantial influence is likely to extend to the life of other doctrines as well, and from which still more may be looked for in the future. A similar remark applies to the work of the Salvation Army. Its Self-Denial Efforts, i.e. abstinence from a number of the pleasures of life with a view to being able to give all the more to the spiritual life, is carried on with these forms of ascetic action whose survival and wider diffusion within the pale of Protestant Christianity are in general to be wished and prayed for. Similar in character and aim are the Weeks of Self-Denial which have recently become common among the Evangelical Church, from which an account is given by R. E. Thompson, the historian of that denomination, in American Church History series, vol. 159.

V. WESTERN CATHOLIC ASCETISM: Max Heimbucher, Die Orden und Konvente der ersten drei Jahrhunderte, Freiburg, 1897; E. Spreitzenhofer, O.S.B., Die Entwicklung des alten Monstums in Italien bis zum Auftreten des heiligen Benedikt, Vienna, 1894; G. Gritzmacher, Die Benediktiner, Neuwied, 1895; J. Spreitzenhofer, Geschichte der Benediktiner, Vienna, 1895; cf. also Zöckler, Askese und Monastik, pp. 10-29, 1897.
ASCETICISM (Greek) — We find asceticism even in ancient Greek life, and there, in fact, its unseemly beginnings go back to the 7th and 6th cents. B.C. Sundry anticipations of the practice are traceable in various religious cults, as, e.g., the rigorous fasting enjoined by the Eleusinian Mysteries, the fast-day in the sacred calendar of the Attic Thragetas, preparing for incubation in the cithorian courts, etc. But some of these went ever beyond the embryonic stage, as they did not emanate from any systematic religions conception of the world. Asceotic movements of real signification make their first appearance among the esoteric seers and partiers of the 7th and 6th centuries B.C. Thus Alarct, whom Findal (frag. 270 B) names as a contemporary of Cresus, is said to have carried the golden arrow of Apollo over the whole earth without taking food. In Strabo, v. 2, 5, he appears as ὁ θάνατος ἀπὸ τῆς ἀσκήσεως, a religious ascetic, thus being an embodiment of the esoteric Mysteries. This is, in fact, confirmed by the account given in Hesych. Synes. Socr. c. II (Litt. ii. 654 B.). The rule of abstinent practices was generally observed by the archons and by the lepers. The purpose of these regulations and ceremonies was to purify men from the contaminating touch of demons. And, indeed, the practice of cathartics in general arose mainly from the dread of demonic powers, with their standing menace of pollution. Such ideas had not yet taken shape in the Homeric age. These germinal notions, however, could not develop into a genuine asceticism until men had become conscious of an opposition between body and soul. No such opposition is supposed to exist apart from the body belongs to the remote past, the phenomena of dreams, the trance of possession, as also the frequent abrupt transition from life to death, all bearing evidence that the second element—soul—had not yet been of small account, as contrasted with the soul. Of small account, as contrasted with the soul, of small account, as contrasted with the soul, of small account, as contrasted with the soul, of small account, as contrasted with the soul, of small account, as contrasted with the soul. The outstanding feature of early Orphic asceticism was the prohibition of animal food (cf. Euripides, Hippolyt. 352 = Diels, Frag. 471, No. 8).
Mysteries Pythagoras was undoubtedly acquainted, and when we find unmistakable traces of the ascetic mode of life even among the oldest Pythagoreans, we need hardly hesitate to infer that the founder of the school was himself an ascetic. Even Herodotus (II. 81) speaks of the prohibition of burying the dead in woollen clothes as being not only an Orphic, but also a Pythagorean, ordinance; while, again, the doctrine of the ἀρχαὶ ἐφύσοι was attributed to Pythagoras by the geographical tradition. The curious opinion expressed by Aristoxenus is really meant to apply only to contemporary Pythagorean scholars with whom he was intimate. The interdict against the use of bees seems likewise to belong to the early school. It cannot be doubted that other Pythagoreans were distinguished by their simple life. A peculiar feature in their asceticism, from the 4th cent. at least, seems to have been silence, originally resorted to, no doubt, as a means of avoiding sacrilegious or ill-intentioned language in their religious practices; compare what is said by Isocrates (Busiris, 29) regarding the Pythagoreans of his own time. It should also be noted that anticipations of sexual asceticism, or continence, are apparently found in connexion with the primitive school.

Meager and notices as they are sufficient to show us that purity (ἀγερία, ἀγερίται) in the ceremonial religious sense was the ideal of the 'Iatic' philosophers no less than of the Orphic cults. Moreover, when we compare with them the teaching of Pythagoras regarding morality and the transmigration of the soul, and that of Philolaus regarding the human body as a house of detention wherein the soul expiates its guilt (frag. 14D), it would appear that early Pythagorean asceticism sprang from the same fundamental sources, and had the same view, as that of Orphism, the influence of which upon the former is unmistakable. Pythagoreanism, further, had also an ethical tendency; thus one of its characteristic virtues was ἀσφοιτισία, which was supposed to be promoted by asceticism, and which unquestionably had a place in the system before the days of Aristoxenus.

3. Empedocles. — While we may thus deduce from a tradition, fragmentary at best and overgrown with later traditions, the fairly definite fact that among the early Greek philosophers Pythagoreans intimately associated with mystical theories about the soul, the same conjunction of ideas is brought out in strong relief in the case of the last great purifier of ancient Greece, viz. Empedocles of Acragas, who likewise belonged to the West. Further, the moral and religious views of Empedocles resemble some of the Pythagoreans in the circumstance of their having no organic connexion with his philosophical or scientific

In Aristophanes, Frogs, 1032, Ἀσκησία ὃς ἐν οἰκετείᾳ has probably been initiated into the Orphic mysteries says: ὁ ὁρφικὸς μὲν γὰρ τάκτεσθαι ἥμων κατέθετο. Cf. Euripides, Hecuba, 767, ἀσκήσεως τὴν ἠγορασμένην ἔργα ἀπέχειν. The practice of fasting (εὐρέμα) seems also to have had a place in Orphic asceticism.

As a matter of fact, the things and conditions from which they really kept themselves unsnared were those which represented in the symbolism of religion, rather than involved in actual practice, a dependence upon the world of death and immortality. See op. cit. II. 120.

The Orphic asceticism, however, like the ὁρφικὸς βίος in general, probably had, even in its early stages, an ethical import as well. This is certainly not the opinion of Erwin Rohde, who, speaking of this asceticism, says: 'It does not join in the practice of the civic virtues, nor is discipline or transformation of character required by it; the sum-total of its morality is to bend one's course towards the deity, and turn away, not from the moral lapses and aberrations of earthly life, but from the profane (frag. II. 120, cf. ii. 102).

On the other hand, Conzeper writes: 'What distinguishes the Orphic branch of the Greek religion from the other Mysteries is the extraordinary emphasis it laid upon morality, an approximation to which is found only in the Apolline cult centralised among the Attic Eleusinians. This deepening of the moral consciousness may well be regarded as the true source of the most important and most characteristic element in the Orphic teachings about the soul' (Griech. Denker, i. 107, cf. 434.) It would certainly seem to be the case, that with that of Rohde, is so far the right one, though the former has possibly somewhat exaggerated the moral factor.

2. Pythagoreanism. — Orphic ideas exercised a vast influence upon the succeeding period. In the first place, cognate practices and views are found among the early Pythagoreans. It is, of course, impossible to determine precisely how far such ideas are traceable to Pythagoras himself, as the oral traditions of the school are all we have to go upon till the time of Philolaus, i.e. the middle of the 5th cent. B.C.; but general considerations seem to favour the theory of their being so derived. With regard to Pythagoras, indeed, we are certain of only two of his cardinal tenets, viz. the immortality of the soul, and the transmigration of souls.

While we can bear in mind how intimately these two tenets are connected with asceticism among the adherents of Orphism, with whose

VOL. II. — 6
theories. In his poem called Ἀσκησις, abstention from animal food, and, in fact, avoidance of blood-shedding in general, are very specially inculcated, and are based upon the theory of transmigration and that of the close affinity of man and animal—a concatenation of thought which we may perhaps suppose, though we cannot prove, to have obtained strength from Orphic and Egyptian motives.

So Hippolytus, Refutationes, viii. 29, 349—Diels, Frag. iii. 2, 296 f. 1: ἦν δὲ τὴν τοιοῦτον ὁπὸ τὸν θεολόγον νεώτερα ἐλεγμένον τοῦ τοιοῦτος μεγάλου πόλεμον πεπέμβας ὁ Πλάτων, ὃς τοὺς μεγάλους μαθητὰς παραδόθηκε ἐν γὰρ κόσμῳ τὰ συμφωνία τῶν φυσικῶν κακολογίων ἐκπίθηκα.

Infrag. 140 is also worthy of note, as exemplifying the variability of the laurel (on this cf. Rohde, ii. 181, 2). The case of the Pythagoreans of the 7th cent., may be said in one sense to reach its end, but in another to arrive at its culminating point, in the Platonic philosophy. In Plato, the founder of the idealistic view of the world, philosophical asceticism and theurgy combine with one another in a wonderful way. The Divine origin of the soul, its pre-existence, its fall into corporeality, its judgment after death, its expiatory wanderings through the bodies of animals or men, according to its character, its final redemption from the cycle of rebirths, and its return to God—all these various doctrines, in their main features at least, were borrowed by Plato directly from the 'theologians,' i.e., in a special sense, the Orphics. The manner in which he amalgamated them with the rest of his philosophical system is, however, all his own.

In the early stages of Plato’s thought the two worlds of becoming and being stand in the relation of sheer opposition: here, the world of sense, with its unresting flux of ever-changing phenomena; there, the supersensuous world, world of idears, identical and absolutely unchangeable realities, of the ‘ideas,’ of what alone truly exists. The human soul, however, occupies a peculiar position between the two; it is of Divine origin, and while not itself an idea, it is ‘most like’ one, and partakes of the character of existence in the supramundane sphere it has gazed upon the Ideas, but, having fallen into the state of corporeality, it has forgotten them; and only by its recollection thereof (ἀνάμνησις) can it possibly attain to true knowledge. Such leading principles must of necessity result in a pessimistic attitude to the world and its supposed goods, that is, in a world-renouncing morality. Withdrawal from the life of the body, which only impedes and constrains the soul; the utmost detachment of the soul from its prison-house in the other (philosophical) ‘dying’ so impressively depicted by Socrates in Phædo (especially p. 64 ff.); disengagement from the world of sense in general, with its phantasmaria of delusive appearances—these things go to form the end which the friend of wisdom must know in view.

In the Thetis, 170 A we read: ἦν καὶ παρθένος, χρή εὐθέντος (from this world) εἴκος (to the gods) φυγὼν ὅτι τίταρτον. Similarly, philosophy becomes καθαρός: ὁ πάθος, 67 A: ἴδος ἦν ὁ σῶμα άνωτέρως ἐστάσις, ἐὰν ἂν μέλλει μετὰ υἱοῦ αὐτοῦ ἄφαντα πάντα τῆς ἀληθείας ἐμπεσθεράνειν. Such, similarly, becomes the soul: ὁ ἀνδρός τοῦ θεοῦ καθαρός ἐστιν. In the Academy, however, it is another case, ὁ θεὸς, ἐν τῷ πέποντι τὴν ἐνεργήν ἀσέρπην ἑκάστην καθαρός, ἐστιν ἐκ τοῦ θεοῦ τῶν αὐτῶν. καὶ ὡς καθάρος ἑν τῷ πολιτείαν καθαρός καὶ ἐκ τῶν πολιτείαν ἐστιν καθαρός καὶ ἐστιν παλαιότερον καθαρός ἐστιν οὐκ ὡς καθαρός ἐστιν οὕτως ὡς καθαρὸς ἐστιν ἐκ τοῦ [οὐκ] θεοῦ καθαρός ἡταῖρος ἐστιν καθαρός ἐστιν ἐκ τοῦ θεοῦ καθαρός καθαρός.
The philosopher also will therefore stand aloof from the enterprises and pursuits of his fellow-citizens, in so far as the community is not large, will give himself entirely to the task of becoming holy.

On its positive side, however, this katharsis from all that earthly implies a turning towards God. By renouncing the present world the soul becomes free to the highest degree of all relativity in the sense of the ὑποτέλεσις, the vision of the Ideas, and especially the Idea of the Good, the highest of them all. But the Ideas constitute the realm of divine realities. Thus the soul which, though of heavenly origin, had been cramped and delayed throughout its life by the body, is enabled by the possession of that highest knowledge which is identical with virtue.

 Cf. Theat. 176 B— In connexion with the passages given above; ὑπότελεσις (cf. Republic) B η ὑποτέλεσις αὐτῆς ἡ προσέφεραν ὑποτέλεσιν ἀπὸ τοῦ θεοῦ τοῦ θεοῦ, ὑποτέλεσιν τοῦ θεοῦ τοῦ ἀλήθους, τοῦ θεοῦ τοῦ ἀλήθους, τοῦ θεοῦ τοῦ ὑπερτέλεσιν, τοῦ θεοῦ τὸν ἀληθινόν ἄλλως ήσε πάντα τοῦ δικαιοσύνης καὶ σίγου ἄριστου ἄλλως ὑποτέλεσιν τοῦ ὑπερτέλεσιν τὸν ἀληθινόν τὸν ἀλήθινον τὸν ἀληθινόν τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθινον τὸν ἀλήθι...
render himself as independent of the external as possible, the Cynic endeavours to reduce his wants to a minimum; and in order to win his inner freedom (άτάδια), he exercises himself in combating and overcoming the affections (so Diogenes, cf. Dio, ix. 12), more especially in fighting against ἀθάνατος (Diogen. frag. 99, 100. IX. 12; cf. Lucian, Vit. aur. 8; Teles, frag. v. II).

This world-abjuring in Cynic ethics found its chief expression in a negative attitude towards the family, the State, and the idea of nationality, and towards the great traditions of Greek philosophy, even those of the Peripatetics; and in the position the Cynics assumed towards Greek religion, art, and science. This is to be explained in part by the fact that Antisthenes was but half Greek by blood, and that Diogenes sprang from the lower classes. Even in their boasted countermilitant the Cynics were in earnest only with the negative constituent, viz. their detachment from State and nationality.

The real asceticism of the Cynics showed itself, above all, in their mode of life, which they reduced to the simplest possible form. They consisted chiefly of lupines, dried figs, peeled barley and water; their clothing was practically limited to the τρίβων, their feet being ἀνυψωτότα, while their place of abode, i.e. their lodging by night, was the shelter of the pillars of the temple in summer, and in the bathing-houses in winter. By inuring the body to the extreme of rigour, they—more especially Diogenes—sought to strengthen their power of will (Diog. Laert. vi. 29, 34).

The significance attached to asceticism by Diogenes, who had already distinguished two kinds of ἄσκησις—one purely physical, the other both physical and psychical (Diog. Laert. vi. 70 f.)—is shown by his apothegm: Οὐδέν γε τα παράσιν ἐν τῷ βίῳ χωρὶς ἀθάνατος καυροθυλαῖθα, δόοην εἰ τά παρών ἂν ἐνευκείη. A significant, and characteristically Hellenic, feature of Cynic ethics, however, was its attitude towards the sexual impulse. To the Cynics this appeared to be no less natural than hunger itself, and therefore likewise to require satisfaction—though in the simplest and least expensive way. Thus Diogenes is in no way scandalized at either masturbation or illicit intercourse (marriage had, of course, no meaning for him); in fact, as the gratification of sexual desire was reckoned sacrilegious by the Cynics, many of them—viz. Zeno and Crates, Diogenes the Cynic (Hippar-" chia), had no scruples about indulging even in the presence of others, thus showing a gross lack of modesty, to say nothing of good taste. Nevertheless, those who indulged beyond the requirements of nature were looked upon as the slaves of pleasure (φραγατι), and this they reckoned the worst of evils. *

Antisthenes did not himself lay so much stress on the external aspects of the Cynic mode of life; while he did, however, it would seem, to make a virtue of necessity. Very much more, indeed, externals weigh with his gifted pupil Diogenes, as also with Crates, his wife Hipparhia, her brother Metrocles, and others. † The asceticism of the Neo-Cynics during the Roman Imperial period will be dealt with in connection with the later Stoics.

Primitive Cynicism reproached even innocent enjoyment. Further, from the time of Diogenes at

least, the Cynics tended to make too much of the external aspect of their mode of life. But an asceticism which sprang from an ethical standpoint so grossly individualistic could be of no permanent value to human society. Still, in putting to the test of actual practice the dictum that man’s true happiness does not depend upon hiscircumstances, the Cynics made a valuable contribution to human progress; while, from another side, their belief that moral volition is an essential constituent of virtue was pregnant with significance for the future.

6. Stoicism.—Of the leading principles of the early Cynic ἄσκησις* only one was of exceptional importance, viz. the idea that virtue can be acquired only by unremitting practice. In this particular point, which involved an emphasis of the volitional factor in virtue, the Cynics made an advance upon Socrates; it was, in fact, a thought destined to be fruitful for all time, and in the further development thereof special credit is due to the Stoics. We must not forget, indeed, that the Stoas was preceded by Aristotle, who in his Ethics had also distinguished virtues from vices, viz. the ethical and the diatonic (e.g. Eth. Nicom. ii. 1. 1103 A, 14 ff., i. 13. 1102 B, 33 ff.). Ethical virtue is ἀθανασία εἰς τοὺς πάθος καὶ πάθεις (Eth. Nicom. ii. 6, 1106 B) εἶ θεον περίγεγραμμεν (i. 1106 A, 22). Since the Cynics, however, in insistent desire, is often stronger than the volition which springs from φραγατι, it is only by means of exercise that the individual can acquire that φραγατικά which enables him, even in opposition to the stronger desire, to do what he recognizes as right. Now, φραγατικά is a sub-species of αὐτοτροφία, which, again, is one of the ‘ethical’ virtues. But the idea of a psychological independence of the will—apart from the intellect—was foreign to Aristotle.

It must certainly be admitted that among the early Stoics, so closely related to the Cynics in many other things, the volitional moment in virtue does not stand out very prominently, though this may be due partly, of course, to the fragmentary character of our available sources. Unmistakable traces of the idea, nevertheless, are still extant, and yeoman service has been rendered by Adolf Dyroff in bringing these to light. The personal ideal of the Stoic doctrine of virtue—the wise man—has, of course, no further need of practice; but all the more is it necessary for the neophytes, theory and practice, ἐν διατοις. The founder of the school valued practical example more highly than arguments against pleasure (frag. 241); witness also his significant utterance: οὐδέν ἡμιοστέον τέσσαρα τό χρόνον. Βρεθεὶς γὰρ ὑμῶν ἡ δίκη, δὲ τέχνῃ μακρῇ, καὶ μέλλων ἡ ταῖς τῆς νοημονίαν ἐναγαίνει (frag. 323). His successor Cleanthes likewise places moral conduct higher than theory, and that he recognizes the element of volition in virtue is shown by frag. 503. It is accordingly easy to understand why Cleanthes, like Antisthenes, placed his highest rewards as ἀγαθοί (frag. 611), while frag. 129 (Gercke) furnishes special evidence of the fact that Chrysip- pus, * the second founder of the Stoas, * appreciated the value of practice and habit in the attainment of virtue. The task of becoming virtuous, or—since only a few finally attain that end—that of coming as near to perfect virtue as possible, belongs

* No doubt, the doctrine of the absolute worthlessness of earthly goods was taken over by the Stoics, but it was sub- sequently slightly modified by some of the different sects, i.e. by the Epicureans (κατὰ διάδοσιν, viz. προφητεύομαι, μάξα, καὶ ἀπορωσίαμαι), whereby at least a certain respect for the value of material goods is shown. On the other hand, the φραγατικά of the Cynics was spiritualized by the Stoics, who put no special value on the ascetic mode of life. One of the cases of this regarded the πόρος of a Stoas, such as Musonius, and, in some degree, also Epictetus, did a change in this respect take place.

2020
to the will, and cannot be performed without practice (cf. also frag. 294, 275 A). Chrysippus gave full reproof to this, and the period of effort in the work of attaining perfection. True insight is shown also by Aristo of Chios in his remark that 'much practice and much fighting' is demanded by the struggle both against pleasure and against the asceticism of today. It is manifest that nothing now remains of the work of Herilus, who, like Dionysius Metathemenus, wrote περὶ ἀκρόσιας (Diog. Laert. vii. 166 f. [Diels, 410 f. A]), especially as he deemed ἑκάστην to be the supreme good. A further proof of the fact that the value of the distinction was the most being given to it, and more highly appraised by the Stoics, appears in their doctrine that many (apparent) evils are allotted to man for the purpose of calling his moral energies into exercise, and may therefore be utilized for his welfare in whatsoever degree he may choose. This idea was already mooted by Chrysippus, but it was especially in the middle (though probably also in the middle) period of Stoicism that it became fruitful.

The early Stoics undoubtedly felt that the will must be trained in the exercise of virtue, but they gave the thought neither clear articulation nor adequate recognition. An advance in this respect was made during the middle period. Thus Panetius, whose ethical teaching was unquestionably influenced by Aristotle, draws a distinction between ἀκρόσια (vt. 152, 1) and καταπόρτα (vt. 152, 1) virtue and holds that the latter, requiring, as it does, a coherent action, is attainable only by practice.* Discipline of the body is also necessary (Cicero, de Offic. i. 23, 70). The practical virtue, which consists in the voluntary, is ἀκρόσια, the virtue whose significance was first fully realized by Antisthenes, and afterwards very specially by Aristotle. Posidonius likewise distinguishes the two aspects of virtue. Inasmuch as practical virtue consists in the subordination of the irrational to the rational part of the soul, especially in the repression of the bodily impulses and passions, it is to be acquired, Posidonius believes, by the cultivation of the body, and habit, which must carry out the process of subjugating impulse begun by education. But this point of view, which at first sight is hardly distinguishable from that of Panetius, or even that of Aristotle, is in the case of Posidonius most immediately related to a mystical Platonic conception of the nature and destiny of the human soul: the soul is a part of the Divine πνεῦμα, and, coming down from the heavenly to the earthly sphere, enters the body which is its prison, and which seizes and defiles it with desires. To preserve this divinely begotten soul, this δαίμον, from earthly guilt and defilement, and by means of a virtuous life to effect its return to its celestial home, the Εὐθυς, where alone full knowledge can be its portion—such is the aim of all truly wise and great men. The influence of Plato is here quite unmistakable, though Posidonius was doubtless congenitally inclined to the idealistic point of view.

It was in later Stoicism, however, that the importance of practice in virtue, as in moral life and especially morally, first gained full and adequate recognition. Seneca, it is true, emphasizes this particular aspect in an incidental way at best, but this was due not so much to any lack of insight on his part, as to the defects and the weaknesses of the age, which in the main takes the form of contempt for the body, the body being regarded as but a letter upon the Divine soul, which amidst her sombre, insecure, changeful, earthly existence longs for her Divine home (cf. also i. 29, 32, 20). With regard to the attitude of Epictetus towards corporeal asceticism, see ii. 12, 16 ff.

The moment of ethical asceticism, however, reached its highest development in the Phrygian freedman Epictetus, in whose hands the idea of 'asceticism', became finally spiritualized, representing, in fact, the unswerving endeavour of the individual soul towards its own moral perfection. Of a multitude of relevant passages we note only the more important.† That which was openly taught and practised by Epictetus was put to the proof in private by Marcus Aurelius, the last Roman who sat upon the throne of the Cæsars.§ Amid the tumult of the world's capital, or by night in his lonely tent at Carnuntum, Aurelius laboured ceaselessly in the depths of meditations on the world, towards the purifying and perfecting of his soul. He is never able to satisfy himself, but never falters in his effort to come nearer and nearer to the ideal (pp. 127, 14 ff.; 131, 18 ff.), and throws himself bravely into the conflict between soul and sense (pp. 93, 18 ff.; 01, 9 ff.; 131, 12 ff.; 162, 4 ff.). But apart from other profound differences between Aurelius and Epictetus, though both were Stoics, they were fundamentally unlike in their spiritual outlook. Thus, while Epictetus, alike in thought and action, is wholly concerned with the present, the Stoics, on the other hand, as we have seen, look towards the remotest future, and would willingly subordinate the present to the future, and in so doing they look upon the world as something that has no real existence (e.g. i. 17, viii. 3). He despises the goods of this world (iv. 48), even fame, and often all but grows weary of life itself (p. 1, 9 ff.). His apocalyptic utterances seem to be haunted by the pathos of life and the yearning

* Cicero, de Offic. i. 18, 60; Schmeckel, Phil. d. mitt. Sta. 216 ff.

† e.g. Epì. 16, 11 f.; 18, 55 ff.; 75, 7 ff.; 82, 16; 90, 46; 94, 47; 95, 45 and 57. In Epì. 5, 4 he deprecates the extravagances of Cynic asceticism.

‡ Quoted. Nat. prolog. 33 ff.; ad Marcianum, 23, 1 f.; 24, 5, 25.

* Cicero, de Offic. i. 15, iii. 3, iii. 12, 4 f. 111; cf. also i. 20, 32, 20. With regard to the attitude of Epictetus towards corporeal asceticism, see iii. 12, 16 ff.
ing for death. He certainly has no belief in a future life, but his eye turns away from earth and from human effort, and is directed toward the All and the Eternal. Though he is an adherent of the masculine philosophy, more especially the Neo-Platonism of the Pythagoreans, he is not consistently maintained by Aurelius, any more than by Seneca and Epictetus—yet the fundamental qualities of his great soul have an admixture of the spirit of renunciation and mysticism. Leaving his anthropology out of account, we see that the most unmistakably in his conception of the Deity.

7. Neo- Cynicism. Of an entirely different nature from the view of life entertained by Aurelius, is that of the Neo-Cynics, for whose teachings there was a lively interest, and even a certain sympathy, among theLater Stoics, such as Musonius, Seneca, and Epictetus. The representatives of this Neo-Cynic tendency revive the asceticism of Diogenes and Crates, and, while laying the main emphasis upon the actual practice of asceticism, the contribute nothing whatever in the way of fresh thought. For fuller information see art. NEO-CYNICISM.

8. Neo- Pythagoreanism and Neo-Platonism. The tendency towards renunciation of the world, which forms the basal element in the temperament of the Pythagoreans, was reconstituted in a variety of forms. Stoicism, but was rather a product of the time, and, one may well suppose, of his own experiences and fortunes. It was, however, organically related to the philosophy of the Neo-Pythagoreans—that school, which emerged in the Arians of the first century B.C., perhaps in the Alexandria. No doubt the greater part of the literature of this school is pseudographic, and we know by name only a few of its adherents. Apart from P. Nigidius Figulus and Valentinus, contemporaries of Cicero, and Sotis, the early Christian author, perhaps the most important representatives known to us are Apollonius of Tyana and Moderatus of Gades (1st cent. A.D.), Necomachus and Numenius (2nd cent. A.D.), and Philostratus (3rd cent. A.D.).

The moral and religious views of life promulgated by the Pythagoreans is in part traceable to the Mysteries of the ancient school, but in a still greater degree to Platonism, especially to that form of Platonism set forth by Posidonius in his commentary to the Timaeus. The characteristic of the soul, which was preserved from the old, viz., the mind and body. Spirit is the principle of good (the Deity being conceived as pure Spirit, and regarded as utterly transcendent), while the body, like matter in general, is the principle of evil. Between the two stands the Demiurge, or world-former, and the demons, whose kingdom lies in the sphere between the earth and the moon. The soul, which is formed of the Divine essence, is meanwhile confined within the body as in a prison, and her deliverance from the body and its impulses, in order that she may become conformed with the Deity, is the most urgent task of mankind—a task which finds its positive side in a holy and devout life, since the Supreme can be worshipped in a truly spiritual manner only with purity of thought and piety of conduct (cf. the fragment of Apollonius in Ennead, Prop. Ennead, iv. 13). Mankind is exposed on all sides, however, to contamination by demons, and the means employed to cleanse from this defilement is asceticism. The most effective forms of asceticism are certain specific aablations and expiatory cere-

numinous, and abhorrence from every kind of sin, more particularly from flesh and wine (among the Later Pythagoreans), sexual temperance, or even abstinence (as is said to have been counselled by Apollonius), silence on the part of neophytes, etc. But as man is of himself unable to realize this end, and since between him and the supramundane Godhead there yawns a great gulf which requires to be bridged, the Deity reveals His will through the medium of a special messenger, the Deity of the Pythagorians formally, and now Apollonius, as also in the art of divination, in order that man may possibly be helped in his dark endeavour to reach his heavenly home and the deification of his being.

Sources for our knowledge of Neo-Pythagoreanism are the account of Alexander the Great by Diod. Nurt. viii. 22 f., the large fragments of pseudo-

nymous literature written under the name of the old Pythagoreans (particulars in Zeller), the fragments of Numenius, Philostratus's Vita Apolloni, and the Lites of Pythagoras by Porphyry and Iamblichus. In Neo-Pythagoreanism the mysteries of the older school are resuscitated in a spiritualized and morally nobler form. The real significance of the later development, however, lies in the fact that, in conjunction with the Christian, the last great system of ancient philosophy, viz. the Neo-Platonism of Plotinus. It was the aim of Plotinus to get beyond the dualism of Neo-Pythagoreanism on both metaphysical and ethical principles. In his nobly planned and profoundly studied system he has created an emanation from the Deity, who is supersensual, supramundane, and exalted above oppositions, even that between spirit and body. He is Pure Being, the Absolute, and from Him issues the world in a series of gradations, returning again to the same. The principal stages of this emanation are three in number, viz., Spirit, Soul, and Matter. Just as light eventually fatigues the eye, and its radiance is changed to darkness, so does the final irradiation of the ineffable and inscrutable Essence, so that the living being traversed in the medium of the Deity, Deity and Soul, become Matter (Enneads, iv. 3, 9), which, however, never attains the metaphysical independence that belongs to the Absolute. Matter is the μόριον, and, as the αφωνίων τοῦ ἀγαθοῦ, the ἐκτός καθότως. Man, too, is an effluence from the Absolute, and in the human soul are distinguished a supersensual or Divine, and a lower or sensual part. Just as pure spirit in its final expression becomes matter, so the human soul with equal necessity is metamorphosed into body. The supersensual part, the soul, which was preserved in the Deity and remained in union with God, has suffered disaster from having entered the body (iv. 3. 15 ff., v. 1. 1). From the union of soul and body springs all the irrationality and depravity of the soul. Our great task, therefore, is the extirpation of everything that binds us to sensuous existence, the complete withdrawal of the soul from the outer world to its own inner life. Hence, virtue is neither more nor less than the work of purifying the supersensual soul from all its relations with the world of sense (cf. Timaeus, 51 ff., 60 ff.), that is, the way in which all this that Plotinus should set no value upon taking part in earthly affairs, either of a scientific or a politico-ethical nature. This complete detachment of the soul from all ties with the external world, however, appears on the positive side as its surrender to the Supersensual, to the Deity, the yearning for whom becomes ever more intense as the bonds of sense are more and more transcended. So far as union with the Divine is concerned, the external mode of life is of no importance. What counts is, in the opinion of Plotinus, not the outward but feeling; and accordingly he attributes no value to asceticism of the common sort, however it may have concurred with his own inclinations (Zeller, iii. 522 f.). Of greater importance is the thinking consideration of life, and, still more, pure intuition; but the full and blessed union is voidful only to
ASCETICISM (Hindu).—In India ascetic practices have been very widely prevalent from the earliest times. The mortification of the body, and the self-inflicted penances associated therewith, have been habitually carried to lengths beyond every reasonable limit. The ascetics were, in all ages, looked upon by the learned and unlearned as the ideal representatives of the spirit of India, and the ascetic world has been the cradle of the Hindu religious system. Among the ancient and the modern Indian sects the ascetic ideal has been maintained, either in the form of the kshatriya, or as the root of all religious thought.

The ascetic view of life, the sense which we attach to the Hindu ascetic life, is determined by the asceticism which is to be found in the Greek world; nevertheless, as a consequence of its being embraced, deepened, and spiritualized by two of the greatest thinkers of Greece, Plato and Plotinus, its influence has been enormous. Of no less importance, however, than the asceticism of the other two personalities, to which we have just called the ascetic world, which discovered, and to some extent developed, the significance of the will in morals. Both of these tendencies, which, moreover, were in some degree combined in Posidonius, exercised a profound influence upon early Christian thought.

ASCETICISM (Hindu)

practise of tapas also was, in great part at least, adopted from the aboriginal or other tribes among whom the new-comers settled. Theirs was the darker, gloomier view of religion and of life, to which asceticism was congenial. To the bright, joyous spirit of the Aryans—the spirit that finds expression in the Hymns—the sad and despairing outlook which is the motive-power and inspiration of ascetic practice was repugnant. To them the goals were opened wide, and for the spirit there was no right of being forced or enjoined by human suffering; and life was not yet clouded by the pessimistic tendencies of a later age. It is noticeable that all the instances quoted from the Rigveda of the use of tapas in its technical sense are taken from the late tenth book, where the rule of life appears both in the literal meaning of 'warmth,' 'glow' (e.g. x. 16. 4), and metaphorically of the glow of feeling, passion (e.g. x. 83. 2). Tapas, however, is also pain, suffering, voluntarily endured (iv. 109. 4, 104. 2, 167. 1).

2. \textit{Tapas} in Indian literature.—(1) Rigveda. — In the earliest Sanskrit literature, the Hymns of the Rigveda, neither the word nor the conception and thought that underlies it is of frequent occurrence. It would not, however, be a legitimate inference from this fact that ascetic habits were unknown to the primitive Aryan communities. Nevertheless, the absence or rarity of reference does not necessarily suggest that such habits belonged to the lower side of the religious life, the

Other philosophers bore the name 'Phramani' (Πραμανή, probly a corruption again of ἱβραϊκά, ἱβραϊκά), and were opposed to the Vedas and the rituals in general. They lived on the hills or plains, others as frequenting the cities. Others, again, were known as Γραμανικοί, and were therefore probably Jews or Samaritans (e.g. the 10th century father of Pantagruel, at the age of seventy-three; with reference to this act Megasthenes is quoted to effect that the self-destruction was caused by an old age following his ambition, and that thus acted were regarded as rash and rash confounded (rareness, ib. xx. 69).

They lived on the hills or plains, others as frequenting the cities. Others, again, were known as Γραμανικοί, and were therefore probably Jews or Samaritans (e.g. the 10th century father of Pantagruel, at the age of seventy-three; with reference to this act Megasthenes is quoted to effect that the self-destruction was caused by an old age following his ambition, and that thus acted were regarded as rash and rash confounded (rareness, ib. xx. 69).

2. \textit{Tapas} in Indian literature.—(1) Rigveda. — In the earliest Sanskrit literature, the Hymns of the Rigveda, neither the word nor the conception and thought that underlies it is of frequent occurrence. It would not, however, be a legitimate inference from this fact that ascetic habits were unknown to the primitive Aryan communities. Nevertheless, the absence or rarity of reference does not necessarily suggest that such habits belonged to the lower side of the religious life, the
The representation, however, as might be expected, is not always consistent. In addition to the view most usually adopted, which sees in tapas a real, though less commendable and direct, means to the attainment of a knowledge of Brahman, the two extreme views, as of those great ascetics, so declare the practice of austerity indispensable to such knowledge, and those who refuse to acknowledge in asceticism any virtue or efficacy whatsoever, and maintain that only in the way of knowledge and by no other means may the final end be reached. Elsewhere, and the Vedas as a whole, the Vedic authors are placed side by side as the essential conditions of a true insight; and those who in the right spirit with faith practise asceticism in the forest ascend on the way of the gods.

Tapas also is indefinitely associated in the Upanisads with the third ātman (p.r.v.), and the life of the anchorite in the forest (vānaprastha). On him the practice of asceticism is especially obligatory, but even he must add to it faith, or the mere outward observance and self-mortification will not suffice. Only gradually, and quite clearly or definitely, will the Upanisaded period was a distinction drawn between the third and a fourth higher stage, the essential note of which was not mere bodily self-mortification, but the voluntary and entire surrender of all worldly possessions, and the ascetic is represented twice as the vānaprastha and the sannyāsī, is completely carried out, and the duties and obligations of each clearly defined. (3) Manu and the Law-Books.—It is in the Law-Book of Manu, ch. vi., that the formal conditions and rules of the ascetic life are set forth; and these are in large part repeated, quoted, or amplified in the later Dharmasūtras. How far some of the more strict and exacting of these regulations ever became matters of literal observance, or how far they were observed only as a mark of the ascetic, is uncertain, but, of course, remain uncertain. But, in view of the capacity which Indian ascetics have always exhibited for almost heroic endurance of self-mortification, it would seem by no means impossible, or even improbable, that in some instances at least the utmost extremes of bodily torture were submitted to, and the rules of the books carried out in fullest detail. It will be noticed that Manu confines the rights and privileges of an ascetic life to the twice-born.

A twice-born śākta, who has thus lived according to the law, is entitled to the āsura, or ascetic, if from the village into the forest and reside there, duly controlling his senses. The great fire of ascetics, as we find in the rule, with various kinds of pure food for ascetics, or with herbs, roots, and fruit. Let him wear a skin or a tattered garment, let him bathe in the evening or the morning, and let him always wear (his hair in) braids, the hair on his body, his beard, and his nails (being unclipped). ... Let him be always clean and be reciting the Vedas; let him have patience of hardships ... ever Liberal ... and compassionate towards all living creatures.*

Then follow directions with regard to the sacrifices the ascetic must offer, and the kind and quantity of meat. When he bathes at the three Sabanas (sunrise, noon, and sunset) let him offer libations to the water and the names and the gods, and, practising harassed and harsher austerities, let him dry up his bodily life, and live without food, water, air, wholly silent, subsisting on roots and fruit . . . chaste, sleeping on the grass, and controlled at all times; he thus passed the third part of life in the forest, he may live as an ascetic during the fourth part of his existence, after abandoning all the household attachments, the only objects of his concern and subduing his senses ... an ascetic gains bliss after death.†

Departing from his house . . . let him wander about absolutely contented, and enquiring for employment that may be offered. Let him always wander alone without any companion, in order to attain (the spiritual state). . . . He shall neither possess a fire nor a dwelling, he may go to what is everywhere, firm of purpose, meditating and concentrating his mind on Brahma. Let him neither possess alms-bowls, nor trees (for a dwelling), course worn-out garments, life in solitude and indifference towards everything, are the marks of one who has attained this spiritual state. Let him not lose his desire to live, let him walk for his time, as a servant for the pay of his wages . . . let him patiently bear hard words, let him not insult anybody, let him not become anybody’s enemy for the sake of this body . . . entirely abstaining from sensual enjoyments, with himself for his only companion, he shall live in this world, desiring the bliss (of final emancipation).‡

Carrying an alms-bowl, a staff, and a water-pot, let him continually wander, and the ascetic is also a hermit.

Rules are then given for begging and the manner of eating, subjects of meditation, etc. The ascetic is to beg daily once in the day, and when he goes to any house for that purpose it must be after the time of the ordinary public meal. This has been concluded (cf. Brāhmad, ii. 22; Vas. x. 7, 8).

Three suppressions of the breath even, performed according to the rules of ascetics, are associated with the repetition of the mantras, om, and the ascetic, as it is well known, must know to be the highest austerity for every Brāhmans.§

When by the disposition (of his body) he becomes free, when he obtains eternal happiness both in this world and after death, he who in this manner gradually given up all attachments, and is freed from all pain of opposite uncleanliness (of body), and alone . . . a twice-born man who becomes an ascetic ... shakes off sin here below, and reaches the highest Brāhman.‖

Elsewhere, in the sadra sūtras and the other books, there are incidental references to the ascetics, which lay down further rules for their conduct and life.

Ascetics and students are to receive alms from the Brāhman household after the performance of the Bali offering (iii. 94; cf. vi. 7; and Brāhmad. ii. 5, 11; Vas. xi. 5; Āpast., ii. 4, 10, 11).

For sacred cows with female ascetics a small fine is payable (viii. 502; cf. vi. 5, 7, and v. 5, 10); and the Brāhmans are not to meddle with the wealth of another. An ascetic, a hermit in the forest, and Brāhmans who are students of the Yeda shall not be made to pay toll at a ferry (viii. 407; cf. vi. 15, 22).†

Hermits (tapasākṣi), i.e. those who practice tapas, ascetics (śākta, those whose passions are under control), Brāhmans, the crowds of the Yāmānīkī delights, the lunatic, and the ascetics are the first (i.e. lowest) order of existence caused by Goodness (as above, xii. 45).

Additional directions in the Law-Books are to the effect that a householder must turn back if he meets an ascetic (Vīṣṇu, lxxii. 36). An ascetic from religious mendicancy shall become the king’s slave (ib. v. 132). Cf. Gāndharvas (iii. SBE ii. 152–153; vi. 164; xvi. 56); Brāhmad, in. 17, 16, 17, ill. 3; eight mounthful are the meal of an ascetic, this being that of a hermit in the woods, thirty-two that of a household, and an unlimited (quantity) that of a student (Brāhmad. ii. 13. 7; cf. Vas. v. 20) ; let him (the hermit) not injure even gaddis or gants, let him bear cold and perform austerities, let him confound the inhabitants of a Brāhmanī (xi. 549).†

* Manu, vi. 1-8 (SBE xx. 195 ff.).
† ib. viii. 33, 1, 17, 41-49. § 10, 95-94.
‡ i.e. the three mystic syllables bhūr, śvā, śvār (cf. vi. 7, 78, 81); the virtue of their recitation, with suppressions of the breath is so great that it frees the gree from the sin of murder of a Brāhmanī (xi. 549).
¶ Manu, vi. 70. ** 10, 63-66.
ASCETICISM (Hindu)

stantly reside in the forest, be contented, and delighted in (dresses made of) bark and skins (in carrying) water (in his pot)" (Baudh. iii. 3. 19; \*Vas. vi. 28). As a quallide by which a (true) Bráhmapi may be recognized are the concentration of the mind, austerities, the subjugation of the senses, liberality, truthfulness, purity, sacred learning, compassion, worldly learning, intelligence, and faith (Vas. vi. 29); he is worthy to receive gifts who is ever restrained by austerities (vi. 30); 'to suppress the breath is the highest austerity' (x. 5; cf. Ápastamba, ii. 21. 7-21, 22, 23. 1, 2).

(4) Bhagavat Gītā.—The 'Song of the Blessed' reopened, by some, a symposium between the two views of an idealistic part and the practical devotion demanded by a theistic creed, salvation by conviction and knowledge alone, or salvation through faith and works. It is a subject of dispute which of these views is the earlier in the poem, and forms the original kernel, and which has been superimposed upon the other.* In either case tapas, in the form of renunciation, self-devotion, is the highest form which 'action' can take; and in the thought and teaching of the Ṛṣis the essence of ascetic practices is not painful mortification of the body, but the negation of selfish desires and the sacrifice of selfish inclination and love of ease in the cause of right and devotion to the Supreme God. Passages which enfore renunciation and the duty of earnest and purifying itself is the basis and the practical theistic strata of the poem. Attempts, however, to reconcile conflicting views, or at least to recognize what is good in both, are not wanting.

There is a twofold path, that of the Śūkyās by devotion in the shape of knowledge, and that of the Yogins by devotion in the shape of action. A man does not attain freedom from action merely by not engaging in it; nor does he attain perfection by mere renunciation (Bhag. Gītā, 2. 10).

The 'asetic' is one 'who has no avarice and no desire... Children, not wise men, talk of svādhyāya and poṣa as distraction. One who pursues either well obtains the fruit of both... I say, casting off attachment, performs actions dedicating them to Brāhma, is not tainted by sin' (Gītā, 3. 25).

'Some by concentration see the self in the self by the self; others by the Śūkyās and poṣa; and others still by the Karmāṇis and poṣa; others yet, not knowing how, practice concentration after hearing from others. They too, being devoted to hearing (inner action), cross by death' (Gītā, 24. 1).

'Renunciation is devoted to (poṣa) for one becomes a devotee (poṣa) who has not renounced (all) fancies... The devotee whose body is contented, and therefore not bound by material things, ammowed, who has restrained his senses, and to whom a soul, a stone, and gold are alike, is said to be devoted... He should restrain his mind; never let it flicker, and never engage in devotion, regarding me as his final goal. Thus, constantly devoting his soul to abstraction, a devotee whose mind is restrained, gains an unshakeable and eternal immortal bliss in his mind's self-restrained becomes steady upon the self, then alone, he who, being indifferent to all objects of desire, is said to be devoted. As a light standing in a windless (place) flickers not, that is declared to be the parallel for a devotee, whose mind is re-strained, and who devotes himself to abstraction' (vi. 22f.).

The indestructible seat... is 'entered by ascetics from whom all desires have departed' (vii. 11).

'Whatever you do... whatever you eat, whatever you make, whatever you speak, whatever penance you perform, do that as offered to me' (vi. 27).

'This threefold penance (i.e. bodily, vocal, and mental) practices, is called good. He who is not engaged in the same, unacquainted with the self, and not restrained from action, who has no renunciation, and who is not restrained, is a godless man, and that is nought both after death and here' (vii. 25).

'One who is self-restrained, whose understanding is unattached everywhere, from whose actions there departs in final renunciation and assimilation with me... When his mind well-restrained becomes steady upon the self, then alone, he who, being indifferent to all objects of desire, is said to be devoted. As a light standing in a windless (place) flickers not, that is declared to be the parallel for a devotee, whose mind is re-strained, and who devotes himself to abstraction' (vi. 22f.).

Those who, restraining the group of the senses... meditate on the indescribable, indestructible, unperceived... they, intend to be free from (all) calls because, necessarily, necessarily attain to tell' (vi. 8).

Who is able to know and be, as also in honour and dignity, who is alive in cold and heat, pleasure and pain, who is free from attachments, to whom praise and blame are alike... who is homeless, and of a steady mind and full of devotion, that man is dear to me' (cii. 3. 14).

Similar quotations might be easily multiplied. In the Bhágavad Gītā the plastic philosophy of asceticism, as it presented itself to the Indian mind, appears in its loftiest and purest form. To the earnest-minded śādhu this book is his Bible; and the nobility of its thought, and the charity and breadth of its outlook, render it not undeserving of the name.*

(5) Epic poetry.—The Epic poems add little to the general conception of tapas, although they offer many examples of its practice, and contain narratives more or less marvellous of ascetics who are preserved in their own circumstance of power (see below, p. 91). Rāma in his hermitage on the banks of the Godāvari is the type of the peaceful, gentle hermit who has renounced the world, and lives retired from its strife and care, true to duty, true to virtue.' In the Mahābhārata descriptions of the hermit (svāmipyāra) and of the ascetic (svāmyāsā) are found, which agree almost verbally with those of Manu (Mahābhā. xii. 191 ff., 243 ff.; cf. above, p. 89). And in the same book, true and false tapas are distinguished from one another: 'If one is engaged, though that ordinary men count for tapas, is merely a castigation of the body, and is not regarded as tapas by the good; renunciation and humility, these are the noblest tapas; he who practises these virtues fasts uselessly, and his virtue is never found wanting.' 'Study of the Vedas and avoiding injury to any living being, men call bodily asceticism; the true spiritual asceticism is control of speech and thought.†

In the Purāṇas and later literature the extravagances of asceticism are not uncommon in the same; renunciation of worldly possessions and the voluntary endurance of bodily pain are means to an end, viz. deliverance from the sāṃśāra and the acquisition of supernatural powers. The essential principles, however, are overlaid with a mass of extravagant fancy and repellent detail; and the stories of the lives of the ascetics, and the descriptions of their self-inflicted tortures, present few features of attractiveness or interest.

3. Asceticism in modern practice.—The most general term for the Hindu ascetic is śādhu, a 'good' or 'pious' man, a saint, or sage, of which the feminine śādhī denotes a woman who has taken ascetic vows. Svāmyāsā, one who has 'cast off,' i.e. home and possessions, is also frequently used of any monk. "The Bhágavata is properly restricted to a particular sect (see below, p. 93 f.) but is a Muhammadan term, expressive of poverty of spirit, but is sometimes, though incorrectly, applied to a Hindu beggar or ascetic. India has always been the home of asceticism, and from the very earliest times this feature of Indian life has attracted attention. Śādhu have formed the shifting itinerant element in a population for the most part stationary and rooted to the soil. In spite also of their general aloofness, by their numbers and by the respect paid to them they have always exercised a considerable influence in the land, and, in the absence of more direct methods of conveying intelligence, have formed a fairly constant though unimportant means of communication between the different parts of the country. Present everywhere, although rarely purely naked, they are yet a familiar sight, and are often as likely to be met with in cities as in the remotest parts. They are to be seen as the commonest and most usual of the characters who make up the Indian crowd' (Church Missionary Intelligencer, 1905, p. 610).

* Cf. the interesting account which Dr. T. L. Pennell gives of the śādhu whom he overtook on the road from Ludhíana, and who was recomte to have obtained some experience and manner of life. 'When my heart is lonely I read in the Bhágavad Gītā a consolation, and I like that better than any other book because it makes my heart glad' (Church Missionary Intelligencer, 1905, p. 610).

† Mahābhā. xii. 271, 221; cf. Deussen, Allg. Gesch. der Philo-

ASCETICISM (Hindu)

stay in one place, they brought to the settled inhabitants the consciousness of an outside world, and wrought effectively, though probably unintentionally, against the narrowness of a merely local and parochial spirit. Whether the sādhus were more numerous in ancient times than at the present day it is difficult to determine. They occupy a larger place in the ancient than in the modern literature of India; and the same is true also in all probability of the thought of the people.

There is, in form, however, an appreciable though small percentage of population who still adhere to it. At the census of 1901 the total number of beggars and religious mendicants was returned as 4,914,000, or nearly five millions, a decrease of about 63% during the decade preceding. The decrease, however, is attributed to the heavy mortality of the famine years, and not to any lessened attraction in the profession of sādhism. Probably by far the greater number of these, if not all, were true ascetics, bound by vows to a life of self-renunciation and poverty.

More, also, perhaps than in any other country asceticism in India latterly, a Kṣatriya, and a member of the Kshatriya and Durbar class, was no more and a member of the warrior caste. It was held to be a mark of the Brahmān to move and live and not determine.

As to the practice of tapas in the first instance by the example of the greatest saints and heroes of old, and of the gods themselves, who are represented as enduring self-inflicted tortures for thousands of years in order to secure a higher rank or enhanced power. The rāja of old, the demigods of legend and story, the dwellers in heaven as well as on earth, engaged in the practice of tapas to secure dominion for themselves, or to confound their foes. Without tapas, or being himself endured age-long austenities in order to erect. And Siva, in the character of an ascetic named Sanāyāsin practising austenities of almost unimaginable severity for thousands of years, is the type and patron of the ascetic, who by the grace of Śiva is granted power to attain all his desires. There was no limit to the power of self-mortification; all things were possible to tapas.

The classical example and the most convincing to Hindu thought was found in the story of the rivalry and hostile encounters of Vaiśeṣṭha and Vivasvāmitra. Their dispute, and a battle, for the possession of a boundless and powerful and wealthy king, was overthrown and put to confusion at every point by the might of the Brahmān's incantations and magical devices. Humbled and beyond measure enraged, Vivasvāmitra hastened to Siva, and said, "O Brahmān, if septennial and protracted austenities compelled the gods to grant him the birth and rights of a Brahman, thus placing him on a level with his Brahman adversary. The story undoubtedly represents the rivalry of the two great orders or castes, the priestly and the warrior; but it also expresses the conception of the omnipotent strength of tapas, which could bridge the gulf, and lift the Kṣatriya, inferior though a king, to the level of the proud and domineering Brahmān.

On the power of tapas see also Mann, xi, 329 ff.; 'Whatever is hard to be obtained, whatever is hard to be attained, whatever is hard to be reached, whatever is hard to be performed, all may be accomplished by austerities; for austerity (possesses a power) which is difficult to surpass. Both those who have committed mortal sin and all other offenders are severely freed from their guilt by means of well-kept and practised austerities. Insects, snakes, moths, bees, birds, and beings bereft of motion reach heaven by the power of austerities. Whatever sin men commit by the mouth, their penance will burn away their sins, if they keep penance as their only riches. The gods accept the offerings of that Brahman who has purified himself by penance and grants to him all desires.

By Gods, discerning that the holy origin of this whole (world) is from austerity, have thus proclaimed the incomparable power of austerity' (SBE xxv, 473 ff.). See also J. Muir, Original Sanskrit Texts, I, 358 ff., who quotes the words from a twofold form of the Mahābhārata (Adiparvam, 6628 ff.), and supplements them with a very similar language (51-65) in the narrative of Nahum, who by tapas won for himself the rank of Indra (Mahābhārata, Adip. 3194; Muir, op. cit. p. 207 ff.).
of Megasthenes (see above, p. 88), and that of the true sannyásî, the homeless wanderer, was never very clearly drawn even in theory, and was in practice as loose as his habit permitted. Ascetic habits at least were common to both; and the dweller in the forest-hermitage, no less than the man who had "cast off" possessions and earthly ties in favour of a vagrant life through the cities and country, emblazoned by means of topas to break the fetters which bound him to an earthly existence, and to secure final rest and bliss.

(1) Clothing and habits.—Numerous also as were, and are, the sects of ascetics, varying in the details of costume and habit, they all possess certain characteristics in common, and certain features in common, and to the eye of the comparative student a similar and specific appearance by which their profession may be recognized. All sâdhâs carry a begging-bowl, which in its simplest form consists of a hollowed-out coconut or gourd, but is sometimes of brass, figured or otherwise ornamented, and furnished with a lid or handle; a water-pot also, and usually a staff. Theoretically, and as individuals, they are without worldly possessions, but the monasteries in which many of them take up their abode during the rainy season, and for longer periods, are studded with riches beyond debate. Such monasteries, which are very numerous all over India, owe their existence to the liberality of pious founders, and have at different times been the recipients of gifts of money or land, whereby merit has accrued to their owners and the religious houses have in many instances become endowed with great revenues. They are not, however, in most cases, places of permanent residence, but their inmates wander through the country as sâdhâs, or ascetics, living on the alms of the people. The monastic quarters are ordinarily salmon-coloured, but sometimes other colours are met with, according to the sect or order to which they belong; many also go practically naked. On their bodies they rub ashes—a practice which is supposed to have been originally intended to protect the skin against the insect plagues of India, or as a defence against the hosts of the demons.* The forehead is marked with the tilaka, the variously shaped sign or symbol, made with coloured earths, indicating their sect or the god under whose protection they hold themselves; and the hair hangs down from the head, long and matted, but in other cases is formed into a rough coil at the top, or is entirely shaven off, the head being left bald. They sleep on the ground, reclining in the mode of the holy men of humanity, or they go round to collect food and alms, for which they must not ask, but contentedly receive what is given. According to the stated rule, they must not approach a house to beg until the regular meal-time is past; what remains over is the portion of the mendicant.

Other objects usually found in the possession of a sâdhâ are a rosary, the material of which and the number of the beads vary with the different sects. Saivite rosaries are composed of the berries of the rudrâksha tree (Elæogýrus glandíscus), thirty-two or sixty-four in number; sometimes, however, such asetics wear a rosary of human teeth (dantâyáti) or the skin of a snake round their neck. Vaisnavite ascetics carry a rosary of a hundred and eight beads of tulasi wood, the holy basil (Orysssum sanctum), or occasionally, though it is not common, the skull of a human being. The purpose of the rosary is for use in the recitation of prayers, or to enable the devotee to repeat the name of his god a definite number of times without effort.† In all probability the Christian use of the rosary was derived ultimately from India. Many sâdhâs will also be found with fire-tons, the iron of which is supposed to be a protection against evil spirits, and, as an article of diet, bhang, with a pestle and mortar, and a pipe, which are brought into constant use. Many of them carry on their person small idols, or sacred objects, or talismans as the liṅga or bilâgrâma, reliefs also from the places of pilgrimage they have visited, and seals or certificates issued by the priests in charge. They are supposed to spend their lives in meditation, withdrawn from the thoughts and interests of the world. For a similar reason, because he is believed to be in sâmrâti, * profound trance, a state of intimate and universal communion with the Divine, the body of a sannyásî is under ordinary circumstances buried, not burned; he is in reality not dead, and may revive at pleasure to a consciousness of external things.

(2) Mortifications.—The distresses and self-mortifications to which the Hindu ascetic submits himself would be almost incredible if they were not certified by the accounts of many eye-witnesses from the earliest times to the present day, and by the well-known capacity of the Eastern to endure with stoicism hardship and pain that would be intolerable or fatal to a European. For the purpose of describing the varieties, and describe the various kinds of self-torture invented and practised by sâdhadus would be impracticable. Among the more usual and prominent which attract attention is the so-called 'arrow' or 'spike-bed' (śavâtsâks) of the Pârśuva sect, a flat board studded with iron nails or spikes, on which the ascetics sit or lies at full length, and which he is supposed never to leave night or day. The practice is in imitation of the sufferings of Bhûshan, the leader of the Kurus and chief antagonist of Arjuna in the Mahâbhârata. For the space of two years the arrow is thrust by Arjuna with so many arrows that, falling, it did not touch the ground, and Bhûshana lay thus supported for forty-eight days and nights before his death, during which time he discoursed on high topics before the assembled armies.* The Brâhman ascetic at Benares is said to have used one of these couches, on which he lay naked, for thirty-five years.† Another common form of self-torture is to raise one or both arms above the head, and to hold them there until stiff and atrophied, when they cannot be drawn down again (kâta). A very different process is that of the ascetic who, having shaved off his head, becomes a sâñyâsî (see bk. 39), and depends for support on the reception of alms, of which they are allowed a certain amount, and which vary in different places. If they stop at a village, which they do not do, they will request the alms of every person, to be distributed among the poor. In the course of collecting a little money and food, they might find a very considerable sum for themselves; but this is a rare event, as the ascetics themselves sell their begging-bowls as soon as possible, and keep very close to the roads and highways. If they are allowed to pass, these mendicants are not to be feared from their looks or the attacks of wild beasts. Other sâdhadu undertake prolonged fastings, or place themselves under vows.

of silence for years. Some display their powers by chewing live coals, or their endurance by thrusting knives or skewsers into their flesh, treading on beds of glowing ashes, sitting immersed to the neck in water, allowing themselves to be trampled alive, or hung with the head downwards (vārđhavajachārya). Tricks of self-hypnotism of a most remarkable character have been without doubt known to and practised by Indian ascetics for centuries.\(^{4}\)

(3) **Aśātic sects.**—Hindu *sādhus* are of various kinds. Many Hindus, especially the uneducated and unenlightened, believe that the *sādhus* are superhuman beings. There is quite a different sort of ascetic, however, one whose character can with certainty be compared with that of the Buddha. This sect of ascetics is known as the *śramaṇas* (see art. SANYĀSIN). The remaining sects are of less importance. *Brahmācharins* are all men, and most of them are Brahmins. The name is derived from *brahma*, *that which is not destructible*, and *cāra*, *to go*. It is applied to ascetics who have, in their own estimation, an exceptional capacity for moral and intellectual growth. They have a rule of life, but they are not bound to observe it. They are believed to have all the powers of demons, and they are thought to be capable of doing wonderful things. They are in general of low social position, and are therefore not considered as being of much importance. They are known as *brahmanichāryas*.

The sect of the *Aśātins* (see art. Aśātins) is the most important of all the sects of ascetics. It is the chief of all the ascetic sects, and is the only one that has any claim to be considered as a true ascetic sect. It is the sect of the *sādhus* or holy men, who are the chief of all the sects of ascetics. They are known as *brahmanichāryas*.

The sect of the *Sādhus* is the most important of all the sects of ascetics. It is the sect of the *sādhus* or holy men, who are the chief of all the sects of ascetics. They are known as *brahmanichāryas*.

ASCETICISM (Hindu)

ASCETICISM, the Rbputed and Visnu the There the all gourd, for Some Other refrain of displayed the ones, them See more this Ramanuja. native. They Madhvas,poverty Madhavacharya. Mahendranath, as cast the and and perhaps the cast of ascetics. The ascetics wear the robes, and sometimes yellow thread. There are numerous factors, and the usual tulasi rosary and necklace. There are several subdivisions, the moral reputation of some of which does not stand high (see art. BENGAL, CHAITANYA).

The Kośīr Panthins can hardly be said to affect asceticism in any real sense of the term. They wear no distinctive dress, cover the usual necklace and beads, and on their foreheads the distinctive mark of Viṣṇu. The wandering monks of the order are numerous in northern and central India, and bear a high character for simplicity and purity of life.

The remaining orders of sādhus have originated among the Sikhs. The three most important are known as Akālins, Nirālins, and Udāsin. There are others less numerous and active. Generally the dress of the Sikh sādhu is more complete than that of the ascetics of other, or at least of Śāivite orders; and he bears less prominent and obtrusive marks of his ascetic profession. The Akālins, or Nihangs, are the militant monks of the Sikh faith. They dress in blue garments, and travel over the country fully armed, on horseback or riding on camels, and their requests for alms are said to be preferred with a tone and manner that secures instant compliance (see art. AKALINS). The Nirālins are for the most part quiet and inoffensive students of the sacred books, whose only outward marks of their sādhu profession are their reddish-yellow garments and long hair (see art. NIRALIN). The Udāsin dress in salmon-coloured robes, with a peculiar pointed cap, and a black cord round the neck; and in addition to the water-pot, usually a gourd, carry a bag over the shoulder, and a small black mat or carpet, which they spread on the ground when they rest. Some Udāsins shave the head, while others allow the tuft of hair to grow, and in this form, in addition to meat or spirits, and not smoke, and are pledged to poverty and continence (see art. UDĀSIN).

There have also been at all times a few sādhwis, or female ascetics, in India, who have emulate their more numerous male companions in their devotion and the rigour of their ascetic practices. The publicity, however, which the profession of sādhuism entails is an obstacle to its frequent adoption by Indian women, and any general observance by them of ascetic habits or vows would be opposed to the national sentiment. The practices of the Hindus themselves. Sādhwis are usually widows, who have less to lose in the adoption of a roving life; and in most instances, though not always, are of low caste. It would seem also that generally, although again not without exceptions, the sādhwā is moved to enter upon this manner of life by the desire to cast in her lot with father or other male relative or friend; and solitude therefore rarely forms part of the voluntary penance which she undergoes. The case is recorded, *Oman, op. cit. p. 184 ff.

‡ See Oman, op. cit. ch. viii.
however, of a Hindu widow of good family, who lived as a solitary recluse in an underground cell near Benares for thirty-eight years, devoting herself to the purpose and hope of thereby commending their teaching to the people among whom their lives were spent. It is doubtful how far the attempt has ever been really successful. With the spirit that conselled and animated such renunciation to self-sacrifice and the abandonment of all for the sake of duty, and to promote the unselfish end which they had in view, all will feel sympathy. In the regard of every Hindu also the ascetic ideal is a noble one, and the man who endeavours to put it into practice is worthy of all honour. It would seem, however, that the utmost sacrifice which it is in the power of a European, either by constitution or circumstances, to make cannot approach the abnegation or extreme rigour of self-sacrifice of the Indian. His mode of living will probably appear to be a pale imitation, not wholly sincere, and inconsiderable below the true ideal. It will excite his wonder, but in no degree move him to respect, while the motive that prompts the abandoned life will be entirely beyond his comprehension. There have been native Indians also, Christian sadhus, who have wandered through the country in ascetic garb, and followed the ascetic rule of preaching and teaching by the way. Their action, so far as it is possible to ascertain, has greatly increased and extended the influence for good, and has appeared entirely commendable to their fellow-countrymen.†

4. Religious and ethical value of 'tapas'.—There is probably no country in which ascetism has been so widely and constantly practised, or in which its ideals have been held in such high regard, as India. The injunctions of their sacred books, and the examples of their sages, have kept before the mind of the people the thought that renunciation of the world, with rejection of its pleasures, is the supreme of good. And although the motive of the abnegation and bodily self-mortification of the Indian sadhu was undoubtedly in the ultimate analysis selfish—he abandoned the world that he might gain something better—yet the spirit of self-mortification was an ever-present reminder to the people that the good of this world is not the good which is most worth having; and his example revived in them the longing, which the pressure of worldly cares and ambitions might well have deadened or crushed, for a higher experience of life than was suggested by the hard material facts of the present. The hand that pointed upwards and onwards might indeed be prompted by no generous or altruistic spirit. Nevertheless it did suggest and invite to upward striving. And there can hardly be any doubt that, in spite of its obvious drawbacks and limitations, sadhism has been on the whole a good to India, and a force that has made for righteousness in the broadest use of the word.

That ideal commanded the assent and enthusiastic adherence of the regenerate; and was not blind to the defects and dangers of an ascetic life, the opportunities it afforded for imposture, the habits of idleness and the love of ease which it promoted. While, however, they jest at the sadhu, they respect the ideal which he represented. His ignorances and littlenesses they tolerated or laughed at, while they allowed his claim to be far greater than any to which they, pre-occupied with mundane affairs, ever aspire. That there were pretenders and impostors among the ever-moving crowd of ascetics, men to whom godliness was a way of gain, the keen instinct of the people always recognized. These, however, were not true sadhus, but were masquerading in a borrowed garb to which they had no right; and their presence hardly lessened the respect in which the profession was held, or weakened the influence which its better members wielded. It was and remained good that an ideal of purity, self-restraint, and indifference to pleasure and wealth should be constantly exhibited in concrete form before the eyes of the people.

On the other hand, the existence of so large a number of able-bodied men, living in idleness, and drawing their support, for the greater part, from the kindness of the people, is, as a man of energy and thought at least, than a burden to the commonwealth. No sadhu ever did any work. He passed his time in the most complete and absolute idleness, as far as the labour of the hands was concerned; and from a social or communitistic point of view, his life was entirely unproductive. It must be remembered, however, that the burden was very widely distributed, from Cape Comorin to the utmost Himalayas; and that in any given case the demand made by the individual sadhu upon the people among whom he wandered was very slight. The burden was probably little felt, much less than would have been the case in the more artificial and closer-knit States of the West. It is true, nevertheless, that, on the premises of Western logic and argument, the loss of the remunerative labour of so great a number of potential workers cannot have been other than hurtful to the general prosperity of the land.

Sadhism also, both by its principles and by its practice, struck a heavy blow at the spirit of caste. To the true sadhu all things were indifferent, and therefore to the principle of caste it was nothing; for there were nothing to him. Most of the orders acted up to this belief, although a few refused admission to membership to any but Brahmans, and declined to receive food from men of a lower caste. Their influence was tremendous and far-reaching; they stood for freedom and equality as against caste assumption and pride. And mingling with the people as they did on their incessant journeys, the conceptions and theories which they thus represented, though they never availed to break the Brahman yoke, must have struck deep root, and given rise to many searchings of heart.

There is, however, at the present day a new spirit brooding over the land, inimical to sadhism and the ideals which it represents and fosters. Western activities, and the conceptions of duty and aim which the West has introduced, and which are acting as a strong ferment in the life and society of India, must in the long run be fatal to the ascetic, to the world-renouncing spirit. English education, which is in part un-Brahmanical, has undermined the superstition which he professed, and the strenuous life which it incubates, will render impossible the meditative existence of the sadhu—the man who in the world is not of it. The end is not yet; for perhaps a considerable time to come the true ascetic will go on his pilgrimages by rail, will utilize the electric light and the other appliances and conveniences of

* Oman, op. cit. p. 241 ff.† For a recent example of Indian Christian sadhus, see Harvest Field, 1906, p. 304.‡ See H. H. Wilson, Philosophy of the Upānyāsas, p. 564 f.; the worth of tapas to the Indian was primarily its worth to himself; the external results, its worth for others, were of comparatively little account.
ASCETICISM

The asceticism found in Japan after the introduction of Buddhism is only a foreign importation with which we are not concerned here (see ASCECTISM [Buddhist]).

A Chinese traveller, describing the Japanese of the early centuries of our era, mentions this interesting custom: 'They appoint a man whom they call an "abstainer." He is not allowed to comb his hair, to wash his face, or to approach women fortunate, to the cleanliness of the body, abstinence from certain foods, and continence—correspond exactly with what we know of the usual condition of the "god-men" who are found among so many primitive peoples, and who, when illness or any other calamity occurs, are held to be responsible, and are deprived, punished, or killed (see J. G. Frazer, *GF*, *passim*). An analogous conception is also known to exist in China, where the emperor is held responsible for drought; and in Korea, where, in the olden time, the ancient kings were deposed or put to death.

If we turn now to the most ancient Japanese book, the *Kojiki* (A.D. 712), we shall not find this primitive custom mentioned; but we may see there at least an idea of abstinence which appears to be the continuation of it. This idea is expressed by the word *imi*, the root of the verb *inu*, which, in its original meaning, signifies "to shun." In one passage the reference is to a sacred weaving-hall (*imi-heteyo*), where the Sun-goddess presides at the weaving. Here, we are told, the *imi* has only the secondary sense of "sacred," which, however, is closely related to its original meaning. In another passage we have an account of the mythical origin of the *Imibo no obito*, that is to say, the chiefs of the *Imibe* or *Imibe*), a hereditary corporation of abstaining priests, who claimed descent from the god Futo-dama ("Great Jewel" or, rather, "Great Gift," "Great Offering").

Again, in a third passage, relative to the troubles which followed the death of the first legendary Emperor, Jimmu, we are told that one of his sons, renouncing his claim to the succession, became an "abstainer" (see *Kojiki*, ed. with notes by Mitošri, 1789-1922, vols. 8, 13, 20; or the Eng. tr. by B. H. Chamberlin, sec. 15, 33, 53, pp. 62, 134, 180 of the re-issue of 1906).

The *Nihongi*, which are preserved only eight years later, that is, in A.D. 720, contains passages corresponding to the first two passages of the *Kojiki*; but, under the influence of Chinese ideas, it substitutes for the "abstainer" of the third passage a single priest 'of the gods of Heaven and Earth' (*Nihongi*, ed. Shukai, vols. 1 and 4, or the Eng. tr. by W. G. Aston, 1896, pp. 41, 42-47, 140).

We shall now examine the documents relating to worship, especially the old rituals in which the *Imibe* appear (Engishiki, A.D. 927, ed. Dehaen, vol. 8, normal ed. 1908), for seeing what their "abstinence" consisted in. The special function of the *Imibe* was to prepare the offerings for the gods, "avoiding" all impurity in doing so. This is what is given in exact terms in the last lines of the first ritual, relating to the *Teshiki* or "Offering for the Harvest," celebrated at the time of sowing, and also at the end of the fourteenth ritual, recited at the *Ohonoke no matsuri*, or "Festival of the Great Offering of Food," which was a festival of first-fruits (*Nishinana*, "New-tasting"), more solemn, and celebrated only at the succession of the Emperors. On the other hand, in the eighth ritual, concerning the festival of the *Ohotono Hogaki*, or "Lucky-wishing of the Great Palace," we are told that it was the *Imibe* who, with a sacred (ini) axe, set to work on the wood destined for the sacred places (the audience-hall, the Emperor's bathroom, and the shrine of the Gods), and who, with a sacred (ini) mattock, dug out its foundations. On this occasion they also prepared the offerings, brought the Imperial insignia into the great hall, hung up the magic stones in various places (the audience-hall, the Emperor's bathroom, and the shrine of the Gods), and meanwhile observed to ensure by avoiding with great care everything that might cause déshienement.

Apart from the *Imibe*, abstinence was practised also by certain people and on certain occasions.

As a general custom, to prepare himself for a religious festival, the officiating priest had to remain indoors (*i-gowari*), to avoid speaking and making a noise, to eat no food except that cooked on a pure fire (*immu-bi*), in short, to contrive to escape every possible cause of uncleanness. The duration of this abstinence of various kinds, and the importance of the festivals: a month for festivals of the first class, three days for festivals of the second class, and one day for festivals of the third class. During the month preceding the *Ohonoke*, the most important festival of ancient Shinto, a lesser abstinence (**gai-e** was observed, and during the last three days a greater abstinence (**shibai-imi**). The Emperor himself, having to take part personally in the ceremony, had to conform to this rule. When the Emperor Yariaku desired to see the god *Imami*, he was confronted by the apparition of a dreadful serpent, which made him rush, terror-stricken, into the interior of his palace for
ASCETICISM (Jewish).—1. Pre-exilic customs.—Jewish piety, consisting originally of faith and trust in a covenant God, found no room for asceticism as a self-imposed discipline of the soul. Indeed, the terms of the bi-lateral covenant between Jahweh and Israel rendered asceticism impossible. For, according to the solemn transaction on Sinai, Israel became Jahweh's own people in a special manner, pledged henceforth to acknowledge Jahweh as their only God, and to obey Him as revealed to them by Divinely-inspired legislators and prophets. Jahweh in return solemnly promised to remain Israel's God. Moderate prosperity was therefore regarded as His smile on His people, and conformed to the Sinai-worship. 'God is good, and ever ready to pardon. To Him all things were possible 'to walk with Jahweh.' No mutilation of the flesh or renunciation of the world was necessary to arrive at the highest stage of Jahweh-pleasing holiness. And so we find that pre-exilic customs and laws were adverse to asceticism, e.g. mutilation of the body was forbidden (Lv 192, Dt 1424), fasting was only an accomplishment of prayer and confession of sin, and was therefore an act of humiliation before God, and not a self-inflicted chastisement, and, except on the Day of Atonement, was left to the free will of the faithful (1 S 7, Ps 352, Du 9, Ezr 82, Jer 36).

2. Post-exilic legalism.—The re-organization of the community after the Exile laid the foundation of that rigid, torpid legalism from which Judaism has not yet recovered. The leaders of the nation, in their efforts to establish their own authority, the important thing was to avoid impieties (torani) of every kind, that is to say, everything that might be displeasing to the gods, e.g. uncleanness (to begin with personal cleanliness: no one could take part in a religious ceremony without first having washed and put on clean clothes), crimes condemned from the ritualistic point of view (e.g. incest), and lastly, calamities (such as the bite of serpents), because these were then regarded as a Divine punishment for some unknown offence. But also, the civilally forbidden, the sacrifices forbidden to the ancestors of the primitive period, such as eating meat, were not considered to be contrary to this Shinto conception of asceticism.

The psychological evolution of Japanese asceticism can be clearly followed in this series of decrees from the later Chinese. In the first centuries of the Christian era we have the asceticism of primitive peoples, characterized chiefly by its strict asceticism, and once attained, and by careless regard with regard to personal cleanliness, the Japanese people discovered any trace of an ascetic properly so called (cf. the passage from Kojiki which the Nihonmi thought it necessary to correct). On the other hand, there is mentioned as a hereditary priesthood, already well established, this corporate body of the Imperial which we see afterwards in operation in the Engishiki in the 10th cent., and which represents the most typical case of the ascetic practised also by many other people in all circumstances connected with religious rites. But, under this new form which so quickly succeeded the preceding one, Japanese law not only to all the sins committed properly so called, or even other reasons, except as an immediate preparation for certain festivals or as a temporary condition for certain functions; and, above all, far from regarding hith as a virtue, it required absolute cleanliness. Thus the idea of religious purity had undergone a complete transformation; and, in conformity with this instinct for cleanliness which already manifested itself as one of the distinctive features of the national character, physical cleanliness became itself the condition of moral and ritualistic purity.

MICHEL RAYON.
men (Shab. 129a). Theirs was the highest degree of piety (Rosh hash. 17). 'Zeal leads to innocence, innocence to purity, purity to Pharisiasm, Pharisiasm to holiness, holiness to humility, humility to sin-fearing, sin-fearing to asceticism. Asceticism is the gift of the Holy Spirit,' etc. (Sota ix. 15). Their excess of piety was so great that their practice could not be quoted to prove a doubtful halakha (Men. 41a). Only those were admitted to their circle who were learned (Pirg. Abod. ii. 6), and whose youth had never been defiled by sin (Suk. 53a; see also B. Ḥam. 103b).

Most praise-worthy was their cultivation of an even temperament, a forgiving spirit, generosity in money transactions, and almsgiving (Pirg. Abod. 10, 11). Their performance of the negative duties was so far exceeded by an hour's meditation, and accordingly they spent nine hours a day in spiritual exercises (Brach. 32b). In order to sacrifice the more, they occasionally took the Nazirite vow (Ned. 11a). It was probably due to their excessive fasting that they mostly died of enteric diseases, from which they suffered ten or twenty days before their death (Sahil. iii. 9; Gen. Rab. 62).

Since, however, the object of the Hasidim was not mortification of the flesh but nomism, their asceticism is more properly called servitude to asceticism. Starting from the principle that right and wrong were defined by the Law, and that the choice of either was in one's own power (cf., besides Josephus, Pirg. Abod. iii. 19), they had no indwelling sacrifices and no veneration of the Law above the organization of the body, as a peril, or to trace any connexion between cosmic and individual evil. God created the evil inclination (277 יב), and God created the Law as antithete (Kid. 30a). As long as the faithful were occupied with the study of the Law and with the performance of works of mercy, they had the power over their own evil inclination (Abod. zavah, 5b). Perfection could be aimed at by a punctilious attendance to the positive and negative precepts of the Law, without the suppression of the natural feelings. A legalist could therefore indulge in all those pleasures of life of which the Law took no account, provided that indulgence did not interfere with Israel's separation (cf. also Kid. 20a, 'Hallow thyself also in lawful matters'). The body was consecrated, but not sacrificed to asceticism. Self-mutilation and injuries were forbidden (B. Ḥam. 91b).

No scruple might live in a town which did not possess, among other sanitary requisites, a bath, a barber, and a physician (Sanh. 17b). When health required their residence, they sold all their shoes for food; and he who stinted himself was threatened with retribution by Providence (Shab. 129a). To save life, even the life of a newborn infant, all laws except those relating to idolatry, incest, and murder might be suspended (Shab. 128b). To save the life of a woman profaned (Shab. 128b); cf. also Mekh. Kil. This. 1. 'The Sabbath is delivered unto you, not unto the Sabbath'). A hungry invalid might be dieted on ceremonially unclean food. The vine-irrigation of the Sabbath and great festivals, and was not missing from the social board. 'He who abstains from wine is a sinner' (Sanh. 11a). Rab. went so far as to say that in the great Judgment Day man would have to give an account for every lawful pleasure he refused (Jer. Kil. iv.). The same Rabbi on another occasion said, 'Beati possentes qui sedent a se 277 (Sabbath). They are the disciples of Abraham our father enjoy this world, and are heirs of the world to come' (Av. v. 22).

5. Alexandrianism.—While Palestinian Judaism was being developed into a forensic science, that of the Greek diaspora was gradually assumed the appearance of a philosophical system. There
were several agencies at work to produce this effect. The inability to fulfil every precept of the Mosaic Law on foreign soil must have been the first inducement. It even may be possible that the Law, the Stoic tutors, supplied them with the allegoric method, and the Greek language with a metaphysical terminology. As early as pseudo-Aristeas the Jewish delegates to Ptolemy IV. are called philosophers (Kantzeck, AJ 3, 209). According to Aristobulus, the most prominent Greek philosophers and poets derived their knowledge from Moses, who was the inspiration and source of all philosophy. One of the fundamental principles of this religious philosophy was the pessimistic doctrine which led to the corruption of the corruptible body, says the Book of Wisdom, 'presseth down the soul, and the earthly tabernacle weigheth down the mind that misseth upon many things' (9:9). But it is Philo who is the prophet of Alexandriaism. According to him, man's highest aim is a mystic union with the Deity, attained through asceticism and flight from the world, the former as a means of liberating the spirit from the trammels of the flesh, the latter as a safeguard against a relapse into the sensual (de Allegr. ii. 411). Their ascetics, accordingly ascetics and hermits. Enoch was removed from sinful surroundings (de Abr. iii. 352). Abraham's call was accompanied with the command to depart from temptations of the flesh (de Mag. Abr. i. 457). Jacob was the true ascetic who wrestled until he obtained a vision of God (de Spec. i. 618). But the greatest ascetic was Moses, whom self-discipline and continence qualified for the gift of prophecy, and raised to the nearest approach to God (Vita Mos. ii. 145 b). Alexandriaism left no impression on Palestinian Judaism, though some of the Philonic Midrash found its way into the Rabbinic Hagadda. The kohmkheth Yevanim, or Greek philosophy, had no attraction for the Rabbis. The works of Philo would have perished if they had not been preserved by Christians. The first Jew who mentions Philo is A. dei Rossi (1573).

6. Esseniun.—The asceticism of the Essenes, as seen in the short accounts of them by Josephus, Philo, and Pliny, is so strange that we doubt whether the Essenes and their practices have any claim to be seriously considered. Even the character of the sect is obscure. Since no satisfactory derivation of the name exists, we hazard the suggestion that 'Essene' is an ethnic term =Essuites, or Idumeneans, or at least a clan of Idumeans.° This would coincide with Pliny's account of their chief settlement on the western coast of Asia. Pliny and Josephus would also account for Herod's partiality for them, and for the presence of an Essene in his court. Their rejection of animal sacrifice removes them considerably from Palestinian Judaism, in which the sacrificial cult is everything. Their other tenets are so non-Jewish that the conviction is irresistible that the sect was of exotic origin, though on Jewish borderland; that in its gradual development it received accretions from Pythagoreanism, and finally from Alexandriaism; that to replenish its ranks it carrried on a propaganda in the Levant and Syria where the soil was ripe for anti-hedonic movements; and that those Jews who joined the order, and among them chiefly Hasidim and Pharisees, would adopt only those practices of the Essenes which were not inconsistent with the State religion. Thus Onias ha-Maggel, who is supposed to have been an Essene (Ta' an. 19 and tb. Tos. ii. 11), was a married man and offered sacrifices (Ta'an. 23). José b. Joezer the priest, another reputed Essene, was a wealthy man (INba balath, 153). The number of adherents, therefore, cannot have been very considerable. The name 'Essene' is not mentioned in the NT. In the Talmud the allusions to them are scanty and doubtful, and under the appellations of Patishem (in ArLn. 'Patishem', i.e. 'secret'), Hekhaim ('silent'), Mysteries', Bonaim ('builders'), and Tobbi Shakruth (\'morning bathers\'). Perhaps the Assur Misrosh ('men of work'), who are mentioned on a par with the Hasidim (Sifte, 51; Sofer 15), were Essene ascetics, mutatis mutandis being pure Hebrew for '

7. Modern Judaism.—The teaching of the Talmud is codified in the Turim and Shulkhan Arukh, which is still binding on Judaism. We look in vain for a theory of asceticism in the code. The Jewish devotional literature of the Middle Ages shows indeed a tendency to asceticism. Foremost among these is Bahya's hoboth ha-lebathoth (\'Duties of the Heart\'), which is a Hebrew translation from the original Arabic made by Ibn Tibbon (1161-1180), and is as popular among orthodox Jews as Thomas à Kempis' 'Imitation of the Lord' according to Christians. So are the Shakare Teshuboth (\'Gates of Repentance\') and Sheker ha-Jiruh (\'the Book of Fear\'), by Jonah Geroniolo (\'1263). But this is due mainly to the interest of the Kabbalists, who had access to Moslem sources, e.g. the Brühl, Jahrb. v. and vi. 71-93. Maimonides' views are more in accordance with the Jewish spirit. In his Mishne Torah, Deoth iii. 1 and vi. 1, he points out that asceticism is not only unnecessary but even sinful. Judah Halevi, another prominent philosopher, in the Kuzari (iii. 1 and 4), states: \'The prevalent custom among us is not to separate oneself from the world, nor to despise life ... but to love the world and length of life.' On the asceticism of the Kabbalists and Kabbalistic Hasidim see KABBALISM, \'HAUSIDISM, also ESSEES, KARAITES, PHARISEES, and sects (Jewish).

ASCETICISM (Muslim).—The very copious materials which are available in Arabic, Persian, and Turkish literature for the study of Muslim asceticism, which hitherto received little attention from European scholars, and some of which have not been before it will be possible to give an adequate survey of the subject. This article can only attempt to sketch the main lines of development, and to illustrate the salient features of each. The main periods are (1) the period of Muhammad; (2) Early Muslim and Sufi asceticism; (3) Development of Sufi asceticism in the Middle Ages. (a) Monastic institutions. (b) Sufic systems. (c) Philosophical asceticism. (d) Conclusion: the Jewish orders. 1. Introduction: the teaching of Muhammad.—The religious ideas of the pagan Arabs were vague and scanty. Engrossed in the toils and pleasures of the present life, they seldom thought of the future, and the notion of preparing themselves for a better life beyond the grave had not entered their minds. It was Christianity, not ecclesiastical, but of an irregular and unorthodox type, that sowed the first seeds of asceticism in Arabia before the advent of Muhammad, and continued to exert a dominating influence upon its development in the Muslim empire during the early centuries. In pre-Islamic times Christianity was diffused among the tribes of North Arabia, and many Arabs had at least a superficial knowledge of its rites and doctrines (Wollhausen, Relig., 229). But, however, even in this ancient, pietistic spirit, the Bedawin were impressed by the Christian monk (\'rabib\'), whose lamp, burning in his lonely
ASCETICISM (Muslim)
cell, was a welcome sight to travellers in the darkness of the desert. These monks, together with occasional wandering hermits, offered to the heathen Arabs a model of ascetic life, and inspired certain individuals, known as ḥanifs, to reject idolatry, profess monotheism, and adopt ascetic practices, such as the wearing of sackcloth and the abstention from particular kinds of food. There can be little doubt that the ḥanifs stimulated Muhammad, with whom most of them were contemporaries; two, in fact, were elected as his followers by blood or marriage (cf. Sir Charles Lyall, *The words "Hanif" and "Muslim," in* J.L.A.S, 1903, p. 771 ff.). The influence of Christianity may serve to explain ascetic tendencies which appeared in the oldest form of Islam—e.g. Muhammad and his family converted first from Judaism. This lasted only threw into stronger relief the social, active, and aggressive spirit of Islam as contrasted with monastic quietism and renunciation. Apart from general exhortations to recognize the vanity of earthly joys, and to put faith in good works rather than in the gifts of fortune, the Qur'an contains few passages that can fairly be interpreted in a specifically ascetic sense. *Pasting* is enjoined as a penance for certain ritual and legal offences (Qur. ii. 192, 237, iv. 94, v. 91, lvii. 5); *penitence*, which was probably most prominent during the infancy of the creed, was evil into good (xxv. 70); *prayer* restrains a man from committing sin (xxix. 44); the doctrine of self-purification, especially by means of almsgiving (zakāt), is preached in Sūras of the Meccan period: "He that purifies himself (tazakkūl) hath attained felicity" (lvii. 14, cf. *Grégoire*, *Observations*, 1904, pt. ii. p. 113). The root *ZHD* (to renounce), from which is derived zakāt, the ordinary word for Muslim asceticism, occurs in the Qur'an only once, and is applied reproachfully to those who sold Joseph and the one which the Prophet himself pronounced as *tabattul* ("detachment from the world"), is found (lxxix. 8) among Divinely ordained acts of devotion. Another ancient epithet of ascetics is *sāwī*, fem. *sāwhā* (literally, 'wandurers'); these are mentioned in Sūras 115, lvii. 5. It need scarcely be said that Muhammadan writers on asceticism interpret the Qur'ān in the light of their own theories, and import a technical meaning into many words, e.g. *dhikr* and *tawakkul*, which the Prophet used in the obvious signification.

2. *Early Muslim and Sufi asceticism.*—According to the Qur'an (lvii. 27), *monasticism (rekhabānīya*) was an innovation in Christianity itself, and Muhammad in a famous sentence declared that it was no part of Islam. Nevertheless, some instances of a tendency in this direction are recorded by early Muslim tradition (see Goldzihier, *De l'Ascétisme aux premiers temps de l'Islam,* in *RHR*, vol. xxviii. p. 314 ff.), which invariably represents Muhammad as condemning such acts of penance and mortification, whereas, at a later time, asceticism was widespread. The Prophet did, however, evince a high regard for the monks. Goldzihier has collected several examples of persons contemporary with Muhammad, or nearly so, who did penance for their sins. Thus Bahā' b. Dhawr retired into the mountains in the neighbourhood of Medina, clad himself in hair-cloth, and tied his hands behind his back with iron chains, crying repeatedly: 'O my God and my Lord! see Bahā', bound and shackled, confessing his sins.' Abū Labāba, in remorse for an act of prevarication (Ḥin Hishām, 626), fastened himself to a pillar in the mosque at Medina, and remained in that position until he was assured that God had pardoned him. Other forms of penance were associated with the pilgrimage to Mecca. It was not unusual for pilgrims to go on foot and without shoes, or, while circumambulating the Ka'bah, to let themselves be led like a camel by means of a ring which was inserted in the nose (cf. Goldzihier, in *Vienna Oriental Journal*, vol. xiii. p. 36, n. 9). We hear of pilgrims who had taken a vow of silence: this was denounced as a heathen custom by the khalif Aḥbāb Bakr.

The first century of Islam was singularly favourable to the growth of asceticism. The long and bloody civil wars, the fierce fanaticism of the political sects, the rapidly increasing laxity of morals, the spectacle of a military despotism enforcing its will upon devout Muslims, and openly rejecting every principle of the ideal theocracy which they wished to restore—all these circumstances contributed to excite in men's minds a dread of man and the feeling that this world was nothing but a rope to the world to come. Hence arose a powerful and wide-spread ascetic movement, originally orthodox in character, but gradually developing mystical tendencies, and passing almost imperceptibly into the old form of Sufism. During the Umayyad period (A.D. 661–750) this movement continued to bear a distinctly orthodox stamp, and derived its leaders, if not its chief strength, from the Pictists, including Qur'ān-reciters (gūrā), students of the hadith, and learned divines.

Sufism is represented by the personality of the theological Hasan of Basra (ob. 728 A.D.), who may be regarded as the founder of the Bas'rite sect of ascetics and mystics (cf. Qut al-qulūb, Cairo, 1310 A.H., i. 129 and 166). His sayings, and those of the early Muslims in general, leave no doubt that the mainspring of their asceticism was the intense terror produced by the vivid descriptions in the Qur'an of the Day of Judgment, and the torture of Hell, and (2) a morbid consciousness of sin, which impelled them to spend their lives in penance and devotion. One of the most famous of Sufyan ath-Thauri (ob. 777–778 A.D.), *enables any one to support the burden of devotion* (Ḥilyat al-a'lyiyā, i. 74a). *Suppose,* said Bishr b. Mansūr to Atā as-Sulaim, *that a blazing fire were kindled, and presented to me, which but entered it should be saved!* 'I should tremble,' Atā replied, *lest my joy might cause me to expire before I reached it' (ib. i. 32b). Many stories are told of persons who died of fear on hearing a preacher describe the anguish that awaits the wicked after the Resurrection, or who wept so violently from terror and remorse that they swooned away. The slightest infraction of the religious law required a long and painful expiation. Kahun b. al-Ḥasan is said to have wept for forty years because he once took a piece of clay from a neighbour's wall. These are a class of ascetics called 'the Weepers' (al-Bakdā'īn), a term probably borrowed from Christian monasticism (Abū 1-Maḥāsin, ed. Juybūl, i. 390, i. 5; cf. Thomas of Margia, *The Book of the Governors*, ed. J. Budge, vol. i. Ch. 9). This connexion the pervading influence of Christianity on the early period of Muslim asceticism should not be overlooked (see von Kremer, *Herrschende Ideen*, 32 ff., 57 ff.; Goldzihier, *RHR*, vol. xxviii. pp. 314–324, and *Materialien zur Entwicklungsgeschichte des Šūlismus*, in *Festgabe* for
ASCETICISM (Muslim)

Oriental Journal, vol. xiii. p. 35 ff.). Not only can the dress, vows of silence, and many other practices a Muslim ascetic is traced to this source, but in the oldest 'Sufi biographies, besides numerous anecdotes of the Christian monk (rishb), who from his cell or pillar gives instruction and advice to wandering Muslim devotees, we find unmistakable proof that the doctrines of the latter were developed in a large measure out of the Jewish, and seem to be based on Jewish and Christian traditions. Quotations from the Pentateuch and the Gospels frequently occur among the sayings attributed to Muhammadan saints; and Biblical stories, relating from the mouths of the prophets, were, as far as we can see, the popular collection entitled Isláldh, which is said to have been compiled by 'Abd al-Munabbih (ob. 728 A.D.), and the still extant Qisas al-Anbâyâ ("Tales of the Prophets"), by Thalâbi (ob. 1056 A.D.). While, as has been stated, many of the early Muslim ascetics belonged to the learned class, lived in towns, and did not exclude themselves from social intercourse and public life, the movement had its roots among the common folk, of whom a great number embraced with enthusiasm the ideal of unworldliness. The dress was held up as the best means of attaining this end, by abstaining from all human society, seeking shelter in caves and cemeteries, or roaming in solitary places, deserts, mountains, and on the shore. Of such wanderers 'Abd al-Adham (ob. 770 A.D.) is a type, although, unlike others, he was born a Muslim. When, in the 16th century, Prince of Bakhk, he clad himself in garments of wool, left his kingdom, and roamed through Syria, earning a scanty livelihood by gardening and other kinds of manual labour. On being asked why he shunned the sight of men, he replied, "I have escaped my religion to my bosom, and am fleeing with it from town to town and from peak to peak. All who see me think that I am a camel-driver (read jaumal for jamalu) or a madman. This I do, that perchance I may save my religion from Satan, and bring my faith safely forth through the gate of death" (Thaâl, al-Anbât, ed. Nicholson, t. 95. 15 f.). Others, again, sought refuge from worldly temptations in the 'Sufi monasteries which began to be founded before the close of the 2nd cent. A.H. Women took an active part in the movement, especially on the ascetical side (see 'SUFIISM). It had no organization, no system of doctrine, but is characterized, as Goldziher has observed (Vienna Orient. Journ. vol. xiii. p. 37), by the one-sided elaboration of certain Qur'ânic ideas of life, with a corresponding neglect of other elements equally important in the eyes of orthodox Muhammadans. In the early period, asceticism can hardly be separated from Sufism; and even when the distinction became sharp (in the 3rd cent. of Islam), many who called themselves 'Sufis were really little more than ascetics with a vein of mysticism. It will be convenient, therefore, to regard the early 'Sufis as in some degree belonging to the movement under consideration, leaving the monastic institutions and organized asceticism of a later period to be treated in the following section. We shall now deal with some practices and theories which illustrate the general character of ancient Muslim asceticism.

(a) Dress.—Garments of coarse wool (shág) were a mark of asceticism in pre-Islamic times; in this respect the Arabs owed the Christian hermits ('Nôdéke, in ZDMG, vol. xlvi. p. 47). Similar garments were often worn by Muslim ascetics; hence the name 'Sufi,' which came into use before 200 A.H. A synonymous epithet of rarer occurrence is 'Musulmân,' which is derived from the garment of hair-cloth called mish, plural misr, meaning (cf. Hilgul, ii. 80; Nufurât al-Alâ', Calenta, 1859, Nos. 89 and 90). Ascetics of both sexes are described as wearing a snood (jubba or midâqâ) of wool; women sometimes added a head-covering and veil (ihtilâf) of the same material. Slâyân ath-Thaurî (6), 777-778 A.D.) condemned this as being an innovation (inda), others on the ground that it was borrowed from Christianity or savoured of ostentation (Hilgul, i. 90°; Iqmd, Cairo, 1299 A.H., iii. 345.); Scárat, Lâwâqîf, 1299 A.H., iii. 345.; Bistâri, ii. 47.) declared that a woolen garment might be worn for economy, or as a travelling dress, but not for religious purposes (Hilgul, ii. 171°). In another place (ib. ii. 167°) he allows the adept, whose heart is purged of all the passions, to wear anything. "One who mantles in the signs of asceticism," but says that it is safer for him to wear "two white garments" like ordinary people, so as not to excite remark. Garments of hair (shârîf) are often mentioned; they were sometimes worn under a rich dress, e.g. by 'Abd al-Sâdiq (Lâwâqîf, i. 42. 20 f.). Some petasists were recognized by their long cloaks (bernes, pl. burtînîs; cf. Iqmd, ii. 291. 7). Usâl al-Ghulâm (ob. circa 790 A.D.) wore two dust-coloured garments one as a rubâ, the other as an izâr—so that he could look like a poacher. Bishâl al-Askî (ob. 841-842 A.D.), the well-known ascetic of Baghdad, went to market "wearing a shabby fur (jaro), a short boot (bâht), and a very fine izâr" (ib. ii. 77°). All this shows that the term "silk" was not confined to the use of fine silk, but that ascetics were not invariably distinguished by a peculiar dress. Concerning the patched frocks (nawqârût), which in course of time superseded the woolen garb of the 'Sufis, see art. 'SUFIISM.

(b) Food and fasting.—Many ascetics attached great importance to eating only what was lawful (kâdî). Thus 'Abd al-Adham said, 'Let your food be good (tayyib), and you need not pray by night or fast by day' (Hilgul, i. 199°); and he used to eat clay and earth when he could not get anything above suspicion. So says 'Abd al-Sâdiq (ib. 587 A.D.) was celebrated for the purity of his diet (ib. ii. 47°); he wished to eat no food that entailed either gratitude to man or chastisement from God, but confessed that he found this impossible (ib. ii. 54°). On the other hand, some of these ascetics have many instances of holy men who were miraculously guarded from eating "dubious" viands, e.g. such as came from a wedding-feast or had passed through the hands of a government official. It is clear, therefore, that "not eating" (ob. 577 A.D.) that whenever he stretched out his hand to take any food of this sort, he was warned by the twitching of a vein in the tip of one of his fingers (Qushairî, Cairo, 1318 A.H., p. 64, l. 21). 'Abd al-Adham advised warm bread with olive oil as the best food for ascetics (Hilgul, i. 199°); others favoured bread and salt, gruel made of barley-meal, etc. Some abstained from meat altogether, but this does not seem to have been usual; it was, however, eaten sparingly. Vows of alms-giving from particular kinds of food, e.g. carrots or dates, were often made, and were supposed to confer a higher spiritual rank (Lâwâqîf, i. 61. 17 f.). Besides the obligatory fast of Ramadan, voluntary fasts of varying length and severity form an indispensable feature of Muslim asceticism. Their purpose was to mortify the flesh and illuminate the spirit, to procure wisdom and prevent sin. 'He who masters his belly,' said 'Abd al-Wâlid b. Zaid (ob. 593 A.D.), 'masters his religion and masters all the virtues' (Hilgul, i. 16°). Bayzâd al-Ishârî said that he attained to the sublime by means of a hung belly and a naked body (Qushairî, 16. 10). Said b. 'Abdallah at- Tustari (ob. 896 A.D.) was famous for his fasts.
ASCETICISM (Muslim)

He held that food should be eaten only to preserve life and reason, not to give strength, and that incapacity to perform one's devotions through weakness arising from want of food was better than the performance of them by one who had eaten his fill (Ihya‘, Cairo, 1280 A.H., iii. 871). He observed to his likhis in a list of those who had fasted forty consecutive days (Ihya‘, iii. 89). Later, Şafis surpassed his achievements in this line, for, according to Aih ‘Uthman’s account (Qushairi, 78, 31), and his name is included by Ghazâli in a material sense; the zâhid abstained from food, sleep, society, and all harmless pleasures. If a man possessed only one shirt, he might count on being admitted to paradise before his more deserving neighbour who had two (Tadh. al-‘a‘atyâ, i. 47, last line and foll.). But since the ascetics naturally restricted halâl to the narrowest possible limits, and condemned everything else as superfluous, it was but a short step to the view that ‘nothing in the world is lawful, and therefore there is no true renunciation in renouncing the world’ (Qushairi, 67, 11). Thus what Sayyid ‘Uthman’s followers did of the early Sâfs exhibit a strong bias toward a spirit... conception of zâhid. Not that they fasted less, kept fewer vigils, or relaxed their austerities, but they realized that such acts could have no value except as the expression of an inward feeling. Renunciation exists only in the heart (Illiyat, ii. 170); it is the abandonment of all that diverts one from God (Qushairi, 67, 4), and especially the abandonment of ‘self.’ Self-abnegation, in its practical aspects, which alone concern us here, may be described, as the poor man (tâwakkul) or quietism (ridâd), as it is closely connected with the doctrine of ‘poverty’ (fayş).

Most Muhâammadan treatises on Sâfism allude to the controversy which arose at an early period as to the superiority of poverty or riches (see, e.g., the ed. of M. Kâshif al-Mahri, p. 181, and of A. al-qulûb, printed on the margins of Qit al-qulûb, ii. 161. 15 ff.). It was debated whether the rich man who was blessed with wealth and who rendered thanks to God for it did not represent a higher ideal than the poor man who endured want uncomplainingly. Some argued that wealth (ghând), being an attribute of God, should be preferred to poverty, which is an attribute of man, and cited the Prophet’s saying: ‘The upper hand is better than the lower;’ i.e., ‘to give is better than to receive.’ The leading Sâfs, with a few exceptions, were declared in favour of poverty, quoting such traditions as these: ‘O God, let me live poor, and die poor, and rise from the dead amongst the poor;’ ‘the poor of my people will enter Paradise five hundred years before the rich;’ ‘poverty is my pride’ (al-fuqru, ‘abârî). What poverty meant may be gathered from a saying of Sâri as-Sa‘a‘qi (ob. 867 A.D.): ‘Do not take anything from any one, nor ask any thing of any one, nor have with you anything which you can give to any one’ (Illiyat, ii. 244). It was even held that the prophet had based on the theory of tawakkul (‘trust in God’), which the early Sâfs carried to extreme lengths (see Goldziher’s investigation of the subject in the Vienna Orient. Journ. vol. xiii. pp. 41–56). They define tawakkul as renunciation of personal initiative and volition, leaving all to God, being entirely passive, like a corpse in the hands of the washer who prepares it for burial.

Applying this doctrine to matters of practical life, the true muwâzakkul could not make any effort, direct or indirect, to obtain the means of living. He could not admit any thought of providing for the narrow. He could not beg, work for hire, or ply any trade or handicraft, but had to depend for his daily bread on what God, ‘to whom belong the treasures of earth and heaven,’ sent him as a gift from Himself, or delivered to him by the hands of his fellow-creatures. He was then said to gain his livelihood mina l’ fidâh, i.e. through an ‘opening’ which God made for him. The ancient Sâfs, who commonly adhered to these principles and hence are often called al-mutawakkul, did not think to be influenced by Christian teaching (Mt 6:25–34, 1K 23–24; see Goldziher, loc. cit. p. 45). In later times, when the theory had broken down, the same term was still used to denote a class of Sâfs who wandered to and fro, living ‘on trust’ (l’ tawakkul). It
ASCETICISM (Muslim)

was customary for such men to make the pilgrim-age to Mecca 'without provision' (bild sāid), and in some cases they considered their vow of tawakkul to have been violated if they extracted a thorn from their feet or cried out for help on falling into a well. But, of course, the facts of nature were too strong for the doctrinaires. Living 'on trust,' if strictly interpreted, involved a serious risk of death from hunger. That provision was not perished in this way is likely enough, and may possibly have evoked the assertion, which is ascribed to Sufyān ath-Thaurī (Hilāyīt, i. 819), that those who refuse to beg, and die of hunger in consequence, go to Paradise. Generally the Sufis themselves came to the opinion that tawakkul was not invalidated by seeking a livelihood (tabassub).

A similar conclusion was reached as regards the question whether a mutawakkil might take medicine or not; but there were always individuals who refused to compromise with their conscience. Goldziher (loc. cit. p. 53) mentions the existence in Persia, in the 4th cent. A.H., of a numerous sect who rejected medical aid. Their leader, Abū l-Ḥaibār B. Bābī, was a Christian physician, and, like modern Christian Scientists, he recommended his patients to trust in God. It is curious that a theory which forbade begging, or allowed it only as a last resource, should actually have produced swarms of able-bodied mendicants who made their tawakkul an excuse for living on charity. The sectaries of the Middle Ages.—(a) Monastic institutions.—The Prophet's saying, 'There is no monasticism in Islam,' was not falsified, on any large scale at least, until several centuries had elapsed. Most of the early Sufis led secluded lives with a few friends and companions of the same way of thinking. Many of them were married, and some had the full legal complement of wives, like Ḥātim al-Asamm of Balkh, who died in A.D. 831 (Hilāyīt, i. 2139). Bishr al-Ḥāfi, although himself unmarried, is said to have acknowledged that Ahmad b. Ḥunblā, who had followed the same apportioning of marriage, was his superior in this respect (Qīṭ al-qulāb, ii. 241) Nevertheless, the advocates of celibacy—for they did not always practise what they preached—soon began to make themselves heard. Ḥasan of Bāṣra said that his father would rather see his son die than to be a Christian who married. Would he be willing to marry in the world, he does not occupy himself with wife and child (Lauwīq, i. 38. 10). According to Rībāb b. Amr al-Qaṣī, no one attains the rank of the elect (ṣiddāqīm) until he leaves his wife a widow and his children fatherless (ib. i. 11). Abū al-Darrār, in his marriage as a backsiding and a concession to worldliness; it might be the better state for those who could endure its cares, but only the single man (wāḥid) tasted the full sweetness of devotion, and was able to give his whole heart to God (Qīṭ al-qulāb, ii. 247). These views, conflicting with the ancient Muslim doctrine that a man's duties towards his family are quite as important as those which concern his faith, never gained universal acceptance. Celibacy is seldom demanded by Muhammadan religious orders as a condition of membership.

We have but little information as to the origin and growth of monasticism in the early period of Islam. The first monastery (ḥānaqāḥ) for Sūfis is said to have been founded at Ramūlah in Palestine by a Christian convert (Najštābī, 34), apparently before A.D. 800. Sitting in a ḥanāqāḥ was condemned, as equivalent to begging, by Abū Turāb an-Nakhsibānī, who died in A.D. 879 (Hilāyīt, ii. 2229). The year 290 A.H. (=A.D. 815) is named in two fictitious traditions (Qīṭ al-qulāb, ii. 229) as the date when all Sufis, or celibacy which belonged to all Muslims, and would be adopted by the best men amongst them; and this prophecy after the event seems to mark the beginning of Muslim monasticism with approximate correctness. It is probable from the development of corporatized monastic institutions throughout the Muhammadan empire belongs to a much later period. In reading the older works on Sūfism, e.g., the Qūt al-qulāb, the Hilāyīt al-mulāyīt, and the Risālā of Qushairī (all of which were written before A.D. 1590), one is struck by the absence of any reference to monasteries; yet the celebrated Sūfis of the 3rd and 4th cents. A.H. generally gathered round them a circle of disciples, who would naturally have dwelt in religious houses, if such had been available. As late as 1414, it is erroneously asserted by De Sacy in Journal des Savants, 1821, p. 725, and after him by Dozy and von Kremmer), is described as the founder of Sūfi monasticism and rules of discipline. During the next two hundred years (A.D. 1550-1590) the system was very gradually organized and came under various Dervish orders—Adawis, Qādiris, Rīfā'is, Mevlevis, etc.—which arose in rapid succession.

The well-known treatise on Sufism, entitled Ašırār al-Mulārīf, by Shihāb ad-Dīn ‛Umar as-Suhrawardi (ib. 1294 A.D.), contains interesting details concerning Muslim monastic life (see especially chapters 12-18 and 48-52). Speaking of the relation between the Shāfi‘ and the disciple (muridor), Suhrawardi asserts that the latter becomes part of the Shāfi‘, just as in natural generation the son is part of the father. 'This,' he says, 'is a spiritual birth, according to the words of Jesus: 'Except a man be born again, he cannot see the kingdom of God' (Jn 3). The disciple was usually invested by the Shāfi‘ with a patched frock (kūra) as a sign that he submitted absolutely to the Shāfi‘ as a man in this world. In this ceremony the hand of the Shāfi‘ was considered to represent the hand of the Prophet. While the disciple remained in constant association with the Shāfi‘ and under his care, he passed through the time of 'sucking' (fīdām) when he may not depart without leave, but to wait until the Shāfi‘ decided that the moment of 'weaning' (fīdām) had arrived. 'The ascetics of old,' Suhrawardi continues, 'desired solace on account of the dangers to which society exposed them, but Sūfis who live in convents overcome these dangers by the strength of their devotion and the soundness of their spiritual state. They are as one body animated by the single aim of dwelling together in complete accord both outwardly and inwardly; this is a unique characteristic which distinguishes them from every other sect in Islam.' The convent (ribāb) comprised men of all ages, and consisted of private cells (ziwiyas) as well as an assembly-room (baat al-jum‘a). The old men, Suhrawardi thinks, should be allowed to stay in their cells, where they can sleep and rest and do as they please; but, for disciplinary reasons, it is advisable that the young should sit in the assembly-room, holding their breath and keeping their senses under control; if, however, a novice is disturbed by talking and noise, he should be sent to wait in solitude in an apartment, that his attention may not be distracted, while the Shāfi‘ himself maintains order in the assembly-room. Novices should be em-
played in ‘service’ (badus) and sent to help their fellows, were employed in devotional and contemplative practices, and who alone are excused from menial tasks. Service is a pious work, but the Süfis do not approve of asking any one who is not a Süfi to serve them; for ‘they are men, and things proceed from them, in the course of human nature, which are not virtuous and religious means,’ and not entitled to partake of it who were so occupied with God as not to be capable of earning their livelihood, or who were excused on the score of age, or who were authorized by the Shaikh to receive it in return for their labour. Unless the terms of the endowment necessitated a certain indulgence, it was a universal rule in Süfi asceticism that no idler should eat the food of the convent. Ibn Shihabi recommends a forty days’ seclusion (rubū+bis) for prayer and fasting once a year. Süfis, he insists, ‘are in the ascetic and ethical condition of purification, it will not be sought on account of the visions and ecstasies which sometimes result from it. The disciple who goes into retirement (behb) should strip himself of the world and discard all that he possesses, and, after seeing that his parents and relatives are provided for, pray the prayers and repent of his sins with weeping and humility. He ought not to leave his cell except for the public and Friday prayers (ghalib al-fatiha wa-ghalib al-jum‘a); on these occasions he should continue his dhikr and pay as little attention as possible to what he hears and see, lest he may fall into temptation. During his retirement, he should perform ablutions regularly, and sleep only when overpowered by fatigue, and never cease from repeating his dhikr until he grows weary; then he must con it over in his heart, without any movement of his tongue (see `Anār-i, chs. 26-28).

(6) Ascetic systems.—European writers on Süfism are often inclined to identify it with pantheism and to lay undue stress on its transcendental flights, while they ignore its ascetic and ethical condition. This is the ‘path’ (tariqa) which every Süfi must traverse before he can hope to reach the goal of his journey, and which is expanded at great length in the Qat al-galibah by Abū Tālib Al-Makki (ob. 845) and by Abu`l-Husayn al-Shaikh Ghazali. All systems of Süfi asceticism are based on the same materials; hence it is not surprising that one is very like another externally; however much they may diverge in spirit according to the author’s individual point of view. It may be said to have exerted an influence not numerous here, but their broad outlines can be exhibited if we briefly examine the systematic treatment of the subject by Ghazali (ob. 1111 A.D.) in his Ihyā‘, which is a classical text-book of orthodox Süfism. Ghazali does not address himself to aspirants; his aim is the revivification (ihtiyat) of the Muhammadan religion, and he has no desire to make every Muslim a monk. Consequently, in the first half of the work he deals with the ordinary religious duties of purification, prayer, almsgiving, fasting, and pilgrimage; then he introduces acts of devotion, such as recitation of the Qur’an, praise of God (dhikr), supplication (du‘a‘), and vigils; and discusses exhaustively the relation of religion to social life. Many of these topics, though bearing a wider application, belong to the preliminary stage—i.e., ‘bā‘ith (chaire) or, as is technically named—of Süfi asceticism, but in the third and fourth volumes of the Ihyā‘ Ghazali unfolds the method adopted by the Süfis for attaining spiritual perfection. This method falls into two parts, which may be called purgative and unitive, or, what is more, as each of the two respective stages is being pursued respectively: during the purgative, the latter leads to union with God by the acquisition of virtues and faculties. The principles of the purgative way are summarized as follows (Ihyā‘, iii. 74, 153, &c.):—Before entering the ascetic practice, one must be induced to turn his mind to religion by supposing that he were to leave this world, and to think of things: wealth, reputation, mechanical conformity (taqdis), and sin. He will then need a Shaikh to direct him. The Shaikh, to whom he must cling ‘like a blind man on the bank of a river to his guide,’ will provide him with four weapons against the assaults of Satan, viz., solitude, silence, fasting, and sleeplessness. Now begins what is generally a long inward struggle with the lusts and passions. When these have been vanquished, the novice should retire to his cell and perform only the obligatory acts of religion, and not engage in some dhikr, such as Allah! Allah! or Subhānallāh! (‘Glory to God!’), until the essential meaning of it has filled his heart. He must strive to banish every thought that is not of God, and to repel the evil suggestions with which Satan plies him. He must not only keep his mindoccupied in contemplating the attributes of God, and to be able to say that he is a servant of God and his heart. It is a Shaikh to the best of his power to lead the aspirant to God, and to determine his grade, and to guide him; the Shaikh is the guide, and it is his function to indicate the ascetic way. In this case (Ihyā‘, iii. 78-392), finally, in the fourth volume of his work, he expounds the unitive way under the following heads: (1) repentance, (2) submission, patience and faith, (3) the discipline of the will, (4) abstinence from wealth and renunciation, (5) unification (tawhīd) and trust in God, (6) love, desire, intimacy, and acquiescence, (7) attention, sincerity, and truth, (8) contemplation (warraqab) and self-examination (warakār), (9) reflection (turafkhur), (10) meditation on death and what comes after it. Similar scales of ascent occur in every system of Süfi theosophy (see SÜFISM), and are possibly of Buddhist origin (cf. Goldziher, in JEA, 1904, p. 139 ff.). At any rate, Buddhism can be shown to have exercised a considerable influence on the practice and theory of medieval Muslim asceticism; e.g. the use of rosaries and the custom of holding the breath were borrowed from Buddhist monks, whose example must also have powerfully affected the monastic ideals and institutions that reached a high degree of development in this period (cf. Goldziher, loc. cit. p. 125 ff.; von Kremers, Cultuurgesch. Streifzüge, p. 45 ff.).

4. Philosophical asceticism.—Ibn Shihabi (Antw. iv. 194, &c.) distinguishes the asceticism of the mystics, which illustrate the mystical and contemplative practice and contemplation of the, though practised by philosophers and materialists with the object of purifying the senses and thus facilitating the acquisition of the intellectual sciences: the latter, he says, leads to heresy. It assumes its
most interesting form in the so-called zindiqs, a name given by the Muslims to various kinds of heresiarchs whom they suspected of being a nomad in disguise, and they might have urged, with truth, that the prevailing tone of his poetry is ethical and reflectively rather than religious. He sings the praises of asceticism, which he had adopted professionally in consequence, it is said, of a disappointment in love. The charge of heresy was brought against another jealous and prolific orientalist, Al-Ma‘arri (see MA‘ARRI). He too retired from a world where he had found only sorrow and failure. His asceticism, however, presents some peculiar features which it is possible, though hardly probable (cf. IEAS, 1902, p. 291), that he borrowed from the Indian Jains. He held that it was wrong to kill or injure any living creature, even a flea. His diet was strictly vegetarian; he abstained from fish and eggs as well as milk and honey. He wore a dress of unbleached wool and wooden shoes, on the ground that no animal should be slaughtered to make leather of its skin. His celibacy was not monastic in character, but was the result of his belief that the best fate is non-existence, and that one ought to shrink from multiplying the misery of life. To pretend that such opinions and practices are typical of the moral philosophers of Islam would be unjust to Ma‘arri’s eccentric and original genius. He resembled some of them in making asceticism an affair of the conscience and the understanding, an ingredient of the highest virtue instead of a means to it. Other things like the Iwán as-Safa, or ‘Brothers of Purity,’ inculcate obedience to the Divine world-law and love of God, which ‘gains in this life serenity of soul, freedom of heart, and peace with the whole world, and in the life to come access to Eternal Light.’

5. Conclusion: the Dervish orders. — As was said at the outset, this article is limited in scope, and deals only with the origin and main developments of Muslim asceticism. Nearly every Muhammadan sect could contribute something to a detailed history of the subject, and there are abundant Oriental sources for such a work, but in the present state of our knowledge a certain sketchiness is unavoidable. European writers have confined their researches almost exclusively to the modern Dervish orders, in which Sufi asceticism and mysticism are crucial elements. It is much more correct to say that Sufi mysticism predated the fourteenth century than to say that it was created by it. Some were founded before the Mongol Invasion (A.D. 1258), but since the 14th cent. they have branched out in all directions from Senegal in the west to China in the east. While losing their doctrine on the one hand, and practically all the mysterious arts of the Khamsa on the other, they have evolved a complex organization, extended the old practices, and introduced new ones. In some cases, too, their spirit and aims have been altered by the influence of environment and political circumstances. As regards the ascetic training which they impose on their members, naturally each order has its own rules, but they generally agree in the following points: (1) an elaborate ceremony of initiation, which is sometimes preceded by a long and arduous apprenticeship; (2) the wearing of a peculiar garb of a peculiar garment; (3) the neophyte, a severe discipline of solitude, prayer, fasting and other austerities; (4) the inordinate use of dhikr, with the help of music, dancing, and diverse physical stimulants, to excite ecstasy; (5) belief in extraordinary spiritual powers vouchsafed to adepts and fraudulent monastic persons. Which they display for cheating live cows, charming snakes, predicting future events, etc.; (6) veneration, approaching to delusion, of the Shaikh, or head of the order. If it is true that in most of their practices and beliefs the modern Dervishes had already been anticipated by the Sufis of the Middle Ages, from whom they are lineally descended, it is no less true that they have vulgarized Sufism by surrounding it with a network of mechanical routine, by exalting its phantasmagoria at the expense of its theosophy, and by preoccupation on their part with the performance of an orgiastic exercise. See article DERVISH.

REVSOY A. NICHOLSON.

ASCETICISM (Persian).—An essential part of the meaning of the Zarathushtrian reform, viz. the care of cattle and pasture land, is given in ‘The Complaint of the Soul of the King’ in the Ahumadaitha Gathá, Yasht xvi. 89. This zeal for economics inseparable connected with the now faith, the Prophet in his religion placed a distinct value on earthly goods and productive work, and introduced that strongly anti-ascetic tendency which separates the Avesta so widely from the higher Indian religion.

1. The Avesta moral code is not only negative (‘Thou shalt not,’ etc.), but also contains positive duties. In its origin it is the ethics of cattle-breeding. Zarathushtra himself was the first ‘meadow-keeping cattle reaper’ (ciyatu-zyaya, Yasht xiii. 89), as well as the first priest and the first warrior. The Ghoshty do not know any but pasture land. By the time of the later Avesta agriculture has appeared. Vendidad iii. mentions the five places which are the happiest on this earth: (1) where one of the faithful is worshipping; (2) where one of the faithful erects a house with a priest therein, with offering and all good herds, and where all these treasures of life are prospering; (3) where most corn and fruit trees are cultivated, and where water is led into a poorly watered soil (a later glosser has added, ‘and where dryness is brought to a watery soil,’ ditching being later than artificial irrigation); (4) where flocks and herds increase most; and (5) where flocks and herds yield most urine. The life-long fight against the demons means cultivating the ground, sheltering the plants from drought and heat, and keeping them from being conquered from the wild. Activity has always been one of the first principles of Zarathushtrianism.
Among the later writings of the Parist, Sad Dar lxxxii. 10 insinuates: 'Every good work which the ascetic methods would postpone for to-morrow, and accomplish with thine own hand the counsel of thine own soul'; and in Ganj-i-shaygan (§ 126) one-third of the day (and night) is given to religious duties, one-third to the cultivation of the ground (the eight hours working day!), and one-third to eating and sleeping.

2. The following objections are raised against ascetic principles:—

(1) Wife and children make a man superior to him who is not married (Vend. iv. 47). A young woman is an extra burden and handicap, just as an uncultivated ground needs cultivation. The good husband receives fruit from both (Vend. iii. 24-25).

(2) The wife he marries is a housewife, and he himself is to be the father of children (Dinkort vii. ii. 2ff.; xiv. 1). But nowhere is there an attempt made to eliminate his father in the flesh. Such an idea would be opposed to the Mazdayasniyan ideal of holiness. The psychological relation of the union of a father and daughter is not, however, in any way hindered.

'Both have embraced the first time with desire for a son, and the demons shouted out unto them, in the villainous speech of their shameless words, Why should thou not enter into Porshashap, whereupon they started up like people who were ashamed.' The same experience was repeated a second and a third time. They all agreed and continued at this duty, and accomplished it, saying: 'We will not so stop without accomplishing something, not even though both Bab and Nok should arrive here together.' Then that manchild, who was the righteous Zarathshth, because complete ... in the womb of his mother.'

The Mazdayasniyan has to recite the Ahdnas-Fatras (q.v.) and the Ahut, when he goes in to his wife (Dinkort ix. xix. 8).

(2) The man who owns a house is superior to him who does not (Vend. iv. 47).

(3) Fasting is a sin. Without eating no one has strength for a vigorous piety, for cultivating the ground, and for begetting strong children (Vend. iii. 33). The man who nourishes and develops his body through the eating of meat takes in more of vohiman ('good thought') than he who does not (Vend. iv. 48). The man who teaches or practises fasting, or is a Zoroastrian, is deprived of the holy law, and deserves punishment (Vend. iv. 49).

A well-known passage of the Parsi treatise Sad Dar lxxxiii. forbids fasting: 'In our religion it is a sin to pass a day without eating. Fasting means to fast from sin with the eye, with the tongue, with the ear, with the hand, with the foot.'

According to al-Biruni, the person who fasted was considered by the Zarathushtrians as a sinner, and had to feed a certain number of men as an expiation (Chronology, tr. Sachau, p. 217).

(4) All practices of mortification are prohibited. The Pahlavi paraphrase of the Vonshminas Nas of the Sasanian Avesta attributes the self-mortification prescribed by Mani to the Evil One (Dinkort ix. 39).

The ascetics whose doctrines are opposed in the Pahlavi writings can be identified, even if they are not expressly mentioned, as Mani in the Pahlavi Vonshminas Nas and Mazdak in the Pahlavi commentary to Vend. iv. 49 ('Mazdak, son of Bandat'). The chief form of asceticism opposed besides Manicheism was Christianity. During the persecutions of the Sasanians, marriage was not infrequently offered as an alternative to death.

The ascetics referred to in the Vendidad may have been Christians (Darmesteter) or Manichaeans (Spiegel). But it seems equally probable that ascetic doctrines were well known and practised in Iran before them. The Babylonian religion had unmarried brides of gods. In India the great ascetic methods were of a more empirical type, and postmortem procession.

3. Penalties, imposed for offences against the Avesta law, often illustrate the anti-ascetic tendency, inasmuch as those punishments themselves do not consist in sufferings, but in positive useful works: 'A certain day's work is done, and agriculture are fulfilled at the same time. In some Avesta fragments of the manuscript Tahwaras and in some of the book of ritual ceremonies, Nirangjistan, the degree of penalty incurred partly by omissions or smaller inadvertencies in the ritual, and partly because to be unclean is sin, and the lash (zraskh-katanra, 'the instrument of obedience'), is commuted into a day's work in the fields (Fragments of Tahwaras, xii. 11, 12; Fragments of Nirangjistan, 42, 43, 89, 83, 109; AMG xxiv. 554 f., 105 ff.). If the penance inflicted by Vendidad xiv. upon the man who has killed an otter belongs to the ideals never realized, it is nevertheless very characteristic. He must, among other penalties, kill thousands of snakes, lizards, frogs, ants, worms, and flies. He must give to the good men the instruments of agriculture as his wages, and of a farmer. He must make ditches for irrigation, and make a gift to good men of cultivated ground, a byre, and a beautiful bedstead. He must give to a young virgin as wife to a good man. He must make a gift to women, as many as will bring up twice seven puppies, and make twice seven bridges over ditches. He must cleanse twice nine dogs from vermin, and let twice nine Mazdayasniyans get a good square meal of meat, bread, strong drink, and wine (cf. quotation from al-Biruni under 3 (3) above, and Vend. xvii. 72-74, where the killing of snakes, frogs, and ants, and the building of bridges over water belong to the punishment for sexual intercourse at forbidden times). All animals considered as bad and noxious are called khroftara, and it is a most meritorious work to kill them. This is very different from the view of Lao-tse, from Indian, and from medieval Sufi and Christian asceticism and mysticism.

NATHAN SODERBLOM.

ASCETICISM (Roman).—1. For the purposes of this article 'asceticism' may be taken roughly to mean self-discipline, prompted either by the authority of religious rules or by philosophical inspection upon the nature of life, or by a combination of both these forces.

The early Roman religion, so far as we can trace its features, was not to any appreciable extent swayed by the yearsings which in the Orient gave rise to asceticism at a time immeasurably remote.

The primitive Romans deemed that their shadowy and impalpable divinities were under compact with the community whose exclusive property they were. They asked of their worshippers no burdensome price for the favour which they accorded. The sacrifices required by them were not of the ritual of circumstance and language connected with them; but was completed, and needed to be carried out with the utmost precision. The idea of a faint or impurity, dispensing to the gods, and for this reason to make offerings in those places, and to be cleansed away only by purificatory ceremony, is old enough in Roman religion. But the expiation was easy, and called for little in the nature of self-suppression. Some of the primitive survivals of the gods, particularly the Flamen of Jupiter and the Vestals, were subject to strong ceremonial restrictions in their lives. But these resembled the religious tabus prevalent among backward races, rather than any genuine
ascetic discipline. The Roman *fortis*, or public religious celebrations, though requiring a cessation of labour and ordinary occupations, were, for the most part, joyous in character. Even in the connexion (noun), Closely we As her character. Such the spread fast ally name of as belonging to the real Roman ritual, but as a feature of the *Grecus ritus*. The earliest mention of it is in a fragment of the *Bellum Punicum* of Naevius (quoted by Nonius Marcellus, p. 197 M: 'res divas edict, predicit castus*'). The special name for a fast, *castus* (a noun), is of doubtful derivation. The adjective *castus* implied originally purity achieved not by self-discipline but by ceremonial observance of no very exacting nature.

3. Such discipline as the early Roman under- were learned by religious order, but was laid upon him by his country. There was no limit to the sacrifices which she might demand of him; but only in rare cases had these a religious significance. This was particularly true of the ceremony called *devoto*, by which a com- mander in the field, using a solemn formula, vowed himself to death, thereby binding the gods to be- stow the victory on his army (Livy, viii. 6–10). But even in such circumstances, if the enemy failed to kill the willing victim, it was possible, in true Roman fashion, to claim the God had received a human image and raising a mound over it.

4. We must look, therefore, for traces of asceticism to those cults which Rome and the West adopted from Greece and the East. The fast (*castus* or *jejunium*) enjoined upon a deity's worshippers first appears in connexion with Ceres. Although her name is Latin, all her ritual in historic times was Greek, and her station in the official religion was first assigned to her in the earliest days of the Republic by the custodians of the *casti sacri*, who controlled the immigration of alien divinities. Her priestesses were Greeks brought from the towns of lower Italy (Cicero, *Pro Balbo*, 55). As she became a chief patroness of the plebeians and the poor, her cult grew in popularity, and new services were granted on the 19th Oct. C. 190, first a Greek *hyperea* was instituted in her honour, and was celebrated annually on Oct. 4. By a paradox not uncommon in the history of religion, Ceres, who bestowed the boon of bread, was honoured by abstinence from bread (Petri p. 163; Arnob. v. 16). The fast may also have indicated a participation in the sorrow of the mother (Ceres–Demeter) for the loss of her child (Libera–Persephone). Also in August a vigil was maintained during nine nights by women worshippers, and was accompanied by a strict rule of chastity. This led to Ceres being regarded as a divinity who presided over divorce, though she was commonly reckoned as one of the patronesses of wedlock. An inscription found at Bologna, and of at least as early a date as 200 B.C., seems to point to a *castus* by which June Lucina and Jupiter were appeased (Ritschl, *Priv. Late. Monumenta*, Suppl. 11, 12).

5. A few years before the time at which the *jejunium Ceresii* was introduced, the Magna Mater, the Great Mother of the gods, who dwelt especially on Mount Cimbrum, was officially welcomed at Rome. This was due to the superstition which was generated in the minds of the people by the disasters of the Second Punic War, when the Roman gods seemed insufficient to sustain the Roman power, and a yearning arose for aid from the gods of other lands. As the powers of the temple of the Great Mother at Pessinus in Galatia was venerated as her type, was brought to Rome and enshrined on the Palatine. The ritual of the goddess was frenzied and orgiastic. For the first time self-mutilation was accepted by authority at Rome as pleasing to Heaven. The favourite temple of the Great Mother, commemorated in her ceremonies, was the mythical Attis, who gave his name to the weird poem of Catullus. At first the priests of the goddess were imported from her original home, thence in time by Varronian Romans were forbidden to take office under her. But as early as B.C. 77 a breach of the rule took place, and during the Imperial period the priests and priestesses were all Roman. The worship became more and more elaborated as time went on, and it grew in popularity till it spread far and wide in the West.

6. Closely connected with the Magna Mater was the great rite of the *Taurbolism*, with its minor form, the *Criobolium* (qq. vv.). Its history and nature are and are by religious order, but was laid upon him by his country. There was no limit to the sacrifices which she might demand of him; but only in rare cases had these a religious significance. This was particularly true of the ceremony called *devoto*, by which a com- mander in the field, using a solemn formula, vowed himself to death, thereby binding the gods to be- stow the victory on his army (Livy, viii. 6–10). But even in such circumstances, if the enemy failed to kill the willing victim, it was possible, in true Roman fashion, to claim the God had received a human image and raising a mound over it.

7. As is well known, the soldiers who served Rome, whether Romans or aliens, and passed from hand to land, were greatly instrumental in carrying westward the Eastern cults. Some of these failed for a time to obtain authoritative recognition, and were merely tolerated by Government (with occasional suppression), because of their acceptability to the people at large. But by the 3rd cent. the Ro- man Emperors practically abandoned the attempt to hurl back the Oriental deities who were invading Italy and the capital of the empire. A cult which long remained unofficially popular was that of the Cappadocian divinity Ma, a form of the Great Mother, whose acquaintance the Roman soldiers made when Sulci penetrated into the country of the goddess. We have in Strabo (p. 553) a reference to her temple at Comana, with 6000 servants at- tached, whose forms of veneration were often far...
ASCETICISM (Roman)

from reputable. She was identified by the Romans with the old Indian goddess Bellona. The populace of the West became familiar with the spectacle of hierophants in procession with strange insignia, who cut themselves with the double axe and sprinkled the mob with their blood, while they uttered frantic prophecies. The priests wandered about making collections, like the begging friars of the Middle Ages.

8. Egyptian divinities, especially Isis, early made their way into the Greek districts of Italy and into Etruria. The cult of Isis ultimately had extraordinary ramifications all over the Empire, but particularly in the West, and it exercised an esoteric spell over the lower classes, so that Christians of the earlier centuries saw in Isis a formidable enemy of Christ. And she contributed, indeed, to Western culture elements which penetrated into the texture of the Church. Her cult was more and more the object of the Government, but it advanced irrepressibly, as the literature of the Augustan age and later abundantly proves.

9. There was also an influx of deities from Syria. The Dei Syrii had close affinities with the Magna Mater and Bellona, and the priests and worshippers of these three heavenly beings were often seen in company, particularly in the last age of Paganism, when a dim consciousness of one great God beyond and above the separate divinities became prevalent. Another immigrant from Syria was the Sun god, who played a great part in the reign of Elagabalus and later. But more important than these was the mighty Persian deity Mithra, often identified with the Sun-god. The strongly developed discipline, the advancement of the worshipper in mystic fellowship from the lowest to the higher grades, the community of the sacred brotherhoods rendered this cult highly fascinating to the West. Even in barbaric regions never wholly Romanized, numerous altars dedicated to Mithra and other traces of his worship have been found.

10. These new forms of worship supplied to the Italic peoples elements which were wanting in the indigenous religions—the satisfaction which comes of self-sacrifice for heaven's sake, the sensation of mystical awe and an elevation of soul born of intercourse with the deity, also oftentimes a hope of life in a world beyond the grave. In the hard primitive life of the early Italian farmer the lack of these elements was not felt, but the expanded life of later times welcomed their advent. Mysteries of a Greek type, with symbolic ceremonies partly reminiscent of religion, partly embodying ideas that originated in the philosophic schools, seem to have begun to spread to the Italic races as early as the days of the Punic Wars. To these mysteries ascetic practices were often attached. This development and introversion developed the seeds of these new devotions was shown by the rapid spread of the movement called by the Roman Government the 'Bacchanalian conspiracy,' which was violently suppressed in B.C. 186. The Roman priesthoods of the Greek districts of Italy, drew into connexion with them multitudes of Italic race and large numbers of Roman citizens. Many thousands were executed by authority of the senate, after inquiry which recalls the drumhead court-martial, in defiance of the laws which guaranteed fair trial to the Roman burgess. The moral nature of the cult was assumed, but never proved. The secrecy of the worship, then a strange and unfamiliar feature, produced an atmosphere of panic, generating visions of crime such as arose in the Gentile world from the mysterious nature of the early Christian conservances. In later centuries, 'mysteries,' connected with some mythical or semi-mythical founder such as Orpheus or Pythagoras, or with some definite divinity, were popular in the West, but the information which has come down to us concerning the definitions of the sects is by no means trustworthy.

II. The prevalence of the rites and practices to which reference has been made must have greatly changed, in the course of centuries, the primitive Roman and Italian sense of the relation between the Divine powers and man. The claims of the gods upon man were felt to be more exacting than they had been imagined in early days, requiring a toll of human suffering, sometimes physical, sometimes consisting in a sharp repression of many of the desires and ambitions of the average human being. The object of the worship was to cleanse the worshipper from a taint of impurity which he conceived to stand between himself and his divinity. The sense of sin often had a merely superstitious, ceremonial, or mechanical origin, but in the amore and triumph of nature and man mingled with it as time went on. Rome contained a large Oriental population, mostly descendants of slaves brought from the East; these contributed to the gradual transformation of ideas which proceeded through the centuries. Juvenal (Sat. iii. 62-65), it will be remembered, declared that the Syrian Orontes had long since debouched into the Tiber, and many other Eastern races besides the Syrian were abundantly represented at Rome. In the orientalizing of religious sentiment, the Jews played a certain part. The populace and the capital were as familiar with Jewish ideas as the rulers of the Empire were ostentatiously ignorant of them. The action of the Christian element on the pagan cults of the West, though important, is hard to measure, and has often been over-estimated.

12. But another potent influence mingled with that of religion, and promoted a change in the moral atmosphere—the influence of philosophy. The first conspicuous example of asceticism within the bounds of the Christian Church is seen in the West among the Greek towns of the brotherhood founded by Pythagoras. The Roman antiquarians of the late Republic believed that early Rome itself had been influenced by the great philosopher, whose personality had already been dissolved away by legend. Down to the latest Imperial times there never ceased to exist in Italy men who called themselves his followers. The name 'Pythagorean' came to stand for simplicity of life, and for quiet of mind secured by self-suppression, self-discipline, and abstemious. Doctrines and ideas connected with the mythical name of Pythagoras entered into many of the late forms of religion and philosophy in the West. Apollonius of Tyana (q.v.), who was at Rome in the time of the Flavians, was supposed to be the great exponent of Pythagoreanism on its more religious phase. Another form like that of Pythagoras, was soon encrusted by myth. The romantic biography written by Philostratus during the reign of Septimius Severus is charged with 'Pythagorean' ideas, and is deeply coloured by asceticism.

13. But the vogue of the Pythagorean school never extended very far. The force of Stoicism in the Western world was vastly greater and more
The classical Stoic character, as formed in the hard school of early military service, and of that subjection to authority in which Rome had found the secret of conquest, respected the religion of the conquered, but held no creed to which to bind them. The influence of Stoicism was never tinged by Stoic influence. It was not unnatural that many of the national heroes of later creation should be Stoics: Rutillus, the 'Roman Socrates,' who saw things on a larger scale than the very phrases which he had repressed; Cato of Utica, Puerus Thraseas, and Helvidius Priscus. Even the Stoics who had opposed his predecessors on the throne, were heroes and martyrs in the eyes of Marcus Aurelius.

15. The Cynic philosophy of the later time, late Stoicism laid peculiar stress on conduct, and paid comparatively little heed to old theological and cosmological speculation. It carried to a higher pitch than other schools the enthusiasm for morality, which it raised almost to the level of a religion. A school which proclaimed the worthlessness of all ambitions except the ambition to achieve pure virtue within the soul, which regarded 'Nature' as the teacher of all simplicity, which deemed that man most god-like who had the smallest wants and the most perfect control over his desires, which enjoined absolute submission to a Divine order, and aimed at complete harmony between the individual and the Divine will, could claim affinity with what the best Romans regarded as the true Roman spirit. The Stoic made higher moral claims on other men, but he was therefore more severely judged by the outside world. It has been easy for the detractor in ancient and modern times to contrast the professions of many Roman Stoics with their practice. A school which proclaimed the worthlessness of an equally easy fashion has the worthlessness of Christianity often been alleged. It is certain that for the Romans, and for Western society generally, during many generations Stoicism was a leaven which worked powerfully for good, transforming the noblest natures most, but more subtly affecting the tone of life over a wide area. Profoundly influencing Roman law, and creating an atmosphere which the early Church inhaled, the ideal pursued by the Roman Stoics has transmitted much to the culture of the modern world. In particular, the great mission within the Church of the early Church was made easier because society was permeated with Stoic ideas and ideas akin to them.

16. Platonism was early influenced by Stoicism, and the Stoic influence of the third and later centuries reasserted and enforced the ascetic elements in the earlier systems. Philosophical sects and cliques other than those which have been named also existed: and nearly all showed some drift towards asceticism. But the most important movement of all was that great missionary movement which began early in the period of the Empire. Philosophers, often Cynics, and often also calling themselves by other names, left their studies and went forth into the streets of the great cities and preached to the people, urging them to change their lives and to follow after purity and absti-

LITERATURE.—Information bearing on this subject is to be sought in the great modern works bearing on Roman religion and on Roman philosophy. Among these are : Wissenschaft, Religion und Kultur der Römer (Munich, 1903); Revue, La Religion romaine sous les Sénones (Paris, 1899), La Fête du pognon et son influence (Paris, 1899); E. C. Montet, Textes et monuments figurés relatifs aux mystères de Mithra (2 vols., Brussels, 1899, 1901) and La Mythologie du peuple Orientale (Eng. trans., Chicago, 1908); Zeller, History of Greek Philosophy (2 vols., London, 1881); Did, Roman Society from Nero to Marcus Aurelius (London, 1894), and A. G. A. G. Le Caille et les mystères de Mithra (Paris, 1899). J. S. Reid.
ASCETICISM (Semitic and Egyptian)—Asceticism, if it means the habitual renunciation of the things of the flesh as a self-discipline for the purpose of cultivating the things of the spirit, was unknown among the old heathen Semites and Egyptians. Asceticism is fundamentally based on the dualistic concept of the world, a conception which is essentially dualistic and is justified only by the belief that matter is inherently corrupt—that it is the work, in whole or in part, of a being other than the Creator of the soul. Such a conception had no existence among either Semites or Egyptians. To the Semites in the earliest times the spirit was held to be the breath. It sometimes in later periods designated the inner nature of man, and thus was often used for the self, but it was always closely connected with the body, and was never conceived of as of such a different order of existence that it could be benefited by the destruction of the body. That God who had made the body breathed into man’s nostrils the breath of life, and man became a living soul (Gn 2), is the general Semitic conception. The soul was no laier than the body, for bodies were deemed to be living beings. It was dependent was the soul on the body, that after death the soul’s existence was confined to the under world where the body had been placed—a dark and gloomy region, where it led a miserable and lonely existence, remote from the sacred K‘h vi. 80-91; D’horn, Choix de textes, 326-341; or Bab. and Assyrs. Literature, Aldine ed., 408-413; also Is 14th, and Ezek 32nd-33rd). So closely was the soul associated with the body, that later, when Semites came to believe in a resurrection, they necessarily held to the resurrection of the physical body. Indeed, the early Semitic conception of the manifestation of divinity through the processes of procreation (see Barton, Semitic Origins, ch. iii.) shows that their conceptions were based on this spirit’s return to the body. The Egyptian conception of the soul was different. They held it to be a concrete entity, impalpable during life, which had its residence in the body, but left it at the moment of death. Another entity was the kra—an impalpable something connected with every man. Whether it was in the body, or his guardian spirit or genius, is not clear (see Steindorff, Rel. of the Anc. Egyptians, 1211 f.). These were not, however, considered holier than the body, nor were their interests promoted by its destruction. On the contrary, an extension of the body’s welfare was the motive, and so preserved that each soul could recognize its own body; hence the great efforts made in Egypt to munify the bodies of the dead.

It is clear, therefore, that among the peoples of which we are speaking the fundamental thought-basis of asceticism did not exist. There are some phenomena, nevertheless, in the religions of these peoples which might to a superficial thinker seem to contradict this view. These must be briefly considered.

1. Fasting was practised by the Egyptians (Herod. ii. 40), by the Babylonians and Assyrians as is shown by their penitential hymns (cf. Zimmern, Babylonische Bussgesang, 34; and Bab. and Assyrs. Lit., Aldine ed., pp. 454, 457), by the Hebrews (cf. Jer. K 23rd, lv 16th, lv 20th ete.,) and by the Arabs, as is shown by the great fast of the month Ramadan, which has been taken over into Islam. A careful study of Semitic and Egyptian fasting makes it clear that it was not an ascetic practice. W. R. Smith (Rel. of Scm. 434 ff.) held that in the beginning Semitic fasting was a preparation of the body for the reception of holy food—a view which Benzinger shares (‘Fasting,’ in E. B.). This is evidently the conception of it which the Egyptians entertained, if Herodotus may be trusted, for he says the fasting was immediately followed by a sacrifice and a banquet. In the later development of Semitic thought among the Babylonians and Hebrews, fasting was undoubtedly regarded as a means of expressing penitence for sin, and of exciting the pity of the offended deity. This is the view which is expressed in the psalms under certain conditions. Thus ‘to lie with a woman having her sickness’ was tabu (Lv 20th). This was not, however, a manifestation of asceticism, but the tabu arose from the belief that menstruation was a manifestation of Divine power with which it was dangerous to come into contact. Herodotus tells us that among the Babylonians and Arabs all sexual intercourse was followed by purification (i. 198), which means simply that it was regarded as an especially Divine process (cf. Jer. R. Smith, 446 ff.). Sexual intercourse was also tabu among both Egyptians and Semites within the holy precincts of a sanctuary (cf. Herod. i. 64, and W. R. Smith, 45f. and 481 ff.). This was the case even when sacred prostitutes were employed for the temple, and was tabu for the priests to take their partners outside the sacred precincts (cf. Herod. i. 199). It was also prohibited to warriors—war being to the ancients a holy function—and often to people under a vow. While the origin of these tabus is not altogether clear, they had nothing to do with asceticism. The tabu relating to holy places does not apparently belong to the earliest stratum of Semitic religious thought, far in the earliest period sexual licence appears to have formed a part of the religious feasts (cf. R. Barton, Scm. 460). Probably the early prohibitions were excited by the desire to lose through the pleasures were tabulated to those on pilgrimage for a reason similar to that which prescribed fasting, viz. that the body might be the better prepared for the holy function at the festival. The tabu may afterwards have been applied to the holy place as an extension of this, or may have existed from the first lest the exercise of such a holy function in a sacred spot would make it too dangerous for one afterwards to mingle with his fellows. The application of the tabu to warriors probably as well. Sexual intercourse was also renounced by those under a vow, perhaps for the same reason that food was sometimes renounced, i.e. as a motive for the early performances of the vow (cf. Ae 234'). In any case these tabus do not spring from ascetic principles.

3. The conception of sin which is found in the OT, the Babylonian penitential psalms, and in lesser degree in the Qur‘an (cf. Toy, Judaism and Christianity, 185 ff.; Morgenstern, The Doctrine of Sin in the Hebrew Bible, 1905), has no ascetic foundation. This consciousness of sin arose from the want of harmony between environment and life, or the disparity between prosperity and merit, and had nothing to do with ascetic conceptions.

There were two apparent exceptions in ancient Semitic life to the statements made above: the Essenes (q.v.) in Judea, and the rāhīb, sū‘hāb, and Ḥanīfs, who existed in Arabia at the beginning of Muhammad’s career (see ASCETICISM (Muslims)). These were, however, not real exceptions, as in each case the impulse to ascetic practices came from non-Semitic sources.

The fullest contemporary description of the Essences is in Josephus, BJ ii. 8. It appears that sunrise was a sacred time to them, though
Josephus does not, like Appian, imply that they worshiped a rising sun. The other aqueous traits connected with them were that they lived in brotherhoods, avoided trade, paid great attention to ceremonial purity, and some of them renounced marriage. Some regard this last as a natural heightening of Levitical purity, because priests had to be parvenu before they could be performing priestly functions; others look upon it as a practice which could spring only from a dualistic conception of the universe, such as we find in Zoroastrianism. The reverence for the rising sun is also pointed in the direction of Persian influence. Josephus makes it clear that the Essenes were confined to no locality, but were a brotherhood, about 4000 in number, scattered through the cities of Palestine. How the Persian influence reached them may be variously explained, but from the time of Cyrus the channels through which it might come were open.

Among the Arabs, the rākibs, or monks, the sūfiya, or wanderers, and the karmiya, who were regarded as a kind of monk, were probably imitators of Christian monks. We learn from the pre-Islamic Arabian poetry that in high regard the Christian monks were held during that period. In the break-up of Arabian heathenism it was no wonder that men endeavoured to find satisfaction in the way of life which was followed by these monks (e.g. Acts 21:11). More centrally Christianity from non-Semitic sources, and in a mild form was transmitted by Christianity to Arabia. The same is true of Egypt, though monasticism in Egypt was Christian, and became much more intense than in Arabia. It was grafted on to Egyptian life, however, from a foreign source.

LITERATURE.—W. R. Smith, Religion of the Semites, 1904; Bartus, Sketch of Semitic Origins, Social and Religious, 1902; Steindorff, The Ancient Syrian Religion, 1903; Ermans, Die ägyptische Religion, 1905; Toy, Judaism and Christiah-

ity, 1905; Schröer, Geschichte des jüdischen Volkes, 1895-1900; Bouisset, Religion des Juden und des Christen in den antiken Zeitaltern, 1900; Josephus, B. H., ii. ch. 8; Zimmern, Babylonische Bauinschriften, 1895; Babylonische hymnen und Gebete, 1905; Jastrow, Religion Babylonium und Assyriens, 1905; Morgenstern, The Doctrine of Sin in the Babylonian Religion, 1905; Macdonald, Mosaic Theology, Authority, and Constitutional Theory, 1905, which cites much Muhammadan literature. GEORGE A. BARTON.

AL-ASH'ARI.—Abā al-Hasan 'Ali ibn Ismā'īl al-Ash'ari was born at Bayṣra in A.H. 290 (a.d. 773), of a noble and ancient Arab family; several of his ancestors were eminently distinguished in public affairs. He was one of them, Abā Mūsā al-Asbārī, Governor of Kūfa, who after the battle of Siffin represented the cause of 'Ali in the arbitration that resulted in the proclamation of Mu'āwiya as Khalīf (a.d. 638). Of his father little is known except that he was an orthodox Muslim, a student of the Traditions, and a friend of the Shafi'i legist Zakaryāt ibn Yaḥyā al-Sājī. Bayṣra had long been a centre of active religious controversy, and had been the home of some of the most famous teachers of the Mu'tazila. We hear of Abū Wālid, Abū ʿUmar, Ḥujayr, and others, and at this period—the end of the 3rd cent. of the Hijra—Abā 'Ali Muḥammad al-Jubba'ī was famous there as the greatest living exponent of the Mu'tazili doctrines. Al-Asbārī seems soon to have broken away from the orthodox influence, and to have become a zealous Mu'tazilite as the pupil of al-Jubba'ī. Until his 40th year, he attended al-Jubba'ī's lectures and took an active part in the disputations of his school; having a ready wit and an engaging delivery, he was not infrequently called upon by his master to take his place, wherever al-Jubba'ī was not prepared to lead the discussion. We have no certain information as to the mental processes through which al-Asbārī passed before he aban-
donned the Mu'tazilite position, at the age of 40, and went over to the orthodox party. His biographer gives the following dramatic account of the manner in which he publicly announced his conversion: 'He shut himself up in his house for fifteen days and refused to see any one; then making his way to the great mosque of Baṣra, and being seen to come from private intercourse and little assembly, I have abased myself from among you so long only because I have been absorbed in meditation, for the opposing doctrines seemed to me to be equally balanced, and the true did not out-

point the false. So I prayed unto God for guidance, and He had me into the true faith, such as I have written down in these books of mine. I strip myself of all my former beliefs, just as I strip myself of my own garment.' So saying, he took off the robe he was wearing and cast it from him, and distributed his books among the people' (Mehren, p. 252). The conversion of so eminent a thinker and so ardent a controver-
sialist created a great stir, and the ability with which he now began to champion the orthodox position enabled him to gather a large band of disciples, so that he soon became one of the most cele-
brated teachers of his age, and theological problems were sent to him for solution from all parts of the Muslim world. He held several controversies with his old teacher, al-Jubba'ī, who survived the de-

cease of his pupil, and with the Mu'tazilites (it is undoubtedly characteristic of the theological controversies of this period. The story, as told by Ibn Ḥallikān, (No. 618, ed. Wüstenfeld), is that al-Asbārī proposed the case of three brothers, one of whom was a true believer, virtuous and pious; the second an infidel, a debauchee, and a profane; and the third an infidel. They all died. What was the state of each one of them? Al-Jubba'ī answered: 'The virtuous brother occupies a high place in heaven; the infidel is in the depths of hell; and the child is among those who have no place in heaven.' "Suppose," asked al-Asbārī, "that the child should wish to ascend to the place occupied by his virtuous brother, would he be allowed to do so?" "No," replied al-Jubba'ī, "it would be said to him: 'Thy brother was a true believer, virtuous and pious, but thou hast not done such a thing to himself, and thou hast not done such a work to show.' But suppose," said al-Asbārī, "that this child said, 'That is not my fault; Thou didst not let me live long enough, neither didst Thou give me the means of proving my obedience.' " In that case," replied al-Jubba'ī, "God would say, 'I know that, if I had allowed thee to live, thou wouldst have been disobedient and deserved the grievous punishment (of hell); I thus considered what was for thy advantage.' " But suppose the infidel brother were then to say, 'God of the universe, Thou knowest what his brother would have done; Thou must have known what mine would be; then why didst Thou consider what was for his advantage and not for mine?' " Then al-Jubba'ī was put to silence (Spitta, p. 42). Indeed, al-Asbārī seems to have become rather a thorn in the side of his old teacher, who at last declined further discussion with him; whereupon al-Asbārī is said once to have concealed himself in a part of the lecture-hall where al-Jubba'ī could not see him, and to have prompted a woman sitting near him with question after question to which al-Jubba'ī was unable to give satisfactory answers, until at last he guessed the trick that was being played upon him. Of the rest of al-Asbārī's life few details are recorded.
We know that he ended his days in Baghdad, but have no information as to why he left Bâqra, the scene of his earlier triumphs. He died in A.H. 324 (A.D. 933-6) in the arms of one of his pupils, with a curse on the Mu'tazilites upon his lips.

Al-'Ashârî was a voluminous writer, and a list of his works and subjects has been given in his own handwriting and handed down to us; some are theological, dealing with the exegesis of the Qur'an or with the Traditions, others philosophical; but the greater part of them are of a controversial character—polemics against heretics and unbelievers of all kinds, and attacks upon the adherents of the hundred or so sects, among which剐 Ali-Balî, and others of his contemporaries (Spitta, pp. 63-81). This list of his works also includes a number of pamphlets written by him in response to queries relating to difficult problems in theology and philosophy, and these anthromorphic theologies learned to fight its opponents with their weapons, instead of merely doggishly repeating texts and traditions in answer to all arguments and questions. Al-'Ashârî is in this respect typical of an intellectual need that was being felt by the orthodox party of his time for a rational statement and defence of their position; the same tendency manifested itself among his contemporaries in other parts of the Muhammadan world, such as al-Tâhâwî in Egypt and al-Mâ'âtrî in Samarâd. Further, in stating his theological position, al-'Ashârî held a middle ground between the two extremes of some of the traditionists and the philosophical speculations of the rationalists. Thus, while devoutly accepting the statements of the Qur'an about the face, the hands, the eyes of God, and His sitting on His throne, as articles of faith, not to be interpreted as metaphorical expressions for the knowledge and power, etc., of God, he does not take them to imply a corporeal existence analogous to that of man, but explains them as being His qualities and free from all limitations of space and time, his inheritance, however, being that he had come under the influence of the Hanbalite school, he gave up all such attempts to explain these anthropomorphic expressions in the Qur'an, and maintained that they must be accepted "without asking how and without drawing any comparison," i.e. with human qualities. Similarly, he took up a middle position between the fatalistic and the libertarian schools, which has been stated by Professor Macdonald as follows: "Man cannot create anything, he is only the instrument through which God does man's power produce any effect on his actions at all. God creates in His creature power and choice. Then He creates in him his action corresponding to the power and choice thus created. So the action of the creature is created by God as to initiative and as to production; but it is acquired by the creature. By acquisition (kawn) it means that it comes to the creature's power and choice, previously created in him, without having his leaving the slightest effect on the action. He was thus only the channel of 'His action' (Muslim Theology, p. 192). As one of the famous theologians of this school, Abu al-Ma'âli Imam al-'Harâmîn (A.H. 419-478), puts it, al-'Ashârî holds that man has no power over the production of his actions, but has power over the acquisition of them, whereas the Mu'tazilites maintained that he has power over both, and the Fatalists that he has power over neither (Spitta, p. 141). In similar fashion, al-'Ashârî dealt with the great controversy on the nature of the Qur'an, which had stirred the Muslim world to its depths, and had been the subject of bitter polemics between the Khallîfah and al-Mutawakkil (in A.H. 292 and 218) giving special sanction to the Mu'tazilite doctrine that the Qur'an is created, and al-Mutawakkil (in A.H. 324) as authoritatively establishing as the orthodox doctrine the belief that it is uncreated. While applauding the Khallîfah for his conduct of affairs, he felt that the Qur'an is the eternal, uncreated Word of God, al-'Ashârî rejected their extravagances about the letters and the ink and the sounds employed in reciting it being equally uncreated and eternal. The above examples are sufficient to indicate how far al-'Ashârî was willing to allow dialectic reasoning to be applied to theological questions, thereby avoiding the gross literalism of the anthropomorphic exponents of the orthodox position, and attempting to explain where hitherto any such attempt had failed. By his method, he hoped to come to a rationalistic method were made by him mainly in dealing with matters connected with the doctrine of ta'rud ("unity"), such as the Attributes of God and the Word of God. In other matters he frankly accepted the orthodox position unmodified, e.g. the intercession of God in the body of the Prophet, his designating the godless, the miracles of the saints, the evil suggestions of Satan, the coming of Antichrist, etc.

Al-'Ashârî was the founder of a theological movement that gradually won for itself a preponderating influence among Muhammadan sects, gaining a foothold first in Iraq, and later spreading eastward into Persia and westward into Syria and Egypt; introduced into the Maghrib by Ibn Tûnîn (q.v.) in the 6th cent. of the Hijra, it became in a modified form the official doctrine of the Muwahhidîs. The sect produced a number of remarkable thinkers, who by their independent speculations contributed to the development of the system; among them the most distinguished were Abu Bakr al-Bajhînî (ob. 403 A.H.) (q.v.), Abu Ja'far al-Sumâniî (ob. 444 A.H.), Abu al-Mâ'âlî Imam al-Harâmîn (ob. 478 A.H.) and al-Ghazâlî (ob. 505 A.H.) (q.v.), who systematized the tenets of the sect into a body of doctrine accepted throughout the greater part of the Muslim world to the present day.

ASHES.—The dust which remains after the burning of plants, animals, and human beings, has been used from the most remote times for various religious and semi-religious purposes. It is natural to think that, when once the use of fire was discovered, it would not long before the ashes would be found to be valuable and be turned to some account. 1. In places where water is scarce, we know that sand has been used for ablations. Where sand is scarce, ashes would provide an excellent substitute. And since, from the first, fire was regarded with awe and wonder, it is likely that the ashes were often thought to share its mysterious nature. At any rate, we know the use of ashes in ablations. Amongst the preparations which the Brahmins made for any act of religion was an ablation called
a bath sacred to fire, the body being rubbed with ashes (Colebrooke, i. 154). Amongst the New Mexicans it was found that a newborn child was washed and then covered with ashes (Bancroft, i. 566). In this case, however, the ashes may have been used not as part of the cleansing process, but for drying, or possibly for both purposes. People belonging to the Nahua nations were found by Bancroft to have a practice of rubbing an infant’s joints, especially the knees, with ashes in order to clean them (Bancroft, ii. 277). This practice may have arisen from the other.

2. When ashes were used for ablations, it would soon be noticed that the friction produced a healthy effect, or, as we should say, promoted the circulation. In any case, it has been found that primitive people also use ashes for medicinal purposes. Hot ashes would serve as a substitute for hot water. Thus the Nukus apply them in order to cure headache, colic, or rheumatism; the Milwoks use a plaster of hot ashes for stomachic affections and cases of severe travail (Bancroft, i. 294, 306). Vapour-baths are also produced by means of hot ashes. In parts of England the ashes of a consecrated box-tree, mixed with holy water, used to be thought an effective remedy for cold fever. Similar powers are attributed to the ashes of the Myrtaceous afflue, and these plants to those of the Hindu Holi-fire; and in Ireland ashes from the bonfire on St. John’s Day (June 24) are believed to aid the fertility of the fields (Crooke, ii. 197, 318). The Parsis of India dip their fingers in ashes, while the ancient Armenians venerated the ashes of the sacred fire, and scattered them in streams considered holy. Among the modern Armenians, in like fashion, the ashes of the sacred fire kindled on Feb. 13 are held to protect men and cattle from sickness, and are carefully preserved on the four corners of the roofs, or in the stalls, the gardens, and the meadows (Abeghian, p. 73).

3. A more familiar use of ashes, however, is that associated with mourning customs. The Greeks showed their sorrow at bereavement by strewing themselves with ashes (Iliad, ii. 722, Odyssey, xxiv. 315; Plut. de Superstit. ch. 3; cf. Herod. ii. 85; Vergil, Aen. x. 344; Ovid, Metam. viii. 528), or by sitting in them (Odyssey, vii. 153; cf. Ili. xvi. 22); and the practice of sprinkling ashes over the hearth as an act of mourning was widespread. But this simpler practice always seems to be an abridgment of the more elaborate ceremony. In course of time a mere sprinkling sufficed instead of an actual sitting or lying in dust or ashes. It becomes a sign or simple expression of what was originally a stricter form of submission or humiliation, practised first before visible persons, and then before invisible beings as well. Herbert Spencer gives some interesting instances in support of this explanation of the custom. Thus, in the Congo regions of Africa, it was found that the person who would do homage to a benua, or village chief, prostrated himself, kissed the earth, and strode dust over the forehead and arms. When the Dahoman made a salutation, he prostrated himself, and poured sand or earth upon his head. It was found that the Mandandás and Belonda people used the same ceremony; and we are told of the latter, that ‘when they wish to be excessively polite they bring a quantity of ashes or pipeclay in a piece of skin, and, taking up handfuls, rub it on the chest and upper front part of each arm.’ To what extent this ceremony underwent abridgemen{w}e see, when, instead of sprinkling dust on the hearth, people now salutations by pretending to do so (Spencer, ii. 124 ff.). But originally the practice seems to have been one of humiliation. At the same time, even among primitive folk, other customs have been observed in which the ashes seem to be a mere badge of mourning. Thus it was found that some of the Californians mixed the ashes of a dead person with grease, and smeared their faces with the mixture. The dirt was allowed to remain until the action of the weather wore it off (Bancroft, i. 397). In the Arunta tribe of Central Australia, it was found that the widow of a deceased man smeared her hair, face, and breast with white pipeclay; hence she received the name impirra, ‘the whitened one. Sometimes she smeared ashes from a fire in the pipeclay, and was then called san-existing. See Chapter viii. of the *Homerian poems* only the burning of corpses is mentioned. Sometimes the ashes are gathered with a good deal of ceremony. When the Brahmins burn a corpse, the fire has to be so arranged that some of the bones may remain for the elaborate ceremony of gathering the ashes, which is performed by the nearest kinsman on the last day of mourning (Colebrooke, ii. 173 f.). But it has not always been thought necessary to preserve all the ashes, or at least not all in the same place. Among the Nahua nations, it was found that, when a human victim was sacrificed, his head, after being offered to the sun, was burned, and the ashes preserved with great care and veneration (Bancroft, i. 397). Buddha gave directions that his body should be cremated, and a dagoba or stupa (‘reliquary monument’) erected over the ashes. When the body had been burned, messengers came from the chiefs or kings or the heads of the tribes to collect the remains, and avoid dispute, these were divided amongst them, and placed in stupas built for the purpose. When

ASH-MOUNDS

114

Mr. William Simpson Avas in Jelalabad during
the Afghan War, he excavated the remains of a
Buddhist tope, called the Ahin Posh Tope, and
was fortunate enough to come upon the relic-cell,
vhere he found some brown dust which he supposed
to be the ashes of the holy individual to whose
sanctity the tope had been erected. Among the
ashes was a golden relic-holder. The same writer
tells us that amongst the Lamas of Tibet also,
when a holy man dies, a stitpa is made for his
ashes.
But ho found another practice amongst
them. The ashes are mixed with mud or clay, and
small figures of Buddha are made of the mixture.
These are then placed in the shrines where devotions are performed.
But if the ashes of one
person have sometimes been distributed, the ashes
of two or more persons have sometimes been
mingled. In this way Domitian and Jula, Achilles
and Patroclus, were united in death. In other
cases, family urns gathered up the ashes of kinsmen and friends.* It should be added that a king
has been known to lie in state even when reduced
to ashes.
Thus it was found that among the
Nahua nations they gathered the ashes and valuables of a Tarascan king, made them into a figure,
dressed it in royal robes, and put a mask for its
face, a golden shield on its back, and bows and
arrows by its side (Bancroft, ii. 621).
5. Ashes have not only been regarded as sacred,
but have sometimes been thought to jjossess special
virtues.
hear of migi'ating tribes among the
Nahua nations carrying the ashes of honoured
chiefs with them to serve as talismanic relics
(Bancroft, ii. 348), and of other savages inoculating themselves with ashes Avhich represent and are
supposed to impart moral and other virtues. Thus,
as a protection against disease, a slight incision is
made in a person's temple, and some powder made
of the ashes of certain plants or animals rubbed
into the wound, those plants or animals being
chosen which denote certain special qualities (e.g.
the claws of a lion might be used to impart bravery).
In this way the fighting-men among some tribes of
South-East Africa are inoculated with strength
and courage in time of war (Frazer, ii. 361f.).t
Of a similar character is a practice found among
the Tarianas and Tucanos and some other tribes.
They disinter a corpse about a month after burial,
reduce it by buining and pounding to a fine
powder, mix this in large conchs of caxiri, and
drink it, in the belief that by so doing they will
imbibe the virtues of the dead man (Spencer-Gillen,
The Cobeus were found to drink the
p. 535 f.).
ashes of the dead in the same way. It was a
similar kind of belief in the virtues of human
ashes that led the Romans to scatter in the city
the bones of a general who had celebrated a
triuini>h.t In Bavaria it has been customary to
sprinkle ashes from the Easter fire on the land as a
protection against hail-storms, and in Bombay caste
is restored by swallowing ashes given by the guru
(Crooke, i. 293). Ashes from the burning ground
in India are used in black magic (ib. p. 261).
6.
different use of ashes from any we have
mentioned is found in connexion with the belief in
ghosts.
It has been a not imcommon practice to
strew ashes on the ground in order to detect by the
footprints the visits of ghosts or demons.
The
practice has been noticed amongst the Philii)pine

t Sloclern psychology teaches that such a practice, however
sujierstitious the ori;,'iiial idea in it, might— and no douht often
did have the desired effect. It would serve to remind the
inoculated person of certain qualities, to concentrate the mind
u|)on them, and so to produce them. This would be an instance
of primitive folk having been led to adopt a custom for a
reason of their own, which for another and a better reason has
proved to be one of the factors in civilization.

ASH-MOUNDS

(in

Persia).—The a.sli-mounds

of Persia are a series of elevations in the Province
of Azarbaijan in north-western Perfsia, composed
largely of ashes mixed with earth, and called Hills
'

of the Fire-worshippers' by the modern inhabitants,
who assign their origin to the fire-cult of the ancient
Zoroastrians. Scores of these hillocks are scattered
over the great plain around Lake Urumiah and the
city of that name, which is associated traditionally
with events in Zoroaster's life in Azarbaijan. The
mounds are usually constructed of clay mingled
with immense deposits of ashes that are saturated
with nitroxis salts of organic comijosition ; and in
many instances these elevations surmount a small
natural eminence. It is generall3' conceded that
there is nothing of a volcanic nature in their composition ; and although we may not agree in all
respects with the natives, who unanimously ascribe
the origin of the mounds to the accumulation of
ashes from fire-temples, century after century, we
may assume that at least some of the hillocks were
surmounted, in ages past, by sanctuaries dedicated
to the worshii) of fire.
Many of these hills have been excavated in recent
years by the neighbouring peasants, who have <liscovered the value of the alkaline quality of the
ashes for fertilizing purposes and for the manufacture of saltpetre. Their casual diggings have revealed in one or two instances remnants of ancient
walls, and have brought to light ancient pieces of
pottery, terra-cotta figurines, and other relies of
antiquitj', like the small bas-relief cylinder of ala-

baster found at Geog Tapah, near Urumiah, and
preserved in the Metropolitan Museum of Art
in New York city.
The design of the cylinder is
archaic Babylonian in style, and among the figures
carved upon it are the sun-god Shamash and the
demigod Ea-bani, as described by Dr. W. H. Ward
in American Journal of Archa-ologg, vi. 286-301.
The Mission museum at Urumiah contains similar relics.
No systematic excavations, however,
have been carried on to determine the possible

now


value of the ash-hills as contributing to archaeological knowledge or to a better understanding of the early religion of Iran. The study of the ash-hills should furthermore be brought into connexion with the entire subject of kitchen-middens, cromlechs, and carns.

A. V. WILLIAMS JACKSON.

ASHTAR (ASHTORETH, ASTARTE.—‘Ashtar’ was a goddess worshipped by the Canaanites, Hebrews, Phoenicians, and in Phen colonies. This vocalization of the name is attested not only by ‘Ashtar, Atar, etc., in the cognate languages, but by the earliest documentary evidence. In the Amarna Letters (Wilcke, 142, 143, 237, 241) it appears as Ashtar-tu. In a Bab. tablet (PSBA, Mar. 1889, p. 174 ff.) Ash-tar-tu is given as the Pal. equivalent of Ishtar, and in the treaty between Esarhaddon and Ba'al of Tyre As-tar-tu is named as one of the chief gods of Tyre (Bezoek, Catalogue, 330). The Gr. transliteration is As-\(\tau\)ôrê, which appears even in the LXX along with \(\alpha\)s\(\tau\)ôpôô. Augustine (Quæst. in Jud. 16) gives Estart or Ashtar. The pronunciation \(\alpha\)s\(\tau\)ôrê, of MT is probably due to the substitution of the semitic \(\alpha\) for \(\iota\), 'Ashur, 'humble thing,' as in 'Molech' for 'Moloch' (Noldenke, G&G, 1884, p. 1022).

1. Origin.—As to the origin of 'Ashtar, opinions differ. Hommel (Zwei Judengesch. 22), Delitzsch (Asyr. Lexertablen, s.v.), Driver (Hastings' DB i. 158), Zimmermann (KAT 420 f.), Jastrow (The Ed. Bab. 81, 207 f.) hold that she is derived from the Babylonian goddess Ishtar. In favour of this view are the facts that Ishtar is mentioned in Bab. inscriptions long before the earliest mention of 'Ashtar. Ishtar was profoundly influenced by Bab. religion during the third millennium B.C. and that Ishtar is called 'Ashur-tu, 'mother of the gods,' which suggests a derivation of her name from Bab. 'ashur, the same root from which Ashshur and Ashshurah may come (cf. Jensen, KIB vi. 490 f.).

There are, however, a number of difficulties in the way of this theory: (1) This deity is found not merely in Babylon and Assyria, but also in Canaan and among all the other Semites. In Syria, Shaar, Sarar, or other (see art. ASHURGATIS); in Moab, as 'Ashtar (see art. MOABITES) in South Arabia, as 'Ashtar (see art. SALEANS); and in Abyssinia, as 'Ashtar (Müller, Epigr. Denkm. aus Abyssinien, 37 f.). In classical Arabic her name does not occur, though she herself is known under such epithets as al-Lat and al-'Uzza (cf. Herod. iii. 8, where al-Lat is identified with Urania = Astarte). It is hard to believe that the cult of Ishtar spread to all these races, since no other Bab. deity found such wide acceptance. It is more natural to suppose that 'Ashtar was a primitive Semitic goddess. (2) The phonetic changes that this name undergoes in passing from one dialect to another indicate that it is primitive Semitic. In Bab. \(\alpha\) and \(\gamma\) are not distinguished. If Ishtar had been the original form, the appearance of the initial \(\eta\) with the voweled \(\alpha\) in all the cognates would have been impossible, and the second consonant would not have undergone the regular mutation Heb. \(\varnothing\)

Arab. 'Asar, 'Aram. (3) The addition of the fem. ending \(\tau\) in 'Ashtar(t) is adverse to the theory of a direct borrowing of the Bab. Ishtar. (4) The absence of the fem. ending in 'Ashtar, Ishtar, favours the theory of a primitive Semitic rather than a Bab. origin of the name. Before the Semitic languages diverged from one another, the fem. ending was already developed, but a number of primitive words found in all the dialects, such as \(\varnothing\), \(\varnothing\), are fem. without fem ending. To this class Ishtar of South Arabia 'Ashtar' appears to belong. If the Babylonians had coined this name after their separation from the parent stock, they would have appended the fem. ending. In this case, Ishtar was not the different form of the name in the dialects witness to its primitive character. In South Arabia 'Ashtar is masculine, in Moab also apparently in the compound 'Ashtar-Chemosh. If these gods had been derived from Babylonia, where Ishtar was female, the change of sex would have been impossible. If, on the other hand, 'Ashtar was a primitive Semitic name of some physical object, this might have been regarded as fem. by one tribe and masc. by another, just as in South Arabia shawu', the sun,' was fem., while elsewhere it was always masculine. One of the most marked characteristics of the Babylonian Ishtar is her connexion with the planet Venus. There is no trace of this in other early Semitic religions, and this makes it improbable that she is the prototype of 'Ashtar, Ishtar, etc. (7) The use of the plural 'ashkārēth in the sense of 'offspring' (Dt 7:3) cannot be explained from the goddess Ishtar, but points to a primitive Semitic root '\(\varnothing\)'.

The Bab. association of Ishtar with \(\varnothing\), accordingly, is to be regarded as merely one of the running variations of which there are so many instances in Bab. literature.

2. Original sex and character.—If 'Ashtar, 'Ishtar was a primitive Semitic name, the question then arises as to its original gender: Was it masculine, as in South Arabia and Abyssinia (CIS iv. 1, 40, 41, 21, 46, 3; Hommel, "Asyri. u. Ass. 99, 1890, 1097; Zimmern, KAT 420 f.), Jastrow (The Ed. Bab. 81, 207 f.) hold that she is derived from the Babylonian goddess Ishtar. ...
In the Egyptian episode of the Gilgamesh Epic, one of the earliest monuments of Bab. literature (KIB vi. 160-171), she is represented as forming numerous unions, which are usually numbered among the suitor's. In the Descent to Hades (KIB vi. 86 f.), sexual relations among men and animals ceases the moment that she enters the underworld. Prostitution as a religious rite in her service is widely practised in Bab. literature by the Gilgamesh Epic (KIB vi. 122-129), Herodotus (I. 190), Strabo (xiv. 1. 20), Ep. Jer 4 (Bar 6): in Syria, by Lucian {Don S. yr. 22, 43); in Arabia, by Theodoret (Hist. Relig. ed. Sirmund, ii. 85; ed. Wellhausen, Ke stere, 44): in the Phoenician colonies at Carthage, Cyprus, and Sicily, by Strabo (vi. 515; xiv. 294, 515); and to the Fenicians, or 'temple harlots,' are often mentioned, but they are not expressly connected with the cult of 'Ashtart (yet ed. Herod. i. 100). If, however, they belonged to her in the colonies, they doubtless belonged to her in the home country. Baradam, 'mistress,' the goddess of Gebal (Byblos) is only a title of 'Ashtart, and prostituta tions are mentioned in a Syriac fable (vii. 8 f.). The identification of 'Ashtart with Aphrodite by both the Greeks and the Fenicians is also evidence of her sexual character. In this aspect she is clearly a counterpart of the ancient Semitic woman, who bestowed her love as she pleased upon men of either and often hostile tribes, who was courted at the risk of life (cf. M. w. Vagot of Llibul 18-19, of Ant worsh 5-22, of Herkit 1-9), and who frequently had occasion to frequent battle for the death of some Adonis.

'Ashtart-Ishar is a goddess of maternity and fertility. With her is associated her son Tammuz (see art. TAMMUZ). Under the title bilit idah, 'mistress of the gods,' she is represented in Assy-Rab. art. bearing on her left arm a child, who she suckles at her breast, while with her right hand she caresses or blesses it (Beolded, ZA ix. 121, line 5). She is called binit-ibani, 'creatrix of the gods' (Haupt, Ablautische und numerische Keilschrifttexte, 116 f. obv. 6). She is often designated the 'mother' or 'creatrix' of men (cf. ZA ii. 125; iv. 125). In the Deluge Story (KIB vi. 285 f.) men are described as the off-spring. In Babylon she was known as Mulailidu or Mulidu (7725), she who causes to bear,' from which is derived the name Mylitta in Herodotus, i. 131, 189 (Jensen, Kosmologie, 294, 515). In a Sabaean inscription 'Ashtart is described as a goddess who is commonly male, is called 'the mistress, mother, 'Tammuz,' and is described as the giver of children. In Arabia the goddess is comparable to the Virgin Mary with the child Jesus (Ephrath, Passiones, ii.). The existence of the same conception in the West is attested by the Carthaginian proper name 'Ashtart is a mother' (CIT 263), by the title 'mother' applied to the Pagan goddess, and by numerous myths of the sons of 'Ashtart (Aphrodite, Venus). In this aspect also she is the counterpart of the ancient Semitic woman, the fruitful mother of the children of the tribe.

3. Etymology of name. The original character of 'Ashtart(s) must guide us in understanding the meaning of her name. If it is primitive Semitic, it must be derived from the root 'asher, Heb. 'asher, Arab. اَشْر. The is derived after the analogy of the Arab. wnr. stem 'ashtara and Assy. 'isharutu, and is transposed with the ablauti after the analogy of Heb. 'ashhurahash and Assy. qandara for qandana. In Heb. and Arab. ay may mean 'be rich,' which represents Arab. ashar rather than 'asher, and therefore throws no light on the primitive meaning of 'asher.

In Arab, the common meaning for 'ashar is 'stumble,' but 'asher and 'ishar or 'ashara, are used of palm-trees or sheeda which are watered naturally, and 'ashara means a channel to irrigate a palm tree such as is termed bata (Lane, Lex. a.v.). If these words are primitive and not loan words, the root may mean to be full, to be satisfied, and the paradigm by the possibility of a similar meaning for 'asher. If so, 'ashar in a reflexive sense may mean 'the self-watering,' i.e. the spring,' and in a passive sense 'he was watered' or 'watered,' as in the Heb. 'ashara-ah = 'crying' or 'bawling.' All this, however, is very uncertain.

It does not seem unnatural that the primitive Semites should have regarded the number of a spring as a divine matriarch, such as we have seen 'ashar (to be). To the spring, man and beast owed their lives in the arid desert. It formed the oasis about which as a centre the tribe rallied. It nourished the date palm, which furnished food for man and the propagation of male and female trees, and its need of artificial cross-pollination. Everywhere throughout the Semitic world springs (watered cities were holy (cf. Babylon._matches, it is a true even in modern Arabia and Syria (Currie, Cream, ReL. 95-105). In the Syrian inscriptions 'Ashtart is entitled' Lady of the water; and in the Hebrew version of the Song of Songs it is described as the giver of harvests (CIT iv. 104, 165). Alcman, 'the mighty,' a title of the feast, 'Ashtart was connected with the sacred spring, Zemun, at Mecca (Wellhausen, Ke stere, 193).
ASHTART (ASHTORETH, ASHTARTE) 117

34-45, 103). In a Bab. hyem (Haupt, Akkadische und sumerische Keilschrifttexte, 116) Ishtar is described as "the one who causes vegetation to spring forth, creature of everything." (Of Atargatis, Plutarch says, "She is the divinity who out of moisture produces all things," and her sacred fish was represented as a mermaid with a fish's tail (see art. Atargatis). One of the chief sanctuaries of the Phoen. 'Ashtar was at Aphaka (πηρίς, 'water-course'), at the point where the Adonis River bursts out of a cave in the side of Mt. Lebanon. Many nymphs of fountains and streams in Phoen. settlements may be only variant forms of Aphaka, therefore the etymology which connects 'Ashtar with a root meaning 'to be watered,' and interprets it as the nympha of a spring, cannot be regarded as reliable. (R. Smith, Semitic Art., 273; Wallis, Man, Restv. 1, 404; Lagedes, Gen. Ahh. 14; Halsey, E. R. Hist. 1, 212.; Hoffmann, Phoen. Ins. 211.; Baudissin, Jahrb. et Mecob. 234.; Saulique, ZDMG. 67, 267 ff.; ZDMG. xlv, 751.; Barton, Sem. Origins. 1921. 1. Haupt, ZDMG xxiv. 765.)

4. Primitive worship. - As to the manner in which 'Ashtar(t) was worshipped in primitive times, we can only conjecture that those rites which are most ancient and most prevalent among the Semites were originally consecrated to her. Some offerings were cast into the sacred spring, as in Arabia (Weissenf. Rest. 76), and in modern Syria (Curtius, Ueber Rel. 114, 140). It has often been observed as a blot on the sacrificial system, this was impracticable, and another point of contact with the goddess was needed. This was found in the massēbāt, or 'standing stone,' which was erected as a Bethel, or 'abode of deity, near the spring.' On this victims might be offered, and sacrifices might be performed without contaminating the sacred waters. This was the form of the goddess at Petra (Epiphanius, Panarion. 114.). Down to the latest times the 'Ashtar-Aphrodite of Paphos was identified with such a stone (Tacitus, Hist. lib. 3; Serv. Aen. i. 720; Heft, Hist. Num. 628). The 'Ashtar of Gebel Amur is similarly represented, to judge from a coin of this city (Pietzschmann, Phosphorus, 290). In Canaanite temples in general massēbāth rather than images seem to have embodied the mother-goddess. This is alluded to apparently in Jer 23:7 'who say to the stone, Thou hast brought me forth' (see art. Massēbāh). The sacred precinct around the massēbāh was enclosed with 'ashērim, or 'tremt posts,' which also received religious reverence and were early identified with 'Ashtar(t) (see art. Ashērāh). The worship of the goddess was so bound up with the fruits of the earth and of the increase of the flocks and herds. The first-born of animals were sacred. Circumcision was practised as a consecration of the reproductive powers, and the first-born child was the seat of the god's sacerdotal fertility. In Gezer, where the cult of the mother-goddess is everywhere in evidence, the remains of hundreds of new-born infants have been discovered around the standing stones of the high place (for the existence of this custom among the Arabs, see Isaac of Antioch, ed. Bickel, 220). A spring feast was celebrated at the time when the lambs were born, and an autumn festival at the time of the gathering of the date harvest. These occasions were marked by great sexual licence (see W. R. Smith, Semitic Churches, 408.); cf. Weissenf. Rest. 94-101; H. B. Harton, Sem. Origins. 108-115. The chief 'Ashtarte of Cyprus was 'Ashtarte of Cyprus, and she is identified with Astarte by Plutarch, de Iside et Osiride, 15 (cf. Cicero, de Nat. Deor. iii. 59). Tanith also and other Phoen. goddesses may be only local forms of 'Ashtar (see PHOENICIANS). In Phoenicia, Cyprus, and most of the islands of the Egean, statuettes have been found representing a nude female holding a dove. These are similar

served as a general designation for foreign goddesses (Müller, Asien, 313 ff.). In the mound of Gezer a large number of plaques have been discovered in pre-Israelite strata, and the name of the sanctuaries is doubtless 'Ashtar. No other images, except of Egyptian origin, are found in these levels, and this indicates that 'Ashtar remained the principal, if not the exclusive, deity of the ancient Canaanites as of the primitive Semites (see art. CANAANITES). In the OT 'Ashtar appears as a survival of the goddess 'Ashur-dur at 1 Ch 6:9 (12). 1 Ch 6:9 (12), Ch 6:9 (12) is this called Be'esh'tarah, i.e. Beth-'Ashtar, 'house of 'Ashtar.' The plural vocalization is not confirmed by the spelling 'Ashtarot. The name Amur the Amurite legend may be due to the fact that several 'Ashtarts were worshipped at this shrine. It may perhaps be a plural of majesty like 'Eliyehm. 'Ashtaroth.-Qarnain (Gn 14:1, 1 Mac 29, 2 Mac 12) is perhaps to be distinguished from 'Asharoth. In Jg 22:10, 1 S 19:31 etc. from a late Elishiotic or Deuteronomistic word—it is stated that the Israelites in the period of the Judges worshipped the Ba'alam and the 'Ashtaroth of the land of Canaan. Here 'Ashtaroth means no more than 'goddesses,' as in the Heb. 'Ashtoth. 'Ashtaroth or 'goddesses'—a usage that occurs as early as the time of Hannah's return (L. W. King, Jamiulurab, ii. 34). Since 'Ashtar was known to the Canaanites, and also probably to the pre-Mosaic Hebrews, there is no reason to doubt that she was worshipped by Israel in the wilderness. If扫 is corrupted without deriving it from a S 310, the Philistines, who also were newcomers in Palestine, had adopted the cult of the Semitic mother-goddess (read the sing. with LXX το 'astraπωρην). In 1 K 11:2-12 2 K 23:9 'Ashtar is called the 'goddess' (or 'loathsome object') of the Sidonians, and her worship is said to have been favoured by Solomon. In the latter passages 'Ashtar is construed as a proper name without the article. The same is true in the Phoen. inscriptions. We do not read of the 'Ashtar of Tyre and the 'Ashtar of Sidon, as of the Ba'al of Tyre and the Ba'al of Sidon. In τον Κατερος of CIS 135, την is probably an epithet and not the name of the city Eryx. In spite of this, different 'Ashtarts were worshipped in different cities. and the plural, as noted above, could have the general sense of goddesses. The name of another goddess, accordingly, is due, as in the case of 'Amon, 'Ammi (q.v.) to loss of the primitive meaning.

The worship of 'Ashtar in Phoenicia and the Phoen. colonies is well attested by inscriptions and literary references to her functions of fertility. In the Tabnit Ins. 1, 2, 6; CIS i. 3, 15, 16, 18; 4, 5; Lucian, Dea Syr. 4; Archil. Tat. i. 5; Lydus, de Mens. iv. 44; Malalas, Chron. ed. Pind. p. 31; at Tyre, by Sanchoniathon (Philo Rybl. in Müller, Fragmenta Hist. Græc. iii. 509, 509), Manander (in Josephus, Ant. viii. v. 3, 4; Ap. i. 18); at Um el-'Awamed near Tyre, by CIS 8; at Ma'sb'it, by the Ma'sb'it Ins. 4; in Cyprus, by CIS 11. 3; 864. 4 (cf. 4672, CIL 46, 168; at Gul near Malta, by CIS 132. 3; at Eryx in Sicily, by CIS 135, 154; 1; at Carthage, by CIS 455, 457; 264, 4. C. R. Acad. Ins. 7, Dec. 1894, Augustine, De Civ. Dei, iv. 10; Smrth. i773, p. 750.) It is probable that Ba'alat, 'mistress,' the goddess of Gebal and other Phoen. towns (CIS 1. 2ff.; 177; Philo Rybl. in Müller, Fragmenta Hist. Græc. iii. 569; Melito in Cureton, Spec. 44), is only a title of the Phoen. woman-god Ba'al-tu (Müller, Asien, 312; 313). Evidently the goddess 'Ashtarte was well known to the Egyptians that her name
in type to the plaques discovered at Gezer, and are generally believed to represent the Phoen. goddess, the female figure. It is clear that of the Phoen. coins she is represented standing on the prow of a galley with a mural crown on her head or in her hand.

Into Syria proper the cult of 'Ashtart seems never to have spread, on account of the strength of the native goddess Atargatis. Although 'Ashtar was originally the same as 'Ashtart, the two goddesses had diverged so far that they were never identified. Lucian (Dea Syr.) carefully distinguishes them. There was even a temple of Atargatis at Askalon alongside that of Ashtar. On the other hand, Baudissin (55), says that Apollonius (Oneirocrit. 1. 8), and Lydus (de Mens. III. 35, iv. 44) call Ashtarte the goddess of Syria, this only shows a loose usage of the name Syria.

From the Phenicians the cult of 'Ashtart spread to the Greeks and to the Romans. One inscription (CIG 6807) shows that her worship was carried, probably by Roman soldiers, as far as Corbridge in England. Hommel (Neue Jahrb. f. Phil. xxv. (1882), p. 470) says that Apollonius has been named Ashtart, which shows that Aphrodite is etymologically the same as 'Ashtart; but this is doubtful. It is certain, however, that the Greeks identified 'Ashtart with Aphrodite (cf. the inscription from Delos in Bull. de Corresp. Hellénique, vi. 1882, p. 476). Apollonius of Tarentum (op. cit. 147) says that the name of the goddess was Coelestis, but this is also a title of 'Ashtart (Jer 7th 44172; Sanchoniathon in Müller, Fragmenta Hist. Græc. iii. 369). Many of the seats of Aphrodite worship were originally old Phen. sanctuaries. The temple of Urania Aphrodite at Askalon (Herod. i. 100) must be the same as the house of 'Ashtart (1 S 319). The Aphrodite whose rites at Aphaia are described by Lucian (Dea Syr. 6) and Eusebias (Vit. Const. iii. 50), and whom Sozomen (II. 5) calls Urania, can have been no other than the Baalat of Gebal whose identity with 'Ashtart has already been discussed.

The shrines of Aphrodite in Cyprus also were certainly Phen. foundations, and when Homer calls her Kērēs and Kēlēsia (II. x. 350; Od. viii. 283, xviii. 183), he shows that she was derived by the Greeks from the Phenicians. In like manner the Erycina of the Romans is identical with the old Phen. 'Ashtart of Eryx, and Cicero says expressly (de Nat. Deor. iii. 50; cf. Lydus, de Mens. iv. 44) that there are four Venuses, one originating in Syria and called Venus Phrygia, who is called Ashtarte and is recorded to have had wedon Adonis. Compare also what Lucertius says of Ἐνεδρόν γενετρίας in the opening lines of τε δεα Βερονια Natura. It is clear, that much information in regard to the cult of 'Ashtart may be gained from a careful sifting of the statements of classical authors concerning Aphrodite and Venus (see art. GREEK RELIGION).

It is even possible that Rhea, Cybele, and other mother-goddesses of the ancient world may be ultimately derived from the Semite 'Ashtart, or at least may be modified by her influence (see art. ATARGATIS, ISHTAR).

LITERATURE.—In addition to the discussions mentioned above, see E. Meyer, art. 'Astarte' in Roehrer (1884); Camont, art. 'Astarte' in Paul de Ferrère (1830); Baudissin, 'Astarte and Aschem' (with full bibliography of earlier writers) in FEFP (1886); Driver, 'Ashoreth' in Hastings' Dict. (1888); Farnell, Cag. (1893); he shows that she was derived by the Greeks from the Phenicians. In like manner the Erycina of the Romans is identical with the old Phen. 'Ashtart of Eryx, and Cicero says expressly (de Nat. Deor. iii. 50; cf. Lydus, de Mens. iv. 44) that there are four Venuses, one originating in Syria and called Venus Phrygia, who is called Ashtarte and is recorded to have had wedon Adonis. Compare also what Lucertius says of Ἐνεδρόν γενετρίας in the opening lines of τε δεα Βερονια Natura. It is clear, that much information in regard to the cult of 'Ashtart may be gained from a careful sifting of the statements of classical authors concerning Aphrodite and Venus (see art. GREEK RELIGION).

It is even possible that Rhea, Cybele, and other mother-goddesses of the ancient world may be ultimately derived from the Semite 'Ashtart, or at least may be modified by her influence (see art. ATARGATIS, ISHTAR).

LEWIS BAYLES PATON.

ASIA (Ethnology, Religions, and Ethics).—The distinctive title of officina gentium, formerly awarded to Asia by common consent, was based mainly on its vast population, which greatly exceeds that of the rest of the world. Now it may be taken in a more literal sense, as indicating that this continent is really the officium, the true cradle of the human species. In art. ETHNOLOGY it is shown that man was specialized most probably in Malaysia during Pliocene times, that is, while that insular region still formed part of the Asiatic mainland.

From this centre of origin and dispersion the first migratory routes, still in the late Pliocene or early Pleistocene Age, may now be followed almost step by step through the Malay Peninsula, Indo-China, and India to the Tibetan plateau, which was not yet so sharply cut off from those lands as it afterwards was by the continuous upheaval of the Himalayan system. Recently a very old station on this route was revealed in the Pahang district, north of Johore (Malay Peninsula), where a rudely worked stone implement was found resting on limestone rock 45 feet below the surface, among some river gravel, above which was a bed of clay 45 feet thick, derived from the decomposition of the greenstone, which forms the floor of these hills. These hills had been overlaid by the limestone deposit, and it was only when the limestone had been sufficiently denuded to allow the greenstone to emerge that the latter rock began to yield its clay. 'The amount of denudation since this emergence has been immense.' (Haupt, DB xiii. 300. 14th Feb. 1902.) Farther north, Dr. Noeting discovered in (1894) another paleolithic station in the Yenangyang district, Upper Burma, where some chipped flints were found in situ in a Pliocene bed associated with Hippinion antelopus and other long extinct fauna (Natural Science, April, 1897). In India, paleoliths are yielded, often in great abundance, by the Pleistocene beds and drift gravels of the Mirzâpur, Arcot, Orissa, Hyderabad, Narbada, Gangetic, and other districts. Many of the objects are of the same type as those of the European Drift, and are certainly contemporaneous or even of earlier date (JAI xvii. 57 f.).

These primitive Indo-Malayan wanderers may thus easily have converged both from India and Indo-China on the Tibetan tableland, which, under conditions far more favorable, would almost inevitably have become a new centre of specialization and dispersion for the human, as it has for so many other mammalian, species. Here was ample space, such as seems needed for the development of all the races, and a climate far more temperate than that of the Torrid Zone, though, owing to its further lower altitude, more genial than at present; boundless plains intersected by ranges of moderate height, and diversified by a lacustrine and fluvial system far more extensive than that revealed by modern exploration. Here, therefore, the Indo-Malayan Pleistocene precursor must necessarily have become modified in the process of adaptation to his changed environment, and thus gradually have acquired the physical features characteristic of the Mongol division of mankind. Neither colour of the skin, texture of the hair, nor stature could present any difficulty, since in all these respects the Mongol type stands actually nearer than does the Negro to that of the generalized Quaternary ancestor (de Quatrefages). Taken as a whole, the Mongol archetypal types differ from the other divisions—black, white, red—mainly in the general yellowish complexion, the broad flat features, with prominent cheek-bones, slight mesorrhine nose, mesogensnath jaws, brachycephalic (short) head, and a pointed, or sometimes narrow almond-shaped aperture between the lids, a vertical fold of skin over the inner canthus, and the outer angle slightly raised; lastly, the highly
characteristic dark blue spot in the lower serral region peculiar to all true-born Mongols, but disappearing in infancy, and said to be common also to the Siniian young (Dr. Bälz, quoted by Dr. O. Nøelid, *Gesch. von Japan*, 1906, p. 55). The oblique eye with its fold of skin between, which makes the black, lank, and rather coarse hair, round in transverse section, though constant is not exclusive, being common also to the American aborigines, and forming the most marked somatic link between the Mongol and American Indian divisions.

From the central Tibetan plateau this *Homo asiaticus fuscus*, as he has been named by Linné, radiated during the Stone Ages over the greater part of the continent, northwards to Mongolia, Siberia, and the Amur basin, eastwards to China and Indo-China, westwards to the Tarim basin, the Aralo-Caspian depression, and Mesopotamia, southwards to India as far as the Vindylan uplands. Most of the Asiatic mainland was thus first occupied by peoples of proto-Mongol stock, who in their several new environments have differentiated into a number of sub-groups distinguished by more or less marked physical, mental, and linguistic characteristics. Such are the so-called *Hyperboreans*, comprising the now nearly extinct Yakghirs, Chukcheis, Koryaks, and Kamchadalies of the Arctic region east of the Lena basin, whose chief branches are the Mongols proper, the Tunguses with the Manchus, Korens, Japanese, and Liu-Kiu Islanders, in the east, the Turks or Tibetans, the Yakuts, Kirghizes, Samoyeds, and Ugro-Pins, in the north, and, ranging from the Lena basin to Lapland and Hungary, and closely connected by their common agglutinating Ural-Altaic speech, of which Korean and Japanese appear to be aberrant members; the *Tibeto-Chinese* section, including the Tibetans, the Chinese, the India, and several other Far Eastern groups, all of more or less monosyllabic isolating speech; the extinct or absorbed *Akkado-Sumerians* of Babylonia, whose highly agglutinating pre-Semitic language is by many affiliated to the Ural-Altaic family (details in art. ETHNOLOGY, *'Conspicuous').

The first Mongol settlement of Asia left free the southern and south-western regions—a great part of India, Iran, Caucasus, Asia Minor, Syria, Canaan, and Arabia, i.e., about one-fourth of the whole continent. During the early Stone Ages, most of the western section was occupied by various branches of the Caucasian division, ranging eastwards from North Africa, where that division appears to have been specialized (see art. AFRICA). Amongst the first arrivals were the *Semites*, who ranged from the common Hamito-Semitic stock, and occupied the Arabian Peninsula, of which they have always held exclusive possession, and whence they migrated later into Mesopotamia, Syria, and Asia Minor, becoming differentiated in their new homes as Hymarites, Arabs, Phenicians, Canaanites (Israelites, Amorites, and others), Aramaeans (Syro-Chaldeans), Assyrians, and perhaps Hittites. Other early streams of migration from Africa are now represented by the Georgians, Circassians, Leobhians, and others of the Caucasus, where they are distinguished by a surprising diversity of speech (whether the same as a fold mountain of languages of the mediavial Arab writers, and often by an almost ideally perfect physical type, owing to which 'Caucasian' was adopted by Blumenbach as a suitable conventional name of the white division, that of *Burb', and as the Caspian) as wandered, they came the Caucasians of Aryan stock, commonly called *Aryans* or *Indo-European*, whose provenance and centres of dispersion are still moot questions, but whose various Asiatic branches are found at the dawn of history already settled in Asia Minor (Hehleens, Phrygians, Lydians, Armenians, and others), in Iran (Medes, Persians, Kurds, Afghans, Balouchis, and others), in the Hindu-Kush, Taimirs, and North India (Siah-Posh, Dards, Gallehas, Yesie Aryans).

In India these Aryans were probably preceded by a new sub-mongol *Ugro-Altaic* element, by the *Koharian* of the Vindylan uplands, and by the *Dravidians* of the Deccan and Ceylon. There is no certain clue to the origin of the last two, who present mixed physical characteristics and speak two radically distinct agglutinating languages, Koharian especially being of an extra type. In its morphology it remotely resembles the Finno-Ugric branch of the Ural-Altaic family, but, like Dravidian, in other respects differs profoundly from all other known forms of speech. But it is generally, and perhaps rightly, assumed that the Koharians entered India from the north or north-east, and the Dravidians from the north-west, and that both may have been offshoots of the Mongol stock afterwards greatly modified in their new homes.

This first occupation of Asia mainly by the Mongols, but also largely by the Caucasians, has undergone great changes and shiftings, brought about by the ceaseless migratory movements and racial struggles which, beginning in remote prehistoric periods and works families, have since continued during the historic period, and are still in progress. Evidence is now available to show that the Mongol domain was encroached upon and traversed north and south by neolithic whites penetrating from Europe across the Pechora and Lena basins to Manchuria, Korea, and Japan, and apparently from Africa through Syria, Caucasus, Iran, and north India to Indo-China and Malaysia. The strain of white blood is very marked amongst the Manchus and Koreans, while the Ainus, the true aborigines of Japan, are marked with a distinct Mongol blood (Gesch. von Japan, 1906, i. 1). The route followed seems indicated by the station near Tomisk, West Siberia, where, in 1896, numerous worked flints and some human remains were found by Prof. Kaschenko in association with those of a mammoth. Further east, A. P. Medlyt explored (1895) five pre-historic stations in Transsibikalin, in one of which he found two very highly dolichocephalic pre-Mongol skulls of the early European type (L'Anthropologie, 1896, p. 82). In Korea, where the evidence is still more complete, W. Saunders marks on the 'frequency with which features almost European in refinement and Caucasian in east are met with.' Here the numerous flint implements and dolmens, like those of Britain and North Africa, must be accredited to the San-San aborigines who occupied the peninsula long before its conquest by the Mongold Sien-pi from Manchuria.

The southern highway may similarly be traced from Africa through Syria, where Prof. Zimmoffen describes seven stations of the early and later Stone Ages (L'Anthropologie, 1897, pp. 427, 429), and thence through Caucasus, India, and the Khais Hills to Indo-China, where the evidence again abounds. Here are numerous Caucasian groups intermingled or associated with the Mongol substratum, and conspicuous especially amongst the Kajhens of North Burma, the Cambodians of the Lower Meklong, the Mosso, Lolo, Man-te, and many other hillmen all along the Chinese borderlands from Assam to Annam. Mrs. Bishop (Miss Sara Bird) describes the so-called Man-te, visited by her in 1896, as 'quite Caucasian, both men and women being very handsome.' Prince Henri d'Orléans was reminded by the Kin-te (Khamungs, Lin-te) of some of his European acquaintances. Dr. Billet met some Nong people 'with light and even
red hair'; and M. R. Verneul tells us that the Mans and Thai 'differ altogether from the Mongol group represented by the Chinese and Annamese. The Mans especially show striking affinities with the Aryan type' (L'Anthropologie, 1896, p. 692).

In the extreme west the racial movements resumed in the 6th century A.D. the Akkado-Sumerian Mongols by the Caspian Semites over 4000 years ago. After the rise of Islam these and most other Semites became Arabized in speech and religion, while in Asia Minor nearly all the early Caucasian peoples were displaced by the Muslim Turks. Along the Caucasian hordes from Central Asia Antolia has thus become by conquest a part of the Mongol domain, which has also encroached on a considerable section of North Iran, that is, the hilly district between Herat and Kabul, now occupied by numerous Aimak and Hazara tribes, who are ethnically Mongolo-Turks, Muhammandans in religion, and now of Aryan (Persian) speech.

In Irania and the Ardo-Caspiian steppe, that is, the Irân, or 'land of light,' and Turânia, the 'land of night,' of the Persian poet-chroniclers, a perpetual struggles ensued for the mastery throughout the historic period between the nomad predatory hordes of the northern wastes and the cultured agricultural populations of the fertile southern lands. These southern Aryans were driven out by the Persian empire, the Achaemenians, which extended from the Oxus to the Indus, and fostered the growth of flourishing settled communities throughout Central Asia. Thus it was that Iran interpretrated Turan, expanded its higher culture by the very enlargement of its own borders, and, when further stimulated by Hellenic influences, invaded the wilderness itself. In the Tarim basin, at that time a fertile well-watered region, there arose a great centre of Iranian and Greco-Bactrian civilization, the remains of which, after lying buried for some two thousand years under the advancing sands of the Takla-Makan Desert, have again been brought to light by the Sven Hedin expeditions of 1895 and 1900, and more fully explored by Dr. M. A. Stein, who in 1901 recovered great quantities of hidden treasures, now deposited in the British Museum (Sand-buried Ruins of Khotan, 1903).

Later, the Caspian ascendancy in Central Asia disappeared before the repeated invasions of Huns, Finns, Turks, and other Mongol hordes, but has been re-established, at least politically, by the spread of the Russian-Caspiian region in recent times. To these incessant ethnical movements, dislocations, and interminglings are due those intermediate Mongolo-Caucasian populations, such as the Ugrians and other Finns, the Uzbeks, Turkmans, Hazaras, and other Turkic groups, who in their physical characteristics present every shade of transition between the typical white and yellow races.

In many places the cultures and social and religious institutions have changed or been displaced, although in Asia the dominant religions are in general maintained distributed according to race. Thus the Tunguses and most other Siberian aborigines are pronounced shamans; the Hindus extreme polytheists; the Tibetans, Sinhalese, Indo-Chinese, Chinese, Japanese, and Mongols proper all nominal Buddhists; the Arabs, Kurds, Afghans, Turkomans, Uzbeks, Kirghizes, and Turks generally Sunnites (orthodox) Muhammedans; the Persians, the Moors of Ceylon, and the Hazaras mostly Shiites ('separatists'); the Kazakhs are a remarkable spectacle of a nomad Turki group (Kirghiz) and a nomad Mongol group (Kalimaks) encamped side by side on the Lower Volga plains, both intruders from Asia, but the former strict Sunnites, the latter Buddhists like all their Eastern kindred. This distribution, however, is purely superficial, since below the outward forms, often merely official, as in Tibet, Siam, Annam, and China, the old primitive beliefs still everywhere survive in their full vigour. In Asia these beliefs represent all the earliest developments of the religious sentiment—pure animism, personification of the elements, nature, and ancestors (see Etnology, § 9)—not merely in juxtaposition, but often in the closest possible association. Thus ancestor-worship, characteristic of Africa, and animal-cult, dominant in America, are both prevalent in China, a blend of the belief in the good and bad and of water spirits, and an outward adherence to the three recognized national religions—the three 'State Churches,' as they have been called—Buddhism, Taoism, and Confucianism.

In every district are practised diverse forms of worship between which no clear dividing line can be drawn, and, as in Annam, the same persons may be at once followers of Confucius, Lao-tse, and Buddha. In fact, such is the position of the emperor, who belongs ex officio to all three of these State religions, and scrupulously pays reverence to them all. There is also some truth in the Chinese view that 'all three make but one religion,' the first appealing to man's natural nature, the second to the lower, and the third to the higher sphere of thought and contemplation. But behind, one might say above it, all, the old animism still prevails, manifesting in a multitude of nature-worship practices, whose purpose is to appease the evil and secure the favor of the good spirits, the Feng-shui, or Lung-shui, and water ghosts, such as the 'White Tiger' and the 'Azure Dragon,' who guard the approaches of every dwelling, and whose opposing influences have to be nicely balanced on the side of the household. But the powers of the magic arts (Koan, Man Past and Present, p. 223).

The 'professors' here referred to correspond in China to the shamans who control the religious world in Siberia. Shamanism will be separately dealt with, and here it may suffice to say that it is not a particular system of belief, but rather a peculiar phase of thought, which is widely distributed, and appears to be a necessary stage in the progress of all religious development. Thus the shaman belongs to a superior order of such persons, who holds a position somewhat intermediate between the medicine-man and wizard of the lower, and the marabout and true priest of the higher, religious systems. Although in its more advanced stage the office tends to become hereditary, and to crystallize into a regular hierarchy, in Siberia any one may become a shaman who has sufficient will-power to enforce belief in his claim to supernatural virtues, and to exercise them as intercessor between the invisible and otherwise inaccessible deities and their votaries. Hence in Siberia beneath the general shaman-craft there are all kinds of animistic beliefs, practices, and superstitions, in which animal-cult, as in North America, plays a much larger part than ancestor- or nature-worship. There are widespread not only among the Yakuts of the Minusinsk district about the Alabakan affluent of the Yenisei, although baptized Christians, are still under the influence of the shamanas, and credit the Ainus, that is, the invisible spirits of evil, with the power of assuming the form of dogs, foxes, birds, snakes, and other animals. They dwell in the underground regions, and are ruled by the Irel-Khan, who is also the familiar spirit and patron of the shamans.

So also the Yakuts of the Lena basin have a subordinate deity, the Vekhar, or 'Bird of Heaven,' from time to time visits the abodes of mortals in the form of a white horse, an eagle, a cuckoo, or some other bird, and carries messages to and fro between them and the 'Merciful Chief,' creator of the world, who with his wife, 'Shining in Glory,
is all-powerful. These are beneficent beings, but nearly all the rest appear to be devils, and amongst the Yakuts demonology is certainly carried to its extreme limits. The malevolent aerial spirits form twenty-seven tribes ruled by a kind of Satan, who with his wife has a numerous progeny, all hostile to mankind. Amongst these, the Yakut god, who is said to be the instrument of his vengeance, while in the underground Meng-tar, abode of ‘Everlasting Woe,’ there dwell eight other hosts of demons under Asharay-biko, the ‘Mighty,’ supreme in Heaven. These hosts have all their female kinds, and are joined by the shamans after death. Another potent divinity is Enakhs, the ‘Cow-herdess,’ who is much dreaded because of her power to harm their cattle, strike them with murrain, and destroy the calves; hence her wrath has to be turned aside by muddy costly offerings (Ovorovsky).

Despite their veneration of Russian Orthodoxy, the neighbouring Samoyeds still cling tenaciously to their old pagan beliefs. ‘As long as things go well with him [the Samoyed], he is a Christian; but should he run an opportunity to benefit himself, he immediately returns to his old god Nun or Chaddi. . . . He conducts his heathen services by night and in secret, and carefully screen from sight any image of Chaddi.’ (F. G. Jackson, The Great Frozen Land, 1895, p. 84).

Several instances are recorded of this conflict between the old and the new—a subject more fully dealt with in art. Aborigines. Thus on the Samoyed graves the wooden cross is supplemented by an inverted sledge, which is intended to convey the dead safely over the snows of the under world. They also hold in awe the rings of stones within which human sacrifices appear to have been formerly offered to propitiate Chaddi; and although these practices have ceased, ‘it is only a few years ago that a Samoyed living on Novaja Zemlja sacrificed a young girl (8b) as a private act of devotion and as an offering that death in the end of everything, that good and evil deeds receive their deserts in this life, and that immortality is reserved only for the tutelé, that is, the Samoyed magicians or shamans, who either remain quietly in their graves or else wander about at night seeking an opportunity to benefit their friends or harm their enemies. Despite this limited measure of immortality, in the graves are deposited all kinds of useful objects, such as clothing, cooking-pots, knives, horns filled with tobacco, guns, bones, and bits of jute. The Samoyed chief is buried with his rings, thread, sinews for sewing, and scraping-knives for the women, everything being damaged to prevent it from being stolen. The explanation of this seeming inconsistency is that the departed do not die at once, but survive for some time in the grave, where they will require the same objects that they needed in this life. The above-mentioned Nun is an aerial god who dwells in the sky, where he generates thunder and lightning, sends down rain and snow, and rules the winds and storms. The sky horse, also called Num (cf. Dierper), is his visible embodiment, and to his name is given the moon, which when he manifests himself at night, the rainbow (nunauso) which forms the hem of his mantle, and the sun in which he is chiefly venerated, all of which is greeted at its rising and setting with suitable invocations. Some, even hold that the earth, the sea, and all visible nature form part of the same divine system, thus anticipating the mystic and pantheistic concepts of more advanced theosophies. Nun knows and sees all that happens upon earth; if men are good and devout, he protects all their doings, increases their reindeer herds and gives every one of his epithets is Sibiloom-laerite, ‘cattle-warrior,’ blesses their hunting expeditions and their huntsmen. But if they live wicked lives, they fall into poverty and misery, and die prematurely. There is even a sort of moral code containing the penalties which all should be guided who wish to stand well with Num: ‘Believe in Num. Believe in the spirit of evil, and that it will be appeased by sacrifices, that no misfortune befall thee, or thy wife, or thy children; that it may save thee from sickness and assist thee in thy labours. Believe in the spirits that are good, and fear no evil. Do not injure the poor, and Num will reward thee. Speak not of what thou hast seen, that no one may know from thee what has happened.’

Yet beneath this outward display of lofty religious and ethical notions, most of the Samoyeds are still nature-worshippers and animists. They show great respect especially for the bear, which with the wolf is held in the highest veneration in Siberia. Nevertheless the Samoyeds, like the Ainu and other Eastern peoples, will capture and kill it whenever they can. When it is dead, the flesh of its forequarters, carefully cut out, the object being, by a strange confusion of ideas, to protect themselves from harm when next they venture to attack one of the species.

Like the Samoyeds, the Odzynka of the Yenisei region, is the worship of the sky, Arm or Urt, who sends thunder and storms, but also covered with a high sense of honour and rectitude. He mingle amongst mortals, accompanying them wherever they go, and judging them according to their deserts, for no act, good or evil, can escape his notice. He is inaccessible even to the shamans; no appeals can bend his will; and he controls human destinies and the course of events according to the eternal laws of justice. No sacrifices can secure his favour, since he looks only to merit in the distribution of his gifts, without the least regard to prayers or offerings. Hence it is useless to seek his aid. It is the lesser deities and the demons alone that can be swayed by the mediation of the shamans, and, as amongst the Ugrian Finns, they are generally represented by rude stone or wooden effigies, often in an extremely fantastic form. Thus Ortk, the patron of the hunt, is figured as a legless horse stuffed with hair and skins, with two linen sleeves for arms, a linen skirt, and a face made of a hammered metal plate nailed to a block of wood. A log arrayed in beaver fur, beaver heads for Mig, a fat mountain goblin, who plays mischievous pranks with people, leading them astray in the woods, and overwhelming them in snowstorms. In this strange pantheon a place is also found for both the wolf and the bear, and when one of these animals is killed in the hunt it is regarded as a strobak of luck celebrated with much feasting and revelry.

‘The skin is stuffed with hay, and the people collect from all quarters to eat, drink, and spit upon the helpless enemy. They sing songs of triumph expressed in words of insolence and defiance. After their spirit of mortification is exhausted, they set up his skin and the skull in the corner of the eastern wall, and say that all evil from the ferocity of the ferocious beast, and bestow upon it, for a considerable time, the veneration of a tutelar god’ (A. Featherman, Travaux de l'Acad. des Sciences, 1901, p. 560).

But it is in the extreme east, amongst the Gilyaks and Ainus, that this animal-cult has acquired its highest development. The kohr (bear), who represents the Kur, or Lord of the heavens, is one of the chief Gilyak divinities, although under certain circumstances he is occasionally captured and eaten. When taken in his lair while hibernating in winter, he is secured by a leathern noose and dragged along with shouts andcries intended to stultify the still half-dozing victim. He is then kept under restraint, fed and watered, and at last slain on his feast-day, after a fight in which the villagers are required to attack him without arms. Similar strange practices prevail amongst the Ainu of Yezo, North Japan, as described by the late Mrs. C. A. Seligman.

‘The peculiarities which distinguish this rude mythology is the “worship” of the bear, the Yezo bear being one of the most sacred objects of the Japanese, and in which they indulge feelings by which it is prompted, for they worship it after its fashion, and set up its head in their villages, yet they trap it, kill it, skin it, and eat it. The spirit of the wild beast inspires more of the feeling which prompts worship than the inanimate forces of nature, and the Ainus may be distinguished by the variety of their festivals, fairs, or Saturnalia, as the Festival of the Bear. Gentile and savage as they are, they have a great admiration for ferocity and courage; and the bear, which is the strongest, fiercest, and most courageous animal known to them, has probably in all
ages inspired them with veneration. Some of their rude chants are in praise of the bear, and their highest deity on a man is to be found in the shape of an elephant (Viadanat Thres in Buddha 73). For further details and a possible explanation of this strange cult, see the art. ANUS in vol. ii. p. 429, and art. ANNALS, ib. p. 525.

In Mongolia the never-dying superstitions associated with nature-worship, animism, demonology, and witchcraft still survive beneath the outward show of official lamaism. Indeed, the whole system of Buddhism is everywhere changing and modified, as in most other Buddhist lands, by the old local beliefs. The magician are still appealed to when the flocks are smitten by disease; when 'fine weather,' which there means rain, is needed; when sickness troubles the household; or when some healthy but apparently neighbourly boy is struck down by a mortal illness or fatal accident. The very inmates of the huge lamaseries bear the name of Samaneans, perhaps a corrupt form of the Tungus word shaman, as if the Buddhist monks were merely the spiritual successors of the old medicine men. Every possible transition is thus observed between the former nature- and spirit-worship and the peculiar form of lamaism introduced from Tibet after the death of Jenghiz Khan.

In Tibet itself much the same relations prevail between the lamas and the rest of the population. Bon, or Bo-o ho, religion, which persists, especially in the central and eastern provinces, side by side with the national creed. From the colour of the robes usually worn by its priests, it is known as the Red lamaism. In contradiction to the orthodox: Yellow and dissenting: Red, lamaists- and, as now constituted, its origin is attributed to Shen-rab (Sen-rabs), who flourished about the 5th century before the new era, and is venerated as the equal of Buddha himself. His followers, who were originally agriculturists, possessed the entire regions of Tibet in the 10th century, when, on the death of the first chief, the Bonpo sect is the ubiquitous cre- stikes with the books of the cross reversed, instead of , a change said to be due to the practice of turning the prayer-wheel from right to left as the Red lamas do, instead of left to right as the orthodox way. The contemporary Buddhist formula of six syllables - om mani pad me hum— is also replaced by one of seven syllables - om tri mots la sa ha dun (Sarat Chandia Das, in C.I.S.R. 1858, 1882).

In the upland regions the Brahmaputra, between Tibet and Upper Burma, there are a multitude of primitive Mongoloid peoples—Abors, Mishmis, Garos, Khasis, Koochis, Bodos, Kacharis, Lushais, Naga, Kuki, Chins, Kahunis, Kacharis, and many others—who have been little or not at all affected either by Buddhist or Hindu influences, and whose religions or mythologies consequently present features of exceptional interest. Thus the gods of the Garos are mostly vague mythical entities, dwelling in the hills or in the sky, but possessing no definite attributes or powers, and associated with many wonderful cos- melical myths. Salong, the chief deity, marries Apongna, a divine princess who descends on earth and gives birth to a son, Kengra Barga, father of fire and of all the heavenly deities, and also to daughter, Mining Mija, who marries the son of Dona, another man of mankind. From a granddaughter of Salong spring the mothers of the Tibetan Bhoti- yas, of the Garos, and of the Ferlinges (English), and so on. But beneath the ancient symbols of the old nature-worship, as seen in the personification of the sun, moon, and stars, of the hills, streams, and forests, with their indwelling genii, to whom are attributed divine powers as rulers of the universe, and controllers of human destinies and all nature phenomena.

According to the creation myth, the face of the earth was originally covered with one vast sheet of water inhabited by a huge worm. One day the Creator, passing over this worm, dropped a small piece of earth, saying, 'If I can do this for the land and people it.' "Nonense," said the worm; "look here, I can swallow it." But the lump passing out of his body grew and grew until it became the world we know now, and the worm strayed out of the ground by the will of the three gods, Lama the Creator, without whose power it would never have been done, Golar, god of death, and the beneficent, Budukal, who emancipates through his wife Yaptse (C. A. Soppit, Kuki-Lushai Tribes, 1857).

The Tzu-geens, a branch of the numerous Chin family, have a tradition that truth is abhorrently powerful, but were so hurt by these innate efforts to capture the sun. With the aid of Jacob's ladder they mounted higher and higher, but, growing tired, began to quarrel among themselves, until one day, while half of them were clawing up the pole, the other half below cut it down just as they were about to seize the sun.

Although often described as devil-worshippers, the Chinas appear to worship neither god nor devil. The northern groups believe there is no Enn Supperman; and although the southern are of Kozin, or beard god, they pay him no homage, and never look to him for any favours, except perhaps exemption from such troubles as he might be disposed to inflict on those who offend him in this world. There are also the countless gods of the air, the streams, the jungle, the hills, and there are those that swarm in the house and in the fields. None of these can do any good, though all may do harm unless soothingly gifted. Mithikwan, the 'Village of the Dead,' is divided into two wards, the Prethikwan, to drive away the happy, and the Sathikwan, reserved for the wretches who die unavenged, and must there bite till their munder is wiped in blood. Thus the vendetta receives divine sanction, strengthened by the belief that the slave becomes the slayer of the slave in Prethikwan.

Should the slayer himself be slain, then the first slain is the slave of the second slain, who in turn is the slave of the man who killed him. Whether a man has been honest or dishonest in this world is of no consequence in the next existence: but if he has killed another, he is in true, he has many slaves to serve him in his future existence; but if he has not killed any many wild animals, then he will start well supplied with food, for all that he can eat on earth being insufficient for existence. In the next existence hunting and drinking will certainly be permitted, but whether fighting and raiding will be indulged in is unknown (Carey and Tuck, The Chin Hills, 1856, i. 190).

Before the advent of the Vedic Aryans, the chthonic gods were probably supreme throughout India, and, despite the wide diffusion of Hinduism, they are still supreme among most of the Dra- vidian, Kolarian, and mixed Aryo-Dravidian abo- rigines. But these gods themselves are nearly all hostile to man, and consequently not easily dis- tinguishable from devils. Hence it is that we have often to fall back on the references to the other low castes, and even some of the high castes, are for the most part demon-worshippers; and this is specially true of the aborigines of Southern India. In the Cochin Census Report for 1901, M. Sankara Menon states: "Nowhere perhaps has the belief in demons a stronger hold on the popular mind than in this part of India. The existence of numerous execrations is a visible sign of the Hindu populace, from the highest Nanbad to the lowest Parang, bears ample testimony to this fact. There is a separate caste, the Panan, amongst the Vannan, comprises diviners, and there are hereditary occupations. The Panan is quite as indispensable a factor in the social organism of the village as the barber, the washerman, or the blacksmith, and he is in a position to have special control over particular classes of demons. The priests attached to many families have their traditional family deities 'by whose aid they profess to control the evil spirits and the malevolent spirits. It may sound strange, but it is none the less true, that there are exorcists amongst native Christians and Mussulmans.
as well. One interesting fact is that high-class Hindus exercise their magical influence by propitiating only the more refined and sublime manifestations of the gods of the pantheon, whereas the lower castes,אוו who are the same as to body but very different in soul, are more terrible and bloodthirsty aspects." Some of the more evil-minded demons are supposed to be wandering about in mid-air, or perching on roof-tops, or black trees, as if they expected the fall in the hands of evil to those that come in their way. They are supposed to live upon the offerings made to them by their votaries, who continually perform the necessary ceremonies for the purpose. Illness, accidents, and other misfortunes are often attributed to the evil influence of demons, who are supposed to sit in the sick-bed of a man and to drive out those demons or spirits. The physician steps in to treat the person, and the common belief is that so long as the patient is possessed, medicine can have no effect. The demons of smallpox and cholera, and mostly of other such contagious diseases, are considered to be caused by a human demon, a jyotirling, or an illusion. A person believes himself to be possessed, and falls ill (66).

In some places snake-worship ranks next to demonology even amongst the high castes. In Malabar nearly all the compounds have their serpent-groves, with effigies of the reptiles carved on blocks of stone; and here no orthodox Hindu will ever kill a snake, even if bitten, since an injury done to any of them would be sure to bring on leprosy, phthisis, or other ailments. Serpents are treated as members of the family, and served with milk, fruits, and all kinds of dainties. None but the women are allowed to enter a serpent-grove, or a twigs from the trees growing in the snake-grove, where songs are chanted and religious rites observed in honour of these deities, which are, in fact, worshipped as gods or demons.

In the direction of the north, superstitious notions seem to touch even a lower level, and among the Kolarans of the Vindhya uplands they were till recently associated with human sacrifices of a peculiarly barbarous character. In order to secure good harvests, the victim, often a child captives, was brought from a neighboring tribe, was put to a lingering death, by being slowly hacked to pieces with an axe, the supposition being that the greater the suffering the better pleased would be the god, and the heavier the crops of cereals. Of the Mundas, one of the largest Kolaran tribes, the chief social feature is their highly developed totemic system. The number of totems almost passes belief, and includes such remarkable objects as rice-woods, cocoons, mice, bees, mushrooms, ants, frogs, eels, worms, or even moonlight, red cache (Chercurous), and tree (crowned) which are sacred, or wearing-sticks. These are all aimed at inducing spirits, so that we have here the lowest conceivable form of the animist that lies at the foundation of all natural religions.

Still more delayed than the full-blooded Kolarian and Dravidian aborigines are the Argyo-Dravidian half-breeds, who are interspersed over the northern provinces, and to their own crude religious dawnings often superadded the revolt ing ideas and practices of the later corrupt Hinduism. Here the blank is almost as a chapter, and for the most part of little interest, of the "twice-born" Aryas (Nobles), and the scarcely human Nāgas, "kindred of the dragon," dates back to the earliest recorded times, and is typified in the mythical marriage of Arjuna, one of the higher Pandavas, with Uṣyā, daughter of the Naga king Vāsuki. This union is also between the still sacred city of Hardwar on the upper Ganges, which is described as inhabited by 2000 crores (a crore = ten millions) of snake-people, whose wives were of peerless beauty; and here was also a lake which contained the nine world's wide life, in which all those snake-people were wont to bathe. During their later migrations the already mixed Aryas encountered the vile Daxyns, proto-Kolarians of the south Gangetic woodlands, for whom no terms of abuse are too strong, yet with multitudes of whom a man was eventually expelled. Thus it was that from the union of the white, the yellow, and the black men arose the modern people of northern India (W. Crooke). That the union was not merely ethnical, but also social and religious, is seen in the usual, или devil-brides, the outcaste jungle tribes, who in the Hindu system became a Brahman Ojha, or exorcizer of evil spirits; and we know that in later times whole sections of the lower races were raised to priestly rank. But this tendency towards complete fusion of all the racial elements with the Vedantic Hinduism, which, though at present occupational, had originally an ethnical basis (see art. CASTE).

A clear insight into these obscure relations is necessary to a right understanding of the strange intermingling of primitive and Hindu social and religious notions prevalent amongst these mixed northern groups. But even so, great difficulties remain, and Mr. W. Crooke, himself a most diligent and shrewd observer, finds it all but impossible to frame a working definition of a Hindu; Mundians of the lower class cling to many of the beliefs of the faith from which they were originally drawn; everywhere in the lower strata the forms of faith known as Brahmanical or Animistic constantly overlap... The natural cleavage line is between Brahmanism and Animism, and it has been found possible on this basis to classify the religious beliefs of central and southern India, but in northern India this distinction is unworkable. Most of the menial and hill tribes protest theoretically to a belief in the addicted to cruel punishments of animals, and even the higher classes are more or less influenced by the Ani mistic beliefs of the lower races (The J. N. Proc. of India, 1857, ch. v.), and Ulieri, where... 'It is a matter of common knowledge as a Vaishnava if we know that on occasion he will worship other gods as well—will reverence the cow or the palm tree, Mother Ganges, or the goddess of smallpox' (p. 245).

As pointed out by Mr. E. A. Gait (General Report of the Census of India, 1901, p. 335), the animistic here in question—a belief in and dread of impersonal powers to be appeased by magic—appears to have passed into the Hindu system from two different sources. Some of its elements are derived from the Vedic Aryans themselves, others from the Dravidian (and Kolarian) races who have been absorbed into Hinduism. But it would be fruitless to attempt to distinguish the two forms of magical usage—the Vedic and the Animistic. They are of mixed parentage, like the people who observe them, partly Indo-Aryan and partly Dravidian. It now becomes possible to understand the picturesque animistic religions of the north, utterly revolting and immoral, others betraying some glimmering of a moral sense, but the great majority degrading—by which these mixed populations are animated. Thus some of the widespread Doms, most probably the parent-stock of the Europerace in India (Dom = the name of an iron-smelting race) and not changeable), hold that raiding and robbery have divine sanction. Before starting on a nocturnal expedition they sacrifice to Sansrī Māi, the chthonic goddess patroness of thieves, and pray in a low voice: "If a dark night may elude their designs and the guards escape the fate of the furin deva, Laverna, was silently invoked by the Roman retro:"

La veni mortem nostrae audi, Pulcher Laverna,
De mihi mater, tu misa sancto, virgo illustri,
Noctem pecuniae, et fraudibus obiate muner.

(Hor. Epist. 1. xvi. 60-63.)

Yet these Doms, scavengers in the towns, vagrants of the jungle and hill tribes, are not quite irreclaimable, and the means adopted to civilize them have met with a measure of success in some districts. They have even a family priest, always the sister's son, who points to matriarchal times when kinship was reckoned through the female line.

The Agravis of Mirzapur, all smelters and forgers, call themselves Hindus, yet worship the tribal deity Lalāsār Devi, goddess of iron (lāhāt =
ASOKA

‘iron’), and also employ the bāgī (see above) to worship the old local godlings. The black goat offered to Lohasūra Devi is worshipped before being dissipated, like the ghosts of the dead, on the hill of Vasanā, like the ghosts of the dead who appear to them in dreams. At the end of the difficult road to the heaven of Parameswara ( Vishnū ) is a great gate guarded by terrible demons, who allow no woman to pass unless tattled. There are twenty-four forms of tattla, and the women who can show no mark of some god on their bodies are tormented by the gate-keepers, who brand them with a hot iron, roll them in thorns, and fling them down from the top of the gate. Tataling has thus become a religious observance. The Arabs are Semites, and, being Semites, are probably of totemistic origin, in the forms—Ganesa, Siva, Krishna as flute-player, the moon, the peacock, and many others—are now merely charms to ward off evils and gain access to the abode of Vishnū. The whole religious world of the Agārias is an intricately interwoven system of primitive and Hindu notions.

Similarly the Agārawālas of the Upper Ganges, although reckoned as Vaishnavas, call themselves, and are, Niga Upanśazi, ‘Snake - worshippers,’ a doctrine that is said to have been taught by the sister of the great serpent Vāsuki. But there is also a deity Ohur, who saves women from widowhood, besides the tribal deity Lakṣmī and several trees—pīpal, kadam, sāmi, babul—which are held in special honour. Socially the Agārawālas are landowners, bankers, and money-lenders, but for them animal food, as well as onions, garlic, carrots, and tunips, is taboo, and a good illustration of the countless hair-splitting caste distinctions is the refusal of the women to eat the food prepared by their daughters-in-law.

One might almost suppose that the Hindu snake-cult had passed into Irania, so general is the respect in which these reptiles are held even by the Persian Shiites. No Persian will willingly kill a house-snake, partly because he thinks it harmless, but chiefly because he supposes it to be tenantmed by the spirit of the late owner of the house. When one was shot by Dr. C. J. Wills, the whole household ‘sulked and looked black for a week,’ although the landlord, being an educated man, was glad, the whole class of reptiles flourished. These years. Equally prevalent are the superstitions associated with omens, the evil eye, and astrology. Nothing serious is done in Persia without the taking of an omen, the casting of lots, or the consulting of an astrologer. A favourite place for taking omens was at the door of the house of the bishop of Hanif, to whom are paid almost divine honours. Recourse is had to the munajjim, ‘astrologer,’ on all occasions; every village has its professional diviner, every town several, whose chief business it is to predict lucky hours or days, to read the future, and to discover stolen property, and in this they are often successful by laying pitfalls into which the thieves unwittingly stumble.

Apart from the fanatical Bābd (q.v.), and the periodical outbursts of religious frenzy connected with the anniversary of the martyrs Ḥusain and Hasan, the Persian Shiites are not particularly zealous Muhammadans. Many, indeed, of the educated classes prefer the writings of Ḥazīf and Sādi to the Qurʾān, are theists and even avowedly pagans, and in their recognition of the Aryan deities, the gods of the East, and that of the Sun, 1823, p. 339). One thing is clear. There is no danger that the monotheism which has sup-

planted the old Zoroastrian dualism in Peria will ever sink, like the Vedic system, to the low level of the primitive celtic beliefs. It will rather be the West which is dissipated, like the ghosts of the dead, in the atmosphere of philosophic unbeliev.

On the other hand, these primitive beliefs are still rife in Arabia, the very cradle of Muhammadan monotheism. Muhammad enthroned Allāh, but failed to abolish the jinnān, the āfīris, and šaḵtaš that still haunt the sandy wastes, and swarm in every wady, cave, well, and hillside of the peninsula. But it has to be remembered that the Persians are Iranians, that is, one of the noblest branches of the Aryan family, while the other, the Hūras or Scythians, is probably a delusion, and whose early beliefs were ‘of the earth earthly,’ originally associated with the Asherahs, the Astarte and Tammuz myths, the abominations of the Baals and Molechs, and all that is implied in the primitive phallic worship.

For the higher religions, all of which took their rise in Asia, see special articles CHRISTIANITY, JUDAISM, MUHAMMADANISM, ZOROASTRIANISM, BRAHMANISM, BUDDHISM, SHINTOISM.

A. H. KEANE.

ASOKA.—Asoka, emperor of India (BC. 273-231), was the grandson of Chandragupta Maurya (q.v.), and son of Bindusārā, whom he succeeded on the throne in BC. 273 or 272, although his formal coronation did not take place until BC. 269, having perhaps been delayed by a disputed succession. According to tradition, Asoka in his youth represented the excessive luxury of Taxila, and also at Ujjain in Mālwa. Silly legends represent him as having attained power by the massacre of ninety-nine brothers, and as having been a monster of cruelty in the early years of his reign; but these are mere fables. In BC. 261 he rounded up the conquered people made a profound impression on the conscience of Asoka, who at about this time came under the influence of Buddhist teachers, to whom war was abhorrent. Four years later, the emperor solemnly recorded in inscriptions engraved upon the rocks his profound sorrow and regret for the misery caused by his ambition, and declared that the loss of even the hundredth or thousandth part of the persons who were then slain, carried away captive, or done to death in Kalinga, would now be a matter of deep regret to His Majesty. Asoka labour under a man who could do no injury. His Majesty holds that it must be patiently borne, so far as it can be possible borne. Asoka acted on the principle thus publicly professed and indubitably recorded, and henceforward was a man of peace, devoted to the inauguration and propagation of the law of compassion, as conceived by him in accordance with the teaching of the Buddha. At a date not exactly known he
ASOKA

qualified himself for the highest rewards of a Buddhist saint by accepting ordination in monastic and adorning the yellow robe of the Order, but did not then abdicate his royal power, although it is possible that in the last year of his life he withdrew from all worldly affairs. He passed away in B.C. 232 or 231 after a reign of fully forty years. The Buddhist edicts he issued while in constant residence on the Golden Hill (Suvarnapuri) at Rajagriha, the capital of the early kings of Magadha (S. Bihar).

The empire which Asoka ruled comprised, in modern terminology, Afghanistan south of the Hindú Kush, Baluchistán, Sind, the valley of Kaman, Kandahar, the lower Himálayas and the whole of India proper, except the southern extreme below the latitude of Madras. The central regions seem to have been governed directly from Pataliputra, the modern Pátàna, then on the north bank of the Són, the great city which continued for centuries to be the capital of India. The outlying provinces were controlled by at least four viceroys, who were often members of the Imperial family; and the orders of these high officers were executed by a regularly organized departmental system of local administration. Each of the provinces was divided by a municipal commission into six boards, and similar arrangements probably existed in the other principal cities. A standing army of all arms—cavalry, infantry, chariots, and war elephants—was maintained in great force, and public order was well preserved.

When Asoka became a devoted disciple of Buddha, the whole machinery of government was utilized by him for the teaching and dissemination of his Master's doctrine, and produced commensurate effects.

Gautama the Buddha, the founder of the Buddhist system as known to history, had confined his ministry to a region of moderate extent in the Gangetic valley, which may be roughly defined as lying between Garg, Prayág or Allahábád, and the Himálayas. When he died in B.C. 240, his followers formed but one of many rival sects in that region, and the society of ordained monks organized by him had only limited and local influence. There is no reason to believe that the vogue of the Buddhist sect had increased very greatly during the two centuries and a quarter which intervened between its founder's death and the conversion of Asoka. The latter event made the fortune of Buddhism, and transformed an obsolescent local sect in the basin of the Ganges into a dominant region-wide religion, permeating and affecting all, if measured by the number of its adherents.

Asoka's progress in the faith was gradual. According to tradition, he was in early life an orthodox Hindu, of the Sáiva sect (see SÁIVISAM); and it is certain that he then approved of sacrifices, and sanctioned the slaughter of animals on a large scale for the purposes of food, sacrifice, and sport. Regard for the sanctity of animal life being the cardinal principle of Buddhist ethics, he began the reformation of his habits by reducing the butcher's bill for the Imperial table to the modest amount of two peacocks and one antelope daily. The institution of the royal hunt was abolished in B.C. 259, and two years later destruction of life for the service of the royal kitchens was absolutely forbidden. In B.C. 243 detailed regulations concerning the slaughter or mutilation of animals to the whole empire were published, which prohibited unconditionally the killing of many large classes of living creatures, and imposed stringent restrictions on the entire population in respect of their dealings with animals.

In the next year the emperor placed on record a solemn review of all the measures which he had taken for the propagation of the dhamma, or Law of Piety, and reminded his subjects how he had striven to lead them in the right way by his personal example. He promised oratorical and monastic sermons as well as in inscriptions on rocks and pillars, by suitable official arrangements for the supervision of morals and the royal alms, by detailed pious regulations, and by benevolent provision for the maintenance and expansion of learning and the arts. But Asoka, while utilizing to the full all this machinery for the moral regeneration of his people, recognized that permanent improvement must be based on a change of heart, and could not be secured by merely administrative measures; because 'pious acts and the practice of piety depend on the growth among men of compassion, liberality, truth, purity, gentleness, and saintliness.' The growth of piety, he goes on to observe, 'has been effected by two-fold means, to wit, pious regulations and meditation. The latest method, two means pious regulations are of small account, whereas meditation is superior. Nevertheless, I have issued pious regulations forbidding the slaughter of such and such animals, and other regulations of the sort. But the superior effect of meditation in the growth of piety is the justification of men, and the more complete abstinence from living creatures.'

The substance of Asoka's practical ethical teaching is tersely summed up in a short edict, perhaps one of the best preserved.

'Thus saith His Majesty: "Father and mother must be hearkened to; similarly, respect for living creatures must be firmly established; truth must be spoken. These are the virtues of the Law of Piety. Man must be so instructed that the teacher must be reverenced by the pupil, and proper courtesy must be shown to relations." This is the ancient nature of piety—this leads to length of days, and according to this men must act.

The three primary duties prescribed by the Asokan code were (1) respect for the absolute, unconditional right of the meanest animal to remain the regal of life until the latest moment permitted by nature; (2) reverence to parents, elders, and preceptors—the superiors so honoured being required, in their turn, to treat their inferiors, including slaves, servants, and all living creatures, with kindness and consideration; and (3) truthfulness. Among secondary duties, a high place was given to that of showing toleration for, and sympathy with, the beliefs and practices of others, and all extravagance or violence of language was earnestly deprecated.

The ethical system outlined in the above propositions, which is in agreement with the doctrine of the Dhammapadá and other scriptures of primitive Buddhism, was developed by Asoka in a series of edicts, probably drafted by himself. The "Fourteen Rock Edicts," published in B.C. 256, were inscribed upon rocks at seven localities in the remoter provinces, namely: (1) Shábátzgarhi, in the Yásuítzai country, forty miles N.E. of Pesháwar; (2) Mánására, in the Hazára District, Panjab; (3) Kási, in the lower Himálayas, fifteen miles west from Mussoorí; (4) Sopára, in the Thána District, near Bombay; (5) the Gírnár hill, near Jánágar, the ancient capital of Káthiáwar; (6) near Dhaulá, to the south of Bhúvánásvar, in the Puri District, Orissa; and (7) at Jánagá, in the Ganjá, District, Madras.

Some of these inscriptions, which vary in script, in dialect, and to some extent in substance, are preserved practically complete, while others are mere fragments. The second great series is that of the 'Seven Pillar Inscriptions,' six of which exist in six copies, engraved on monolithic sandstone pillars erected at various localities in the home provinces. The seventh and most important edict is found on one
pilular only. The remaining records, particulars of which will be found in the works cited at the end of this article, are the two ‘Kalinga Edicts’ in two recensions, three ‘Cave Inscriptions,’ two ‘Tribal Pillar Inscriptions,’ two ‘Minor Pillar Edicts,’ two ‘Minor Rock Edicts’ in several recensions, and the ‘Bhābra Edict.’ The number of distinct documents known may be reckoned as thirty-five, forming a group of inscriptions which may be regarded, perhaps, as the most interesting and remarkable in the world.

A large body of tradition affirms that a Buddhist church council was held at the capital by the command and under the patrocity of Asoka in order to settle the canons and reform abuses in monastic discipline. Although the traditional details of the constitution and proceedings of the council are clearly unhistorical, the tenor of its assembly may be accepted without hesitation. If it had met before the thirty-second year of the reign, in which the emperor published the ‘Seven Pillar Edicts,’ recording his retrospect of the measures taken for the promotion of piety, the council assuredly would have been mentioned in those documents. But they are silent on the subject, and the fair inference is that the council was held at a date subsequent to their publication, that is to say, between A.C. 292 and 291.

The Imperial arrangements for diffusing the knowledge of Buddhist doctrine, and for enforcing the moral practices recommended by the teachers of the church, were designed on a grand scale, so as to embrace not only India, but also distant countries in Asia, Africa, and Europe. The officials of the Government in their various grades were required, in addition to their ordinary duties, to give instruction in morals to the lieges. From the year B.C. 256 the efforts of the official by the systematic labours of special functionaries, designated as Censors of the Law of Piety (dharma-mahānāthāḥ), who were enjoined to occupy themselves in promoting the establishment and progress of Buddhism in India, and the lands of the descendants of those who had been there before, and who were further charged with the delicate duty of superintending the female establishments of the members of the royal family. These officers were vested with special powers for the prevention of wrongful imprisonment or corporal punishment, and were directed to investigate cases in which peculiar circumstances caused the ordinary law to press hard upon individuals. The general superintendence of female morals was entrusted to another set of officers called the ‘Censors of Women.’ Throughout the empire, the enjoining, was strictly to be observed by the Censors; and if we may judge by what is known of the procedure adopted in later ages by pious Indian kings, the penalties of disobedience must have been extremely severe, extending even to the death of the offender.

The activity of the Censors was not confined to the provinces directly controlled by the Imperial officers, but embraced all the bordering tribes and nations in the Indian hills and forests, who lived under the rule of their own chiefs, subject to the suzerainty of the paramount power.

Asoka’s zeal carried his propaganda far beyond the limits of his empire, and induced him to organize a system of foreign missions, which preserved the character of a missionary agency in the history of a large portion of the world. A band of enthusiastic missionaries, headed by Mahendra (Mahinda), younger brother of the emperor (or, according to another account, his son), evangelized Ceylon with such success that the island has been regarded as the cradle of Buddhism ever since. The religion of the Sinhala monks to-day is practically the same as that of Asoka. The Sinhalese chronicles aver that a mission was dispatched at the same time across the Bay of Bengal to Pegu, but it is related that Buddhism was not introduced into the Burmese countries until several centuries later. The existing form of Buddhism in Burma, which undoubtedly was derived from Ceylon, and thus is indirectly a result of Asoka’s labours, dates only from the reformation effected by King Dhammangati in the 15th century, the history of which is recorded in the Kalyânī inscriptions (Ind. Ant. vol. xxii., 1893). The Siamese church also is a daughter of that founded in Ceylon by Mahendra.

From the time of Megasthenes, who was sent as an ambassador by Seleukos Nikator to the court of Chandragupta Marunya in the year B.C. 305, regular intercourse, both commercial and diplomatic, had been maintained between the Indian empire and the Hellenistic kingdoms founded by the generals of Alexander. Asoka made use of the channels of communication thus opened, in order to convey the treasures of Buddhist wisdom to the nations of the West. His missionaries traversed the wide realms of Antiochus Theos, king of Syria and Western Asia, and penetrated the dominions of Ptolemy, king of Egypt, those of his neighbour king Magas of Cyrene, and even those of the European monarchs Alexander of Epirus and Antigonus Gonatas of Macedon. Although missionary effort did not succeed in planting branches of the Buddhist church in the foreign countries named, except perhaps in some portions of the territory of Antiochus, its effects may be traced obscurely both in the history of the Gnostic and Manichean sects of Christianity (Kennedy, ‘Buddhist Gnosticism,’ in JRAS, 1902, pp. 377-415) and in the reflex action on India which helped to develop the Mahâyâna form of Buddhism about the beginning of the Christian era. Ceylon, as already observed, was won permanently to Buddhism, which became the dominant and official religion in the island and that of the neighboring land. Of course the other forms of Indian religion were not destroyed—they were merely overshadowed for a time, and in due course recovered their ancient vigour. In India, Buddhism is practically extinct at the present day, and is hardly traceable in the Punjab to beyond the 13th century A.D. For many centuries the impulse given by Asoka’s systematic missionary propaganda made Buddhist institutions a prominent feature of Indian life; and as late as the 7th century A.D., Buddhism, although then slowly dying out in India, remained popular in Tibet, China, and Japan, through the agency of Indian missionaries at various dates, was an indirect consequence of the Asokan propaganda.

Asoka, while determined to enforce with all his authority Buddhist ethics as a practical system of morals, was avowedly tolerant of other creeds, and devoted a special edict to the subject of toleration:

‘His Majesty does reverence to men of all sects, whether ascetics or householders, by gifts and various modes of reverence. His Majesty, however, cares not so much for gifts or external reverence as that there should be a growth of the inner essence of the matter in all sects. The growth of the essence of the matter assumes various forms, but the root of it is reverence to holy speech, and a man must not despise the reverence of his own sect by disparaging that of another man without reason. Disregard should be for specific reasons only, because the sects of other people deserve reverence for one reason or another. . . . Self-control, therefore, is meritorious, to wit, heartening to the heart of the speaker and the listener alike.’

‘For this is His Majesty’s desire, that adherents of all sects should hear much teaching and hold sound doctrine.’

In another passage the royal preacher repeats the profession of reverence for all sects, and adds that ‘nevertheless, personal adherence to one’s own creed seems to me to be the chief thing.’

Extant dedicatory inscriptions prove that Asoka gave practical effect to these liberal principles, by hewing cave-dwellings from the rock at enormous cost, and bestowing them on adherents of all sects, but mainly on those of the Buddhist sect; while, of course, hundreds of his benefactions must have passed unrecorded.
He realized the truth that his subjects could not be expected to take his preaching to heart unless he proved by acts of material beneficence that he was really, as he had claimed to be, the father of his people, the guardian of the muni'ssociations, both in his own dominions and in those of friendly powers, for the care of man and beast, which doubtless involved the establishment and endowment of hospitals. We are expressly informed that healing herbs, medicinal for the alleviation of human ills, which were wanting, were imported and distributed. In pursuance of the same policy, banyan-trees were planted to provide ample shade, groves of mango-trees were laid out to supply fruit; wells were dug at every mile on the highroads, so that pilgrims of all denominations, whether they were lacking, were imported and distributed, for the enjoyment of man and beast. But His Majesty is careful to explain his motive by the remark that 'such so-called enjoyment is a small matter. With various blessings have former kings blessed the world even as I have done, but in my case it has been done solely with the intent that men may conform to the Law of Piety,'

Asoka's buildings were designed and constructed on a scale of such magnificence that they were regarded by the men of later ages as the work of deities, led on by their divine inspiration. Although comparatively little of his architectural masterpieces has survived, the great stūpas, or brick cupolas, at Sānchi, and numerous monolithic pillars, inscribed and inscribed, which are still standing, suffice to justify his fame in as much as the immense, some of which are fifty feet high and weigh fifty tons, exhibit the stone-cutter's art in perfection, and have been polished and engraved with the utmost nicety.

It is clear that Asoka was no morose fanatic devoted, but that he succeeded in combining in the piety of a saint with the practical qualities of an able king. As a king he disputes with Akbar (q.v.) the right to the highest place of honour among the sovereigns of India; and, in the history of Buddhism, his importance is second only to that of the founder of the faith.

Asoka seems to have been followed on the throne by his grandson Dāsarattha; but hardly anything is known about his successors, in whose feeble grasp the great empire founded by Chandragupta and Asoka was in a short time and from weakness quickly crumbled to pieces. See BUDDHISM, CHANDRAGUPTA.

LITERATURE.—Edmund Hardy, König Asoka (Mainz, 1902); Vincent A. Smith, Asoka, the Buddhist Emperor of India (Oxford, 1903), a complete translation of the original inscriptions known up to 1901 (an inscription on a pillar at Sānchi has been discovered since then; Eeby, Ind. viii. 166; Complete rends Acod. des Insér., 1907, p. 28; J. A. S. B. iii., new ser. 1907), and The Early History of India (Oxford, 1903). All the original authorities are cited fully in these works.

VINCENT A. SMITH.

ASPIRATION may be defined generally as ardent longing. The word is sometimes used to denote worldly ambition or desire, but its proper application, as the etymology may suggest, is to desire directed upon spiritual objects, and so it finds its distinctive exercise in the spheres of ethics and religion. In each of these spheres it is a power inciting to spiritual progress, an inward impulse by which men are urged to the development of their highest nature and true ends as spiritual beings.

1. In ethics, aspiration appears as a longing for the acquisition of goods. Whatever theories may be held as to the origin of moral ideas and of the moral faculty, there is no ethical system worthy of the name that is not based on some moral ideal or conception of the highest good; and aspiration is the longing that impels to the pursuit of the ideal and of all the qualities that belong to it or tend to further it. Aspirations and ideals go together, and have a reactive influence upon each other. On the one hand, aspirations are kindled by ideals; on the other, ideals are shaped and fostered by aspiration. The moral feelings demand for their strength and purity upon the clearness and immediacy of the moral vision; while the moral vision owes much of its quick discernment to the cultivation of the moral feelings. Both vision and aspiration, on the one hand, are qualified by obedience. The gleaming vision must be pursued, the sighing of the human spirit after the attainment of its ideals must not be ignored or suppressed, else moral blindness and moral apathy will inevitably befall us. While men turn away from wrong and do what they know is right, and keep hungering and thirsting after righteousness, moral progress is the assured result.

The particular function of aspiration in the moral sphere is to mediate between vision and obedience. It is a mighty motive power by which our spiritual knowledge is utilized for the purposes of our moral activity. Without the uplifting and impelling force of aspiration, ideals would never be transformed into realities; and so it is a necessity of the moral life that men should cherish their spiritual aspirations. The voice of the imperative voice, but before its high behests can be carried out there must come some urging from the heart's desire. It is faith and hope, admiration and love—and these may all be summed up in aspiration—that enflame us to walk without fainting, to run without weariness, and even at times to mount up on eagles' wings. 'Let us learn to have noble desires,' said Schiller, 'and we shall have no need for sublime resolutions.' And what is moral aspiration but an impulse of noble desires which, having been left unattended, will grow forward, as on the bosom of a swelling tide, towards the realization of the highest moral ends?

2. But it is in religion still more than in ethics that aspiration finds its especial home and sphere, for aspiration is the outgrowth of the soul in search of complete spiritual satisfaction and bliss which, even could they be perfectly realized, would not avail to satisfy it. 'Thou madest us for Thyself, and our heart is restless until it rejoices in Thee' (Augustine, Conf. i. 1). Nothing but personal communion with the Divine can satisfy the innermost wants of the aspiring human spirit. It is to the experience of aspiration as a psychological fact that the origin of religion may be traced. In the visible world men saw around them on every side the tokens of change and decay, of transience and evanescence. But this sense of the perils and of the reality of all earthly things brought to light their own possession of the idea of something or some one real and permanent; and instinctively their hearts went out in dumb longing to seek the Unknown God. And this self-consciousness grew clearer in the course of man's sojourn, the contradiction between the inner life of feeling and desire, of hope and endurance, and the hostile powers of nature by which he was encompassed and opposed, would fill his soul with a still deeper longing for communion with that higher Power akin to himself by whose help he might gain the victory over the world.

The aspirations of the religious soul naturally express themselves in forms of worship. And if at first the forms in which men emboss their relations were crude, material, grotesque, and even repulsive, they testified none the less to a sincere longing after God. The blood of the sacrifice was the blood of a covenant between man and his deity; the sacrificial smoke, as it rose into the air, was a symbol of the spirit's desire
to rise heavenward; the sacrificial meal was a sacrament of fellowship between the god and his people. Moreover, as men grew in the power of spiritual conception and apprehension, their aspirations became purer, and began to find expression in visions, prophecies and revelations of the inspiring Spirit from above stoons down to raise and inform the aspirimg spirit from below, there comes the utterance of the purest spiritual desire: 'As the hart panteth after the water brooks, so panteth my soul after thee, 0 God.'

There is a wide difference between the aspirations of morality and those of religion. Not only is the ethical ideal an abstraction, it is an elusive abstraction. As we pursue it, it recedes before us. The horizon moves onward as we advance, and the actual and the ideal never meet. Religious aspiration, on the other hand, being a longing of the human spirit for personal communion with the Divine Spirit, is able to enjoy an immediate fruition of its object. With the dawn of religion in the soul, the restless heart of man finds rest in God. Not that there is no room in the religious life for further progress and fuller aspiration; the room for progress is infinite, and the call to it is never hushed. But progress here is not towards, but within the sphere of the infinite, and the very attempt to make additional infinities or increments, to become possessed of infinite wealth, but it is the endeavour, by the constant exercise of spiritual activity, to appropriate that infinite inheritance of which we are already in possession' (J. Caird, Phil. of Rel., 284).

Hence the life of Christian faith, in which the experience of communion with God is most fully realized, is a life of aspiration satisfied yet never sated, resting joyfully in its object and yet longing to apprehend it more fully.

LATER AVADAEN.

It became customary for every Aryan to spend a series of years (at least twelve, according to Apatamba, Dharmasattra, 1. 1. 2. 16) in the hermitage or the house of a brahmanical teacher. It became the duty to prepare his brahmanical pupils for their future vocation, and to teach those of the Ksatriya and Vaisyas castes in order to inculcate in their minds the necessary directions for all their future life. (We must remember, cf. Manu, A. 4. 1; that it became customary to give this instruction and, only thus can we understand the incomparable influence which the Brahmans gained and maintained over the Indian people.

It would seem that not only the outward apparel, but also the method of instruction, was different for the three castes; thus in Art. Ar. 3. 2. 6. 9 the rule is laid down to communicate a certain theory or operaavrastre, 'not to any one who will not himself become a teacher.' In return for this instruction the pupils had to work for the teacher in house and field; they attended to the sacred fires (Chhând. up. 4. 10. 1), they looked after the cattle of the teacher (Chhând. up. 4. 4. 5), collected for him the offerings of charitable pilgrims, and performed other duties to prepare himself for the conclusion of his studies in his house. In the leisure time left from the duties to be performed for the guru, the Veda was studied; the teacher recited it verse by verse, and the pupils had to repeat it until the whole was learned by heart. It was perhaps not so much a time of learning as a time of vigorous training, as the word ārama implies. The principal rule was strict obedience to the orders of the teacher (of which we read extravagant examples in Mokshas. 1. 83. f.). It was a period devoted to practice in self-denial and mortification. But the brahmanical system of life had the tendency to extend this ārama, or self-mortification, over the whole life of the Brahmans, and as far as possible of all the Aryas. Not all, after having finished this course of study, founded families and led a life of handcraft, and trade. They were ruled and taxed by the Kṣatriya, the kings, and those who with them had carried out the conquest of the country. But another class claimed and obtained a preponderance over both the Vaisyas and the Kṣatriyas. 'The Brahmans,' were developed into a separate order, into the regular existence, and roamed about as beggars. These last were known as saṅghajñas, 'throwing away everything,' or pariivāyako, 'vagabonds,' or simply bhikṣus, 'beggars.' It was only later that these various kinds of āramas, 'religious mortifications,' were developed into a distinct order within the whole life, the aim of which was to obtain methodi-
ally and by gradual progress which that appears
as an abrupt demand in Matt. 19. 21.
According to this later system, the life of every Brahmana (and not only of these, for the rules given in Manu, vi, seem to extend also to Ksatriyas and Vaishyas) had to pass through four ārānas, or ascetic stages. Every young had to be (1) brahmacārin in the house of a teacher; (2) gṛhaustedhi, performing the duty of founding a family; (3) a vānaprastha, a hermit in the woods, devoting himself to gradually increasing austerities; and (4) to lead a life of complete parivṛjaka, roving about without home or property, living merely on alms, free from all earthly ties, and awaiting his end, delivered even before it from all earthly attachments. How far the practice corresponded to this theory, given in Manu and other texts, we do not know; but we are free to confess that in our opinion the whole history of mankind has not much that equals the grandeur of this thought.
After this general survey let us proceed to consider the history of the ārānas in the Vedas and the post-Vedic age.

2. The Ārānas in the Veda.—In the older Upaniṣads the theory of the four ārānas is seen in course of formation. Chānd. up. 8. 15 mentions only the Brahman-student and householder, and perhaps有待者, in reward for study, the begetting of children, the practices of yoga, abstinence from doing injury, and sacrifice, a departure hence without return. Chānd. up. 2. 23. I names the tapas (of the anchorite) side by side with these as a third "branch of duty." There is still no progressive series. Rather, according to this passage, the Brahman-students, in so far as they do not elect to remain permanently in the house of the teacher, appear to have devoted themselves partly to the householder's state, partly to the life in the forest. Chānd. up. 2. 23, 8. 15 mentions the ātman in the forest and the sacrificer in the village appear side by side. Chānd. up. 2. 23. I contrasts all three branches of duty with the position of the man who "stands fast in Brahman." So too, in Brīh. up. 3. 4. 22, those who practise (1) the study of the Veda, (2) sacrifice and almsgiving, (3) penance and fasting, are contrasted with the man who has learned to know the ātman, and in consequence becomes a muni and pārśvarjīn ("pilgrim"). Both houses of this stage appear to have passed, and therefore the supreme goal. In the cognate passage Brīh. up. 3. 5., on the contrary, the brāhmaṇa is still distinguished from the muni as a higher grade. In Brīh. up. 3. 8. 10 also, the knowledge of the ātman as the highest aim is differentiated both from the sacrifices and benevolences (of the householder) and from the practices of tapas (of the anchorite).
All these passages assume only the three stages of Brahman-student, householder, and anchorite, and none find him in the tracts of the men who know the ātman. The last were originally "exalted above the (three) ārānas" (atigāromāni, as it is said in Svet. up. 6. 21, Kaivalya up. 24). This very position, however, of exaltation above the ārānas became in course of time a fourth and highest ārāna, which was naturally assigned to the end of life, so that studium, and the positions of householder and anchorite (which stood side by side), preceded it as temporary grades in this successive order. Until the post-Vedic age, however, as we find him in the tracts of the men who know the ātman, the fourth ārāna, between the vānaprastha practising tapas and the anyayāsin who has succeeded in attaining māyā, was not strictly carried out. An intimation of the fourth number of the ārānas is perhaps already afforded by the words of Maṅḍ. up. 2. 1. 7:

"Mortification, truth, the life of a Brahman, instruction." Otherwise the oldest passage which names all four ārānas in the correct order would be Jātaka up. 4: "When the period of Brahman-studentship is ended, a man becomes a householder; after he has been a householder, he becomes an ascetic; after he has become an anchorite, let him travel about on pilgrimage."

(1) The Brahmacārin.—Svētaketu was the son of (Uddālaka) Aruni. To him said his father, Svētaketu, go forth to study the Brahman, for none of our kṣatriyas and vaśyas is my dear son, is wont to remain unlearned, and a (mere) hanger-on of the Brahman order." (Chānd. up. 6. 1. 1). From this remark it seems to follow that at that time entrance upon the life of a Brahman-student, while it was a commendable custom, was not yet universally enjoined upon Brāhmans. The entrance also of Satyakāma upon studentship appears to be his voluntary determination (Chānd. up. 4. 4. 1). It was possible for a man to receive instruction from his father, as Svētaketu (Chānd. up. 5. 3.), or at the hands of other teachers, as the same Svētaketu in Chānd. up. 6. 1. 1 (contradictory to the passages just quoted). The request to be received must follow forty (śūrṣe, e. śūrṣe, Maṅḍ. up. 1. 1. 3), i.e. according to Brīh. up. 2. 7, with these forty days. The student takes the fuel in his hand as a token that he is willing to serve the teacher, and especially to maintain the sacred fires (Maṅḍ. up. 4. 19; Chānd. up. 4. 4. 5. 13. 7, 8. 1. 2. 5. 10, 6. 11. 2; Maṅḍ. up. 1. 2. 12; Praśna. up. 1. 1). Before receiving him, the teacher makes inquiry into his birth and family (Chānd. up. 4. 4. 4), but yet, as this example shows, in a very indulgent manner. Sometimes instruction is given even without formal reception (Jāmāṇyika, Chānd. up. 4. 4. 5). The period of instruction is twelve years (Chānd. up. 4. 1. 10), or a "series of years" (Chānd. up. 4. 4. 5). Svētaketu also begins to receive instruction at the age of twelve (Chānd. up. 6. 1. 2), and continues his study for twelve years. During this time he has "thoroughly studied all the Vedas" (Chānd. up. 6. 1. 2), namely, the verses of the Rigveda, the formulas of the sacrifice, and the hymns of the Sāmaveda (Chānd. up. 6. 7. 2), apparently therefore only the saṁvēdas. In other instances there is no trace of the name (Chānd. up. 6. 1. 2). In one example Upakosala has tended the sacred fires for twelve years, and yet the teacher can never make up his mind to impart to him 'the knowledge' (Chānd. up. 4. 10. 1–2). Satyakāma is sent at first with the teacher's herds of cattle into a distant country, where he remains for a succession of years (Chānd. up. 4. 4. 5). A further act of service on the part of the brahmacārin consists in his going to beg for the teacher (Chānd. up. 4. 3. 5). On festival occasions also he is sent in the train of the teacher, awaiting his commands (Brīh. up. 3. 1. 2). Together with and after these acts of service, 'in the time remaining over from work for the teacher' (yugro karma-ālāsaya, Chānd. up. 8. 15) the study of the Veda is prosecuted. The consequence was sometimes self-conscious rather than real enlightenment (Chānd. up. 6. 1. 2). We further find the students wandering from place to place; they hastened, as stated above, from all sides to famous teachers 'like waters to the thirsty' (Trīṭṭa. 13. 18). For the sake of study, the land of the Madras (on the Naphrys) 'in order to learn the sacrifice' (Brīh. up. 3. 7. 1. 3. 1). As a rule, however, they lived as antalāsaṁ in the house of the teacher, and not a few found this manner of life so congenial that they
"settled permanently in the teacher's house" (Chhānd. up. 2. 23. 1). The others were dismissed at the close of the period of studentship, with advice (Bṛh. up. 4. 2) or admonition (Bṛh. up. 4. 4). After he had studied the Vedas with him, the teacher admonishes his pupil: "Speak the truth, do your duty, forsake not the study of the Veda; after you have presented the appropriate gifts to the teacher, take care that the thread of your race be not broken" (Trīṭt. up. 1. 11). Further admonitions follow, not to neglect health and possessions, to honour father, mother, teacher, and guests, to be blameless in works and life, to honour sages, to bestow alms in the appropriate manner, and in all duties to exercise due care, according to the judgment of approved authorities.

(2) The Gṛihastha.—'He who returns home from the family of the teacher, after the prescribed study of the Veda in the time remaining over from work for the teacher, and pursues the private study of the Veda in (his own) household in a pure neighbourhood (where Brāhmans are permitted to live), trains up pious (sons and pupils), subdues all his organs in the ātman, and, besides, injures no living thing except on sacred ground (at sacrifice), he, indeed, is called this manner of life all his days, enters into the world of Brahmans and does not return again' (Chhānd. up. 8. 15). According to this passage, the householder may remain in that state all his life long without sin (Bṛh. up. 5. 10), on the contrary, for those 'who in the village worship with the words "Sacrifice and pious works are our tribute"' for those, in other words, who continue in the householder's state to the end of life, the transient reward in the moon and a return to a new earthly existence are appointed.

The most imperative duty of the householder is to establish a family and to beget a son to continue his father's works. To beget a son is considered a religious duty. In Taṅṭr. up. 1. 9 it is enjoined side by side with studying and teaching the Vedas. Frequently (Chhānd. up. 3. 17. 5, 5. 8–9; Bṛh. up. 6. 2. 13, 6. 4. 3) it is allegorically described as an act of sacrifice. In Taṅṭr. up. 1. 11 the pupil, among other admonitions, is charged to take care and maintain this duty. "The pupil is the father of his father," says: For the pupil is 'more the son than the son' (Chhānd. up. 5. 10. 1). Penance and fasting are only the means by which Brāhmans 'seek to know' the ātman (vividūṣāṇi, Bṛh. up. 4. 4. 22). According to some, tapas is indispensable as a means to the knowledge of the ātman (Maitr. up. 4. 3, Na atapakṣaṃ atuṣṭaṃ dharmam 'district'), according to others (Jābhā up. 4), it is superfluous; and this view is more in accordance with the whole system. For as long as the goal was a transcendental one, the hope might be cherished of approaching near to it by severing means of asceticism the ties that binds to this life. If, however, emancipation is the discovery of one's self as the ātman, and therefore something that only needs to be recognized as already existing, not to be brought about as though it were future, the asceticism of the svānapragnāṇa and gṛihastha is a mere theistic knowledge, the emergence of the gṛihastha's sacrifice and study of the Veda (Bṛh. up. 3. 5. 4. 4. 21). He who knows the ātman is ātigrāhānim, 'exalted above the (three) ārāmas' (Skt. up. 6. 21). He has attained that which the ascetic only aspires after. Work of this nature is the ascetic's, or svānapragnāṇa's, or gṛihastha's, according to his individuality and from all that pertains to it, as family, possessions, and the world (Bṛh. up. 3. 5. 4. 4. 22). He is called svānyāsī, because he 'casts off everything from himself' (sva-maḥ); parivīra, parivīryākha, because he 'wanders about' homeless; and bhikṣū, because without possessions he lives only as a 'beggar.'

(4) The Svānyāsī (parivīryāka, bhikṣū).—The svānyāśa, which is originally only the "abandonment" of the entire brahmanical mode of life in the three ārāmas, assumed in course of time the position of a fourth and highest ārāma, which, as a rule, though not necessarily, would first be entered upon towards the close of life after passing through the stages of bhramachārīn, gṛihastha, and svānapragnāṇa. It thus, however, gained a further meaning. If it was originally (as a natural consequence of the knowledge of the ātman it became a final and most efficacious by which it was hoped to attain that knowledge. The svānyāśa, accordingly, is represented as such knowledge of the ātman and to emancipate in a series of later Upanisads, of which the most important are Brhadā, Svānyāsā, Arunya, Kaṇṭhikārṇī, Paranāhūṣūṇa, Jābhā,
131

ASSAM

Aśrama. We find in them a full account, with numerous contradictions in details, of the preliminary conditions imposed upon the sānyāsin, of his departure from life, of his dress and equipment, of his food, place of abode, and occupations.*

3. The Aśramas in post-Vedic time.—Although the Upanishads teach that every man, Śūdra as well as Brāhmaṇa, after the ascertainment of the knowledge of which, whether originating in an Ārya or a Śūdra, would lead to emancipation, yet the Brāhmaṇas were too much under the influence of old traditions to put this doctrine into practice, and thus the Śūdras were, and are, looked down on from the highest religious community with the Āryas. So much the greater was their care for the spiritual welfare of the three superior castes, and the four āśramas became the via salutis through which every twice-born man (deva) had to pass, i.e. every Brāhmaṇa, Kṣatriya, and Vaiśya, in order to reach the highest goal. As in Vedic times, so also in the later period of Indian life, it was the rule that every twice-born man had to become first a brahmachārin. In this stage he lived in the house of a teacher, persisted in the fulfilment of the Āśrama duties, and on this account, received, through the study of the Veda, the intellectual stamp for all his future life. He then, as gṛhastha, had to marry, to beget offspring, and to fulfill the duties of teaching and learning; sacrifice he performed in his house or temple, or others, giving alms and receiving presents; besides this there were five daily observances incumbent upon him: to satisfy the gods by sacrificing, the Bṛis by studying the Veda, the fathers by offering funeral oblations, men by almsgiving, and animals by feeding birds, antelopes, and other denizens of the forest. Afterwards he passed to the state of vānaprastha as it is described in Manu, xi. 2, and Mahāb. xii. 245. 4: ‘When the householder sees his skin wrinkled and his hair white and the sons of his sons, then he has to retire to the forest,’ in order to extinguish in himself, by austeritys gradually augmented, all the remnants of worldly attachments. ‘In summer let him expose himself to the heat of five fires, during the rainy season live under the open sky, and in winter, if he dwells in wet clothes, the Veda gradually increasing the rigour of his austeritys’ (Manu, 6. 23). Further, ‘after having purified himself in the three social stages from all stain of sin, let him wander towards the highest goal with undaunted courage, a brahmachārin.‘

In this stage of svānyāsin, ‘one who has abandoned everything,’ he roamed about without home (parivṛtajāta), and lived merely on alms (bhikṣa). At a period of life when, according to our thought, aid from others is more than ever needed, the aged man was left to himself without any care or attendance: ‘let him flee from society as from a serpent, from comfort as from a hell, and from women as from a corpse’ (Mahāb. xii. 246. 13); ‘let him not look forward to death, let him not look forward to life, let him await his time as the servant awaits a command’ (nīdisāna, which is the better reading both in Mahāb. xii. 246. 15, and in Manu, vii. 45).

We subjoin a few more verses on the state of the svānyāsin from the sixth book of Manu. ‘Let him put down his foot purified by his sight, let him drink water purified by (sitting with) a cloth, his drink itself purified by truth, let him keep his heart pure’ (60). ‘Let him patiently endure what words, let him not insult anybody, and let him not become anybody’s enemy [by the sin of anger (māsā)].’ ‘by the sin of (perishable) begetting any angry man let him not return show anger, let him be gentle when he is cursed, let him not utter speech, devoid of truth, scathing, according to the four gates of the (neighborhood).’ (61).

by (explaining) prodigies and omens, nor by skill in astrology and divination, nor by the authority of the Vedas, or of the Sūtras, let him ever seek to obtain alms’ (60). ‘Let him not (in order to beg) approach a house crowned with hermits, with Brāhmaṇas, brāhins, and Vaiśyas;[ for] his dress, and his nails, and beard being clipped, carrying an alms-bowl, a staff, and a water-pot, yet he continually wanders about, controlling himself and not hurting the creatures (62); ‘let him not beg once (a day), let him not be eager to obtain a large quantity (of alms), let him make a shallow approach to a person himself attaches himself also to sensual enjoyments’ (63). ‘When no smoke ascends from the kitchen, when the pestle lies motionless on the grindstone, when the embalming has been completed, when the cows have finished their meal, when the remnants in the dishes have been removed, let the ascetic always go to bed’ (66). ‘Let him not be sorry when he obtains nothing, nor rejoice when he obtains something, let him (accept) so much only as will sustain life, free from metal and other impediments’ (68). ‘By eating little, and by standing and sitting in solitude, let him restrain his senses, if they are attracted by sensual objects’ (69). ‘By the restraint of desires he should destroy, not only the destruction of flesh and hatred, and by the abstinence from injuring the creatures, he becomes fit for immortality’ (60). ‘In order to preserve living creatures, let him always by day and by night, even with pain to his body, walk, carefully scanning the ground’ (69). ‘When by the disposition (of his heart) he becomes indifferent to all objects, he obtains eternal happiness both in this world and after death’ (60).‘

For further information about the four āśramas we must refer the reader to the detailed treatment of them in Manu, bks. ii.–vi., and to the parallel literature, the Dharmasūtras. See also Ascbticism, pp. 243–246. Of special interest also is the short description, Mahāb. xii. 191–192, which, being in prose, may have been inserted from an old Dharmasūtra.

If it is true that the highest aim of mankind is not to be found in this worldly existence, but in the realm beyond, however closed to our knowledge this may be, it is none the less true that the attempt, as we have it in the four āśramas, to transform the whole earthly existence into a preparatory school for eternity, merits recognition and admiration even from those who have reached the highest degree of civilization. The Indian system does not demand what is impossible; it does not tear men away roughly and abruptly from that attachment to the world which is innate in them. It offers the opportunity in the stage of gṛhastha to enjoy life, and by enjoying it to convince oneself of its futility. It then, in an advanced age, in the stage of vānaprastha, tends to a systematic mortification of sensuality, and it describes in the next stage the gradual withdrawing of the practitioner from the world, the end of his days, has become free from all worldly fetters, and is best prepared for departure. What we say of so many precepts of the Gospels we may say also of the four āśramas: although they are by no means mutually exclusive, and follow one after another, yet they may serve in a certain sense as a pattern, since the way of thinking manifested in them may in other forms and modifications be precious for every age.

LITERATURE.—The literature has been given throughout the article. See also Ascbticism (Hindu), Upanisads.

ASSAM.—1. Religious history.—There is no part of India which is more interesting in some respects to the student of Hinduism than the Assam valley. As everyone knows, Hinduism professes to be a race religion, the religion of the inhabitants of Bhārat-varṣa, of the Hindu people. Yet, since the origin of the Hindu religion is Vedic, and the Vedas were the collected hymns of the so-called ‘Āryan’ immigrants, the two hundred millions of people now calling themselves Hindus must, in part at least, and probably in large part, be the descendants of races who were converted to, or more properly adopted into, Hinduism. Indeed, the later developments that have sprung from Vedic, thorsh-ship must be due in great measure to the influence of aboriginal

*SBE xxv., 207–213.

See Deussen, Allgemeine Geschichte d. Philosophie, i. 3, pp. 90–93.
beliefs on the simple nature-worship of the Aryan invaders. That was essentially democratic in its natural denigration of the intellectual aristocracy of priests, philosophers, and the highly cultivated warrior chiefs who played so important a part in the development of Hinduism, must have been due to conquest, at once physical and moral, of the lower by higher races. Yet in more parts of India the tension and the struggle are so distant that all memory of them is lost. The Dravidian of the South and the Bengali of the East alike believe that they were always Hindoos. The higher castes and classes, it is true, have dim traditions of a time when their ancestors, fairer and slimmer and lighter in figure than the aborigines, migrated from North-Western India. But the lower castes have no such traditions, and no curiosity as to how their distant ancestors came to be accepted into the Hindu community. There are, of course, notable exceptions to this rule. On the whole, however, it is only the ethnologist who can conjecture from the physical aspect of the various races of India that they were once non-Hindus and spoke some non-Aryan language. But in the Assam valley the geography and the geology and the historic causes, which will presently be stated as briefly as possible, the process by which aboriginal tribes are accepted into the Hindu fraternity is seen in actual operation at the present time, and, by analogy and in some cases by actual historic indications, the process can be traced back from some two thousand years. In the Assam valley we are on the border-land of the Hindu faith, and see the most tolerant and receptive of creeds in contact with the beliefs of Indo-Chinese races. It is singularly interesting to note how alien blood and alien civilizations are quietly assimilated by the slow, gentle, and irresistible force of Hindu ideas.

In the earliest times of which we have any knowledge, what we now call the Assam valley was the nucleus and centre of the great independent kingdom of Kamarpura (q.v.), a name which still survives as that of the modern District of Kamrup, whose capital, now Gauhati (or Guňhati), was then famous all over India as Prajayottishpur, the 'Capital of Eastern astrology.' This kingdom appears to have extended from the Brahmaputra river to the Siang and the valley of the Brahmaputra river, but also the whole of Eastern Bengal down to the sea, and in addition (a thing even more difficult of belief for the modern traveller) the rugged and narrow Sibitor, or Indus, valley, between the Salings and Haman was apparently in the Bhutanese hills that the kings of Kamarpura obtained their store of mineral wealth, and especially of copper. They were powerful monarchs, cultivated, warlike, and enterprising. Each dynasty, as it arose into power, attracted the attention of the Brahmins, and, by one or other of the fictions common to early law and early religion in all countries, was adopted into Hinduism. It was, indeed, by common consent, at Prajayottishpur that there came into being the Tantrik form of Hinduism, that form which gives special prominence to the female energy of the deity, his active nature being personified in his Lakši, or 'wife.' Devi, the Lakši of Siva, is the energy chiefly identified with the mystery of sex and magical powers, which are the leading topics of the Tantras, the scriptures (though, of course, not the sole scriptures) of this form of Hinduism. On the Nilachal hill, a beautiful wooded eminence near the town of Gauhati, still stands the temple of Kamakha Devi, one of the forms of the Lakši of Siva. The legend that explains the ancient sanctity of Kamarpura and of Kåmgirı (the religious name of the Nilachal hill) is as follows:

Såi, the first wife of the god Siva, died of sorrow at the discomfiture she saw on her hand by his body, which was licenced by the interruption of his famous sacrifice of burn-offering. (It may be worth mentioning, as a picturesque circumstance, that the weekly feast of the Brahmins of the Himal and Aka hills catch fire in the dry winter season, and on the 12th and the 28th days of each month, by the falling of rain on the sacred peak of the Kåmgiradev Hill, which is approached by a long ascent, a flood of weeping and wailing is heard by all who approach it. The people to this day assert that the far-off glare of the sky is caused by the reviving ashes of Daksa's interrupted sacrifice, and are satisfied with the glowing tales of accidents so far away and in such distances, the people to this day assert that the far-off glare of the sky is caused by the reviving ashes of Daksa's interrupted sacrifice, and are satisfied with the glowing tales of accidents so far away and in such distances. Daksa's interrupted sacrifice, and are satisfied with the glowing tales of accidents so far away and in such distances.

As the legend sufficiently indicates, the princes and upper classes of the kingdom of Kåmaru were Hindus, probably spoke some Indo-European dialect derived from Sanskrit, and were accepted as of Indian race. But the bulk of the people were not the least of many of whom Hinduism is an addition, and who do not now, Hindus. It is interesting, and not without more than ethnological interest, to indicate briefly what they were.

In the greater part of India, except in the extreme North-West, the people have a strong infusion of Dravidian blood. In the South they speak what are known as Dravidian languages, and the South Indian races of the delta are apparently akin to African peoples. In the North-East the Dravidian blood is mingled with, and especially Indo-Chinese, infusion of recent origin (assam valley and others). Brahman and astrologers resemble their Bengal neighbours, and the Donna, a large fisherman caste, are plainly of Western origin. But the bulk of the people there are evidently people of ancient stock, intermixed to some extent with blood, and their physical appearance is of the 'Mongolian' type, bearing more or less, the characteristic aspect of the yellow races. They have themselves (with the exception of the Ahoms) no record, historical or traditional, of their advent into Assam. But the languages they speak are some close to the successive invasions of Indo-Chinese folk from the north-east and the south-east of the valley. The oldest Indo-Chinese language spoken in Assam belong to the Mon-Khmer sub-family, which has recently been named by Schmidt of Vienna the 'Austri' family of languages. Schmidt claims that it extends from the north of the Mekong river to the north of the Brahmaputra river, the edge of the Mekong itself, and his History of Indian Languages (1864) enumerates the primitive inhabitants of Assam, under the name of Samoda, who was ruling in Upper Burmah in A.D. 105, and also that of Hindus who led the Tchamphans or Shan in their conquests of the maritime Mekong in the 14th century. As Gait says, must have passed through Assam, as, probably, did the Hindus from Kambôd, in N.W. India, who founded and gave its name to the Cambodian kingdom in Indo-China. It is possible that Mon-Khmer peoples invaded and gave there language temporarily to much of North-Eastern India, as well as to parts of Burma. But the only Mon-Khmer tongue surviving in Assam is that of the Khais, now inhabiting and giving their name to the mountains between Kamrup and Sylhet. These interesting people remained independent until they came under British rule, and have not even now come under Hindu influence. They are of the same stock as the Khams of the Basques in the Pyrenees. Elsewhere the Mon-Khmer language of Assam, whether the dialect of the Mon-Khmer speaking Mantches in the north, or the dialects of the Bung, or the dialects of the Bung, have become completely assimilated, and can no longer be distinguished.

The next wave of Indo-Chinese invasion is represented by the various peoples who speak the Thoto-Tibetan languages, of which Assam has three main groups of dialects. The first of them is Nagi, spoken in and to the east of the Ngà hills. The second is the Ñir-Chin, spoken by the Mon-Khmer of Cachar, and the third, the Central, by the interesting race known as the Miiks, who now inhabit an outlying bastion of the Khais hills jutting into the Assan again. The people here are good painters, as yet hardly at all come into contact with Hinduism, and, as the Khais, retain their own caste and religious system. The most ancient and most important group is that now (since Brian Hodgson's celebrated investigations into their language and genealogy) known as Dalai, or the people of Dalai, the Bung of the Northern Assam; the Dimasas, who live in the hills between Tovong and Chiar; the Géros and Tijeras, inhabitors of the coast of the Assam, and all plains-folk known as Lians and Râbías; and (if they really
belong to the Bodo race) the Chutiyas of Lakhimpur and the great Mijil island in the Brahmaputra. It is possible that the people now speak Bodo languages were all of common origin. But the wide-spread survival of this group of words suggests the possibility of a more general influence. It is possible that some of the ancient Bodo languages were still spoken in recent centuries, and that the imposition of any caste restrictions, the assimilation of race was complete. It is impossible to find any ethnological difference that would suggest any significant differences between modern Bodo languages, except in so far as those who live in the plains among the Bodo people have adopted a tutee to the same extent as have the Chutiyas. But they live in a very slight degree, of 'Aryan' blood. The Koch race in Bengal has become completely Hinduised, has adopted the Bengali language, and is practising multiform, to which modern converts from other Bodo races are still admitted. The Khyenas, once a Bodo ruling race in Northern Bengal, have already been totally identified. But the Mechus and the Chakrachis, though some of these regions, are still physically, linguistically and culturally living as Bodoes, to the extent that are still visible, not far from Balpuris at the foot of the Arik hills. The Akas, whose chiefs now, on occasions of state, wear costumes evidently borrowed from Tibetan Buddhists, are said to claim descent from Bhallukas. It is certain that many too are a remnant of the race driven into the hills, was once more or less Hinduised, and may yet be accepted into the Hindu fold.

But there are many such legends, all, or nearly all, relating to powerful Assa monarchs. One of the most famous of these was Naraka Asura, son of the Earth, who is said, in the Mahabharata and Vishnu Purana, to have carried off the fairings of Aditi (the mother and daughter of Daksh, above described) to his impregnable castle of Prayagisvara, where Kryna, at the request of gods, went and killed him and recovered the jewels. In the Harivamasa the same story is told in a slightly different form. Naraka's son and successor was Bhagadatta, who not only was frequently mentioned in Assamese tradition, but at least was mentioned of him in the Parcen of the Epic, the tale is told of how Arjuna attacked Bhagadatta and compelled him to pay tribute. Subsequently, it is related that the prince was driven out with his mother and an assistant of Duryodhan in the last struggle between the Kauravas and Pandavas in Western India.

Those who are interested in the legendary period of Assamese history will find a full account of it in Gait's History of Asam. In the first half of the 7th century, we at last get a glimpse of authentic history from the famous Chinese traveller Huien Tsang, who visited Kumar Bhaskara Varman, then king of Kamarupas. Asam was not then, or apparently at any time, a Buddhist country. The king and the upper classes were the inhabitants of Hindus, the humble folk were not yet recognized as Hindus at all. This, in the end, was perhaps an advantage, as we shall see when we come to more modern developments of Assamese Hinduism.

From the 7th to the 12th century, the sole knowledge of the country is derived from inscriptions on copper plates, most of them discovered by Gait, which were records of grants of land made to various individuals or classes. These documents list contains titles of kings, and enable the historian to settle a few dates at rare intervals. When the Ahoms entered the Brahmaputra valley in 1252, the old kingdom of Kamarupa had been the birthplace of much of modern Assam. But the introduction of Assam proper may be said to begin. The Ahoms were Shans who descended into the valley over the Patkai pass from Upper Burma. M. Terrien de Lacsouperie, the eminent authority on this subject, says that the Shans are the outcome of an intermarrying of Mons, Negritos, and Chinese. They were a manly and hardy race, and (an unusual thing in the East) possessed the historic instinct very strongly. Their bu-ran-jis (the word is one of the very few Shan words in the Assamese languages) are chronicles comparable for accuracy of detail and picturesque of presentation with those of any country, and from this time on we have a systematic account of the rise, decay, and fall of the Ahom rule, which resulted finally in British supremacy in Assam. The name Assam was successfully invented by the Ahoms, and the Ahom language was assimilated to the country.

The religious history of the Ahoms (g.r.) closely resembles that of previous rulers of the country. They, like their predecessors, finally established themselves at Pragjyotishpur (which gradually came to be called Guahati) and at several towns and palaces in Upper Assam. The kings and their Ahom subjects intermarried with their predecessors in the country,
and became, as zealous Hindus, defenders of the famous shrine of the Tantrik goddess Kamākṣā. But the bulk of the quiet, innocent, and cheerful Hindus of Assam, not Tantrik Tamils, were, like the followers of Chaitanya in Bengal, Vaiṣṇavas, and hold a creed which is manifestly tinged by Buddhist influences. Their faith is that of the Bhāgovata, enthusiastic worshipers of the Indo-Chinese races that invaded the country, the Father of his creations, as accessible to prayer, as having been incarnate in human form, and as one who loves humanity. The soul is regarded as eternal, and extinction or absorption is not considered as possible or desirable. Rather is it the opinion of the Vaiṣṇava that, in order to incarnate himself, and make his devotees, the bhakti, or ‘devotion,’ and prayer, fellowship with and ultimate approach to the presence of the divinity (see Bhakti-Margā).

2. Sāktism.—(a) Historical aspect.—This new religion, to which the majority of the converts to Hinduism from the humber races and classes now belong, came into being at a time when the Assam valley was divided between the Koch kings of the West and the Ahom kings who were establishing their dominion in the East. One of the greatest of the present state in Assam was killed in 1584 after a rule of nearly fifty years. In his time the Koch power reached its zenith, chiefly owing to the warlike ability and energy of his brother, the celebrated commander Silārā. Nara Narāyana himself, lessee of the Koch, a studious and industrious, who greatly encouraged the spread of the Hindu religion. Like all the rulers of Assam, he was himself a Sākt (a worshipper of the Sīttī of Sīva), and he rebuilt the temple of Kamākṣā Devī, which had been destroyed by Mahārāja of Bengal. He ordered many Brahman priests from Bengal to conduct the religious ceremonies at the temple, and, to this day, the paravattī gusain (‘mountain priest’) who is the chief priest at Kamākṣā, is a Bengali from the great seat of Bengal religious and culture at Nudd. The temple contains two stone figures which are said to represent Nara Narāyana himself and his warrior brother Silārā (or Sukhadiya). What Sāktism then was (and what still is in principle) may be judged from the ceremonies conducted at the opening of the temple: the whole ceremony cannot do better than quote from Gait’s History.

‘At this time Sāktism was the predominant form of Hinduism in this part of India. Its adherents base their observations on the Tantras, sects of religious works that are the basis of various ceremonies, prayers, and incantations prescribed in a dialogue between Sīva and his wife Pārvati. The fundamental belief is that the female principle is the source of all power and nature as manifested by personified desire. It is a religion of bloody sacrifices from which even human beings were not exempt. In the Kālīka Purāṇa it is stated that a man without blemish is the most acceptable sacrifice that can be offered, and the manner in which the victim is to be dealt with is laid down in great detail. When the new temple of Kamākṣā was opened, the occasion was celebrated by the immolation of no less than a hundred and forty men, whose heads were offered to the goddess on saivers made of copper. Accord- ing to a description of the ceremony given in a paper called Bhogā, who were voluntary victims. From the time when they announced that the goddess had called them, they were instructed to do what they were allowed to do whatever they liked, and every woman was at their command; but when the annual festival came round, they were killed. Maryhill’s copy in the British Museum is a Tyā office, and in the Ain-i-Akbari the people were accused, among other practices, of disfiguring by the examination of a child out of the womb of the pregnant woman and the consequent termination of her full term of months. The religious ceremonies of the sect were elaborately described in a paper entitled ‘On licentious orgies too disgusting to be even hinted at’ (p. 56).

It may be noticed as a historical fact, that the Sāktism of Kamākṣā was the religion in turn of dynasty after dynasty of decadent monarchs, each promulgated from a state of semi-savage conduct by adoption into Hinduism. It may be, on the one hand, that something of savage brutality and lust were imported into the cult by association with primitive beliefs. Certain it is that all the royal families, whether of the Brahmaputra valley or of the adjacent Surrā valley, sent to the shrine their adherents to all the excesses and abuses that go with panic-stricken cruelty. It is a fact, too, that life in the soft, enervating, and malarious climate of Assam invariably produced physical and moral decay in the fine and finely-bred Indo-Chinese races that invaded the country. When the British took possession of Assam, the Burmese were in occupation of the valley, and were belying their Buddhist creed by cruelties probably unequalled in savagery in any part of the world. Had they established their rule in the Brahmaputra valley, and thereby, there can be little doubt that they, too, would have come under the influence of environment, and that their race would have become enmasseled by commixture with the degenerate plains-people. Certainly the Tantrik religion of Kamākṣā was one of inconceivable cruelty and degradation. Before going on to describe how in the 16th cent. a reformation of the utmost importance and interest altered the whole aspect and application of Hinduism in Assam, it may be well to state briefly what the Sāktism of the Brahmaputra valley is known to be.

(b) Sāktism at the present time.—The modern manifestations of the cult of the generative and reproductive forces of Nature are undoubtedly less brutal and more humane, and the influence of Hinduism in the Brahmaputra valley is known to be.

4. The Sāktism of Assam contains, a larger foreign population in proportion to its total numbers than any other Indian province, have effected a real change in the tenets, perhaps, and certainly in the manners of Sāktā. Sāktism in Assam, and the Hinduism of the Brahmaputra valley, the scriptures of the sect, a religion of blind terror, of uncontrolled excesses, of the terrible mystery of birth and death. The root-idea seems to be that Nature creates only to destroy; that she creates only to be destroyed. The doctrine begotten only because it is foredoomed to early destruction. The Sāktist can indeed say of his Kamākṣā, or of some other form of the generative powers of boon nature, that, like the Lucretian Venus,

‘per te quomiam genus omnem animant
Concipilur, vitae aurum luna solet.’

He can, indeed, take pleasure in the recurring marvel of love. But behind seems to lurk a morbid sense that life and death go hand in hand, or rather that one is the shadow of the other. The Venus of the Nilachal hill is Mistress of Life, and Love, and Death, it is inferred that weak mortals, her children, can do her service by loving, by begetting, by slaying. This sentiment is very widely, if obscurely, present in the minds of Hindus in Assam even the redoubtable Tantrik priest Navin Chandra Sen, the most eminent of living Bengal men of letters, the sense of the mingled horror and rapture of Sākti-worship is expressed in a way that no mere description by a foreigner could convey. The novel contains, incidentally, a graphic account of the appalling cyclone and tidal wave which swept over the district of Chittagong in
October 1897. The whole description is a vivid reminder of the fact that this remote corner of Bengal was once part of the vanished kingdom of Kamarupa, and still preserves its ancient attitude towards the inscrutable mysteries of our common existence.

The tale opens with a singularly beautiful and poetical description of the Kuttapong coast in late autumn, of the blue sea flecked with foam as the water of a lake reflects the setting sun. The gentle billows rise and fall, the sky overhead, the yellow sands shining in the happy brightness of morning sunshine, and behind them the rich gold of ripening rice fields. The dense green foliage of which the brown-roofed cottages of the peasants are nestled to the north. The sacred peak of Chandra-shekhar, crowned with the gleam of the white temple of the goddess, and to the south lies the rocky island shrine of the local Venus at Mashiak, an Indian Cyprus on a small scale.

The annual festival at Nilachal on old time, human sacrifices were offered to the goddess of Life and Death. The people are happy in the expectation of a plentiful harvest. They are preparing the simple presents with which they rejoice the hearts of their relatives and children; their minds are filled with gratitude for safety, and prosperity, and sufficient food. But the goddess is bent on warning her creatures that death is her function as well as life, and love, and happiness. On the feast day of the goddess, the people gather. The folk are quietly sleeping, the great wind blows suddenly with visible warning, and, catching up the rising tide, plucks it in a charming indescribable destruction over the sleeping coast, involving all—happy houses, men, women, and children, ripening fields, the bodies of prey, and the sacred animals, even the birds of the air—in one common holocaust. The goddess has exacted her own sacrifice, since men no longer offer another. The chapter is significantly headed 'Rarna-Kirttra,' the 'Field of Battle.'

And this, be it noticed, is not a description written by a fanatic priest. Naivin Chandra Sen is an English scholar, and an administrator who rose high in the British service. He has ceased to be an ardent student of English literature, and, as his poetical works show, is deeply interested in the study of religion. But the warp and woof of the devotional texture of his mind is made up of the ancient conceptions which gave the Brahmins of Bengal a long supremacy in the religious atmosphere of the Eastern, and the kingdom of Kamarupa its old reputation for magic, sorcery, and divination. It is still a land of spells and charms; and mystic formulas, rightly used, still have power to bless and curse, to draw on fellow-mortals the smile or frown of the unseen deity. There is no logica basis in all this, because, by a quaint fancy, that is the period during which Mother Earth, obscurely identified with the goddess, is unclean. Conversely, the great river Brahmaputra, which flows under the shrine, is, for reasons mythological and other, ceremonially impure throughout the year, except on the annual bathing-festival of the Asokasamta, when ablation in his waters becomes as cleansing as bathing in Mother Ganges herself.

In the Report on the Census of Assam, taken in 1891, Gait writes as follows:—

Their religious ceremonies (i.e., those of the Śāktas of Eastern Bengal and Assam) have frequently been the subject of adverse criticism. Robinson says* that some of the formulas used at the festival in honour of Kali relate to things that can never become the subject of description, and that "the most enterprising of the pretentious priests of Kali are likely to exhibit which it is scarcely possible to suppose the human mind could be capable of devising." I am not aware on what authority he formulates this pretentiousness that the formulas are supported by other writers, and have not, so far as I know, been contradicted. It is well known that dancing girls are never supposed in the least to be engaged in the worship of Kali, which makes the objection very weak. The main objection is founded on the and of the idea that a great deal of licentiousness is permitted under the guise of religion. Here Gait refers his readers to the account of Sankar-devi by Monier Williams in his Religious Life and Thought in India.

The five essentials for worship are the five Ma/taras, or 'five M's'; namely, Madya, wine; Matyas, fish; Madra, 'packed grain and myrrh'; and Maha/bhata, 'the indulgence of sex.' B. C. Allen has a similar account of modern Śāktism in the Assam Census Report for 1901.

Before quitting the subject of Tantrik worship in Assam, it is only right to warn the reader that descriptions of the cult of the goddess are too extensive to be given. Few enthusiasts must not be accepted as a fair account of either the religious beliefs or the ethics of the great bulk of Assamese Śāktas. Like most Eastern Indians, and especially those who have an infusion of the Western Chida-Śakti, these are a mild, contented, and smiling race, little given to excesses of any kind, good sons, husbands, and fathers, and, so far as the long experience of those Europeans who have lived among them shows, not more addicted to grossly superstitious practices than the bulk of humanity. Religion with them, as with most races, is left in its more esoteric forms to priests, experts, devotees, and enthusiasts. There are a few dancing girls at the Kâmâyā temple, it is true, and it is to be feared that these are devoted to the perversely logical extremes of a creed of panic terror, and morbid exaggeration of the facts of sense. But there is no part of India where womanly virtue and modesty are more valued and more consistently practised than in Assam, which in this respect compares very favourably with the neighbouring Bengal. widowhood and prostitution is rife. In truth, the Śākti-worship of Kâmâyā can hardly be considered as belonging to Assam in any proper sense. It is the creed, so far as it is Assamite at all, of the upper classes, a few of whom are by way of being the better class. There can be no doubt that, except at the temple itself, it has been purified by contact with the true national religion of the country, the reformed Vaishnavism, to which it is a pleasure and a relief to turn.

3. The Vaisnavism of Assam.—(a) The historical aspect of Assamese Vaišnava-worship.—When the Koch king Narā Nāriyāna (1529—1554) ruled in Western Assam, and the Ahom king Chuhumung, whose Hindu name was Swarga Nāriyāna (1497—1509), ruled over the eastern part of the Brahmaputra valley, the great social and religious reform initiated in Bengal by Chaitanya spread to Assam, and became the foundation of what is still the popular and prevalent form of Hinduism in the country.

In still earlier times, when the Ahoms entered the Brahmaputra valley, they were still under the sway of the goddess, who were known as the Bāra Bhujuś, and these claimed to be descendants of Sānadora, the minister of an ancient and still anonymous ruler of Assam kingdom. Sānadora and his son were on the throne on the expulsion of Arimatā's son Reina Singh. Reina and his son Kismat were both powerful men, who learned in the Brahmanic sciences and con amore, by his own real name, and in whose house was born the revered Sheikhul Musālik, who then ruled in Central Assam, and the powerful Chātiliya monarch whose capital was at Sādyā, near the north-eastern frontier. Ultimately, however, they fell victims to the usual law of decay to which all Assamese dynasties have been subject, and were subdued by the rising Ahom power. As in so many other cases, this semi-royal family became reconciled to the common lot of Assamese humanity, and, save for some lingering pride of race and some intellectual aspirations, were absorbed, as far as we can learn, by the mass of the people. One of Sānadora's descendants, named Rajā, settled at Bardowa in Central Assam, and his son Kishore was the father of the great religious reformer Sankar-deva.

This is one of two versions given by Gait of the origin of the first of the reformers of Assam. The other story does not differ in material points from that which has been summarized above. It,
too, describes Sankara Deva as the descendant of famous chiefs, but speaks of these as the wardens of the northern marches.

It is said of Sankara that he early recognized the crude and cruel practices of the Life and Death, and was puzzled by the anomalies of the Śākta religion, obvious enough to modern students, if they present few difficulties to simple races surrounded not only by hampshire but by the frequently hostile and always terrible and incomprehensible force of a land without sunshine, and of an earth subject to earthquake and storm. Sankara’s fate was cast in a happier and more peaceable time, when there was an equilibrium of forces. For instance, who quarrelled with his teaching the Koch and the Ahom, and when men had leisure to think of the possibility that human beings might conceivably live at peace together, and that the religious world might not be torn by a schism.

He spent twelve years in Bengal, chiefly, it is supposed, at Nuoda, where he learned the religious ideas of a greater than himself, the famous Bhaktivinoda. He lived, like the Bhagavad Gita his scripture, and Kṛṣṇa, the heroic incarnations of the cult, in his time. He is one of the most eminent of the many teachers, both before and after Chaitanya, of the Bhagavata religion, which in some of its forms so closely resembles the teachings of Christianity that it has been supposed by some that the doctrine of bhakti, or personal adoration of a divine Father, was borrowed from the Thomsane Christianis of Southern India (see BRHAT-SARA). Sankara, at all events, abused priests, idols, and castes, and taught that all the priestly books and the caste of Saktas, and all the immortal souls, and capable of being freed from sin and sorrow by beseeching these prayers to their loving Father. He at first strove to propagate his ideas, his earnest desire to finds converts affords another parallel with Christianity — in the Ahom domination. But the Ahom kings were under the domination of the people they ruled, and Sankara was compelled to take refuge at Barpeta, in the kingdom of the idol and enlightened Koch king Rana Nārāyana. It is said that the kings had many interviews with him and even proposed to become his disciple. But Sankara, with characteristic modesty, refused the honour.

This story may be recorded in a concise and picturesque form the fact that the Vaisnavas of Assam never tried, as their Brahman predecessors had done, to win over the ruling classes. Their ‘kingdom,’ if the expression may be used without irreverence, ‘was not of this world,’ and they were content to influence the ordinary classes, races and classes, those which orthodox Hinduism had, with some vague memory of the old ‘Āryan’ exclusiveness, regarded as Mlecchas and barbarians. It is said by modern followers of Sankara that he had studied the Bhagavad Gita, before he proceeded to Bengal, with Hari Deva and Dāmodar Deva, subsequently to be themselves founders of minor Vaiṣṇava sects. It is possible that there was at this period a widely spread wave of religious inquiry and a silent revolution against the physical. This is said to be the cause of the Saktas, at least a curious coincidence that, when Luther and other reformers were rebelling against the abuses of Roman doctrine and discipline, a precisely similar movement should have produced Hari Deva in Bengal, and Kṛṣṇa Deva in Orissa, Chaitanya in Bengal, and Sankara in Assam.

Sankara is said to have lived to great old age, and to have died in the year 1669. He was succeeded by his favourite disciple Madhava, a Kāyastha like himself. Among those who still follow the teaching of Sankara, are the Nārāyana, who with even greater reverence than Sankara himself, and the sect is commonly known as the Māhāpurüṣyas, the followers of the ‘Great Man’ or Teacher, i.e. Madhava. But there were some who, on the other hand, united with Sankara’s system in the influence of old-time ideas, and resented the founding of a hierarchy of Kāyasthas as religious guides. Several Brāhmañc disciples preceded and founded sects of their own. The most important of these Brāhmañc disciples were Dāmodar Deva, Hari Deva, and Kṛṣṇa Deva, who founded numerous chattras, or centres of religious instruction. The most important and interesting of these are the institutions, not wholly unlike Buddhist monasteries, at Aunāli, Dakhināpi, Guranur, and Kurukshetra — all in the remarkable Majuli island, perhaps the longest river-island in the world, which lies in the Brahmaputra, between the modern Districts of Sibsagar and Lakhimpur. There is little Sāktism now except in Kāmarūt Lāuri; and that of the Vaiṣṇavas in Lower Assam is mainly Mahāpurūṣya. No great change has taken place, including Nowgong, east of the Kalang, is inhabited mainly by followers of the Bāmiynyas guṇais.

But even in Upper Assam the Brāhmañc did not in early times exercise an unquestioned sway. There was one Aniruddha, a Koliya or writer by profession, who quarrelled with Sankara, Deva, and founded the Moamāria sect, which played an important part in subsequent political events, and is known to all students of Assamese history as the origin of the famous Moamāria rebellion. It is said that the rulers of Assam first contumeliously given by the Brāhmañc to the low-caste followers of Aniruddha, who lived by a fresh-water lagoon which abounded in the coarse fish known as moa. His disciples were known as ‘killers of moa fish.’ They became ‘fishers of men’ to considerable purpose in later times, and furnished a hard nut for the Ahom rulers of Assam to crack.

For a time the Mahāpurūṣyas and Bāmiynyas between them practically ousted Sāktism from Assam. Its restoration was due to the pride of the famous Ahom king Sukhrungphula, better known by his Hindu name of Rudra Singh (1600—1714). He wished to adopt Hinduism, and was too proud to accept the saren, the oath and formula of orthodoxy, from a subject. He imported one Kṛṣṇārāma Bhūtācharya from Nuddea, and made him parvatia gusain, the high priest of the mountain-temple of Kāmikā. Kṛṣṇārāma was a Sākt, and the Court and its dependants adopted his form of Hinduism. The new gusain’s priestly arrogance was at last shown when Rudra Singh, who had been educated by his son, Suneypolah or Lakhśa Singh. Kṛṣṇārāma refused to recognize the young king, on the ground of illegitimacy. Laksuri Singh accordingly imported another Sākt priest from Bengal, who was the founder of the family of the Na Gaisain, the ‘New Priests,’ as the Parvatia Guaisins are the heads of the Nāi Gaisins, who together with them form the nucleus of Sāktism in Assam. There are, however, a few representatives still of the old indigenous Sāktism of the Assam valley, who, though they may be a savage race, are known by the title of Māyakī Mura, the ‘Dareheads.’ Gaif believes that Sāktism has more vital force than Vaiṣṇavism. ‘Many Vaiṣṇavas,’ he says, ‘are attracted by the more realistic worship of the Śaktas, and offer sacrifices at Kāmikā, despite the remonstrances of their spiritual guides.’ In truth, Vaiṣṇavism, as practised by its humbler converts, is but a stage removed from the animistic cred of the aboriginal races of Assam. It involves chiefly the giving up of good roast pork and rice-beer — luxuries to which the castes that have Indo-Chinese blood in their veins are much addicted. Sāktism, on the other hand, puts little check on sensual gratification, if it is always possible for enthusiasts of either sex to regard themselves as incarnations of the male or female form of the deity, and so to please divinity by pleasing themselves.

(b) Vaiṣṇavism at the present time.—It remains to say a word as to the Vaiṣṇavas as they now are. Laymen are under the supervision of the Vaiṣṇavins of one chattr or another, to whom they have taken the vow of obedience. They are visited from time to time by bhaktas, or disciples of the chattras, who exact the doles or fines by which the community is maintained. They are mostly simple and innocent enough folk, not much given to religious or critical speculation. Their
rustic existence is so uneventful and uncharacterized that a very plain and uncomplicated theory of moral and material existence suffices. The Mahāpūraṣāyas never regard Sankara and Mādhava as avatāras, or incarnations of Viṣṇu, though neither of them claimed this presentation in his lifetime, and would, indeed, have regarded such an assumption of divine honours with horror. The way to salvation among them is founded on the performance of deeds and the devout pronouncing of the name of Hari. Worship is carried out by the performances of sankirtan, the enthusiastic singing of hymns accompanied by much beating of drums (dhol) and clashing of cymbals (aṭṭā). Additionally, the incarnation of Dot Avatār, of Viṣṇu are believed in. Caste prejudices, though theoretically opposed to the tenets of the sect, were not wholly destroyed by Mādhava himself, and are slowly but surely reasserting themselves, perhaps under the influence of the adjacent Sāktism. The Mahāpūraṣāyas do not, however, recognize caste so fully as the sects that have Brāhmaṇ leaders. The Kālū Bhakats, the monks or recluseś who live in the precincts of the chotāras, are celebrants, ascetics, and wholly ignore caste, as being of the nature of worldly distinctions. In each chotāra, there is an image of Viṣṇu, but this is said by the Kālūs to be a mere concession to the idolatrous weaknesses of the common people. They themselves do not pay any reverence to the idol, and are careful to respect objects near the image. The Bhāgavān Gīta, with, no doubt, in the case of the better read among them, a leaning towards pantheism.

The Mahāpūraṣāyas eat the flesh of wild animals, such as deer, and also all feathered game. They do not eat domesticated animals or birds. It would be worth mentioning that the Assamese word for 'deer' is pakhu, the local pronunciation of the Sanskrit pāku. The deer is, in fact, 'the animal.' The Mahāpūraṣāyas do not kill with the knife or pelt, as most Indians do, but kill only animals to death. Their principal scriptures are a Kirtan and a Doṣār attributed to Sankar Deva, and a Nānakñose and Rattukālī that have been composed by Mādhava. The Kirtan and Nānakñose are anthologies from different purāṇas. The Bhāgavān Gīta is the only work of the chotāra lineage. The Bhāgavān Gīta. The Mahāpūraṣāyas refuse to eat with the Dāmodāriyas, but, curiously enough, intermarriage with them is not unknown. The Dāmodāriyas worship the idol of Kṛṣṇa, and they regard Gopāl Deva as an incarnation of that god. Refusing the spiritual leadership of Śūdras, they refuse, necessarily, to recognize the claims to honours of Sankar and Mādhava. In other respects there is little difference between their tenets and habits and those of the Mahāpūraṣāyas. Though they are careful for Brāhmaṇical supremacy, they are, strange to say, less strict in diet than the Mahāpūraṣāyas, and eat the flesh of goats, pigeons, ducks, etc., following in that respect the example of their Brāhmaṇ teachers. Nor are they so particular as Śūdra caste in matters of personal cleanliness.

The followers of Hari Deva regard their leader as an emanation of Kṛṣṇa, but do not on that account deny that Sankar was also an incarnation of Viṣṇu. Among them prevails the practice of the bhakat-seva, which permits their Brāhmaṇ leaders to accept indiscriminately all offerings made to them by their jajāmnas, or disciples. Hari Deva himself was an enthusiastic admirer of Sankar and Mādhava, but in modern times the tendency of the sect is to regard himself as a rather not to identify themselves with the Dāmodāriyas.

Finally, a few words must be said as to the followers of Gopāl Deva. Gopāl was a disciple of Sankar, who quarrelled with his leader, and started a chātra of his own. But it is said that the misunderstanding did not wholly destroy the liking and respect for one another, and it is difficult at the present day to see much difference between the beliefs and practices of the followers of Gopāl Deva and the Mahāpūraṣāyas. The former hold a much more formal festival in honour of their founder, but in other respects are much of the same as members of the rival sect.

4. Methods of conversion.—The most important method of conversion to Hinduism in Assam, but these were always reserved for ruling princes and powerful tribes, and were only conceded to converts"; that described by Gaity as 'conversion by fiction.' As he says (Genses of Assam, 1891, p. 83):

'The Brāhmaṇa ingratiate themselves with the head of the house, discover that he is a Hindu of unexceptionable antecedents, whose ancestors have for some reason thought fit to conceal their identity, and present him with a brand new genealogy, in which his descent is traced back to some god in the Hindu pantheon or some potestate in Hindu mythology. Thus the Koch kings are said to be descended from Siva, who, assuming the form of Baria Mandali, had intercourse with his wife, who was no other than an incarnation of Parvati. While a divine origin for the king was thus furnished, the rest of the family were not forgotten. It was explained that the Kachari kings were Kṣatriyas who fled eastwards to escape the wrath of Parasurāma, and had remained there ever since, disguised as brahmanes and Kuki-Chins. The Kacharis, however, were similarly converted, and, after their ancestry had been satisfactorily traced back, the two classes were placed (about 1700 A.D.) in the body of a large copper image of a cow, and were thence produced to an admiring people as an original Hindu convert. At the same time the claim of that part of the country were also admitted to be of Kṛṣṇa origin, and were allowed to assume the sacred thread on declaring their adherence to the sect of the Brāhmaṇ. Thus the Brāhmaṇa and the Kachari both professed the conversion of the Manipurias (or Meitei, the Kuki-Chin race inhabiting the Impāl valley) happened in precisely the same way. Arjuna was alleged to have been the founder of the royal family, while the masses of the people, like the Kacharis, were admitted to be Kṛṣṇa's converts. The Kuki-Chin are of the opinion that Kuki on conversion is at liberty to describe himself accordingly and to assume the sacred thread. For the Ahoms, Indra was selected as the mythical progenitor of the kings, but no special origin as such has been assigned to the common people, so that an Ahom on conversion takes as low a place in the Hindu caste system, in his own estimation, as he does in that of orthodox Hindus.'

Here Gaity adds an interesting note to the effect that Indra also enters into the traditions of the Mon-Assam races of Burna and the Far East. The Ahoms and the Vaishnavas of Assam state that the Kuki-Chin have been admitted into Buddhist mythology (Languages of Farther India, p. 41). It is just possible that the Ahom kings brought the tradition of their heavenly descent with them from Burna, and did not obtain it from their priestly attendants.

The fictional system of conversion had its advantages. It admitted whole races at a time into Hinduism. But it involved important concessions, which the Brāhmaṇas were not likely to make unless they could receive some compensation in return. Converts who belong to tribes for which a high ancestry has already been invented, continue to claim admittance to their reputed caste—generally, of course, a high one. But nowadays conversion is sporadic as confined to humble folk, and such people are kept much lower footing than the kings, warriors, and invading races of old time. Sometimes they change their tribal name and enter a caste specially reserved for them. Sometimes they even become Hindu without changing the title of their priests.

In the Assam valley the Koch caste is usually allotted to converts—a circumstance not without interest when it is considered that Koch was originally the name of a race whose members, in Northern and Eastern Bengal, changed their name to Rajghatia. The name has been adopted Hinduism. The true Bodos of the Kachari Dwars usually enter this caste, while their highland
ASSASSINS

consins, the Di-ma-iisi, as already related, have been raised to Katriya rank. But even the name of Kachir cannot be assumed all at once. A Kachir, for instance, begins by being under the protection of a gujiri and taking the oath of obedience, or sarav. He is then called a Saraniya. At this stage he still eats pigs and fowls, and continues to drink beer and, less frequently, distillates. Next he (or rather his descendant) becomes a Modahi, which implies the renunciation of alcohol. By slow degrees the annual yearning for unholy food and drink diminishes or disappears, and, having become a ceremonially pure Hindu, the aforesaid Kachir is said of his race. It seemed natural that he should invest his savings in a polygamous union, and he was at some pains to convince his missionary that he could find nothing in the New Testament to prevent a layman from being the husband of two wives. It was, of course, impossible for his pastor to accept his view of the case, but he married a Kachir girl en secondes lois, and himself in due course became a Hindu Kachir.

At the present time the ferment of political agitation which is stirring in Bengal has spread, to some extent, to the educated classes in the Assam valley. The movement is largely a Hindu movement, and, until the fervent Sakti of Mātā, or mother, to whom the Bande Mataram hymn is addressed. This hymn is usually interpreted as an invocation of the mother-land; and, in one sense, it undoubtedly has this meaning. It is possible to make the trouble for this context in the well-known novel of Amaudha Math, from which the hymn is taken, will have any difficulty in convincing himself that the invocation has also an esoteric sense, and implies the adoration of a female divinity, who is, more or less disguised, the Sakti of the old cult of the vanished kingdom of Pragjyotishpur. The neo-Saktis who, in Bengal and Assam at least, head the new 'national' movement towards autonomy and independence of British rule, boldly claim, on the one hand the intellectual ability, an equality with European races, and, on the other, have exhibited a marked desire to be admitted to the amenities of European society. They themselves confess that the social and political progress of Japan has given the hint for this new ambition. It will be a matter of much interest to see how the followers of the more esoteric and, according to European ideas, less pure and elevating form of Hindu belief will be able so to transmute their social system and ideals as to obtain admission into the fraternity of modern Europe. Of the intellectual ability of the Arvo-Dravidian upper classes of Bengal and Assam, the heirs of the ancient civilization of Kāmarūpā, there can be no doubt. That most of them are good citizens and excellent in their dealings with one another is equally undoubted. For it may be that traces of hemp, rather than the society depicted, for instance, in the tales of Apulcins—a society which nevertheless retained something of the administrative instincts of Republican Rome. It would be unwise to dogmatize or prophesy in a matter whose solution must depend partly on the good sense of the Buddhists. It would be unfair to remind the political reformers of Assam that the shrine of Venus Kamakāśa still draws its throngs of worshippers and furnishes revenue to priests who are much as were the priests of Venus Kāma in China, when the theocratic station of Gahāri was the proud and famous capital of Pragjotsishpur, an early English account of which may be read in the travels of Ralph Fitch, who visited the country of Couch, or Quichen, as he calls it, when Nara Narayana still ruled the diminished remains of the old kingdom of Kāmarūpā.

Sec, further, separate artt. on ĀHOMS, Bodos, Khasis, Lushais, Manipurs, Mikhes, Nágás.

For an account of the Muhammadanism of Assam see King and Assam and Assam, and for the Buddhists see BUDDHISM (in Burma and Assam).

J. D. ANDERSON.

ASSASSINS.—I. Names.—'Assassins' was a name given, mainly by European writers, to a community properly called Ta'limītātes (Instructionists) or Isāmītātes ('followers of Hashan Sa'īlî'), forming a branch of the Bhūtātātes (Bhuta-Tattvātātes) of the Inner Meaning'), Ismā'īlīs ('adherents of Ismā'īl b. Jāfar as-Sādiq'), or Sab'Itātes (Hepadtātes), and sometimes confused with the Bābītes or Hurmizdtātes and Qarnātātes (q.v.). For the origin of the name Assasin (spelt in base-Latin documents asasini, asiassini, asassini, hassassanti, heissessin, etc.) many improbable conjectures were offered till it was finally identified by de Sacy (Mém. de l'Institut, iv. 44) with the Arabic hashšāshīn or hoshshiyā, 'drinkers of hashshāsh' (an extract of one or two hundred years or occasioning properties, with which there is reason to believe that the members of the sect were at times drugged). The story, however, to that effect which is told by Marco Polo (3rd ed., Yule, i. 139), though parallel with some Eastern narratives (see von Hammer, Minus de l'Orient, iv. 555), can only be regarded as a romance. The name hashšāshīn with its synonym has as yet been found in very few Arabic authors, and applied to the Syrian branch of the sect; and seems to have been a term of abuse, given to it by its enemies, who associated deceit with the habit of drinking this liquor (ZDMG xx. 591).

2. Tenets. The tenets of the community are very imperfectly known, partly owing to the rarity of MSS. emanating from it, and partly because their doctines were essentially esoteric, and communicated in their entirety to very few persons. It is, however, certain that the system of the Ismā'īlīs was a conflation of philosophic pantheism, emanating from India, with the formulas of Islam. The development of the doctrine until the process was facilitated, and which won them the name Bābītes, was that every text of the Qur'ān had a hidden meaning, which was to be followed

* De Sacy's references we may add Mufid al-ulūm (Cairo, 1819, p. 50), where hashšāsh is said to be the food of the Muḥibādat (the name by which the sect is known to its enemies).
to the exclusion of the literal sense. The name Sab'ītes is ordinarily interchanged with Shī'ites, as implying that the former recognized only seven imāms, whereas most of the Shī'ites recognized twelve; the seventh being that Ismā'īl b. Ja'far, who was supposed to have died before his father (who therefore left the imāmate to another son Māsā'). Or others may hold that he pretended to have imbibed some mis-\textit{t} from the Shī'ites. 

Since the some soul of Ismā'īl b. Ja'far, who was 

the first imām, was the leader, or retain his title to the imāmate and handed it over to his son Muhammad, a real or pretended descendant of whom afterwards asceticism and 

debasing activities of the sect. Some of the matter given by Mirkond is derived from a work by the celebrated Nizām al-Mulk, vizier of the Seljuks, who was well acquainted with Ismā'īlī doctrines and mabinations. The most elaborate account as yet discovered is that in the chronicle \textit{Jami' at-Tawāris} (ed. "Melis, Or. 1654"). This is told in the form of a dialogue between him and Sabah, a certain Muslim who had a knowledge of the doctrine. The statements of this work and others bearing on the same subject, have been submitted to searching criticism by W. C. Brown (A Literary History of Persia, ii. 190 ff.), who has disposed of certain familiar myths, which need no longer be repeated. According to this, his father's house was Khalīf, but he had migrated to Qum, where Hasan was born; both originally belonged to the Shī'ite sect of Twelve, but the son was converted to the sect of Seven through the influence of a missioner named Amir Darrā'ī, and some of the famous preachers and travellers Najjār and Khūrāsānī. These missionaries, societies founded by whom had already honeycombed Persia, were agents of the so-called Fāṭimī Khālīfahs of Egypt, at whose court ambition which had failed to secure the ascetic and antiformal fanaticism of the Ismā'īli sect, was now in control of Baghdad, naturally sought compensation. The myth to which reference has been made assigns Hasan a motive of this sort, which is not mentioned in the source.

About the year 472 A. H. (A.D. 1080) Ḥasan went to the court of the Egyptian Khalīfah Mustaṣṣir, and studied the doctrines of the community which he had joined. But he did not stay more than two years in Egypt, having espoused the cause of the Khalīfah's elder son, who was murdered by his father to succeed him, but was later displaced in favour of another son. Ḥasan Sab'āh maintained that the expressed resolve of an imām was unalterable. He obtained, however, some sort of certificate as Ismā'īlian missionary, and introduced his doctrine to Persia, already playing that part in Persia, whither he returned in 1081; and a writer on religions in 1083 at the court of Ghaznī already mentions Ḥasan Sab'āh as a successful preacher of Bātinism in Khurāsān, with a library of his own (Schefer, p. ed. 1901).

According to Ibn Ṭabīr (ed. Tornbery, vol. x. p. 213), the Ismā'īlian revival with which Ḥasan proceeded to associate himself about this time began at Sāwā, where eighteen men met to perform worship in the style peculiar to the sect. Thereafter the centre of the movement.-472 A. H., and the first assassination took place, the victim being a \textit{mii'adhdhin} (\textit{caller to prayer}), whom they had vainly endeavoured to convert to their doctrines, and had murdered when they feared he might betray them to the local authorities. The vizier Nīṣābūrī al-Mulk ordered a carpenter who was suspected of the murder to be executed with great brutality, and thereby exposed himself to the vengeance of the sect. Since Ḥasan Sab'āh's conduct is said to have been dictated by dissatisfaction and ambition, and the desire to be master of Persia, the vizier's orders must, with the occasion for his conversion; but the order of events is not quite certain. What is clear is that the sect was highly unpopular with the orthodox, though the skill of the missionaries caused it to spread in secret; and that the sectarians quickly felt the need of a stronghold in which they could be safe from persecution. The first fortress seized was one near Ḵa'īn between Isfahān and Šībār (see C. E. Yates, \textit{Khurāsān and Seistan}, 1900, p. 62). That of Ḵa'īn, which fell into the hands of Hasan, was on a small rocky island, covered with a solitary rock, about 300 yards long from E. to W., very narrow, not 20 yards wide at the top; about 200 feet high everywhere save to the W., where it may be 100" (JEGS viii. 431; cf. ill. 15). Ḥasan gave his vizier Ḵa'īl Malik Juwainī the right to inspect the fortress before his occupation of it, and the vizier thence extracted a brief history of the community, which he afterwards inserted in his chronicle called \textit{Jahān-Kushī,} tr. by De-}

\textit{\footnote{When the Qur'ān says Jesus had no father, the meaning is that he received instruction from no trustworthy teacher: when it says that he raised the dead, it signifies that he brought knowledge to dead understandings.}}

\textit{\footnote{Rather more interesting is their gloss on the Qur'ānic name of al-Sab'ā. They supposed the names mentioned. These names they supposed to stand for the first two Khalīfahs, Abū Bakr and 'Umar, who kept the first imām, 'Ali, out of his rights. With regard to the existence of God they maintained a sceptical attitude, so far at least as ‘existence’ might be regarded as an attribute; for their public symbol was at times ‘we believe in the God of Muhammad.’ In their cosmogony the world of mind was said to have first come into existence; the world of soul followed, and then the material world. The latter was due to the victim being a \textit{mii'adhdhin} (\textit{caller to prayer}), whom they had vainly endeavoured to convert to their doctrines, and had murdered when they feared he might betray them to the local authorities. The vizier Nīṣābūrī al-Mulk ordered a carpenter who was suspected of the murder to be executed with great brutality, and thereby exposed himself to the vengeance of the sect. Since Ḥasan Sab'āh’s conduct is said to have been dictated by dissatisfaction and ambition, and the desire to be master of Persia, the vizier’s orders must, with the occasion for his conversion; but the order of events is not quite certain. is said to have purchased it for 300 pieces of gold from an 'Aliid who happened to be governor, and on whom Hasan imposed by professional asceticism and piety; and he probably obtained authority among the Isma'ilians by persuading them to use the Khilaf, whom they acknowledged as their chief. Hasan caused the land surrounding his fortress to be carefully cultivated, and this may have led to the legend which associated with it gardens of delight that could serve as a counterpart of the Islamic Paradise.

Like other founders of dynasties in the East, Hasan was a preacher and controversialist. Works by him* or by his colleagues, embodying Bâ'itite doctrines, excited sufficient attention to evoke replies from the foremost theologian of the time, al-Ghazâli, who wrote a work dedicated to the Khalif Musta'qil (487-512 A.H.), whose reign coincided with Hasan's tenure of Alumit. A second tract written by him in answer to the 'Instructionists', called 'The Just Balance (al-Qâdîs al-Musta'qil)', was published in Cairo, 1900. It is in the form of a dialogue between Ghazâli and a member of the sect. The latter maintains the doctrine of a hidden instructor, who can see all that is going on in the world, on the authority of his mother, 'and our master the late Alumit', as well as a work entitled Dâmmân lÎsâfâhîn, and the inhabitants of the fortresses. The treatise is occupied mainly with an account of the forms of the syllogism and the logical fallacies, and an attempt to show that there is no need for an infallible instructor. The book must have been written before 515 A.H., when its author died. The writings of Hasan were burned by one of his successors; but some of them were current in the time of Shâhristânî, who in his work on Sots and Schools, ed. Careton, p. 151 A.D. (1049 A.H.), copied some excerpts from others translated from Persian into Arabic. The purpose of this treatise appears to have been to deprecate the independence of the reason, and prove that for knowledge of God (which with this sect was equivalent to salvation) recourse must be had to a divinely-authorized teacher, whence the sect are sometimes called at-tâ 'Enmîyâ, or 'Instructionists'.

Undoubtedly his purpose was completely to ensnare the mind of his disciples, who may even have been brought by their assiduous preaching and the fascination of the sect. Assasination was from the commencement of Islam a common way of dealing with enemies, Hasan Salâh appears to have systematized the process in a manner previously unknown. A doctrine which is ascribed to the Isma'ilians by a late writer, but which may well have been taught also by Hasan Salâh, was that the soul is imprisoned in the body for the purpose of executing in all points the orders of the imâm. If the soul quits the body while fulfilling its duty of obedience, it is delivered and transported to the regions of the upper lights; whereas, if it disobeys, it falls into darkness (Quatrémè, Mines de l'Orîent, iv. 363).

One class of disciples, called Filûdîs, were ready at all times to assassinate those whom the head of the sect marked out for death; and in accordance with the doctrine described they were instructed in the art of their own lives readily in making such attempts. Nevertheless these persons received a special training qualifying them for such missions; they were taught foreign languages and the ceremonies of war, and it is said that they were instructed in a variety of disguises. Hence the assassins dispatched by the 'Old Man of the Mountain,' in order to win the confidence of their destined victims, would play a part for a series of months, or even years. The terror certainly felt by those whom a certain sect is called by Muhammad al-Makûl, Malik Shâh, 'the book killed with' (Alî Yâr al-Hasanâh, ed. Amezoa, p. 139).

Hasan Salâh could strike from his fortress and was enabled to extend his possessions and make terms with various rulers. In the second year of his residence at Alamut he struck down Nigel al-Mulk, khalif, short of his hand, and the Sultan Malik al-Mulk, his chief, who, after the death of his master, was killed by his own nephew as governor of Khurásân. During the war between Bakşîyârûq and his brother Muîlamad, numerous fortresses were acquired by the chiefs of the sect, mainly in the region called Kûhistan. The knowledge of the existence of this society, and that many persons in high posts at the Seljûk courts were their secret adherents, caused terrible anxiety and dissatisfaction. Whether wished to retain the tenures him of belonging to the Isma'ilian sect; delations multiplied; suspicion hovered over every one' (D'Ollason, Histoire des Mongoles, iii. 159). The Sultan Bakşîyârûq, son of Malik Shâh, was himself accused of favouring the Assassins, and was compelled to raid their country, without, however, achieving any important results.

Not long after the acquisition of Alamut by Hasan Salâh, the Assassins became strong in Syria also. Whether these Syrian Isma'ilians at the time of their first recognized the authority of the 'Old Man of the Mountain' is not certain; a detailed account of their history is given by Quatrémère, to which something is added by Defrémery in J.A., 1854, 1855. Ten years after the seizure of Alamut, we hear of the Isma'ilians establishing themselves at Aleppo; and for a time they enjoyed the almost unconcealed favour of the Seljûk prince of that place, Ridwân, who is thought to have employed their services in getting rid of his enemy Yahşî ad-Daula, prince of Emeâ's (a.d. 1100). The names of their leaders at this time are given by G. H. of the authors of the history of the Assassins, by the name of Alûb Bakrî and his chief, Abû Tahtî al-Salîq (Abû Yâ'âta l-Hasanâh, p. 149). Through the machinations of the latter, in 1106 they obtained possession of Apamea, whence, however, they were ever driven by the Franks. Ridwân's successor, Alû Arslân, the Dumb, urged on by the Persian Seljûks, organized a massacre of the Isma'ilians in 1113; yet their numbers and power kept increasing, and in 1126, through the efforts of their agent Ibnâbrî and his influence with Zahîr ad-Dîn 'Atabâk, they got the better of the Seljûks; but however, they were driven in 1129 owing to a massacre of their adherents in Damascus. In 1140 they acquired a highly important stronghold, Masyûf or Masyâf, and in the second half of the 12th cent. they were in possession of ten or eleven fortresses. Lists of the persons of eminence whom they killed have been made out by many writers. These were sometimes persecutors of the sect, but not infrequently the head of the community took pay from some foreign prince to strike down an enemy. In 1148 one of their number killed the Frankish count of Tripoli, in consequence of which the Templars invaded their territory and compelled them to pay tribute. On 29th April, 1192, an ensign of the 'Old Man of the Mountain' killed Conrad of Montferrat, signor of Tyre and titular king of Jerusalem; different accounts make the 'Old Man of the Mountain'—or rather Rashîd ad-Din, at this time independent head of the Syrian Assassins, resident in the fortress of Kabî—despatch the Assassins at the instigation of the Khalif, and at the same time, the Assassins in this case were disengaged as monks. The ability with which the Isma'ilian chiefs could execute assassinations caused them to receive commissions for such acts from both Eastern and Western princes, including the Byzantine emperors. And much of the business was ascribed to them which were innocent.
ASSASSINS

The throne founded by Hasan Sabah was occupied by seven successors—Buzurg Umîd (518–532 A.H.), his son Muhammad (532–557), his son Hasan (557–560), and his grandson by marriage Al-Salih Arslân Sabah (Hasan's adoptive son; 560–618), his son Al-Salih Arslân Bâbars (618–654), and Al-Salih Arslân Bâbars was taken by the Mongol leader Hálagh, and the fortresses of the Assassins in Persia were stormed one after another. This last date corresponds with A.D. 1256. In Syria the power of the Isma'ilians continued somewhat longer, and as late as 1265 presents are said to have been sent by various European monarchs; but the ruler of Egypt, which, after the fall of Baghdad, became the head of the Isma'ilian order and succeeded in regaining possession of their fortresses, all of which were occupied by the Egyptian Sultan Baibars in 1273. Baibars, however, continued to favour the sect, and to make use of members of it when he required assassins; and a curious treaty is mentioned between his general Qâlûhân and Margaret of Tyre, in which the Egyptian undertakes that no servants of his with the exception of Assassins shall molest her. At times they were able to regain possession of their fortresses, and in 1326 held as many as five. Many of the later Mamlûk Sultans counted themselves among the admirers of Al-Mamûn, and they were in reality the heirs of Nizâr. It is not too much to say that the Isma'ilians were at one time the depositaries of the religious spirit of Syria.

On the other hand, the Isma'ilians have been called by Browne, Literary History of Persia, II, 190, 'Assassins, or those of the sect founded by Hasan Sabah, whose followers, who were called the Isma'ilians, were still represented in India by a community called Khôjâs, who trace their origin to the mission of an Assassin named Șadr ad-Dîn, who some centuries ago made converts among the Hindu trading classes in Upper Sind. Col. Yule in his edition of Marco Polo (3rd ed., i. 140) gives the following statement that the sect multiplied considerably in Sind, Kachch, and Gujarât, whence they spread to Bombay and Zauzíbar. Their numbers in Western India were then probably not less than 50,000–60,000. Sir W. Hunter (Gazetteer of India, 3rd ed., i. 52) adds that they are especially numerous in the Peninsula of Kathiawâr. They have also established trading colonies along the East coast of Africa. The leader of the main body of the Khôjâ community was then the Persian prince Aghâ 'Ali Shâh, whose predecessor, the well-known Aghâ Khâkh, who lived as a resident of Bombay, left behind him many legacies. He was the troubadour who wrote the ballad said to have been written by Aghâ Khâkh. In the 19th century, the troubles that drove him from Persia. About this person some further details are given by Yule in the passage quoted. Having raised a revolt in Kirmân, he fled from Persia to Sind in 1849. He had been imbued with Isma'ilian teachings and had been educated in a religious community called Khôjâs, who trace their origin to the mission of an Assassin named Șadr ad-Dîn, who some centuries ago made converts among the Hindu trading classes in Upper Sind. Col. Yule in his edition of Marco Polo (3rd ed., i. 140) gives the following statement that the sect multiplied considerably in Sind, Kachch, and Gujarât, whence they spread to Bombay and Zauzíbar. ASSIMILATION (Psychological).—The term 'assimilation' in psychology represents a form of union or combination between presentations or presentational elements, but its precise application has been variously interpreted.

(1) In its general use, referring to a phase of the apprehensive process, a presentation is 'assimilated' when it is taken up into, and becomes an effective moment in, the total consciousness present at the time of its arrival. No new presentation is available either for memory or for knowledge or for practical application, until when it has been thus brought into connexion with other elements of consciousness, and with the general forms and tendencies of conscious movement which constitute for psychology the 'self.'

(2) Historically, the first usage of the term was the converse of the above: many of the Scholastics spoke of knowledge as taking place by assimilation of the knower to the thing known, after the Greek principle (ἐγκαταστάσις τοῦ  ἔμνου τοῦ ὑμνου): so Albertus Magnus, Thomas Aquinas, Suarez, and others.

(3) In modern psychology, 'assimilation' is applied to a form of association (q.v.), namely, simultaneous partial association, the features of which are (a) that it takes place between elements or parts of presentations, not between individual or independent presentations, as in ordinary association by contiguity; (b) that the two (or more) elements which enter into the association are simultaneously given in consciousness, although one is usually a 'sensation' (i.e. peripherally excited), the other necessarily a 'representation' (i.e. centrally excited); (c) that they cannot be separated or distinguished by direct analysis, thus corresponding to the 'inseparable association' of English psychology.

Instances are the union of colour and form in visual perceptions, of tone-quality and distance in the perceptions of sound, of tactual quality and 'hardness' or 'softness,' 'smoothness' or 'roughness,' in the perceptions of touch.

(4) More definitely, 'assimilation' is applied to the synthesis of similar elements or elements of similar quality, and is contrasted with 'complication,' a synthesis of presentations of diverse quality and diversity.

(5) On this view, of which Höffding and Ward are the chief exponents, an assimilative process is of the essence of perception. In its simplest form, perception is recognition (or direct cognition), i.e. the awareness of an impression, or group of impressions, as familiar, as already experienced, without any added idea or image of the previous presentation arising in the mind. The impression may have been new, not associated with an added quality or colouring, by which it is distinguishable from a wholly new impression. This added character or mark Höffding calls the 'Einkongenheitseigenschaft,' the 'quality of known-ness.' It has been explained by Külp through (a) the wave theory of similarity and power with which the known excites other ideas, and (b) the peculiar mood or feeling which the known arouses, as contrasted with the unknown or unfamiliar. Both of these features, however, are common to other forms of repeated consciousness; they illustrate the law of practice, according to which all function, and especially nervous function, 'is made easier by repetition and practice.' A more important feature in Höffding's theory is that recognition or perception involves an assimilation between two elements, either the reproducing impression (a) and the reproduction or revival of the earlier impressions (a₁, a₂, etc.), the whole being symbolized by

\[ a + a = a \]

(a) a is not, however, an explicit or free idea, but an 'implicate (gebunden) representation'—a tied idea. But according to Ward there is no revival of earlier impressions: 'We have to do now with the retentiveness of a waxen tablet but with the plasticity of a growing structure. The inchoate beginning, so far from being reproduced, is obliterated and superseded by the supervening detail; and even when the acquisition is complete, the perfect identity of the new with the old forbids us to talk of memory of ideas.'

Thus (i.) assimilation is the process underlying all acquired perception, as distinct from sensory impression on the one hand, and the organized sensations, or perceptions, which seem to form the stimulus of instinctive behaviour on the other. (ii.) It is a product of mental activity (through interest, intention, action by way of trial and error, etc.) in which past experience is correlated with the present situation. But (iii.) this influence is not mediated by distinct images or free ideas, which are a later product. (iv.) It marks a distinct step in mental growth, and is correlated with a special degenerational nervous system (the cerebral hemispheres).

(v.) Individual development, phylogeny (the evolution of the nervous system in animals, and pari passu of the forms of animal behaviour) and mental pathology (cortical or sensory, psychic or 'soul,' and verbal blindness, etc.), support the view that sensation, perception and assimilation, free ideas, and association are both distinct in their psychical nature and origin, and have as their 'basis' distinct physical functions and structures.

L. L. E. M'CINTYRE.

ASSIMILATION (Religious).—All development, that is growth, must proceed by means of assimilation. That is to say, religion, if it is to grow, must assimilate whatever is good and true in general culture (Tiele, Elements, i., 242), or, if that is too wide a statement, then we may say it

'Mind, N.S. iii. 592.'
must appropriate whatever conduces to its growth—
all that makes its creed clearer and deeper' (ib. 290); it may appropriates, and this is true, because, not merely ‘imitate or adopt it’ (ib. 297). What is thus appropriated will in the process be transformed to some extent, for it is ‘assimilated’ to religion or to the form of religion into which it is taken up. Of course, it can only be transformed to the extent to which it is assimilated. Thus it takes up from the environment something good and true, and assimilates it, will be affected by what it takes up; it will be brought into accord with the civilization from which it has appropriated the good or true idea; it will be different from what it has left behind, but it has developed or grown. But, in thus growing by means of assimilation, it must remain true to its type, it ‘must form, maintain, and vindicate its own character’ (ib. 242). It will also maintain and vindicate its own character shedding dead leaves, throwing off waste tissue. And the matter thus thrown off is not matter which ought never to have been taken up, but matter which—useless and even dangerous as it now is, cumbering the ground on which it is found—was once, when first taken up, a living element in the growth of religion. In now rejecting conceptions or formulae which are dead, and being dead are injurious to continued growth and life, we are neither denying that they once were essential nor condemning the past generation with whom they originated. We are simply submitting to the test of time and the discipline of their use. If it is true, if the progress of assimilation is the continued metamorphosis which they enjoyed and exercised, the same right to grow in the same way as they—by shedding dead leaves and putting forth fresh ones.

Thus far we have illustrated the meaning of ‘assimilation’ by reference to ideas which a religion appropriates from its cultural environment; and such ideas, though they may, at the time when they were taken up, have represented the highest scientific or philosophic knowledge of the day, may with the advance of knowledge cease to occupy that position; they may become dead leaves on the tree of knowledge, and if so, then religion, too, must shed them—or share decay with them. But a religion in the course of its history may—and if it is to grow, must—come into conflict with other religions and convert men from their old form of religion to the new. In such a case the converts cannot and do not empty their minds utterly of their old religions ideas. Some form of transaction or accommodation between the old and the new is inevitable; and no religion, even the most powerful, can get in contact. Some of the old ideas are taken up by the invading religion; but they are not simply adopted as they stand; they are assimilated. And, naturally and necessarily, they are assimilated to those elements in the new religion to which they are most akin; and they strengthen those elements. Thus, if the new religion recognizes the existence of evil spirits, whether as the cause of disease or of other ills, the gods of the old religion may appear as demons in the new. Or, if the new religion recognizes saints and angels, some of the old gods may persist by a corresponding metamorphosis. And in either case the metamorphosis immensely strengthens the element which it has reinforced. But though it strengthens the particular belief by this process of assimilation, it does not necessarily transform the religion as a whole. It has absorbed it better as religion. On the contrary, the very belief which it strengthens may be one which religion, to live, must ultimately cast aside.

‘Assimilation’ is not necessarily and always beneficial to the Church. For example, the form of religion which organism may assimilate what is injurious to it.

On the other hand, what is assimilated from the old religion may be advantageous, in a greater or less degree, to the new. The habit of worshipping on stated occasions may exist in the old religion and be made the basis of another, the very core of the new. Yule and Easter testify by their names to the fact that they existed before Christianity, though they have been assimilated, and in the process of assimilation have been transformed, by the Church. Yule was thus taken up into Christianity and baptised into the truth, but it was not merely this or that outward form of worship; we have to recognize the selective assimilation and consequent consecration of many current customs and institutions and ideas’ (Hillingworth, Doctrine of the Trinity, p. 94). As an example of such ideas we may take the Logos doctrine. That idea was taken up—whether from Philo or from ‘the general intellectual atmosphere of which he was a representative product’ (ib. p. 88)—and baptised into Christianity by St. John. But it was not adopted just as it stood; ‘the new faith fashioned a new thing’ out of it (ib. p. 89), the new ‘term was, so to speak, taken out of its old associations, to be employed thenceforward as a Christian symbol’ (ib. p. 90).

At this point, the difference of opinion manifests itself as to what assimilation ‘means and implies. It may be maintained that assimilation never implies an addition to the original creed of Christianity—‘never the imposition of a new article of faith’ (Hillingworth, p. 98), but simply the ‘progressive assimilation of the religious ideas which they enjoyed and exercised, the same right to grow in the same way as they—by shedding dead leaves and putting forth fresh ones.

This view may seem to imply that the formulation of doctrine is of necessity progressive; that the process is always one of interpretation, never of misinterpretation; that the result is always to bring out what was implicit in the teaching; and that those who hold this view have the means of knowing, and the power of declaring, infallibly, what was and what was not implicit in the teaching of Christ Himself. In the absence of such power, our confidence that the process in any given case is one of interpretation and not of innovation must vary with the particular circumstances of the case. Let us illustrate this by reference to the Logos doctrine. Every one will admit that out of the Philonian doctrine the new faith fashioned a new thing; viz. the Johannine doctrine. But we ask, was this what it was not? Is it evident that there was that in the new faith which was capable of being interpreted or explained by the terms and the conceptions of the Logos doctrine. But will it be maintained that, if the Philonian doctrine had been non-existent, the Logos doctrine would never have appeared, all the same, exactly as it actually does, in the Gospel according to St. John? No one can maintain that. Had the Johannine doctrine been non-existent, no one would or could maintain that it was implicit in the teaching of Christ Himself. And had the Philonian doctrine been unknown to St. John, the Logos doctrine would not have existed in the Fourth Gospel. But the Philonian doctrine did exist; it contained some truth; and that truth was recognized, appropriated, transformed—the Johannine doctrine into the Logos doctrine. Of course, by the truth of the matter, it is not possible that the Logos doctrine was ever anything that the Johannine doctrine was not. But it was possible that the Logos doctrine was not more than what the Johannine doctrine was, and that is the exact nature of the question. To say, however, that Christian doctrine was not affected by what it assimilated, that it remained what it was, and that it is now exactly what it would have been had it never assimilated anything whatever from the environment in which it developed, is a position which no one will undertake to maintain.

Christian doctrine took over what was good and
true in the Philonian teaching; and it has grown consequently in a way in which it would not have grown otherwise. The Christian creed has grown clearer and deeper, because it had the power of appropriating and assimilating from its environment what there was good and true in that environment (ib. p. 144). But the power of assimilation, where it exists, is not always exercised; and, where exercised, is not always exercised wisely. We are not able to say either that Christianity left nothing good assimilated or that everything it did assimilate was good. Neither, therefore, can we say that everything it did assimilate was implicit in the teaching of Christ Himself. We may be justified in saying, if we will, that in Christ for us we must believe—that the growth and development of Christian doctrine, so far as it is the unfolding of what was implicit in Christ's teaching, is the work of the Holy Spirit, or of the Church following the guidance of the Holy Spirit. But it is simply not true that the Church has always, invariably, and in every respect, followed that guidance: our confidence that any given action is the result of that guidance . . . must vary with the particular circumstances of the case" (ib. p. 100).

The fact that any given action is the result of the action of the Holy Spirit is not necessary, but it is always the case that it was done under the guidance of the Holy Spirit. So far as the Church submitted to that guidance, it appropriated what was best and truest in the surrounding life and thought of its own purposes" (ib. p. 124). And that statement is as true of the present day as it is of the earliest days. But evil as well as good may be assimilated; has been, as a matter of history, assimilated; and, as a matter of fact, is being assimilated. The mere fact that a custom, institution, or idea has been assimilated does not prove that it was imported into Christ's teaching. The fact of assimilation is one to be "constated" by scientific investigation. The value of the assimilation and of its consequences is a different question, and one which should be kept distinct.

If Christianity should come to be the dominant religion in Japan, it will inevitably, in becoming so, assimilate much from Buddhism; and it may be that the resulting form of Christianity will in some respects be higher than any hitherto taken by Christianity. That is a possibility which is a possibility that one who believes in the infinite potentiality of Christianity will for one moment care to deny. But the higher form, in such case, will be a higher form of Christianity. The process will be one of assimilation. The result may be for the world that it is possible for men to make greater self-sacrifice, and to lead a more Christ-like life, than has hitherto been the case with any Christian people.

ASSOCIATION. — Association, or, the more frequently used phrase, Association of Ideas, denotes a doctrine of both philosophical and psychological import. In philosophy it is the explanatory principle of that theory of knowledge which would derive all knowledge from items of sensation. Psychologically, association denotes the doctrine which deals with the reproduction of past experience by a present object of consciousness. The so-called "Laws of Association" express the conditions under which reproduction takes place. Three such laws have been formulated and are still in current use: the English textbooks of Psychology. (a) Law of Contiguity: a present object will recall any object with which it was contiguous in space or time, e.g. the sight of a visitor from one's native place revives memories of that place. (b) Law of Similarity: a present object will recall any other object that is similar to it. The sight of one person revives the memory of another whom he in some respect resembles. (c) Law of Contrast: a present object recalls an object contrasting with itself, e.g. a childless hearth revives the memory of a mother's merry crew of boys and girls. It is this particular psychological doctrine which is the foundation both of association as a philosophical principle and of association as a comprehensive psychological theory.

It has been claimed by Sir W. Hamilton* that Aristotle was the first to formulate the Laws of Association. The passage upon which the claim is based is from de Memoria et Reminiscientia, a translation of the latter part of which Hamilton gives in full, together with his own emendations in, and commentary on, the text, in the note in question. After dealing with memory, Aristotle contrasts with it recollection (ἀναμνήσεως).

"The occurrence of an act of recollection is due to the natural tendency of one past experience to follow another; it may, indeed, be necessary, in order that the sequence is to occur; that the former event should have occurred, and that the latter event should be the occurrence of the second process will take place in every case. It is the difference that some people receive a greater amount of recollection from a single event than others in the same circumstances. That is the reason why there have been on frequent occasion, and in some instances, after seeing the things once we remember them in particular things are different, for which there are many who have seen them frequently. Thus, when we recollect, one of our previous psychic changes is stimulated which leads to the remembrance of that one after which the experience to be recollected is to be recollected is to be recollected. Consequently we hunt for the next in the series, starting our train of thought from what is now present, or from some coming, as from something similar or contrary or contiguous to it." * Plato had already noticed the same striking cases of relationship between recollected idea and present object (Philo, Phileb., 98 C.): "The sight of his lyre the lover will recollect the beloved. The picture of Simmius is apt to remind one of Simmius.' Recollection may be derived from things either like or unlike." There had, however, been no formulation of the principles involved or any attempt at a scientific theory of recollection as such. All knowledge was recollection.

The fact of association was recognized in the teaching of the Stoics and Epicureans, but no new contribution was made towards the theory either by them or later by the Scholastics.

The first important formulation of a theory is that of Thomas Hobbes. In Human Nature(1650), Hobbes distinguishes between the casual and incoherent flow of ideas in dreams and the orderly flow—

when the former thought introduced the latter . . . The cause of the coherence or consequence of one conception to another is their first coherence or consequence at that time when they were produced by sense: as, for example, from St. Andrew the mind runneth to St. Peter, because their names are read together; from St. Peter to a stone, for the same cause; from stone to foundation, because we see them together; and for the same cause, from foundation to church, and from church to all good people, and from good people to tumult; and, according to this example, the mind may run almost from anything to anything.

In addition to this form of the flow of ideas, which would be order in accordance with the Law of Contiguity, Hobbes notices another and different form which one might in general term "appetitive," on account of the cause assigned for it.

"The cause whereof the appertaining of any one of them, who, having a conception of the end, have next unto it a conception of the next means to that end."
In Hume’s philosophy, on the other hand, Association, in its connection of ideas, plays an all-important part. In the Treatise on Human Nature (1739-40), he brings forward association as the doctrine of ideas, not for ideas of memory, wherein the connexion is ‘inseparable’ and is ‘the original form in which its objects were presented,’ but for ideas of imagination. We are to regard it as ‘a gentle force which concerns the body’, in the qualities from which it arises, and by which the mind is after this manner conveyed from one idea to another, are three, viz. Resemblance, Contiguity in time or place, and Cause and Effect.

From the Exposition concerning Human Understanding, we learn that Hume regarded himself as being the first to enumerate or classify the principles of association. In this later treatise he recognizes them as principles of connexion for memory and imagination alike.

Although in his theory of knowledge Hume shows an advance upon Hobbes, both in the application of the principle of association to explain our conceptions and in his systematization of the whole doctrine, yet his psychology of association is inferior to that of the earlier writer. Beyond the classification of the principles there is little attempt at a theory of association. Of its effects are everywhere conspicuous; but as to the how and why they are mostly unknown, and must be resolved into original qualities of human nature, which I pretend not to explain.  

It is in Hartley’s Observations on Man (1749) that we first meet with association as a comprehensive psychological faculty. Here for the first time there is a methodical analysis of the phenomena of mental life and a thoroughgoing attempt to show how the more complex mental phenomena are derived from the simpler by means of association, memory being but one particular case of this.

Here the passions and the phenomena of conduct are shown as products built up by the association of ideas (traces of sensation) with the simple sensations of pleasure and pain, and with automatic movements; just as similarly imagination and reasoning are but cases of the association of ideas with one another and with the senses.

Hartley’s psychological theory is closely bound up with his physiological one as to the nature of the processes which take place in the nervous system. The main outline of the general theory is best given by his own propositions, and from the psychological point of view some of these are important enough to warrant quotation in extenso.

* To omit that kind of discussion by which we proceed from one idea to another, and there are often other instances, first in the sense there are certain conceptions of concepts which we may call ranging; examples whereof are: a man can imagine or construct a figure and then trace it. There is yet another kind of thing lost; the bounds casting about at a flint in hunting; and the ranging of spiders: and herein we take a beginning arbitrary.

* Another sort of discussion is when the appetite gives a man his first practice in that honour to which the appetite maketh him think upon the next means of obtaining it, and that again of the next, etc. And this the Latins call successus, and it is the same as the methodical and even fortuitous. There is yet another kind of discussion beginning with the appetite to recovery of something lost, and proceeding from the present backward, from the thought of the place where we miss at, to the thought of the place whence we came last; and from the thought of that, to the place before it, till we have crossed the same way wherein we had the thing we miss: and this is called Reminiscence.

The recognition of these appetitive associations might have led to new theories as to the origin of the association link, but Hobbes did not pursue the theme any further, and his successors do not appear to have noticed the group of associations which he here singles out.

In a logical and psychological doctrine of remembrance becomes also a philosophical one, the principle of his theory of knowledge, as it was thereafter the principle for the empirical school.  

1. All experience being ... but remembrance, all knowledge is remembrance;* for it is either sense-knowledge and the remembrance of it, or knowledge of the truth of propositions and how things are called, which latter again arises from experience—

* which is nothing else but the remembrance of what antecedents have been followed by what consequents.†

2. When a man hath so often observed like antecedents to be followed by like consequents that, whenever he seeth the antecedent, he looketh again for the consequent, or when he seeth the consequent, maketh account that there hath been like antecedent; then he receiveth the knowledge of having been before, or another, as clouds are signs of rain to come, and rain of clouds past. This taking or losing of signs by experience is that wherein men do ordinarily think:**

§ It is the power of arbitrarily devising signs and so increasing associations that differentiates man, the rational being, from the brute beasts. Without such signs the coherent flow of ideas would be at the mercy of chance—

* for one conception followeth not another according to our election and the need we have of them, but as it chanceth us to hear or see such things as shall bring them to our mind. The experience we have herof is in such brute beasts, which, having the providence to hide the remembrance of their meat, do nevertheless want the remembrance of the place where they hide it, and thereby make no benefit thereof in their hungry time: but man at this point begins to distinguish somewhat above the nature of beasts, hath observed and remembered the cause of this defect, and to amend the same, hath made by the mind an instrument to set up a connexion in his mark, the which when he seeth it again, may bring to his mind the thing he hath by it, by which he may be set up in those marks: his learning in writing and reading, his use of words, these marks, are those human voices which we call names or appellations of things sensible by the ear, by which we recall into our mind some conceptions of the things to which we gave those names or appellations.†

To John Locke belongs the authorship of the phrase ‘Association of Ideas’; yet Locke does not even mention association in his psychological account of memory.‡ The phrase for him denotes the connexion of ideas ‘that in themselves are not at all akin’, as opposed to those which ‘have a natural correspondence and connexion one with another. This strong combination of ideas, not allied by nature, the mind makes in itself either voluntarily or by chance, and hence it comes in different men to be very different according to their different inclinations, education, interests, etc.**

Association of Ideas is for Locke the explanation of words, and intellectual habits, but it is not given any philosophical or general psychological significance.

mental phenomena in which association, or, as Brown prefers to style it, suggestion, was used as the explanatory basis. In place of the varieties of powers or mental faculties given by Reid and others, Brown grouped all intellectual phenomena under two fixed and in the same state, as each might have formed part of other trains, and in which the particular state of mind that arises by suggestion does not seem to be of any consideration; the state of mind which preceded it.

The primary laws of simple suggestion are resemblance and contrast, while contiguity is treated as a secondary law. To simple suggestion belong conception, memory, imagination, habit.

Relative suggestion is the capacity for feeling resemblance, difference, proportion or relation in general, where two or more external objects or two or more feelings of the mind itself are conceived by us.† To this capacity belong the so-called faculties of judgment, reasoning, and abstraction.

The true psychological descendant of Hartley is James Mill, in whose Analysis of the Human Mind (1800) we have the first formal treatment of the psychology of vibrations, used as the great explanatory principle of psychology. The phenomena of the human mind are analyzed into two classes—intellectual and active—and the psychology of these is a doctrine of elements and compounds. Sensations, including pleasurable and painful feelings, are the elements, the whole of the remaining furniture of mind being set forth as products, compounded out of these elements in accordance with the Laws of Association. Ideas are traces of sensation, and spring from exist in the mind. The sensations are either of which they are copies.‡

This order is synchronous and successive order in time, and synchronous order in space. Contiguity is thus the fundamental Law of Association, resemblance and contrast being treated as special cases. Not only do simple ideas, by strong association, run together, and form complex ideas, but a complex idea, when the ideas which compose it have become consolidated so that it always appears as one, is capable of entering into combinations with other ideas, both simple and complex.

Conception, imagination, classification, abstraction, memory, belief, inference, are shown by analysis to involve nothing but our sensations and their ideas compounded by association. Similarly for the phenomena of conduct. Will is analyzed as a product of association where a certain action is desired, it is associated as cause with pleasure as effect; the idea of the 'outward' appearance of the action excites by association the idea of the inward feelings which are the immediate antecedents of the action, and then the action takes place. There is no place here for a doctrine of Free Will. Whatever power we may possess over the action of our muscles, must be derived from our power over our associations; and this power over our associations, when fully analyzed, means nothing more than the power of certain interesting ideas, originating in interesting sensations, and formed into strength by association.†

This strength, we told, depends upon the vividness of the associated sensations and the frequency with which the association occurs.

As compounds formed in this way are not associated with an exact law, mental phenomena admit of scientific treatment. Psychology need no longer stand without the rule of science; its method resembles that of the mechanical and physical sciences. The

‡ I. Analysis of the Human Mind, vol. 1, ch. iii.
§ I. Lectures on Philosophy of Human Mind, Lect. 32.
The psychological statement of genesis, even if accurate, is no longer accepted as a logical criterion of the validity of relationships. Consequently Mill attempts to find an independent justification for our belief in the predominance of cause, belief in the relationship of cause and effect in particular; and in this attempt his theory of knowledge breaks down. Psychologically he regards belief as being primordial. It makes the difference between memory and expectation to be one hand and imagination on the other. 'What, in short, is the difference to our minds between thinking of a reality and representing to ourselves an imaginary picture? I confess I can perceive no escape from the opinion that the distinction is ultimate and primordial.' It is present whenever an association of ideas is entertained, absent in the case of others. It is present in every inductive inference, and its logical justification is 'experience'; the inferred connexion of ideas conforms to fact. Yet even in the simplest inference, since the judgment must embrace 'unobserved' as well as 'observed' cases (for otherwise it would be no inference), this guarantee, conformity to fact, already implies logically our belief in the uniformity of nature. In the uniformity of the unobserved with the observed; that is to say, the logical justification of the inference itself involves belief. Thus the attempt to establish as an induction the uniformity which every process of inference presupposes is doomed to failure; and Mill ends by confessing that inference is not from uniformity, but according to it. What is important philologically is not this failure to establish inductively the Law of Causation, but the recognition which this abortive effort involves, viz. the recognition of association as an inadequate doctrine in the theory of knowledge. This point might be illustrated from Mill's own subsequent writings on Utilitarianism, where he uses association for the purpose of removing psychological difficulties in the way of his main logical thesis rather than for positively supporting it.

Alexander Bain in his Senses and Intellect (first published in 1855) shows adherence to the Laws of Association as the principles which should dominate the presentation of his psychology. Thus he writes in the preface to the first edition: 'in treating of the sensuous and the subjective faculties, the latter is abandoned. The exposition proceeds entirely on the Laws of Association, which are described with minute detail and followed out into a variety of applications and applications. Movements, sensations, appetites, and instincts are treated as the raw material, the data to be worked up into the various forms of intellect: memory, judgment, abstraction, reason, imagination. The fundamental properties of intelligence are consciousness of difference, consciousness of sameness, and retentiveness, of which last reproduction is a higher form. The general condition under which retentiveness is manifested is contiguity. This is the basis of memory, habit, and the acquired powers in general. Consciousness of sameness gives rise to the reproductive principle of similarity, which is dominant in invention, reason, and abstraction.

Bain then proceeds to trace out in detail the operation of these two principles upon our movements, sensations, and instincts, and the acquisitions and forms of knowledge to which they separately, and in conjunction, lend. In the Emotions and Will (the first edition of which appeared three years later than the Senses and Intellect), the same general plan of treatment prevails. Emotions and the will are secondary products. Emotions are derived from muscular feelings and sensations, while will is derived from spontaneous movement.
relations to external relations.* * It is correspondence. In our intelligence, then, it will hold that there is a relationship between subjective and objective. This correspondence is the "universal postulate" behind which thought cannot go. The ultimate test by which thought tries a subjective relation with respect to its objective validity is "inevitability of the opposite."

"To assert the inevitability of its negation is at the same time to assert the psychological necessity we are under of thinking it, and to give our logical justification for holding it to be unquestionable."

Of such certainty are the "necessary" truths and ultimate premises of our knowledge. Thus, for their Spencer, as with the earlier writers of the association school, the theory of knowledge is "psychological." This gains some additional plausibility because it is the task of psychology to trace out the processes by which the correspondence between the subjective and the objective relation is produced. In its task it must, through the doctrine of heredity, draw upon the experience of the race as well as on that of the individual. The various faculties—memory, imagination, reason—are different stages in the evolution of this relationship.

"Mind is the law of similarity. Each primary or vivid feeling is joined to and identified with a faint feeling (secondary), which has resulted from similar vivid feelings."

"Knowing a relation as well as knowing a feeling is the assimilation of it to past kindred; and knowing it completely is the assimilation of it to past kindred exactly like it. But since within the present class the process of one into another insensibly, there is always, in consequence of the imperfection of our perceptions, a certain range within which the classification is doubtful—a certain cluster of relations nearly like the one perceived, which become incessant in consciousness in the act of assimilation. Along with the perceived position in space or time, the contingent positions arise in consciousness."

Therefore results the so-called law of association by contiguity. When we analyze it, contiguity resolves itself into likeness of relation in time or in space or in both. . . . Thus, the fundamental law of association of feelings is that each, at the moment of presentation, aggregates with like that the past experience. The act of recognition and the act of association are therefore aspects of the same act. And the law of contiguity is valid, besides this law of association, there is no other; but all further phenomena of association are incidental."

This somewhat lengthy quotation will serve to make clear what is meant by "association" in the latter term and the language meant to Spencer. It is now a general name for the essential characteristic which Spencer finds in all processes of knowing—assimilation. Since consciousness is dependent upon change, there is also, in every process of knowing, "differentiation"; consciousness is continuous differentiation and assimilation and contiguous assimilation. The finer the degree of differentiation and assimilation, the higher the degree of differentiation.
This is the parallel of differentiation and integration in a given process. In an organized increase in complexity of structure goes hand in hand with increase in function, and the establishment of closer connexion between part and part, with fuller organization of function.

We remember that the laws of structure and function must necessarily harmonize, and that the structure and function of the nervous system must conform to the laws of structure and function. If, then, we shall see that the ultimate generalizations of psychology and physiology must be, as far as the same primordial truth, both are expressions of the same fundamental principle;—

"Viewed as a generic feature of knowing, association is not a mechanism for combining items of knowledge, but is the principle of growth whereby past progress is retained and further differentiation made possible. In the old doctrine the complex idea contained the elements out of which it was composed; here the higher process absorbs the lower, the new the old. So different is the doctrine, that one may be tempted to wonder why Spencer's psychology should be ranked with that of the association school. The reason is this: the conception of the problem of absorption is higher, and the lower, the new the old, is taken unchanged from the theory of association.

Throughout the history of the school the advance in the theory of association as such is practically nil. This is chiefly due to the fact that we distinguish some one form as more fundamental than others, e.g. Mill selects Contiguity, Spencer Similarity, or to subsume them under some more comprehensive law, such as Hamilton's Law of Redintegration, but for all alike the theory of the process itself remains on the same level. Things are associated because they are alike, or because they are contiguous in space or time. A hint of an internal analysis of association is given, as we noticed, by Bain, and it is the study of the 'conditions' of association that marks the close of what is strictly to be called 'association psychology.'

Closer study of the 'how' and 'why' of mental development renders necessary broader conceptions than any which can be yielded by the three laws of association. Similarly, closer study of the memory processes brings a demand for a fuller statement of the conditions under which one fact of consciousness is able to suggest some fact of previous experience, and of the extent to which such a memory is a 'revival' (see MEMORY).

German psychologists stood outside the association school; it would be an omission not to refer to Herbart, in the general conception of whose psychology there is considerable likeness to that of Hartley and Mill. The first presentation of Herbart's psychological doctrine was the Lehrbuch zur Psychologie (1815). This was followed by the fuller and more reasoned exposition in Psychologie als Wissenschaft neu gegrundet auf Erfahrung, Metaphysik, und Mathematik (1824-1825). Herbart rebelled against the dogmatism of 'faculty psychology.' He found Locke's treatment of mind as a storehouse of ideas a least truer to experience than the analysis of mind into faculties current in the school of Wolff. The faculties are set up as genera and treated as causes, when there has been, and can be, no study of the particulars from which alone such generic notions could be reached. Such psychology achieves nothing but hair-splitting distinctions between these faculties, and yet withal acknowledges an unknown unity in which these faculties are contained. The whole method of this psychology is a need of reform. It is impossible to reach genuine and substantial particulars, i.e., it is impossible to use induction and analogy in psychology, because our knowledge of these particulars is unavoidably defective; consciousness is in perpetual change. The new method of which Herbart speaks (Reflexion, Entwicklung, and Würzung) or completion by means of constructive hypothesis. One is entitled to use such a method only if the existence of certain relations can be demonstrated, viz., relations wherein the positioning of one member renders necessary the positing of the other.

The whole task of psychology will be to complete the known facts of inner experience, and to establish relations by which these facts shall be connected, in accordance with general laws. Psychologists have failed to find conceptions appropriate for psychology, because they have not been mathematicians, and have thus not realized the special adaptability of mathematical notions to the ever-changing phenomena of consciousness. Further, it is, in Herbart's view, necessary for psychology to be based upon metaphysics. Psychology is brought face to face with the problem of the many in one, for behind all the varying mental conditions is the unity of mind. That is to say, psychology is brought face to face with the problem of the function of consciousness is in perpetual change, psychology is brought face to face with the problem of change, transformation.

Herbart's psychology, therefore, is prefixed by speculative notions. The method is to arrive at a concept of the soul. This is defined as a simple substance, without parts, without any plurality whatever in its quality. What this quality is we can never know. Like all other substances, the soul's activity consists in self-preservation. Each reality or substance conserves itself against other substances, and from these conservative activities arise relations, plurality. The efforts of the soul in opposition to other substances are its ideas. These ideas are not produced by any spontaneity of the soul, but arise only in its strife against other realities; they arise, then, from external conditions, and have their quality determined by these conditions. In so far as these ideas come into relation with one another they are forces, and in virtue of their opposition to one another have a quantitative character. Every idea is a tendency, and as such is never destroyed; it may be arrested, totally or partially, or pass from consciousness to sub consciousness, but it will ever strive to reestablish itself, and will do so when opposed by removed or reinforcement come through relations to sense. The subject-matter of psychology is not the soul, but these relations between ideas; hence the metaphysical speculations and the general consideration of mathematical relations are followed by a statis and mechanics of ideas.

It is in his reaction against 'faculty psychology,' and in his reduction of inner experience to simple events of a homogeneus character, from whose interplay arise all the diverse forms of consciousness—memory, imagination, feeling, will, etc.—that we see the resemblance between Herbart's conception of psychology and that of Hartley or James Mill. In the metaphysical bases of their thoughts and in their methods of exposition, the German and the English writers are poles apart.

In the more recent German psychology, and independently of Herbartianism, the influence of the association school can be seen, despite the fact that the errors of its doctrines are sometimes laid bare in a none too gracious manner. Wundt has treated psychology as a doctrine of elements and operations, thus bringing the physiological Psychology, which represents his standpoint in general psychology better than the more specialized Physiological Psychology or the lectures on Human
ASSOCIATION

and Animal Psychology, we find the following division of topics: (1) psychic elements; (2) psychical compounds; (3) inter-connexion of compounds; (4) psychical developments; (5) principles and laws of psychical development. The elements, of course, are no longer the simple ideas of, say, Mill, but abstractions, the ultimate factors into which the simplest experience can be analyzed by thought: elements of sensation, and elements of feeling. The compounds, too, do not correspond to complex ideas; they are the phases of experience which can be recognized as having a determinate character, e.g. an emotion, such as anger, or a simple perception; they are not, therefore, mere sums of the elements which enter into them. Moreover, such compounds are only components of experience; that is to say, in any given state of consciousness we have an inter-connexion of such compounds, e.g. the emotion in connexion with perception.

The connective processes, again, are not the old forms of association. Various processes are distinguished for building up compounds and extensive union; for the inter-connexion of compounds, association (which, however, is not association of ideas, since no such phenomena as ideas in Mill's sense—copies of sensations—are recognized) and apperception. All save the last find their determining conditions in the state of that which is connected; but the last, apperception, is a volitional process involving choice, the motives of which can be explained only from the whole previous development of the individual consciousness. As 'volitional' it is placed on a different level from the others. * This treatment of apperception connexion is peculiar to Wundt, and is connected with his ontological view that 'will' expresses the ultimate reality of the soul.

The same general ground-plan is followed by Külpe in his Outlines of Psychology. Psychology is defined as 'science of the facts of experience in their dependency upon experiencing individuals' †—a definition of the science which assigns a leading rôle to bodily processes, since 'individual' signifies corporeal individual. The connective processes, therefore, are viewed as dependent upon psycho-physical conditions. The laws of reproduction are explained in relation to the conditions of centrally initiated sensations—the 'ideas' of English psychologists—and apperception is treated as being in principle a concomitant union without any part of reproduction. ‡ For the essential conditions of the origin and maintenance of the feature which especially characterizes apperception, viz. attention, we are referred outside consciousness to the central nervous system. §

Wideiy different as the specific doctrines are from those held by the earlier English writers, yet, nevertheless, the scheme of classification adopted for the scientific exposition of psychological facts would seem to be derived from the writings of the association school.

As was stated above, current English psychology does not use association as an explanatory principle. Traces of the older method of exposition are, however, to be found in Prof. Sully's text-books, Outlines of Psychology and The Human Mind, although these embody the results of modern research and learning. The three aspects of mental life—intuition, the feelings, and conception or volition—are treated separately. Under each we have a serial order of phenomena; from elements of sensation, feeling or volition, successively higher products are built up by elaborate processes. These processes are: differentiation, assimilation, and association. The last is discussed in connexion with retentiveness and reproduction, and is conceived as the process 'which binds together presentative elements occurring together or in immediate succession,' and as being a 'main factor in development, resulting in a progressive elaboration of very simple and less complex, and more complex products.' † Attention, is, however, treated as a determining condition for the elaborate processes, and this saves their operation from being purely mechanical.

The old method is entirely departed from in the psychology of Stout and Ward. Ward's conception of differentiation and integration, in the continuous advance of which processes mental development consists, shows an advance on that of Spencer.

We shall find in the growth of a seed or an embryo far better illustrations of the unfolding of the contents of consciousness than in the building up of molecules: the process seems much more a segmentation of what is originally continuous than an aggregation of elements at first independent and distinct.  

Unity of consciousness is not something which psychological theory has to account for as a product or growth, but is that from which psychology takes its start.

Working backward from this we find it now, we are led alike by particular facts and general considerations to the conception of a totum objectum or objective continuum which is gradually differentiated, thereby becoming what we call distinct presentations.  

'The notion, which Kant has done much to encourage, that psychological life begins in a confused multiplicity, and is only after the most minute analysis purified into a simple definition, is a common one, but it is the hypothesis of the conception of a totum objectum that is the mystery of the psychology of a totum objectum.' * The conception of a totum objectum is, in fact, the conception of the subject.

Changes within the total field of consciousness, and persistence of the old alongside of the new (retentiveness), give the bases for differentiation, and subjective character or feelings; that is to say, the continual concentration of attention on 'this' or 'that' within the total field explains its further progress. The connexion of sensations with movements is the first phase of integration; the pleasure or pain which accompanies sensation causes change in the distribution of attention, and thus causes movement, the initiation of 'that,' the suppression of 'this,' the suppression of 'that.' First 'natural selection,' then 'subjective selection,' will bring about such syntheses, and thus presentations originally in no way connected will come to be united together; the consciousness of presentative association is a particular instance of this. Association by contiguity is as such inexplicable; for 'contiguity' Ward substitutes 'continuity.' A and X, which have no connexion one with another, occupy 'the focus of consciousness in immediate succession. This constitutes their integration. ** Through the movements of attention they are now parts of one whole, form what Ward terms a continuum, are continuous one with another. These movements of attention 'come in the end to depend mainly upon interest, but at first appear to be determined entirely by mere intensity.' †† The power of variously distributing attention is the one power which Ward desires to leave the subject of consciousness, and it is in virtue of this power that the subject plays the rôle of agent.

In Stout's psychology we have a similar view of the unity of consciousness and of the processes of differentiation and integration.

The process of consciousness is a process of incessant change; the changes are partly due to the play of external impressions, and to other conditions extraneous to consciousness itself. But this is rarely, if ever, entirely so. The process is in part self-determining. The successive phases have by their very nature a tendency to pass into other phases.  

'This tendency is connection, and it is connexion which correlates and gives a special character to other...

---

* Cf. § 47. † Cf. § 65, ir. by E. T. Titchener. ‡ Cf. § 77. § Cf. 1b. § 76.
wise disparate and disconnected processes. For such unity the 'general condition is that the successive phases of a conscious process shall constitute a movement towards a definite aim or terminus.' There must be continuity of interest, and for this, retentiveness is essential; later phases of a conative process owe their meaning to the earlier. So in general, it is the 'dispositions' or 'traces' left by previous experience which make development possible.

Continuity of interest lies at the bottom of all association and reproduction. In association by contiguity the re-occurrence of any one of the members of a conative unity 're-excites the whole divine impression of knowledge of the latter to the members of such disposition. There is direct continuity between the suggesting and the suggested idea. In what is called 'association by similarity,' the suggesting factor re-excites a disposition having a member similar to, or partially identical with, itself, and, as in the medium of this similar or partially identical member; there is thus no direct connection between the suggesting factor and the members of the re-excited disposition. The continuity of interest is indirect.

With both Ward and Stout, therefore, association takes its place as a process depending upon the fundamental laws of psychical development, as explanation, not explanation.

ASSUMPTION AND ASCENSION.—Meaning and scope.—The idea underlying these theological conceptions is the idea of communication between the natural and the spiritual order, and of a passage from the former to the latter. As the idea of 'Revelation' presupposes the possibility of movement from heaven earthward, so the idea of 'Ascension' presupposes the possibility of movement from earth heavenward. In some form or other other these conceptions have so often through religious systems; and in primitive religions they are set forth in terms of the geocentric philosophy of antiquity. The earth is the centre of the universe. Heaven, the abode of the gods, is above us in the skies; and the heavenly messengers is represented as a physical descent, a 'coming down,' while their departure is a physical ascent, a 'going up.' So too the movement of human beings to the spiritual region is a 'going up,' an uplifting; and the language of devotion bears perpetual witness to this. The translation of souls, the terms of the doctrine may be so clear that the man may be unable to determine, as he looks back upon it, whether he was 'in the body or out of the body.' Such was the case of St. Paul, who recalls (2 Co 12:4) how he had been 'caught up into Paradise, and heard unspeakable words which it is not lawful for a man to utter.' But it is only if the translation be of body as well as of soul that it comes within the scope of this article, which does not embrace an inquiry into 'visions,' or 'dreams,' or 'intimations' of the Divine (see these articles).

I. ASSUMPTIONS OF SAINTS.—1. Bodily translations to heaven, for purpose of revelations.—The apocryphal and apocalyptic literature of Judaism and of Christianity furnishes (see Bible) some illustrations of bodily 'assumptions' into heaven, granted to individuals, that they might be informed of spiritual truth. 'Assumptions' of this kind are temporary only; and, the vision ended, the man returns to earth. The language of Ezek 8:25 was, perhaps, not intended to be literal, and (see 12:12) speaks not of holy tree than as a voluntary means to the exaltation of the spirit; but the story of the transportation to Babylon of Habakkuk, who was lifted up 'by the hair of his head' (Bel 30), implies a translation of his body. Granted a belief in the possibility of such earthly experiences (which underlies much Eastern folklore, as in the Arabian Nights), the step is easy to the belief in a translation of the body from earth to heaven.

1. (The most remarkable legend of this kind is that of Enoch, discussed below (2, 1). But there are other instances of the universe; these conceptions are common.

2. Abraham.—In the Testament of Abraham (ed. M. R. James, 1892), Michael takes Abraham up in a cloud with angelic chariots, to show him the world of men from the standpoint of heaven. Abraham then is brought back to his house, where after an interval he tells the rabbis that they might be informed of spiritual truth. 'Assumptions' of this kind are temporary only; and, the vision ended, the man returns to earth.

3. Isaiah.—In the Ascension of Isaiah (chs. 7, 8), Isaiah is raised to the seventh heaven, where he has a vision of the Beloved, after which experience he returns to earth (ch. 11).

4. Rabbinical literature tells a like manner of four rabbis who entered Paradise and were granted revelations.

* A Manual of Psychology, bk. i. ch. ii. § 3.
ASSUMPTION AND ASCENSION

(5) Moses.—The story of Moses in later literature has affinities with 'assumption' or 'ascension,' legends of various forms. The two starting-points are the Biblical accounts of his discourse with God on Sinai, and his escape from the Egyptian pharaoh. The first is described in the OT (Ex 3:1-10) and the second in the book of Daniel (Da 9). The OT passages were merged in the source in which the ascension began to be equated with the Ascension of the Messiah, and transferred to him (Ex 3:1-10), and of his secret burial (Da 9). The first of these led to the idea of an 'Apocalypse of Moses,' such as that edited from the Greek by Tischendorf; the second to the stories of his 'assumption' (cf. Jude 9). Thus Josephus (Ant. iv. 48) tells us, as Moses vanished with Eleazar and Joshua, a cloud suddenly enveloped him and he disappeared in a certain valley, although he wrote in Deuteronomy that he died, 'fearing lest because of his exceeding virtue men might offer sacrifice at his tomb.' In the OT, the Assumption of Elijah (cf. 2 Kgs 2) and Sir 44:45 says of him μετέτρεψα (cf. Sir 44:45 ἀνέκαρπος ἀπὸ τῆς γῆς). Following this tradition, He 11:12 has Ἐκάρπωt μετέτρεψα τοῦ μὴ ἰδεῖν θανατῷ; and the conception of Enoch's 'ascension' without dying is frequent in Christian literature. The same idea appears in Josephus (Ant. i. iii. 4), who says of Enoch, ἀνέκαρπως πρὸ τοῦ θείου, ὥσπερ ὁλὸν τελευτών αὐτῷ ἀναγέγραφας.

(2) Elijah.—The Elijah traditions, like those of Enoch, seem to have developed in two different directions. The first, the apocalyptic trend (e.g. the Coptic by Steindorff) is a Christianized form of a Jewish apocalypse, and bears witness to the belief that Elijah received supernatural revelations (it was long supposed to be the source of 1 Co 15). But the best known form of the tradition is that which starts from 2 Kgs 2:1. Behold, a chariot of fire, and horses of fire, which parted them both asunder; and Elijah was taken up by a whirlwind into heaven (ἀνέκαρπω καὶ ἐκάρπω τὸν αἰώνα). It re-appears in Sir 48:8 (ἀνεκάρπωτος καὶ ἀνέκαρπωτος) and 49:14: 'Elias for being zealous and fervent for the law was taken up into heaven.' It will be observed that the instrument of his assumption, according to the original story, was a tempest, not a chariot, of fire, as artists have loved to represent it; and that 1 Mc 25:9 explicitly points to the piety of Elijah as the cause of his 'assumption' without passing through the gates of death.*

(3) Other Biblical personages.—In Rabbinical legends, other persons are held to have escaped death by a similar privilege similar to that of Enoch and Elijah: e.g. Eliezer, Abraham's steward, for his faithful service; Ebed-melech (Jer 38:2;); Hiriam; Jabez (1 Ch 4:9); Sarah, Asher's daughter (Gn 46:26); and Pharaoh's daughter. So Ezra was 'taken up' after his vision (2 Es 8), and Baruch had a like privilege (Apoc. Bar., passim).

3. Assumptions after death.—With such 'assumptions' as have just been described, we must not confound the 'assumptions' in which after death the body was removed from earth and caught up to heaven.

(1) Hercules.—A classical example is the legend of Hercules. Being poisoned by the arts of Dejanira, he erected a pyre on the summit of Mount Oeta in Thessaly, and lay down to die. Zeus, appraising his career, surrounded the pyre with smoke, and after the mortal parts of Hercules had been consumed, he was carried up to heaven in a chariot drawn by four horses. Neither his bones nor his ashes could be found, the underlying idea of the legend being that earth was not a worthy resting-place for the remains of one so godlike.+

(2) Virgin Mary.—A Christian legend of the same kind is that of the 'Assumption of Mary,' according to which the first, and after that the dead body of the Virgin was assumed to heaven (see the Transitus Mariae, ed. Tischendorf). 'It was becoming'—so Newman expresses the conviction of the Roman Church—'that she should be taken up into heaven and not lie in the grave until Christ's Second Coming, who had passed according to early Christian belief, Enoch and Elijah were the 'two witnesses' to the world who, when the time was manifested in Jerusalem (117), and whose ascent into heaven (117) was to be followed by the Second Coming of Christ.+

The mythical story of the quest of Hadès for his dead wife Eurydice by Orpheus, who afterwards returned to earth, is the prototype of many of these myths. The story of Plato's chariot to the shades of the dead is far more ancient than that in Virgil, Aeneid, vi., or in Dante. But in these there is nothing strictly comparable with the idea of 'assumption' to heaven.
II. ASCENSION OF CHRIST.—The narrative of the Ascension of Christ (Ac 1:9) is not analogous to the Jewish legends of 'ascension' or 'assumption' in either of the forms which they have taken. One of the most common activities on being dead in order to receive revelations of the spiritual order, as was reported of the seers of the Jewish apocrypha. Nor, again, was His Ascension an escape from the experience of death, as was believed by some to have been the privilege of Enoch and Elijah; but death, followed by a re-creation and resurrection. See also the pre-Marcan and early Christian documents, canonical and extra-canonical, as a withdrawal into the spiritual world with the body which He had taken upon Himself and in which He had lived an earthly life, died, and risen victorious over death. After His Resurrection, His body is represented as spiritualized and as superior to earthly conditions, to a degree which is not asserted of it during the days of His ministry; but nevertheless, according to the Christian tradition, the body in which He ascended to heaven still remains in some way阴 the cross and had been buried in the sepulchre of Joseph. The 'assumption' of Moses was conceived of as consistent with the continuance of his corpse in a hidden grave (see above, p. 152). But this is not the case with the Ascension. It has been treated with the assumption presupposed the empty tomb. Christ's Ascension was a resurrection of His pre-existent state, in His glorified humanity, rather than an assumption to heaven, granted by the favour of the Most High. Its meaning will be considered more fully in a later section (§ 7); at this point, we note that, as described in the Christian tradition, it has no exact parallel in history or literature. This it is essential to keep in mind.

It is next to be observed that there was nothing in the Jewish beliefs about Messiah which would naturally suggest such a consummation of the visible ministry of the Christ. An Ascension, in lieu of death, might have been expected by those who accepted the current beliefs about Enoch and Elijah; but death, followed by a re-creation and resurrection, was beyond the sphere of the first disciples. Looking back upon the Resurrection, they were able to find phrases in the OT which might be thought to point forward to it; and, in fact, that Christ rose again 'according to the Spirit of life in power from the dead' (Rom 1:3-4). But nothing of the kind was asserted consistently of the Ascension. P's 110th was, indeed, quoted, according to Ac 2:24, by St. Peter, and P's 68th was quoted by St. Paul (Eph 4:8), as applicable to the exaltation of the Christ; but that He ascended according to the Scriptures was never an article of the Creed. The Ascension of the Messiah had not been part of the Jewish expectation. Nor, so far as can now be discovered, did the disciples understand the allusions which, in the Fourth Gospel, Christ is reported to have made beforehand to this consummation of His visible Ministry on earth (Jn 3:35-40), any more than they understood His predictions of His Resurrection ( Mk 9:31; 10:33; Lk 18:37; 24:46; Acts 2:29-33; 3:15-19). The significance of this says much for the historical veracity of the tradition; for the exaltation of Christ to heaven was the natural object of the hopes and expectations of the first-century Christians. If anything were expected of Christ by them, it was His exaltation to be with God in heaven; but there was nothing about His earthly Ministry in connection with such an expectation. The Ascension, in any case, had a period of suspense followed by an Advent of Christ in victory and judgment, His Death, Resurrection, and Ascension had no place. In every Christian age the former of these beliefs has been more conspicuous than the latter. In the literature of the Church, the assumption of Christ is the hand of the Father has always been more present in the thoughts of those who call Him Master than His 'Ascension' to His Throne. For the belief that Christ is now in spiritual communication with His disciples, that He guards, forgives, and guides them, is essential to the Christian life. It is historically interesting, it but is not vital, to know how the beginning of this ministry was revealed to the early disciples by the risen Master's final withdrawal from their sight. And, in fact, while the doctrine of the assumption of Christ has always been a principal part of Christian instruction, and a favourite topic of Christian contemplation, the Festival of the Ascension (see § 3 below) has throughout the Church's history main]) been a commemoration of the event, rather than the event itself, in which Christians have been mainly interested. A kindred phenomenon, which points the same way, is the poverty of the hymnology of the Ascension. The subject is one which might be expected to attract the imagination and inspire the poetry of the Church; but it has never done so to any considerable extent.

In strict conformity with these tendencies of later Christian history, we find that, while the Pauline theological literature, which refers to the Exalted Christ in spiritual fellowship with those who are 'in Him,' references to the Ascension as an event are rare. It is always presupposed, as in the phrase 'The Lord himself shall descend from heaven' (1 Th 4:16); for 'ascend' or 'ascension.' But this implication becomes explicit only in Eph 4:8. He that descended (ie. into Hades) is the same also that ascended far above all the heavens,' where the reference to the άνάβασις of Christ is unmistakable. The only other allusion in the Pauline writings to the Ascension as an event is in the fragment of an early hymn quoted in 1 Ti 3:16 (ανελήμφθη ἐν δόξῃ).

To these may be added, from the Epistles, Ile 4, (ἀναβεβλατός διὰ διαθήκης τοῦ οὐρανοῦ) and 1 P 3:22 (οὕτω εἰς τοὺς πόλεμους ἐκ σοφίας). The meaning of the latter, which was written of by the prophets, both of which carry a distinct reference to the ascended of Ascension. In like manner, the allusions in the Fourth Gospel express: οὐδεὶς ἀναβεβλάτης εἰς τὸν οὐρανὸν εἰ μὴ ὁ θεός ἐκ τοῦ οὐρανοῦ καταβαίνῃ, κ.τ.λ. (Jn 3:3, ἐγὼ δέχομαι τὸν ἅλυμα τοῦ ἀναβέβλατος αὐτοῦ πρὸς τὸ πατέρα μου ... ἀναβεβλατὸς πρὸς τὸν πατέρα μου, κ.τ.λ. (Jn 20:17). Whatever view be taken as this was noticed as early as the 4th century. οἱ παλαιοὶ τοῖς τοποῖς χριστηθέντος εἰς τοῦν οὐρανὸν καταβαίνοντας εἰς τοὺς πόλεμους. See also p. 152. This is the case with the words printed among the works of Ephraim (Philip, 414, 417).

† This view was taken as early as the 4th century. See also p. 152.
ASSUMPTION AND ASCENSION

point shows that the evangelist conceived of it as the beginning of a new era for the followers of Christ. But a withdrawal of this nature into the spiritual region is the essence of the Ascension, to which, therefore, the conclusion of St. Luke's Gospel bears definite witness, even if it be supposed that ἄνεφέρετο εἰς τὸν οὐρανόν is a later gloss, explanatory, in the unscholarly language of the see (pp. 151, 156), of the manner of the disappearance of Christ into the spiritual world.

(2) The Acts.—In the later treatise by Luke, the Acts, this kind of descriptive language is used without hesitation when the story of the Ascension is being told: Ἀπεστάλησαν αὐτὸν ἐκ τῆς Ἰερουσαλήμ, καὶ ἐστάτη ἐκ τῆς Ἰερουσαλήμ ἕως ἕως τῆς Αὐροίδος (Ac 1:9). According to Acts, that is, the departing Christ was received in a cloud, His disciples following His passage upward with straining eyes. Angelic messengers then informed them that, as was the manner of these things, so would be that of His Return, i.e., in a cloud, from the upper regions of the sky. There is no doubt as to the definiteness with which the Ascension of Christ is here narrated. The testimony of Acts is express.

It remains, however, a legitimate problem, although one of no small difficulty, to determine in what language in which it is described is to be regarded as literal, and how far it may be understood either as symbolical or as the natural, unstudied language employed in an unscholarly age to describe a fact quite abnormal and unique in the experience of the narrators.

The Christian Church for many generations regarded the story as literally precise, i.e., it was believed that Christ went up in a cloud into the higher regions of the atmosphere. It may have been so, just as the great literary interpretation of Luke, ascribed to Christ of His Second Coming in the clouds of heaven with power and great glory' (Mt 24:31; cf. Mk 14:25 = Mt 26:42) may be the literal interpretation, which was adopted by St. Paul 'we shall be caught up in the clouds to meet the Lord in the air' (1 Th 4:17). But it must not be forgotten that this phraseology similar to the eschatological language used by Christ—or, at any rate, ascribed to Him by the Evangelists—is to be found in the Jewish apocalypses, which reflect the popular beliefs of the time.

If the last words spoken of intelligibly at all, they must be spoken of in the language of symbol and imagery familiar to His hearers. And no one doubts the verbal connexion of Mk 14:25 and parallel passages with Dn 7:14: 'There came with the clouds of heaven one like unto a son of man, and he came even to the ancient of days, and they brought him near before him. And there was given him dominion, and glory, and a kingdom, that all the peoples ... should serve him.' It is to be remembered, then, that the Ascension in Ac 1 is described as a 'going into heaven,' conceived of as a process similar to that 'coming from heaven' of which Jewish apocalyptic and Christ Himself had spoken. The cloud and the upward movement are, indeed, explicitly recorded as having been observed, and they present no special difficulty. But it is right to note that they are the natural and almost inevitable accessories of any Jewish narrative which sought to describe the solemn and unique departure of the Christ, or to enrich with detail the brief statement that follows the Ascension (1 Th 4:17).

(3) Sub-Apostolic Literature.—The Appendix to St. Mark, a document of the earliest sub-Apostolic age, gives no information as to the post-Resurrection appearances of Christ which is not found in the Lucan and Johnian narratives. It may have been based upon these, but in any case like them, it follows the Jerusalem tradition.
the Ascension in OT language: ἀνάβησαν αὐτῶν ἡμεῖς ἐκ τῶν οὐρανῶν (the phrase used 2 K 20:1 of the Assumption of Elijah) καὶ ἐματίασαν ἐκ βεβίων τοῦ θεοῦ (cf. Ps 110:1).

Later writers, Barnabas (ὕπερ αἰρέσεως καὶ ἀδικοτητικῶν), Aristides (καὶ Ἀρισταδέ, ἐν τοῖς οὐρανῶν ἀνάβησαν), Justin (ἀνάβησαν ἐκ τῶν οὐρανῶν, Dia, 38), and Irenaeus (ἐν τοῖς ἐναντίων τοὺς ἀνάβησαν, Ηθο. 1. x. 1; cf. II. xxxii. 3, iv. 2), carry on explicit witness to the Christian tradition into the 2nd century. To these may be added the first chapters of the Apocryphon of the Ascension of Isaiah, e.g.: 'They will teach all the nations... of the Resurrection (ἀνάστασας) of the Beloved, and those who believe in His Cross will be saved, and in His Ascension (ἀνάβησας) into the heavens, where He came' (Lk 18:1), a passage which Charles treats as belonging to the earliest part of the treatise, and as probably of the 1st cent.; see also the description in xi. 22 ff. of the Ascension of the Beloved through the seven heavens (a passage which looks like an imaginative amplification of He 4:12).

2. The Ascension and the Resurrection.—Despite the definite language of passages such as those which have been cited, it has been suggested by some writers, e.g., by Harnack,2 that in the earliest tradition the Resurrection and the Ascension were not distinguished. But the considerations already adduced (p. 153) sufficiently explain the omission on the part of some writers (e.g., Clement, Polycarp, and Ignatius [yet cf. Magn. 7]) to make explicit mention of the Ascension as an event in itself. To the thought of the first Christians, the credentials of the Gospel were the appearances of Christ after His Resurrection; this historical fact was fundamental. But the evidential value of the Ascension was no greater than that of any other of the Epiphanies of the Risen Lord, when He came (Lk 18:1), a view which was not essential to make separate mention of it. So soon, however, as the Church began to formulate a Creed, the Ascension, as the event which terminated the visible ministry of Christ on earth and inaugurated His invisible ministry in heaven, was explicitly distinguished therein from the Resurrection, as it had already been distinguished in the Acts, in the Marcan Appendix, in Barnabas, and in the 2nd cent. writers. 'He ascended into heaven' is a separate article of the Creed in the earliest Christian records.

Tradition, however, is not quite unanimous as to the interval between the first and last manifestations of the Risen Christ, between the 'Resurrection' and the 'Ascension.' Neither in the third Gospel nor in the Marcan Appendix is there any note of the time that elapsed; and as the story in both cases runs continuously, a hasty reader might conclude that these writers mean to place the Ascension on Easter Day. But it is evident that the Marcan Fragment is only a summary, and not a consecutive narrative. And, although not so evident in St. Luke's account, its summarized character is clear when ch. 24 is scrutinized closely. The Supper at Emmaus was in the evening (24:3); time must be found for the return to Jerusalem, seven miles a.v. (24:2); for the telling of the story to the Eleven (24:3); for the Eleven to act (24:4), for the Discourse there and the Commission (24:47); for the walk of 11 miles to Olivet (24:9). No tradition recognizes the Ascension as taking place in the middle of the night; and yet this is what we understand the text to mean. Yet it is evident that the Ascension took place on 24Apr as describing the events of a single evening.

The fact is that this narrative is not necessarily continuous, from 24Apr to 24May at any rate, and that therefore it does not contradict the statement of Ac 1:1 (cf. Ac 13:3) that 'forty days' elapscd between the Resurrection and the Ascension.

3. Ascension Day.—Forty days is a round number; and although the Church since the 4th cent. has kept the Ascension Day the 40th day after Easter,3 it is not certain that the author of Acts meant it to be taken quite literally. Barnabas speaks of the Resurrection and the Ascension as having both taken place on a Sunday (2 Cor. 15:51). It is possible that he preserves a true tradition about this.4 It has been suggested by Dr. Swete (op. cit. p. 69) that Sunday the 43rd day after Easter would meet the statement of Barnabas, as well as the 'forty days of Acts,' and it may well be that this is the true interpretation of all the data.

4. Origin of belief in the Ascension.—The nature and details of the Church's tradition as to the Ascension of Christ have now been summarized. It is worthy of attention that a priori it would be difficult to account for the origin of such a belief were it not based on fact. Those who explain the belief in the post-Resurrection appearances of Christ as of subjectiv origin, and as due to the emperor of strain in the Christian Church, fail to account for the fact that the Ascension was one of the most important beliefs of the Christian Church, and the interpretations of Jesus in the synoptic narratives, and even the descriptions of Jesus as a prophet or Elijah, would have to be freed from the belief that He had ascended, and had returned to heaven, if the disciples were to continue to believe in the Ascension. Thus it is clear that the Ascension is mentioned in the synoptic narratives, and in the narratives of the Ascension of Barnabas, as well as the 'forty days of Acts;' and it may well be that this is the true interpretation of all the data.

5. Manner of the Ascension.—When it is sought more closely to determine the manner of the 'Ascension,' the data are found to be insufficient. For it is represented as an Ascension of the body, as well as of the soul of Christ, and as by the power of God. It is not that the Ascension of Christ, which they recognized with certainty as the last of the series, and which, therefore, in some respects was unlike those which preceded it. Such an experience was theirs, according to the Lucan narrative, in the vision of the Ascension; and those who do not admit that the narrative is based on a historical event are under the necessity of explaining how the disciples, whose only strength was in the conviction of the nearness of their Risen Master, should have been led to imagine that the extraordinary Epiphanies of His presence had suddenly come to an end.

A careful and valuable examination of his argument will be found in Swete, The Apostles' Creed, p. 64 ff.
the Johannine (Jn 20^\text{th} - 25) Resurrection narratives, the Risen Christ is represented as in a body over which His spirit has complete control. It is the same body which hung on the cross, but it has been spiritualized. To describe it we have to use St. Paul’s phrase, and say that it is now a ‘spiritual body’ (σώμα πνευματικόν [1 Cor 15^\text{th}]), a body which is the final stage of the physical body and which we can understand that such a body would not be subject to the laws of space and time, although it is impossible for us to figure in the imagination its movements. And therefore a physical theory of the Ascension is out of our reach. We are subject to physical laws, and when we clearly see that we fully recognize that they are not binding in the spiritual order, they impose limitations upon the pictures of our imagination.

6. Philosophical rationale of the Ascension.—It is, however, possible to conceive the fact, although not to imagine the manner, of the Ascension, when we remember that it represents the passage from the physical to the spiritual order. Heaven is not a place up in the sky; it is the spiritual world which encompasses us, and which is nearer than can be seen by the bodily eye. It is like a fourth dimension of space, invisible, unimaginable, and yet quite as real and quite as near as the length, breadth, and depth of our bodily environment. To move into this fourth dimension from the earthly life may be the most natural of all movements for the spirit, for for the ‘spiritual body’ which is its envelope, while the process may be, must be, inscrutable for the spirit confined by the natural body.

Of such a process the counterpart would be a movement from the spiritual into the physical plane. ‘Their eyes were opened, and they knew him; and he vanished out of their sight’ (Lk 24^\text{th}): that is the heavenward movement—the passage to the spiritual order. ‘Jesus cometh, the doors being shut, and stood in the midst’ (Jn 20^\text{th}): that is the earthward movement—the passage from the spiritual order. In neither case is the movement perceptible; the result alone, in the one case appearance, in the other disappearance, is noted by the bodily senses. Once the reality of the spiritual order is recognized, such movements are not to be declared impossible. The capacity thus to rise superior to the earthly conditions of space, and in the power of the spirit to move unseen to and from the world of spirit, has been claimed by masters of the spiritual life in many lands; notably in the ascetics of the classical world, who do not stay here to examine the justice of such claims, upon which the last word has probably not yet been said by psychological science. Nor is it this the place to enter upon speculation as to the power of spirit over matter, and of mind over body, the limits of which cannot as yet be regarded as defined. But it is desirable to note that the incidents in the Resurrection narratives which have been subjected to the severest criticism as abnormal and incredible present no other difficulty than this, that they presuppose a passage from the physical to the spiritual order. And, in this aspect, the only distinction between the Ascension and the previous withdrawals from sight of the Risen Christ is that the Ascension was the last of a series, and that it was done in a way as to give the impression that it would be the last.

7. Implications of the Ascension from the Christian point of view.—This, however, would be a quite inadequate conception of the Ascension from the Christian point of view, for no account has been taken in the preceding section in the unique Personality of the Ascending Christ. We proceed, therefore, briefly to exhibit the significance of the Ascension—or, more strictly, of the Heavenly Session which is its sequel, and which it initiated—in its relation to the fact of the Incarnation, with which it is closely associated in the Creeds. In what follows, the Christian doctrine of the Incarnation (see IN- CARNATION) is assumed, and an attempt is made to indicate the doctrinal implications of the Ascension, as they have been recognized by the Church looking back upon the Revelation of God in Christ.

(1) Exaltation of Christ’s Manhood.—The Christian gospel is that God became man, (a) to free man from the bonds of sin, and (b) to restore him to the dignity of fellowship with the Divine. (a) The beginning of the movement of Divine Love in Christ Incarnate is the birth of Christ and His Deity. ‘The Word became flesh.’ And the Divine sacrifice of the Cross marks the consummation of the Redemption of humanity. But (b) the Divine purpose is not fulfilled until man is restored to his true estate. ‘The Incarnation could only identify the Redeemer with the essential elements of humanity. It could not spiritualize that bodily organization which is no less a part of the true being of man than his intellectual and moral gifts.

... The Resurrection and Ascension needed to follow, that the ‘resurrection spirit,’ which could not be free, might enter into our spirits, and make us sharers of its victory.’* Thus the end of the movement of the Divine Love is Christ Ascended, i.e. Christ in the Exaltation of His Manhood. The Ascension was οrganization, as Irenaeus has it (see L. 3); it was not a mere ἀνάβασις, or Assump- tion, of Christ’s spirit; it was a true ἀνάβασις, an exaltation, of Christ as the Representative Man to the glory of the heavenly life. The doctrine of the Incarnation does not teach that Christ assumed immanently a human nature, body and spirit, only for the years of His visible ministry, and then abandoned it like a discarded cloak. In the light of the Ascension it means that He is still Man, and that as Man He is in communion with Deity. This is the signification of the Ascension when Christ resumed His heavenly condition, the same yet not the same, for He had become man, who thenceforth may dwell in Him, as He in man.

(2) Completion of His ministry for mankind.—The Ascension, therefore, marks the completion of His ministry in His relation to man. Henceforth His Messianic offices of King, Prophet, and Priest are fulfilled in perfect measure and without the restraints to which He submitted Himself in the flesh. The service of man is always a service of leadership, of counsel, of reconciliation. The threefold office of man can offer to his fellows; he may rule, he may teach, or he may by sacrifice of himself bring them nearer to each other and to God. And in the Ascended Christ as the Perfect Man these ideals are perfectly fulfilled.

(i.) The Ascended Christ as King.—It was under this image that the Hebrews most vividly conceived of the Messianic Deliverer who was to come. Their natural leader in war was their king, who not only directed the campaign from afar, but himself descended to the battlefield. So, too, under the conditions of Eastern autocracy, the king was the judge, who assigned reward and punishment by his own authority. And thus, when Christ spoke in parables of His future relation to mankind, the imaginations were excited to visions of kingly pomp and glories, of kingship and a kingdom: ‘Henceforth ye shall see the Son of man sitting at the right hand of power’ (Mt 26^\text{th}); and it is ‘the King’ who is to dispense blessing and cursing at the Last Assize (Mt 25^\text{th}). The Apocalypse represents Him coming forth to succor the nations, ‘King of kings and Lord of lords’ (Rev 19^\text{th}), whose victory at last shall be complete: ‘the

ASSURANCE—ASURS

157

kingdom of the world is become the kingdom of our Lord, and of His Christ' (Rev 11:15). In this there is an inner moral necessity, according to St. Paul: 'He must reign till He hath put all his enemies under his feet' (1 Co 15:25). The rule of the Ascension is the final conquest of the world, and the right of power, is the rule of an absolute monarch; and the Ascension marks the Enthronement of the King. The Hebrew conception of a Messianic Prince merges in the larger conception of an invisible Master in heaven, who lives and reigns in the world of the spirit, and holds the keys of the future.

(ii.) The Ascended Christ as Prophet.—That the Spirit was not yet given, because Jesus was not yet glorified' (Jn 7:38), is a principle frequently laid down in the Fourth Gospel. The thought of Christ as the Servant of Jehovah, the Prophet who was to be raised up, was prominent in the earliest Christology (Ac 3:22, 23; 77). That He came to reveal the Father's will was His own claim from the beginning (cf. esp. Mt 11:27; Lk 10:20). Nevertheless, this prophetical office, although fulfilled by the Incarnate Christ in such measure as no prophet or seer before Him had reached, was not to be fulfilled in its perfection until after the Ascension, when it was to be exercised through the ministry of the Spirit: 'It is expedient that He should be for a while withdrawn from you, but ye shall see Him.'

(iii.) The Ascended Christ as Priest.—Of the conception of Messiah as Priest there is but little in the OT literature. The idea emerges in Ps 110, of His Eternal Priesthood, although not after the order of Aaron, but 'after the order of Melchizedek'; but the thought was not developed until the Epistle to the Hebrews expanded it. The consummation of the official service of the Jewish priests was reached when, on the Day of Atonement, the sin-offering on behalf of the people having been sacrificed outside, the blood of the victim was brought within the Holy Place, and sprinkled before the Mercy-seat (Lv 16:16). So, it is argued (He 9:11-12), the consummation of the offering of the great High Priest is His Ascension to the heavenly Mercy-seat, where the efficacy of His sacrifice of blood is perpetually pleaded. It is the function of a priest to offer sacrifice, and this is perfectly fulfilled in the voluntary sacrifice of the Victim-Priest, which is efficacious to the cleansing from sin and not merely from ceremonial defilement (He 10:10), and which, further, is unique and needs not to be repeated. He, the higher, and more spiritual, function of a priest is to intercede, and this is perfectly fulfilled in the perpetual intercession (He 7:25) of the Priest who has 'passed into the heavens' (He 4:14), 'made higher than the heavens' (He 7:25), 'who sat down on the right hand of the throne of the Majesty in the heavens' (He 8:1), whose priesthood is 'unchangeable' (He 7:25). It has been debated by theologians when the Priesthood of Christ began. Is He to be regarded as a Priest during any period of His visible ministry, or only after His Ascension? On this point there is a difficulty in the Hebrews, only in heaven. * The answer seemingly implied in Hebrews is that, while He was always Priest throughout His Ministry and Passion, and while the supreme sacrifice of His priestly

* For opposite views, see Milligan, op. cit., 77 ff., and Westcott, Hebrews, p. 246.

administration was the sacrifice of Himself on the Cross, yet the consummation of His priestly service is to be found in His perpetual intercession in heaven. Just as the Jewish priest did not reach the highest moment of his service until he had ascended to the holy place, so Christ did not fulfill His priesthood in perfect measure until He had ascended. The Ascension marks the complete fulfillment and consummation of His work as Priest no less than as King and as Prophet. For the Ascension was more than for the Passion, there was an inner moral necessity in the Divine counsels: 'exi παντὸς ἐν και ἐν Μιχαήλ ἀιώνιοι τὸν Χριστὸν καὶ καταπελτήσεις τῆς τόν ἁγίαν αὐτοῦ' (Lk 24:26).

8. Practical issues of the dogma.—While the Ascension has not always been viewed in Christian theology as the 'Glorification' of Christ and the entrance upon His reward, the practical issue of belief in it has always been the same as that which is recorded of its first witnesses: 'They continued in the Temple, blessing God' (Lk 24:25). The vision of the Ascension is a call to worship: Let us draw near unto the throne (He 4:16). That Christ ascended is not only the pledge that His Ministry for mankind is perfect and final; it also conveys the assurance that heaven is near, and that the earthly order is encompassed by the spiritual. The practical theology of the Ascension is the idealism of the Christian life.

ASTROLOGY AND ASTRONOMY.—See Stars, also Sun, Moon.

ASURS.—The Asurs of the present day are a non-Aryan tribe of the Kolarians in Chota-Nagpur, Bengal. A people of the same name is mentioned in the religious books of the Hindus. According to the Satapatha Brahmana, they are the descendants of Prajapati ('the Lord of the Creation'). How they became evil spirits or A-suras ('not-God') is not clear; the fact alone is stated that they fought against the Devatas for the possession of the earth, and that they were overthrown and finally succumbed. The historical grain of truth in this poetical story is apparent; the Aryans, in their invasion of the country that is now occupied by the Asur, were obstructed by that fierce and savage-like people whom they called Astra, or demons, and whom they expelled and partly annihilated.

Whether the Asurs living in Chota-Nagpur are the offsprings of these opponents of the Aryans or are connected with the Asura builders of those ancient embankments still found in the Mirzapur district, is, of course, an open question; yet there seems to be nothing to exclude such suppositions. This much is certain, that the Kolarians, partly inhabited by the Asurs before the Kolarian and Dravidian tribes entered it from the North-West, when they likewise had been expelled from their former seats by the stronger and more intelligent Aryans.

There are still traces of copper mines in Chota-
Nagpur, which seem to have been worked in ancient times, and tradition attributes these to the Asurs. The conclusion may readily be drawn that the Asurs, therefore, must have been a long-lived people; and for some time as subjects of the conquering race (the Aryans), by whom they became to some extent civilized. At the present time their occupation consists in digging iron ore, melting iron, and using agricultural implements for their neighbours.

When the Kolarians were compelled by the Aryans to seek refuge in the hills and the dense forests of Chota-Nagpur, they met there the Asurs, and a severe fight ensued for the possession of the area. Fortunately for the Kolarians, they met a remnant and again almost annihilated. The remnant fled to the plateau of the Chota-Nagpur and Palaman hills, where we find them to-day. A few of them have emigrated to adjacent districts.

The spirits of the slain Asurs must ever have haunted the superstitions and demon-fearing Kols, and they, perhaps with the help of some Hindu hermit versed in the Purāṇas, invented the so-called Asur legend. In this legend we may perhaps be found some traces of the tradition of the totem. It consists in the assumption that such a legend was current among the Kolarians when the story of the destruction of the Asurs and the dispersion of their remnant was added and mixed up with it in later times. The legend as told at present by the aborigines in Chota-Nagpur amounts to the following story:—

There were twelve brethren (sept) of Asurs with their wives and children. They melted iron, they ate iron, and made such a hollow fire in the mouth for iron furnace that Singhobas were smothered. He first sent two birds with a message of warning, but the Asurs maltreated the divine messengers, suffered them to be shot, and killed them. He then sent the sun-god, who had sent his son in the form of a Kora kori, or leprous youth. He sought and found shelter with an old Mund and chief of his wife. The Asurs got hold of him and threw him into the furnace; but he came out of the ordeal cleansed of his leprosy, and bearing in his hands large lumps of gold. This raised the covetousness of the Asurs, and holding their wives to treat the bellows well, they jumped into the fire, and perished one and all, leaving their wives and children widows and orphans. These surrounded the son of Singhobas and did not let him return to heaven until he had assured them that they might occupy the high mountains, the forest, the sands, and the streams, and offered fowls and goats, and rice and liquor, to feed and satisfy them. Whereupon the old ladies dispersed and became the Naxi, or spirits of the mountains, the sands, the barren fields and the springs, where they receive the offerings of the Asurs as long as they were in being.

The Asurs left behind them to the Kolarian a number of iron objects, consisting of vases, basins, spades, hoes, swords, rings, and ornaments, consisting of amulets and images in the likeness of the Asurs, and these are kept by the Kolarian as relics of their ancestors and as amulets against evil. Among these objects, the most precious is the large iron bell, which the Kolarian reserve for the asula, or sacred dance. The Kolarian, like the Asur, are believers in the power of spirits, and they believe that the spirits of their ancestors are present with them in the form of images or amulets, and that in their presence the kiss is a spiritual one, free from profanation. They also believe that the departed spirits of their forefathers, who must be provided with food, and propitiated whenever they become hungry and irritable. All the diseases and troubles of this life are ascribed to their anger; they must be appeased, therefore, with sacrifices of fowls, presented by the head of the family at the house-altar, the fire-hearth. In new-born children the Asurs see the reborn spirits of ancestors. Witches and the evil eye are therefore unknown within the tribe, but people from without may be the object of an Asur belief, and, when disturbed, of quieting them in the manner described above. Every departed parent becomes a spirit—a good one if he died a natural death, an
evil one if he died suddenly or by accident. In the former case it is essential to provide him with food for the journey beyond, and in the latter to prepare a funeral. It is usual to cremate the body after burial, and when the funeral is held the dead are placed on the funeral pyre. After the funeral meal, which usually takes place during the first eight days after cremation, portions of the regular meals must be placed outside the door of the house in the name of the departed. After the third eight days, the relatives and friends come for the funeral meal, when they partake freely of home-brewed rice-beer. After this, the spirits of the ancestors need no further attention, and may be regarded as no longer present in the body of the people on earth. It is the only unfortunate evil spirit which so frequently becomes irritable and ill-disposed. He is to be feared, and in time of sickness and calamity to be reconciled by offerings of rice and liquor, and by sacrifices. See art. Agnihotra.

ASVAGHOsa.—Asvaghosa is well known as the author of the Buddh-charita, a poetical description of Buddha's life. * To him is ascribed the Akanakara, a collection of Buddhist stories with their respective moral teachings. The authenticity of these traditions is confirmed by the external evidence of I-Tsing's statement,† and the internal evidence does not contradict it.

We learn from the colophon to the Tibetan Buddh-charita, and from a biography of Vasubandhu, that Asvaghosa was a native of Siketa. According to the latter authority, it was he who was summoned to Kabul by Katyayana-patra, the alleged composer of the 'Abhidharma in Eight Sections,' in order to help him in the compilation of the great commentary to the 'Mahayana-sutras.' We learn from Yuan Chwang (Hunen Tsang), this compilation took place under the patronage of King Kanika, who is now generally believed to have flourished in the 1st cent. A.D. That Asvaghosa was contemporary with Kanika is confirmed by the meditation from which we learn about the Akanakara, his work on the text of that Abhidharma. As we learn from Yuan Chwang (Hunen Tsang), this compilation took place under the patronage of King Kanika, who is now generally believed to have flourished in the 1st cent. A.D. That Asvaghosa was contemporary with Kanika is confirmed by the meditation from which we learn about the Akanakara, his work on the text of that Abhidharma.

We are told that Asvaghosa was a learned but humble man, who was at last converted to the Buddhist faith in the nescence of the phenomenal world. The agent in his conversion was Parpyana, a disciple of Parvata, who is said to have preceded over the compilation of the above-mentioned great commentary. After his conversion Asvaghosa worked eagerly for the propagation of Buddhism. He was one of the foremost of the order of the Kusumapura (or Sarnath), not only as a preacher, but also as a poet and musician. When that town was taken by the army of Chandana Kumara, the king of the Yuddhachis, Asvaghosa was carried away to their country in triumph, and the tribute paid to the conqueror by the Mahaguhis. Another biography of Asvaghosa tells essentially the same story. The indebtedness of Asvaghosa to Parvata and Purpyana is confirmed by the expression 'In the Sonmaage at the beginning of the Asvaghosa, while his connexion with King Kanika is elsewhere asserted. †

Thus far the traditions about Asvaghosa's life, which are the oldest sources of our knowledge about him, may be regarded as comparatively authentic. But when we take up many other writings which bear his name, we find ourselves in the dark as to the identity of the person.‡ The name is not more clearly by the Tibetan tradition, which applies many epithets to him. This tradition dates from the 12th cent., and itself seems to be the result of confusion.

According to it, Asvaghosa was living under King Bhimbhara, the son of Chandraapuri, whom the legend connects with the god Shiva. The king of Tili and Malaya in the west. Of six epithets given to the name we mention: Mahaprajna, Dharmakirti, Mañjupa. Comparing these different traditions, we find little evidence in this Asvaghosa the author of the Buddh-Charita, except the connexion of the name with King Kanika or Kanika. The Tibetan author, it is true, states expressly that the Kanika mentioned there is not to be confused with Kanika, yet there is reason enough to suspect his assertion.

The following are the works attributed to a person or persons bearing the name of Asvaghosa:

1. 'Iyunn in one hundred and fifty stanzas.' This has been handed down to us in the Chinese language. Two works, the 'Charita' and the 'Parvati-shastra,' have been attributed to this Asvaghosa, and it is likely that both the above works are the translations of the hymn into Chinese, seems to regard him as different from the author of the Buddh-Charita. On the other hand, there is in the Katha the episode mentioned as Kanika's son.

2. The 'Charita,' a translation of the 'Charita.' It is the 'Great Valour,' which is surely Mahasura in Sanskrit. Another book, 'Transmigration in the Six Cycles,' agrees with the above in substance, and its authorship is ascribed to Asvaghosa.

The two instances above given seem to be confirmatory of the Tibetan tradition, but they are not strong enough to establish the identity of these Asvaghosas with the author of the Buddh-Charita.

4. Another book ascribed to Asvaghosa is 'A Nirgrantha's Inquiry into the principle of Non-ego.' It expounds the contrast of phenomena and non-phenomena, and is ascribed by Pajreypaya to Asvaghosa which is preserved in the Records of the Patriarchs. Probable this Asvaghosa is the same as the Asvaghosa of these Ed. 1901, 1892.

5. There is mention of the name Asvaghosa in the memoirs of Yuan Chwang. This Asvaghosa was a contemporary of the Boddhisattva, and is mentioned by Yuan Chwang as having been possessed by a demon. Though Yuan Chwang calls this Asvaghosa a Bodhisattva, we have no ground for identifying him with the Asvaghosa of the Buddh-Charita.

6. Finally, we have Asvaghosa the author of 'The Awakening of Faith.' This last work represents a well-reasoned exposition of the doctrines of the final metaphysical principle and of the phenomenal world as contrasted with it. Everything phenomenal is unreal, because it is made up of constituents and is governed by the law of causality. Now reality transcends every distinction and qualification. It is the 7 r e 8, and cannot be named tathata, i.e. 'the

Thatness. The final aim of Buddhist enlightenment consists in the full realization of this absolute reality, which is attained by each from most of the other sacrifices, which were exclusively priestly.

The sacrifice began in spring or summer, and, with the preparatory ceremonies, occupied more than a year. First, a suitable victim had to be carefully selected. The animal chosen must be of pure breed and valuable, distinguished by special marks. After it had been set apart for sacrifice by the symbolic act of tethering to the sacrificial post, and had been bathed, it was granted full freedom again. It was allowed to run loose for a whole year, and to be freely in the company of a hundred old horses. A hundred royal princes, a hundred noblemen, a hundred sons of officials of higher, and a hundred of those of lower rank, all armed in accordance with their station, formed its escort and guarded it against danger or theft, without interfering with its freedom of movement. Conflicts or wars (cf. especially Mahabhârata, xiv.) often resulted from attempts to steal the horse during its wanderings. If it were lost, the ceremonial had to be partly repeated and another animal substituted.

While the horse thus roamed about at a distance, the people at home awaited the time of its return, and in the meantime took part in all kinds of festivities. Gifts were offered daily to the god Snitri; daily also at a festive gathering before the king and the court the hotr had to give a recital. Every eleven days this cycle of recitations was repeated. The recital concluded with an appropriate chapter from the Vedas, together with singing, lute-playing, and impromptu verses, composed by a noble bard in honour of the king, the giver of the sacrifice, in which he was compared with the pious rulers of olden times. The recital itself was enlivened by dramatic action. According to the class of persons who formed the subject-matter of the recitation, it was arranged that the audience and chorus to whom the reciter addressed himself should consist of old or young people, snake-charmers, robbers, usurers, fishermen, bird-catchers, or sages. When the year had expired and the horse had returned, the sacrifice began with consecration (sîkálo) of the king.

The ceremony proper consisted of four stages. The first was accompanied by numerous other animal-sacrifices, and by the pressing of the soma. On the second day, the sacrificial horse, decked with gold, was once more yoked with three other horses to a gilded car, driven round the Kurus, and after a victory over the Kurus, as a purification from all sins, is described with epic differences. The avemadha was thus the royal sacrifice per excellént. The privilege of sacrificing the horse belonged only to a ruler whose sovereign power was undisputed. It was designed to secure for him continued success, the fulliment of all his desires, increase of strength and extension of the empire. Consequently the sacrifice was made before an expedition for conquest (digrejyöri), or after a campaign which had ended in victory. The Aitareya-Brâhmaṇa (vii. 21 ff.) gives a list, adorned with antique verses, of the kings of olden times who, after ascending the throne, marched victoriously through the whole earth and then celebrated a horse sacrifice. The avemadha thus became a great State function in the period when the people took part officially, and with which were associated customs of a secular and often very gross character, accompanied by oratorical displays. In the strictly regulated ritual these last were permitted only with strict conditions before the ritual had hardened into fixed rules, they were a matter of spontaneous improvisation.

These two features, its more secular character and its national colouring, distinguished the avemadha from most of the other sacrifices, which were exclusively priestly.

ASYLUM.—Asylum (Lat. asylum, Gr. ad, σπείρα, refuge, sanctuarv, near. of adj. σπείρα, in-

violable, from a priv. and σπείρα, σπείρα, right of sanctuary) is a place of asylum, or refuge, from which a refugee is not allowed to be forcibly

1. Among many peoples at different stages of civilization sacred places are asylums. Thus among the Arunta of Central Australia there is a small local town, with a centre called oorntukula, in the immediate neighbourhood of which everything is sacred and must on no account be hurt. The plants growing there are never interfered with in any way; animals which come there are safe from the spear of the hunter; and a man who is being pursued by others cannot be touched as long as he remains at this spot.1 At Maiva, in the South-Eastern part of New Guinea, 'should a man be pursued by an enemy and take refuge in the dabo [or temple], he is perfectly safe inside. Any weapon that was directed at him would miss him, for he had his arms and legs shrivelled up, and he could do nothing but wish to die.'2 In Upolu, one of the Samoan Islands, a certain god, Vave, had his residence in an old tree, which served as an asylum for murderers and other great offenders.3 Among the Kafirs of the Hindu Kush there are several 'cities of refuge,' the largest being the village of Mergrom, which is almost entirely peopled by chiles, or descendants of persons who have slain some fellow-travellers.4 Among the Kafirs of the Hindu Kush there are several 'cities of refuge,' the largest being the village of Mergrom, which is almost entirely peopled by chiles, or descendants of persons who have slain some fellow-travellers.4

2. In many North American tribes certain sacred places or whole villages served as asylums. Thus the Arkaraks of the Missouri had in the centre of their largest village a sacred lodge called the 'medicinal-lodge,' where no blood was to be spilled, not even that of an enemy.5 'In almost every Indian nation,' says Adair, who wrote about the tribes of the South-Eastern States, 'there are several peculiar towns, which are called the old-beloved, ancient, holy, or white towns'; and they seem to have been formerly 'towns of refuge,' for it is not in the memory of their oldest people that human blood was ever shed in them, al-

though they often force persons from them, and put them to death elsewhere.'6 Among the Acagehan Indians, however, in the valley and neighbour-

s on the head of the chief, and the refugees can then return to his house in peace.6 In Congo French, according to Miss Kingsley, there are several sanctuaries. The great one in the Calabar district is at Omen. Thither mothers of twins, widows, thieves, and slaves flee, and if they reach it are safe.7 In Ashanti a slave who flees to a temple and ditches himself against the fetish cannot easily be brought back to his master.8 Among the Negroes of Acrea, criminals used to 'sent themselves upon the fetish,' that is, place themselves under its protection; but murderers who sought refuge with the fetish were always liable to be delivered up to their pursuers.8

3. On the coast of Malabar a certain temple situated to the south-east of Calicut affords protection to thieves and adulterous women belonging to the Brähman caste; but this privilege is reckoned among the sixty-four anathcharans, or abominations, which were introduced by Brähmanism.9 Among the Kafirs of the Hindu Kush there are several 'cities of refuge,' the largest being the village of Mergrom, which is almost entirely peopled by chiles, or descendants of persons who have slain some fellow-travellers.4

4. In Morocco the tombs of saints and mosques offer shelter to refugees, especially in those parts of the country where the Sultan's government has no power; even the descendants of the saint or his manager (mkaddam) can only by persuasion and by promising to mediate between the suppliant and his pursuer induce the former to leave the place.10 In other Muhammadan countries there is, or have been, similar places. In Persia the great number of such asylums proved so injurious to public safety, that about the middle of the 19th cent. only three mosques were left which were recognized by the government as affording protection to criminals of every description.11 Among the Hebrews the right of asylum originally belonged to all altars (Ex 21:13); cf. W. R.

VOL. II.—11
within the church was recognized in most of their codes. In the Middle Ages and later, persons who fled to a church or to certain boundaries surrounding it were, for a time at least, safe from all prosecution, it being considered treason against God, an offence beyond compensation, to force the sinner to leave the sanctuary.

5. In Greece many sanctuaries possessed the right of asylum down to the end of paganism, and any violation of this right was supposed to be severely punished by the deity. According to an old Roman writer, Bulmerinc, Plutarch in various but legal ways was apprized of the murder and delivered to the next kinsman of the murdered person, to be put to death by him (De 1940).

According to the post-exilic law, the refugee could leave the place, after the high priest's death, without being exposed to the pursuit of the avenger of blood. Indeed,杀人者属的 travaill Comedy (s. 7) it is asserted in the scriptures that there is no crime which may not be pardoned from the fear of God and reverence for the saints. But the right of sanctuary was gradually subjected to various restrictions both by secular legislation and by the Church. The successor of Hillel declared that refuge should not be given to a highway robber or to anybody who devastated cultivated fields at night, and, according to Beamanor's Continuisse Beavonesis (xi. 15ff.), dating from the 13th cent., it was also denied to persons guilty of sacrilege or arson. The Parliament of Scotland enacted that whoever sought the protection of the Church for homicide should be required to come out and undergo an assize, that it might be found whether it was committed of forthought felony or in "cham-bluel"; and only in such cases be he to be restored to the sanctuary, the sheriff being directed to give him security to that effect before requiring him to leave it. In England a misdeafactor who took refuge in a consecrated church could not be removed from it; but it was the duty of the four neighbouring 'vills' to keep the holy place, prevent his escape, and send for a coroner, who then came and parleyed with the refugee. The latter had his choice between submitting to trial and abjuring the realm. If he chose to abjure the realm, he hurried, dressed in pilgrim's guise, to the port of departure, was assigned to a vessel, and left England, being bound by his oath never to return. His land was escheated, his chattels were forfeited, and if he came back his fate was that of outlawry. But if the refugee would neither submit to trial nor abjure the realm, then the contention of the civil power was that, at all events after he had enjoyed the right of asylum for forty days, he was to be starved into submission; although the clergy resented this interference with their sanctuary. In the reign of Henry viii. there were certain places which were allowed to be 'places of tuition and privilege' —in fact, cities of permanent refuge for persons who should, according to ancient usage, have abjured the realm, after having fled to a church. There was a governor in each of these privileged places, charged with the daily duty of murthering his men, who were not to exceed twenty in each town, and who had to wear a badge whenever they appeared out of doors. But while these regulations were to the protection of sanctuary was taken away from persons guilty of murder, rape, burglary, highway robbery, or arson. The law of sanctuary was then left unchanged till the reign of James I., when, in theory, the privilege in question was altogether denied to criminals. The Milman, History of Latin Christianity, ii. (1857) p. 59; Bulmerinc, op. cit. p. 73 ff.; Fuld, loc. cit. p. 130 f.; Breton, de Legibus et consuetudine sanctuariorum clericorum ecclesiasticorum (1857) p. 302 f.; Innes, Scotland in the Middle Ages (1863), p. 193.

Gregory ix., Decretals, iii. 49. 6.

Innes, op. cit. p. 138.

Yet, as a matter of fact, asylum continued to exist in England so late as the reign of George t., when that of St. Peter's at Westminster was abolished.4 In the legislation of Sweden the last reference for the privilege of sanctuary is found in an enactment of 1528.2 In France it was abolished by an ordonnance of 1539. In Spain it existed even in the 19th century.4 Not long ago the most important churches in Abyssinia,3 the monarchies of the same country,6 and the quarter in Gondar where the head of the Abyssinian clergy has his residence,7 were reported to be asylum for criminals. And the same was the case with the old Christian churches among the Sudanese at this present day.

Among the ancient Irish the right of sanctuary also existed. This was of two sorts: temporary within the precinct (meagain) of a person of rank, and permanent within the land of a host (brudan) or the glebe (nunod, terram) of a church. The meagain varied according to the status of the owner of the land, ranging from the radius of one spear- cast to the entire plain in which the palace of a provincial king, the king of Ireland, or the Archbishop of Armagh, stood. Within the meagain the fugitive, who by the will of the place and granted formal permission to enter, was safe, so long as he in wise injured the meagain or its owner, for a time, but must sooner or later incur the penalty of his original misled. Within the brudan, on the other hand, a homicide was safe, if he left the district only actually, until he could obtain a fair trial before a brachen, or judge. The right accorded to the meagain of a dwelling was for the protection of the owner against violence on his premises by outsiders—not primarily in the interest of the fugitive, and as it depended on the will—caprice—not the owner, it was uncertain. It was indeed not an asylum at all in the proper sense of the word. But the sanctuary of a church or the asylum of a bruden was absolute and inviolable, depending on no conditions and on no man's will or caprice.8

7. In many cases the tombs of dead or the houses of living persons serve as asylum. The Arab poet Hammid found a safe refuge at the tomb of his enemy's father.9 In the monarchical state of the Eastern Sudan the inhabitants enjoy a legal right of asylum if they have succeeded in escaping to a hut near the burial-place of the king.10 Among the Barotse' and Kafirs the tombs of chiefs are places of refuge. Among the Southern Ovambos of South-Western Africa the village of a great chief is abandoned at his death, except by the members of a certain family, who remain there to prevent it from falling into utter decay; and condemned criminals who contrive to escape to one of these deserted villages are safe, at least for a time. Among various peoples the domicile of the chief or king is an asylum for

criminals; and in some places in West Africa the same is the case with the house of the high priest.2 In Usumbura, again, a murderer cannot be arrested or punished without the consent of the great wizards of the country.3 But even the house of an ordinary man may possess the right of asylum. Among the Bareaes and Kunamas, in Eastern Africa, a murderer who finds time to flee into another country cannot be arrested, and it is considered a point of honor for the community to help him to escape abroad.4 In the Pelew Islands 'no enemy may be killed in a house, especially not in the presence of the host.'5 In Europe the privilege of asylum went hand in hand with the sovereignty of the owner.6 It is the reach of a man's peace was proportionate to his rank.7

8. The right of sanctuary has been ascribed to various causes. Obviously erroneous is the suggestion that places of refuge were established with a view to protecting unintentional offenders from punishment or revenge.8 The restriction of the privilege of sanctuary to cases of accidental injuries is not at all general, and where it occurs it is undoubtedly an innovation due to moral or social considerations. The mere fact that a fugitive's asylum has been attributed to a desire to give time for the first heat of resentment to pass over before the injured party could seek redress.9 But although such a desire may have helped to preserve the right of asylum where it has once come into existence, it could not have accounted for the origin of this right. It should be remembered that the privilege of sanctuary not only affords temporary protection to the refugee, but in many cases altogether exempts him from punishment or retaliation, by giving him shelter among animals which have fled to a sacred place. And if the theory referred to were correct, how could we explain the fact that the right of asylum is particularly attached to sanctuaries? It has been said that the right of sanctuary bears testimony to the power of certain places to transmit their virtues to those who entered them.10 But it is doubtful whether we have any evidence that the fugitive is supposed to partake of the sanctity of the place which shelters him. In Morocco, persons who are permanently attached to mosques or the shrines of saints are generally regarded as more

or less holy; but, so far as the present writer knows, this is never the case with casual visitors or suppliants, hence it is hardly from fear of the refuge that his pursuer refrains from laying hands on him. Prof. Robertson Smith has stated part of the reason why "the feet of Jupiter's high priest, if they ever were cut, stood as undoubted rights as against a fugitive at the sanctuary is regarded as an encroachment on its holiness." There is an almost instinctive fear of disturbing the peace, and particularly of shedding blood, in a holy place; and if it is improper to commit any act of violence in the house of a pagan, it is naturally considered equally offensive, and at the same time much more dangerous, to do so in the homestead of a supernatural being. But this is only one aspect of the matter; another, equally important, still calls forth an animadversion. Why should the gods or saints themselves be so anxious to prevent criminals who have sought refuge in their sanctuaries? Why do they not deliver them up to justice through their earthly representatives?

The answer lies in certain ideas which refer to human as well as divine protectors of refugees. The god or saint is in exactly the same position as a man to whose dwelling a person has fled for shelter. According to Moorish ideas, the owner of the house or temple must never assist the fugitive: for himself, being in close contact with him and his family and his belongings, the refuge is thought to be able to transfer them curses and evil wishes. He is in the 'dr of his host, and L'dr denotes a compulsory relation between two persons, the constraining character of which is due to the belief in the transference of a conditional curse. Ideas of this sort seem common to all tribes of men who have the fear of the enemy, and are recorded as an invariable place of refuge. Sometimes a criminal can, in a similar way, be a danger to the king even from a distance, or by meeting him, and must in consequence be pardoned. In Madagascar an offender escaped punishment if he could obtain sight of the sovereign, whether before or after conviction; hence criminals at work on the high road were ordered to withdraw when the sovereign was known to be coming by. "In Usambara even a murderer is said to be safe as soon as he has touched the person of a saint," say the Christian and heathen tribes, a saying that is met with in many parts of the earth. For he who escapes punishment if he reaches and throws himself on the king's drums. On the Slave Coast, criminals who are doomed to death are always begged, because if a man should speak to the king he must be pardoned. In Ashanti, if an offender should succeed in swearing on the king's life, he must be pardoned, because such an oath is believed to involve danger to the king; hence knives are driven through the cheeks from opposite sides, over the tongue, to prevent him from speaking. So also among the Romans, according to an old Jewish writer, a person condemned to death was begged to prevent him from cursing the king. Fear of the curses pronounced by a dissatisfied refugee likewise, in all probability, underlay certain customs which were prevalent in ancient Rome. A servant or slave who came and fell down at the feet of Jupiter's high priest, if he raised his knees, was for that day freed from the whip; and if a prisoner with irons and bolts on his feet succeeded in approaching the high priest in his house, he was let loose and his fetters were thrown on to the road, not through the door, but by an innovation. Moreover, if a criminal who had been sentenced to death accidentally met a Vestal virgin, on his way to the place of execution, his life was saved. So sensitive to imprecations were both Jupiter's high priest and the priestesses of Vesta, that the Praetor legally allowed to compel them to take an oath. Among several peoples even ordinary women are regarded, in a way, as asylum, probably from fear of the magic power attributed to their sex. In various parts of Morocco, especially among the Berbers of Jàhèd or northern mountaineers, a person who takes refuge with a woman by touching her is safe from his pursuer. Among the Arabs of the plains this custom is dying out, owing to their subjection to the Sultan's government; but among certain Asiatic Bedawin, the custom was to go to some woman and swear a number of oaths, or even têns. Among the Circassians, a stranger who intrusts himself to the patronage of a woman, or is able to touch with his mouth the breast of a wife, is spared and protected as a relation of the blood, though he were in the enemy, nay through the door, but by a relative.

The inhabitants of Baréges in Bigorre have, down to recent times, preserved the old custom of pardoning a criminal who has sought refuge with a woman.

Now, as a rule, men may by his curse force a king or a priest or any other human being with whom he establishes some kind of contact, to protect him, so he may in a similar manner constrain a god or saint as soon as he has entered his sanctuary. According to the Moorish expression, he is then in the 'dr of the saint, and the saint is bound to protect him, just as a host is bound to protect his guest. It is not only men that have to fear the curses of dissatisfied refugees. Aschylus puts the following words into the mouth of Apollo, when he declares his intention to assuage the punishment of the hero: 'Terrible both among men and gods is the wrath of a refugee, when one abandons him with intent.'

EDWARD WESTERMARCK.
common Gr. and Lat. form. The origin of this name was a matter of much speculation to earlier scholars. Solon (de Dios Syris, 178) explained it as a corruption of Ἀθηρ, 'great fish,' and connected it with Ἀθηρία, 'f applicable.' These and Gesenius (Comm. Bib. Is. ii. 342) interpreted it as Ἀθηρ, 'greatness of fortune'; Movers (Phönizier, i. 594) as Aram. ḫērā, 'elevit, like Heb. שָׁם, as a designation for 'female'; de Vogüé (Phénix Centrale, Ins. Sem. vii.), followed by Baudissin (Sabin. et Mead. xxxiv. 1870, pp. 92, 169), Baudissin (Studien, i. 238; FRE. ii. 172), Baedeker (Beiträge, 69 ff.), and nearly all recent scholars. Lagarde (Mitth. i. 1884, 77 f.) doubts the correctness of this view, and Jensen (Hittiter und Armenier, 1888, 157 f.) suggests that Atargatis is derived from a hypothetical Hittite goddess Tarkhu. Neither of these scholars has succeeded, however, in disproving the commonly accepted etymology.

'Atar, the first element in the compound, is the Aramaic form of the name that appears in Canaan as 'Atsarāt, (Atartē), in Assy., and Bab. as Aštart; in South Arabia as 'Atar; in Abyssinia as Astar; in Moab as Aštar. Heb. אט and Arab. ات regularly correspond with Aram. אט, so that Heb. אט becomes Aram. אט. 'Athar was soon assimilated into 'Atar (and it was written אט), the usual form in the inscriptions. The phonetic relation of these various forms shows that 'Atar (Ashtar, Astarte) was a primitive Semitic deity who must have been worshipped by the Arameans from the earliest times. The first appearance of the name is in the Annals of Ashurbanipal (Kass'. viii. 112, 124 = KIB ii. 221 f.; Cyl. b, vii. 92 = KIB ii. 215, n. 4), where the form 'Atar-samain, 'heavenly Ater,' indicates the Aramaic origin of the divinity. It appears also in Syrian proper names such as Aţar-lā, Aţar-gari, Aţar-lāri, Aţar-sūr (Johns, Ass. Doomsday Book, 17; Hilprecht, Bab. Exp. i. 51, 70). A gem bears the inscription יטא, 'Ater is strong' (Levy, Phön. Stud. ii. 33; E. Meyer, ZDMG xxxi. 1877, 752, n. 1). From none of these early mentions does it appear that Ater was a male god, masculine or feminine; in South Arabia, Abyssinia, and Moab it is masculine, in Assyria and Canaan it is feminine (cf. Barton, Semitic Origins, ch. iv.). Winckler (Altert. Forsch. i. 528) has shown, however, that Ashurbanipal in two texts equates Aţar-samain with the Assyrian Ishtar, which is always feminine (in spite of the absence of fem. ending). Strabo also (xvi. 783) says that Aţara is the same as Atargatis, and Atargatis is always feminine. Aţara seems clearly to be a dialectic form of 'Aţar, 'Aţar, and Noldéke (ZDMG xxix. 109) explains it on the analogy of Arabic. 'Aţar for 'Aţhar, 'Ashshur, 'Asyria.' Justin (Hist. Phil. xxxvi. 2) speaks of Aretas (Arathēs = Aţhara) as the wife of Damascus, for whom he built a temple. In the light of this evidence there can be no doubt that the Aramaic name was a goddess (see ASHTART).

'Ate or 'Aţeh, the second element in the compound name Atargatis, appears in the forms אט and in Palmyrene proper names, e.g. אטשת, אטחת, אטאש, אטאת, אטאת, אטאת, אטאש or אטאת of Αταργάτης, Ate, 'Ate, 'Ate, Ate, Ate, Ate, Ate, Ate as the name of a woman (de Vogüé, Doc. Sem. No. 30, 5, 19, 63, 74, 107, 143, 54; Mordtmann, Neue Beiträge z. Kunde Palmyra's, S.M.A. 1875, 47; Sachau, ZDMG xxxvii. 1881, p. 740 f.). It appears also in Phoen. inscriptions from Cyprus in the names Ἀτη and Ἀτη (CIS, No. 93, 79, cf. italics); Noldéke, Arch. Orient. Forsch. i. 528; Strabo, xiii. 1888, p. 926; Halevy, Mélanges de critique et d'histori. 1888, p. 215). Gr. inscriptions and authors it assumes the forms Ἀθη, Ἀθη, Ἀθα, Ἀθε. These forms and the masc. verbs in the Palmyrene proper names suggest that 'Ate is a male divinity, but there is so much looseness in Palmyrene in the agreement of the verb with the gender of its subject, that this argument is not conclusive. Pseudo-Melito (in Ottos Corp. Apol. Christ. ix, 426, 605; Cureton, Spicileg. 44, 25 Syr.) describes τατη, 'Ate, as worshipped at Hadyab (Adiabene), and uses the feminine in speaking of her, but this testimony also is far from decisive. As uncertain as the sex of 'Ate is his (or her) identity. De Vogüé and Baudissin think that the name is אט, Ate, in the sense of 'favourable season,' and that it was used originally merely to distinguish the 'Astar of Hrolopolis from other 'Asters, but subsequently was separated from her as the name of an independent deity. This etymology is not unlike the union of two deities into one that is common in the Semitic world, but the separation of one into two is an unknown phenomenon. Levy (Phön. Stud. iv. 7) and Six (Numism. Chron. 1878, 108) hold that 'Ate is a divine name from the three. 'Ate, 'Ate, 'Ate, 'Ate makes this view difficult. Baedeker (Beitr. 71 f) identifies 'Ate with Aţos (a Lydian deity), which appears in the proper names Sadyattes, Myattes, Alyattes, and he appeals to Lucian's story (de Dea Syr. 15) of the founding of the temple at Hierapolis by Atar the Lydian in honour of Rheia, who had estranged him. In that case the phonetic relation of Aţheos to Aţes is the same as that of Aţhara to Aţar (see above). Hommel (PSBA, 1897, p. 81) thinks also that the original seat of the worship of 'Ate was in eastern Asia Minor (see ATE, ATHEOS).

When so much doubt exists as to the character of 'Ate, it is difficult to determine what is the relation of 'Ater to this deity in the compound 'Ater-Ate, or how the character of the primitive Semitic 'Ater is modified by this relationship. Meyer (ZDMG xxxi. 730) and Hommel (L.C.) regard 'Ater as the wife of Ate, but Hadad is always represented as her consort. Halevy (l.c. 224) suggests that 'Ater is the daughter of Ate, and compares 'Ishtar with Aten in Egyptian and other Semitic names. (RePs ii. 173) thinks that, if 'Ate is a real name and not a mere title of 'Ater, he is probably the son of 'Ater (cf. Ishtar and Tannuzu and the legends given below of Atargatis and her son), Baedeker (Beitr. 71 f) thinks that the relationship is Ate = Ate, i.e. Ate has lost his identity in 'Ater, and he appeals to Lucian's story (see above). The philological method cannot throw much light on this problem, and we are compelled to turn to the allusions in the inscriptions and in classical writers in order to ascertain the character of Atargatis.

The earliest references to the worship of this goddess are found in fragments of Ctesias (+ c.e. 400) scattered through the writings of later classical authors (cf. Ctes. Elyk., ed. Bühler, 393-395; Müller, in Dindorf's Hercules, 10 fl.). Strabo (xvi. 785) says that Ctesias calls Atargate Dercétès. Diodorus Siculus (ii. 4), in dependence upon Ctesias (cf. ii. 20), narrates that Aphrodite was angry with Dercétès, and caused her to fall in love with a beautiful youth among those who sacrificed in the temple in Askalon. By him she became the mother of Semiramis, who was delivered by the gods to be brought up by a woman of the palace, and the youth to disappear, and placed the child in a desert, where she was fed by doves. She then
east herself into a lake near Askalon and was caught by a fish with the eyes of a woman. This is the origin of the half-human half-fish image of Derkètō. The same story is repeated by Athenagoras (Legat. pro Christ. 26) and by an anonymous author (Ehr. op. cit. 333 f; Müller, op. cit. 18), who also calls Derkètō the Syrian goddess, Erastos (Hist. 10, 31), and for the statement that Derkètō was saved by a fish at Bambuye (Hierapolis, the modern Membiş) in northern Syria. He also calls her the goddess of Syria. Hyginus (Astron. ii. 41) states, on the authority of Ctesias, that a fish rescued Derkètō from the sea, and therefore the Syrians regard fishes as holy, abstain from eating them, and worship golden images of them. Xanthus the Lydian, a contemporary of Ctesias, cited by Mnaseas, according to Atheneus (vii. 57), states (if the citation be genuine) that Atargatis because of her pride was seized by the Lydian Mopsus and cast with her son leithus (‘fish’) into a lake near Askalon, where she was devoured by fishes. Hesychius (s. e. ἀταργάδης) says that she is called ἄταργάδης.

The earliest epigraphic evidence of the worship of Atargatis is found on a coin bearing on one side the inscription γυνης, Ἀβδ-Ḥadad, on the other γυνης, ‘Ἄταργάτη (De Luyens, Essai sur la numismat. des Sarrak, 1846, p. 39, pl. v.; Blau, ZDMG vi. 1875, p. 395 f.), and was always associated with the cultus of a Syrian deity that belonged to the Persian period, and it is probably to be assigned rather to the early Greek period. It comes perhaps from Hierapolis, and is interesting as confirming the statements of later writers that Hadad and Atargatis were among the great divinities of Syria. Other coins of ‘Abd-Ḥadad show the more usual spelling γυναῖ-. ‘Άταρατη (see Waddington, RV vi. 1861, p. 9 f.; Six, Numismatic Chronicle, 1878, p. 105).

According to 2 Mac. 12, Judas Macabeus in the year B.C. 144 went forth against Carnion and the temple of Atargatis (τη Αταργατία) and slew 25,000 people. In 1 Macc. 6 this is described as το τεινος και καραπίνα. From this it appears that the cult of Atargatis flourished during the Greek period not only in Hierapolis and Askalon, but also in Idumea. An inscription of the same period from Keift-Hauwar, on the road between Damasus and Banias, bearing the word (῾Αταργατη) indicates probably that there was a temple of Atargatis in this place (Waddington, No. 1890).

Excauls in Delos have developed a number of inscriptions to Atargatis dating from a period shortly before the beginning of the Christian era. Here occur the forms Αταργάτη, Αταργάτης, Αταργάτης (BCh iii. 407), and Αταργατη (ib. vi. 495 f., vi. 477, viii. 132). These inscriptions combine Atargatis and Asadas (Hadad) and identify Atargatis with Aphrodite. In one case she is called ἀφροδητη Ἀταργάτη, in another ἄταρατη ἀπορριατη. Her priests are called ‘Hierapolitans,’ either because this was a colony that had come from Hierapolis, or because the priest of Ἅταργατη was called άταρατης (Herod. i. 107, 125, 170), and adds the new information that she was changed into a fish at Bambuye (Hierapolis). Strabo (i. 24) says, ‘Atargate (according to some MSS, Artagnate) the Syrians call Atalma, but Ctesias calls her Derketo.’ Here Atargatis is identified with Athar (= Athar, Athar-Baar, in the same sense as that in which she is identified with Aphrodite in the Delos inscriptions (cf. xvi. 748, 785). Corinthus (i. 68) records (de Nat. Deor. 6) that fishes and doves were sacred to Atargatis, the goddess of the Syrians, and therefore were not eaten. Pliny (N. H. xiv. 15 (14), 69, says of Joppa, ‘There is worshipped the Colchis monster Justina.’ Whether this is to be understood of the sea-monster (ξυντη, whose skeleton, according to Strabo and Pliny, was shown at Joppa, or whether it is to be regarded as a truncated form of Der-ceto, is uncertain. Judas Macc. (vii. 57) states that Syria. Pliny identifies Atargatis with Derceto, and says that she was worshipped at Hierapolis, or Bambuye, or Malog. In xxxii. 2, (8), 17 he speaks of the pond of sacred fish at the temple of Hierapolis. The xii. 44. of the Syrians, and speaks as an eye-witness. He never calls the goddess Atargatis, and refuses to identify her with Derketo of Askalon, because the image in that place had a fish’s tail, while the one in Hierapolis had perfect human form (14). He prefers to call her Hera (247). All of the admits that there is much to be said in favour of the view that she is Rheia (15). Nevertheless, there is no doubt that his ‘Syrian goddess’ is really Atargatis. His title Σεπίσ θέα is one that is constantly applied to this divinity by other writers. Hierapolis is known to have been a chief centre of her cult. The priest of Atargatis at Delos entitles himself Hierapolitans. In the temple was a pond of sacred fish, such as Pliny describes in the temple of Atargatis at Hierapolis; and Lucian himself narrates that the people held that the temple was built by Semiramis in honour of her mother Derketo, and that they abstained from eating fish and doves, in the same manner as the people of Askalon (14).

The temple of Hierapolis is described by Lucian as the largest and richest in Syria. To it pilgrims came from all parts of Syria. It was not only a market-place, but a place of holy worship, and was surrounded with two walls, one of which was very high and very thick. To the roof of the temple were attached one hundred golden images. The first was that of Hera (Atargatis), which had attributes not only of Hera but also of Athene, Aphrodite, Jupiter, Venus, Pluto, Mars, and Cybele. From this temple she carried a cymbal, in the other a cymbal. On her head, which was surrounded with rays, she wore a crown, and she was clothed with a girdle ornamented with the image of Hera. She had a thunderbolt in her other hand and a drum like that of Rheia (22, cf. 19). The second image bore a general resemblance to Zeus, although it was called by a different name. It was, doubtless, Hadad, who was represented armed with a thunderbolt. Between these two stood a third image, the size of which Lucian could not determine. It had no name, he says, but was called merely σεπίσ της, ‘sight’ (Iv. 10, 72) is doubtless correct in regarding this statement as due to a mistake of the part of Lucian for ἱερατος). The third divinity was really ότε, whose name appears in the second element in ἵερατος, Atargatis. As to the origin of the temple, some said it was built by Denculon, others by Attes (ατες), others by Semiramis and her daughter. Some preferred to believe that it was the work of Dionysus (12-29). The priesthood of the temple was very numerous, and was divided into classes of exercised different functions. Denominations among these were the Galli, or eunuch-priests. On
festival occasions young men worked themselves into a frenzy through music and other religious exercises, and then cast off their clothes for a variety of acrobatic feats. At times they were womanly in their attire, and in the same way they were often represented in art, as in the Casa del Chirurgia, cf. *Atth.* 35-43. Of this custom Lucian offers two explanations. One was that it was in honour of Athar, and the other that it was so conducted in the world in female attire; the other was that it was in memory of Comabola, who mutilated himself in order to avoid being castrated by his wife, and then burned the whole in the presence of all the gods of Syria, who were brought by their devotees to witness the rite (69). Domestic animals, except the hog, were offered in sacrifice. These were presented in the temple, and were taken home to be slain, but sometimes they were killed by being cast down from the portals of the temple. Children also were occasionally offered in this way. Pilgrims always slavages their heads when coming to the sanctuary, and young men and women presented their hair in gold or silver boxes before marrying. Taking in honour of the goddess was a common practice (54-60).

Apuleius (Metamorph. viii. 170) speaks of the 'omnipotent and all-producing Syrian goddess.' Julian (Hist. Anim. xii. 2) speaks of the 'divine mother' of the Athenians (viii. 37), and the goddess (the name of *Arýpýara*). Arunaids (*de Accent.* ed. Barker, 36. 18) calls her *Arýpýara*. The *book of Lęgibus*, ascribed to Bar-desanas († a.d. 220) in *Cureton*, Specidy. Syr. 1855, 29, tr. 31, calls her *Taraíth* (*IΔΣΔΨ*), and says that she is worshipped in Syria and Edessa (the Gr. translation speaks of *Iḥēr* as worshipping her in Syria and Osroene). She is also mentioned in *Theogony* as practiced in her worship. Tertullian (ad nation. ii. 8, cf. *Apol.* 24) calls Atargatis the 'goddess of the Syrians.' Macrobius (beginning of 5th cent.) says that among the Syrians the sun is called Hatala, the earth Aradargia. The last was represented mounted upon a lion, with her head emblazoned by rays (Sat. i. 23, 18). Jacob of Sarug (*a.d. 521*), in the documents published by Martin (*ZDMG* xxxix. 1875, 182), states that *Taraíth* (*IΔΣΔΨ*) was worshipped at Harran. Simplicius (6th cent.) has the form *Arápýara* (cf. Lagarde, *H. v. Ablh.* 1860, 238). The *Taluad* (*Abédē zāra*; Ht. tr. *Ewald*, 1866, p. 85, cf. *Götterdämmerung* 27) says that she is worshipped at 252, i.e. Mabog (Iambicy, Hierapolis). In Armenian writers the goddess appears as *Tharatha*. Moses of Chorene (ii. 27) says that Abgar built Edessa and brought into it its idols, Nabok, Bel, Bathinidal, and Tharatha. For other facts see Lagarde, *Armenische Studien* in *AGG* xxxii. 1887, p. 58, § 846; Mordtmann, *ZDMG* xxxix. 43.

From these accounts it appears that Atargatis is merely a local form of the primitive Semitic goddess Ishtar-Atar. Strabo and Hierocles both affirm her identity with Athara, and the Deos inscriptions call her Aphrodite. Like Astarte, she was a goddess of life-giving water and of fertility. The main seats of her cult, Askalon, Karnaim, and Delos, were places long devoted to the worship of Askalon. She was sacred to her as Astarte, and, according to Artemidorus (*Onirocrit.* i. 8), fish were not eaten by the worshippers of Astarte any more than by the worshippers of Atargatis. The emphasis upon sex in the cult at Hierapolis, as described by Lucian, also favors the original identity of Ishtar with Astarte, and the name of Atargatis with Astarte. At the same time it is doubtless true that, in the mind of the common people, the Astarites of Hierapolis was distinguished from the Astarites of other cities as a separate deity, just as Ishtar of Arbel was distinguished by the Assyrians from Ishtar of Nineveh. At Askalon there was a temple of Astarte as well as one of Derketo, and there is no evidence that the Atargatis of Karnaim was regarded as the same as the old Ashtoreth of Karnaim. See ASHTARAT, ASHTAR.

Hierapolis was, doubtless, the starting point of her cult, because her name is Aramaic. Mabog, the native name of Hierapolis, is apparently *taša*, 'spring,' and is derived from a sacred spring in the precincts of her temple. The name of the goddess is the Gr. *Díábyke* from this centre the cult spread in every direction. We find it at Palmyra, in the Haran, at Karnaim, at Askalon, and in the Greek islands. Into every place where the worship of Astarte had gone that of Atargatis seems to have followed. In this period Hellenic influence was so well known in all parts of the Mediterranean, and by Greek and Latin writers she was commonly called 'the Syrian goddess.'

LEWIS BAYLES PATON.

**ATAVISM**—This word is used in three senses. (1) It is used to designate the bald or Barag, the reappearance of a character not seen in the parents, or even in the immediate ancestry, but found in an ancestral race or in one related thereto. Thus, markedly projecting canine teeth in man have been regarded as re-expressions of a Sinian character, and supplementary to the brachygnathous mammalian characteristics which have been regarded (probably quite erroneously) as atavistic re-appearances of a characteristic of the Lemuroidea. (2) It is used to denote the hereditary re-appearance of a character not seen in the parents, but known to have occurred in a definite period of the higher animal stock. Thus, a child may have the peculiar hazel eyes or a peculiar lack of hair characteristic of a great-grandparent, and not expressed in the intervening lineage. To such cases the term 'reversion' is often restricted. (3) It is used to designate the full expression of a character which is recorded to have occurred in a definite ancestor of the same race (K. Pearson, *Grains of Science* 1900, p. 489), while 'atavism' is restricted to 'a return of an individual to a characteristic not typical of the race at all, but found in at least one ancestor and supposed to express an evolutionary ancestry of the given race (ib.). This would be a useful distinction between atavism and reversion, but unfortunately some scientific writers have used the two terms in the very opposite way; applying the term atavism to (1) and the term 'reversion' to (2) and (3). The distinction which Pearson makes seems quite clear, but we doubt if it is now practicable. (3) It remains justifiable to use 'atavism' and 'reversion' as synonyms denoting the hereditary re-appearance of characters which were latent in the parents at least, but which have not been expressed in definite—not problematical—ancestors near or remote. It need hardly be said that an atavism is not necessarily a deterioration; it may be a throw-back to a higher degree of differentiation. That depends on the direction in which the strain proceeds. The same stock or offspring may have branches with red flowers. In a harmless breed of...
cattle, derived originally from a horned breed, a horned individual may suddenly reappear. A dark brown bantam, crossed with an Indian Game cocking hen, produced amongst others a hybrid offspring which was a jock one-fourth: it is possible that this is a cross between the original wild stock (Ceris Ewart). Similarly, in his horse-tebra hybridizations, Professor C. S. Ewart obtained offspring that were at least partially blended as reversions to an extremely old type of horse, such as is suggested by the striped ponies of Tibet.

Organisms often show peculiarities which their parents did not possess, but which their ancestors possessed. Summing up such cases descriptively, we may say that they seem to illustrate atavism, but the use of the term as an interpretation is not justified. Thus, we may give some reason for believing that the resemblance to an ancestor is due to the rehabilitation of latent items in the inheritance. To do this we have to try to eliminate other interpretations, and that is often difficult. (a) What looks like an ancient feature may be due to an arrest of development through lack of appropriate nutrition. (b) Similar conditions of life, e.g. of food and climate, may induce an acquired or modificative resemblance between the organism and its great-grandparent, but this would not be an atavism. (c) Many organisms normally have certain vestigial organs, and these are often variable. A quantitative variation in a normally present vestigial organ is not what is meant by an atavism. (d) It is conceivable that an independent individual variation may happen to coincide with one that occurred generations before, but this is different from the re-appearance of a latent item in the inheritance. (e) Filial regression, or an approximation towards the mean of the stock, is of everyday occurrence in blended inheritance, and must be kept quite distinct from reversion or atavism. (f) The list of alleged atavisms must also be reduced by the subtrahend of what are called Mendelian phenomena. In certain cases, such as peas and mice, the crossing of two sharply contrasted pure-bred parents results in hybrid offspring which are all like one of the two parents as regards the contrasted characters; when these hybrid offspring are inbred, their progeny resemble in definite proportions the two grandparents.

The fact seems to be that many phenomena have been labelled atavisms which admit of other interpretations, and that genuine atavisms are rather rare. Let us repeat that an atavism is a harking back to a more or less remote ancestor, the harking back being due to the re-assertion or re-reappearance of an ancestral character that has lain for several generations latent or unexpressed.

It seems unnecessary to use the term 'atavism' for the common phenomenon of resemblance to a grandparent. There is every reason to believe that an individual inheritance is like a mosaic, built up of many contributions, through the two parents, from the grandparents, great-grandparents, and so on. It is a normal and frequent fact of inheritance that an offspring exhibits a property that is known to have occurred in grandparents but not in either of the parents. There seems little utility in calling this very frequent 'skipping a generation' an atavism, though it is of the same general nature, and though it is obviously difficult to decide where to draw the line. For how long must a character have been absent or latent before its re-assertion or re-awakening is to be called an atavism? A drone-bee arises from an unfertilized egg; it has a mother and two grandparents, but no father. But it seems rather absurd to consider resemblance to its grand-father as atavism or reversionary. This is a reduction ad absurdum, for the drone-bee would resemble its father if it had one! The case may serve to show that it is undesirable to use the term 'atavism' unless the throw-back is to an ancestor more than two generations anterior.

The exact study of atavistic phenomena must have regard to characters which can be definitely measured and registered, and only when this study has reached secure results will it be possible to discuss with precision what may be called psychological atavisms, re-awakenings, often more fitly termed reminiscences, of ancestral traits which have lain latent, it may be, for generations. The garden of a shepherd's cottage which was swallowed up in a deer forest, lost all trace of its previous cultivation, and became a waste ground. After many years, under more humane conditions, it was re-atted, and there sprang up many different kinds of old-fashioned flowers whose seeds had lain dormant for several generations. So may ancient flowers and weeds now and again reappear out of latency in that garden which we call our inheritance.

J. Arthur Thomson.

'ATE.—A Semitic deity first mentioned in Assyrian proper names such as Ata-tanu, Ata-tana (cf. KAT 1435), then in the Palmyrene inscriptions under the forms ἀτα, ἀταν, ἀταν, ἀτανα, and in Gr. and Syr. writers. This divinity was associated with the old Semitic mother-goddess, Atar-Attar—Atash in the compound name ἀταν 'Attar, 'Atar-gatis (p. 325). The characteristics and even the sex are uncertain. It is possible that the Lydian god Atis is only another form of the name, in which case his myths may be used to supplement the meagre information in regard to 'Atē (see ATIS).

ATHANASIAN CREED.—See CREEDS.

ATHANASIUS.—I. Life.—There is no trustworthy record of the early years of Athanasius, but his writings give us a clear picture of his education and training. (Watkin, Studies of Athanasianism, 2. Camb. 1900, pp. 67-70.) He is acquainted with Greek literature (Horner, Demosthenes, and Plato) and with the later Greek philosophy. In knowledge of the Greek Bible he is second only of the Bishops.

He first passes into the light of history at the Council of Nicea in A.D. 325, at which the Arian party was opposed by 'Athanasius, a deacon of the church of the Alexandrians, who was highly esteemed by Alexander the bishop' (Socrates, i. 20). The rest of the life of Athanasius coincides in the main with the history of the Arian controversy, in which he was the protagonist on the Catholic side. In A.D. 325 he succeeded Alexander as bishop (Cureton, Festal Letters, p. xxxviii.), though it was asserted that he was too young at the time (p. xlv.). It was further asserted that his election was secret (Apoloag. § 6.)

* Watkin (Ar. 67 [71], note) and Robertson (Selected Works of Athan, p. xiv, note) say that the assertion that A. was 'under age' (ioi) at his consecration must be taken with some reservation, and that therefore the conclusion that he was about 30 in A.D. 325; but the argument is precarious. There is not sufficient evidence to show that a canon was accepted at this time at Alexandria prescribing 30 as the age qualification for the episcopate, since Didascalia, both Syriac (Lagard, p. 10) and Ethiopic (Platt, p. 10), lay down the general rule that a bishop must not be less than 50 years of age, and the Apostolic Constitutions (Funk, p. 81) prescribed the same limit. Canon xi. of the Council of Constance (A.D. 314 or later) prescribed 30 as the age for a presbyter, but does not touch the case of a bishop.
The objection to Athanasius on the score of his youth is instructive. He was, indeed, representative of the new age which began with the conversion of the Emperor Constantine. Eusebius of Caesarea, the older contemporary of Athanasius, had been a confessor during the terrible Palæstinian persecution, and so he feared heathenism chiefly as a persecuting power, and was h translate to security when Constantine adopted Christianity. But a new and more subtle danger was arising. Crowds of heathen followed the Emperor with a facile profession of his religion on their lips, and a traditional attachment to heathenism in their hearts. When, therefore, Arius represented the Son of God as a (heathen) demi-god, his teaching meant reading to listeners. To the young Athanasius, the man of the new age, fell the task of detecting the working of the heathen leaven, and of meeting it with Christian medicine.

Athanasius succeeded Alexander in a troubled heritage. Not only were the (new) Arians to be reckoned with, but the old Melitians. In 306, during the Galerian persecution, Meletius, bishop of Lyceopolis, separated from Peter of Alexandria on the ground that Peter's treatment of the lapsed was too mild (E. Schwartz, in O.C., 1901, p. 363). Meletius continued the controversy about the episcopate of Alexander. The Council of Nicaea endeavoured to heal the breach, but the election of Athanasius seems to have widened it; indeed, Gwatkin (Ar. 60, note) thinks it probable that the Melitians elected a candidate of their own, one Theonas.

Athanasius' career as bishop falls into three periods: (a) 328–345, the double contest, personal with the Melitians, doctrinal with the Arians; (b) 348–356, the steady growth of his influence over Egypt, and the decline of Arian power in that country; (c) 357–373, the contest with those who denied the Divinity of the Spirit, and the reconciliation of the old Conservatives of the East to Nicene orthodoxy.

(a) First period (A.D. 328–345).—During the first period the battle waged by Athanasius against Arianism was confused with personal issues. The Melitians worked for his deposition, because he was a strong man and not their own candidate; the Arians aided them, because he was known as an opponent of Arius, and his conduct made his rule to be oppressive, and accused him of violence, and even of murder. At the Council of Tyre in 335, in which several Arian sympathizers took part, Athanasius was deposed. He appealed to Constantinople, but the Emperor compromised the dispute by sending him into honourable banishment to distant Tréves. He returned at the accession of Constantius for a troubled period of sixteen months, but was expelled in Lent, 339, by the prefect Philippus, his enemies asserting that the sentence pronounced at Tyre was still binding. Gregory, a Cappadocian and (according to Epist. Euseyl. 4, 6) an Arian, became bishop. Athanasius fled to Julias, bishop of Rome, and after some negotiations was re-called by 343 by a Council held at Sardica (Soña, in Bulgaria), and was accused of heresy and schism in which he had been condemned at Tyre. The Eastern bishops, however, succeeded from the Council, and refused to receive Athanasius. The doctrinal question lay behind the personal. The result of the Council showed that the Western was in the main (though not Arian) certainly anti-Nicene. In 345 Gregory died, and Constantius conciliated Alexandria by allowing Athanasius to return to his see.

All through his period of exile Athanasius showed himself a true pastor to Egypt and Alex-
ATHANASIANS

i. REDEMPTION.—An account of Athanasius' theology begins naturally with his presentation of the doctrine of Redemption. Athanasius speaks of the death of a Divine Christ as 'the sum of our faith' (καθ' ἡμᾶς τῆς πίστεως, Incarn. 19; see, too, Orat. i. 34, where the same term is applied to the doctrine of the threefold name into which Christ is said to be divided); for, after showing the proofs of Godhead from His works, He next offers up His sacrifice also on behalf of all, yielding up His Body and Blood in the steadfastness of His Body, that, firstly, to make men quit and free of their old trespasses, and, further, to show Himself more powerful even than death, displaying His own body incorruptible, as firstfruits of the resurrection of all (Incarn. 29).

In all references to Redemption, Athanasius gives an important place to the thought that Christ delivered mankind from physical extinction. Adam and Eve were 'by nature corruptible, but destined by the grace which followed from partaking of the Word to have escaped their natural state, had they remained good' (Incarn. 5).

They fell, however, and so corruption remained with them; the rational man made in God's image was disappearing (ἀναπαράστασις, Incarn. 6) by a gradual course of deterioration. So the Word by whom man was made came into the world by the Incarnation in order to re-make man, that God's purpose in creation might not be disappointed. The mere coming of the Word in a human body availed in one aspect to save man. Human nature could not finally perish, seeing that the Word united Himself with it.

But a further work remained for the incarnate Word. Death, owing to God's sentence against Adam, had acquired a certain authority; this authority, however, was exhausted by the Passion of Christ (παραπτώματα τῆς ἑγκατάλειψεν ἐν τῷ κρατήρι σώματι, Incarn. 8). This annulment of Death was demonstrated by the Lord's resurrection with an incorruptible body, and those who believe in Christ know that they themselves have become incorruptible through the Resurrection (Incarn. 27).

In connexion with this annulment of the authority of death, the death of Christ is spoken of by Athanasius as a sacrifice or offering (θυσία, προσφορά, Incarn. 10); yet whether to God or to the Divine justice he does not say.

By offering unto death (καὶ ἂνθρωπος) the body He Himself had taken, as an offering and sacrifice free from any stain, straightway He put away death from all His peers by the offering of an equivalent (καὶ εὐθὺς θεοῖς, Incarn. 24). In another passage Athanasius uses the forensic analogy, yet without definitely saying that Christ's death was a satisfaction of Divine justice by a substitution. His statement follows Scripture closely:

Formerly the world was under the dominion of Law, but now the Word has taken on Himself the condemnation (τό κρίσις), and, having suffered in the body for all, has bestowed salvation upon all (Incarn. 14).

But these statements are general; so far (says Robertson, p. 115) as Athanasius works out the doctrine of redemption in detail, it is

under physical categories without doing full justice to the ideas of guilt and reconciliation, of the reunion of will between man and God.'

On the other hand, Athanasius loves to dwell on the spiritual implications of mankind's fall brought through the Incarnation, and the restoration thereafter to man of the lost Divine likeness (Incarn. 14, 15).

If Athanasius does not attain to the Scriptural fulness of the doctrine of Redemption yet his teaching as to the Incarnation and the Passion is Scriptural in its grandeur. He seeks to express what he finds in the Scriptures, and sums up the teaching of many passages in one terse phrase of his own. Regarding the purpose of the Incarnation, his summary is: 'He was made man that we might be made Divine' (ἰδον ἐνθρόνωμεν, Incarn. 54; cf. Orat. i. 39). Any other attempt to summarize the work of the Incarnate Word is renounced by Athanasius.
In a word,' he writes, 'the achievements of the Saviour resulting from His becoming man are of such a kind and number that, if I wished to enumerate them, he may be compared to men who gaze at the expanse of the sea and wish to count its waves.' (Iohann., 31.)

In the ORATIONS. SOY.—Athanasius is best known for his defence of the Godhead of the Son. His older contemporary Arius challenged the whole Christian world by the answer which he gave to the question, In what sense is Jesus the Son of God? For he, it appears, wished to introduce a new doctrine of the Divine unity, and at the same time the doctrine of the personality or separate existence of the Son. Lest he should confound two Gods, he treated the title 'Son of God' as honorific only. Accordingly to Arius, the Father, therefore not eternal, or unchangeable, but a creature (kuros), yet unique among the creatures. The Son as so was later than the Father, therefore not eternal, therefore not God but a creature. This bold logic involved Arius in a great contradiction. Beginning by laying his argument on the title 'Son of God,' he ended by emptying the title of all meaning. The Son was not a Son, but only a favoured creature of God.

The doctrine of Arius is easy to state, for it was only a theory of some conceiving of as limits, but not of the doctrine of Athanasius. It is true, indeed, that Athanasius accepted from the first the Nicene Creed and defended it to the last. Negatively, in agreement with its anthropomorphism, he contradicted the favourite Arius formula, he who is spoken of in the 'book of the ages' etc. Positively, in loyalty to the terms of the Creed, he taught that the Son was born εκ της ουσιας τοι Πατρι, and that He is θεονομος τω Πατρι. But these two last watchwords of orthodoxy were not the invention of Athanasius; nor were they, in their orthodox sense, of Eastern origin. Neither Athanasius nor any other Eastern received them without allowing his thought to play round them and put them to the test.

When we turn from the acknowledged fact of Athanasius' acceptance of the Nicene Creed to study his own works, we are met by two important facts; (1) Athanasius does not restrict himself to the Nicene watchwords, but (2) on the contrary he uses a great variety of language in order to assert the true Deity of the Son. His language is, in a word, a language through which we might perhaps make our way more easily, if we could be sure of the dating or at least of the order of his works. But much remains uncertain. The two apologetic works (c. Gentiles; de Ineuneratione) are usually assigned to his earlier period, but it is not at all certain that this is so; but, as Loofs points out, the same kind of evidence might be urged in favour of a similar dating of some of the Festal Letters. The important Orations c. Arius are assigned by the Benedictines to c. 328 A.D. The short Exposition Fidelis contains no certain indication of date, though it is important to know at what period Athanasius made use of the rather surprising language found in it. If, however, we may accept in general the Benedictine dates in addition to Loofs' early date for Orations, we may say that his latest works Athanasius seems to hesitate less to use and defend the special term θεονομος than in the early work. To this extent there seems to have been a development in Athanasius' teaching.

In his early works, however, far from confining himself to the watchword θεονομος and to the language of the Nicene Creed in general, Athanasius allows himself great freedom, and not seldom seems to avoid θεονομος. Thus in Exposition Fidelis (§ 1) he writes: Των αυτης υς των δωρεαν εικονα τον Πατρι, ου και ιλαρον ("Very Son ..."), while later in the section he uses even θεονομος τω Πατρι ("like to the Father"), the formula adopted by the Homilies in A.D. 330-330 (de Syn. 30) for regarding the issue. In Orat. i. 40, in arguing with his opponents he uses for the name θεονομος a compound word, the formula of the fourth council of Sirmium (de Syn. 8), and in iii. 11 he similarly employs θεονομος και ουσια, a variant of θεονομος. These, no doubt, were intended to be only approximations to θεονομος, but the name θεονομος may be adopted. Thus that in i. 58, where he seems to aim at full and explicit statement, he gives not θεονομος but της του Πατρος ουσιας θεος και θεονομος. In Orat. iii. 1 he writes, in almost untranslatable phrase, αθεονομος δε θεοτοκος τοις τοις θεονομος, 'The Son is the completeness of Divinity and of Humanity.'

Similarly Athanasius seems often to avoid the Nicene [γενετήτα] εκ της ουσιας τοι Πατρι. In the Orations (cf. de Decr. 26; de Syn. 35) he gives θεονομος γενεται της ουσιας της Πατρος. ('proper offsprings of the essence of the Father'). For ουσια, 'essence,' 'substance,' Athanasius sometimes prefers φως, 'nature.' Thus he writes των Μονογενής τοι Ουσίων το εικόνωσις τη φως (Omnin. traditio, § 3), and η φως μια και αληθερη (§ 5). It is clear that Athanasius recognized that the terms ουσια and θεονομος raised few real difficulties. He seems indeed to have been disposed to many thoughts of that which is material, while θεονομος suggested some previously existing ουσια in which both Father and Son shared as brethren (cf. de Syn. 51). Consequently Athanasius received the term only after these two terms had first been used by the Nicene Council, and only for the purpose which the Council had in view. He contended so long not for the un-Scriptural word θεονομος, but for the official condemnation of Ariasism which it registered.

The Bishop of Alexandria 'were compelled (ψιθομανος) to gather once more from Scripture the general sense (τον εικονου), and to write that the Son is of one substance (θεονομος) with the Father' (de Decr. 20; cf. de Syn. 42). But he shrank from attempting to tie this truth to set phrases.

The more I desired to write,' he says, 'and endeavoured to force myself to the following words, the Divine language seemed the more the more I felt the knowledge thereof withdraw itself from me; and in proportion as I thought that I apprehended it, so much more I perceived that speech did not suffice to enable me to express in writing even what I seemed myself to understand; for it was as if I wrote a word unequal to the imperfect shadow of the truth which existed in my conception' (Historia Arianorum : Epistolas, § 1)

Athanasius' own doctrine is best described as a direct and complete repudiation of the teaching of Arius. He denies σωρειτος all Arius' propositions, holding that the Christ of Arius could not be the Saviour of the world. Athanasius maintained that the Son is Divine, because He is the true Son of God (εκ της εικονας ζωη και φως απαντησεως, de Syn. 42). But he shrank from attempting to tie this truth to set phrases.

The more I desired to write,' he says, 'and endeavoured to force myself to the following words, the Divine language seemed the more the more I felt the knowledge thereof withdraw itself from me; and in proportion as I thought that I apprehended it, so much more I perceived that speech did not suffice to enable me to express in writing even what I seemed myself to understand; for it was as if I wrote a word unequal to the imperfect shadow of the truth which existed in my conception' (Historia Arianorum : Epistolas, § 1).

Athanasius' argument for the Divinity of the Son may be stated under five heads. (1) He argues from the notion of a Trinity (τριαδος) that it is folly to suppose that it is partly created and partly uncreated, in part eternal and in part not eternal (Orat. i. 18). (2) He identifies the Son with the Word (Αγως, Orat. i. 28), and urges that the Son must be eternal, because the Father can never have been without His Word or Reason (Αγως, Decr. 15). (3) He appeals to the Divine works of the Son, namely, Creation (Orat. ii. 22) and Redemption (Iohann. 20). (4) By a copious use of Scripture, and particularly of the Fourth Gospel and the Epistle to the Hebrews, he shows how great is the difficulty of reconciling the Arian theory of the Person of Christ with the language of Scripture. (5) Similarly, he shows that the Christian consciousness demands a Divine Christ (Χριστος, το υπερ ζεμα, & Αοριστος, Χριστος εν εμει, Orat. iii. 2).
careful exegesis of the chief passages of Scripture which they quoted in defence of their views. The passages are collected and discussed in Orat. i. 37—iii. 58. They may be classified under various heads. Some of them seem to speak of the Son as a creature, e.g. 1 Thes. 2:8 (κοσμηματικος, LXX), He 3:2 (ὁ υποστασις της καταρας) and other passages from a lower state, e.g. Ph 2:6, 10; Ps 45:7; others of His entire dependence on the Father, e.g. Mt 11:28; others of His progress in knowledge or of His ignorance, e.g. Mk 13:32, Lk 2:40; others of His public life, e.g. Mt 9:36. Others again seem to draw a line of separation between a limited, human nature, e.g. Jn 17. On the whole, it must be said that Athanasius shows a great grasp of Scripture, and that his interpretations are sounder than those of his opponents. Most of the passages cited above he understands in the light of the main doctrines of Christ, limiting the Arians that their objections are really objections to the Incarnation itself. The passages which refer to advancement he explains less convincingly as referring to the exaltation of human nature through union with the Word by the Incarnation.

iii. Christ’s Human Nature.—The Union of the Two Natures in Christ.—Though Athanasius’ language is not that of the Chalcedonian definition or of the Quicunque vult, he maintains the true manhood and the true Godhead together with the true union of the two natures in Christ. The apparently Nestorian language of such a passage as Exposicio Fidei, § 1 (των ημιερων ἀνθρωπων ἀνθρωπων Χ. Θ. Ν. ώς ἀνθρωπων... ἀνθρωπων καὶ θεων), has to be judged in connexion with other statements of a different form.

1. He became man; he did not merely enter into a man (Orat. iii. 30). ‘It behoved the Lord in putting on man’s flesh to put it on in its completeness with his own persons’ (κατὰ τὴν Ἰδων ἀνθρωπίνην ἀνθρωπόν ἄνθρωπον Ἰσραήλ. Orat. iii. 33). ‘They [truly] confessed that the Saviour had not a body without a soul, nor without sense organs and other things, yet united in this the Salvation Man himself, a salvation of body only, but of soul also’ (Antich. i. 11). ‘If the works of the Word’s Godhead had not taken place through the body, man had not been defined; and again, if the things proper to the flesh had not been predicted of the Word, man would not have been completely delivered from them’ (Orat. iii. 33; cf. 32).

iv. Divinity of the Holy Spirit.—The Fathers of Nicæa contented themselves in their Creed with the brief clause, ‘and in the Holy Ghost’; they added nothing regarding His Person or office. One writer describes the Holy Spirit as an ‘exhalation’ Athanasius kept himself within the limits thus laid down. Though he was engaged in contending for the full Divinity of the Son, though in this context he often uses the Trinitarian baptismal formula and the word ‘Trinity’ (τριάδος), he does not attempt to complete formally his doctrine of the Trinity by extending or adapting to the Spirit the Nicene definitions which asserted the Divinity of the Son. Perhaps he realized that, when the doctrine of the Godhead of the Son was accepted, the acceptance of the Godhead of the Spirit must follow as a consequence.

In the Epistles ad Serapionem, written some time after A.D. 356, Athanasius begins to speak fully of the Divinity of the Holy Spirit. He learned that certain of the Arians were teaching that the Holy Spirit is a creature, one of the ministering spirits, superior to the angels only in degree (βαθύνος, Ser. i. 1). It appears also that there were others who disagreed with the Arians as to the Deity of the Son, but were content to regard Him as at least a God, a creature, one of the ministering spirits, superior to the angels only in degree (βαθύνος, Ser. i. 1). It appears also that there were others who disagreed with the Arians. In the Epistles ad Nicæans, the Holy Spirit is not a creature or a being (ὑποστασις, Ser. i. 29). Athanasius unfolds his doctrine of the Holy Spirit in his Epistles to Serapion, much as he develops his teaching on the Son in the Orations. (1) He maintains that the Trinity must be a real (τελειος) Trinity, in which no creature is included (Ser. i. 9, 17, 29, 58; iii. 7). (2) He asserts that the work ascribed to the Spirit implies His Godhead. Thus he asks: ‘Who shall unite (συνδέσεις) you to God, if ye have not the Spirit of God Himself, but the Spirit of the creature?’ (τὸν πνεύματος, i. 29; cf. i. 6). He carefully distinguishes passages which speak of the Spirit as a creature (κοσμηματικος), and rejects the Arian interpretation of them (i. 3, 4, 10), pointing out that πνεύμαta anathymous does not mean the Holy Spirit (i. 4, 9, in reference to Am 4:13; τὸν πνεύματος). Because, he explains, not two but one and the same person, e.g. the Father, the Word, and the Holy Spirit (i. 28). If his opponents point to passages (e.g. 1 Ti 5:23) in which only two Persons of the Trinity are mentioned, he answers that the Trinity is indivisible (διαλογικος) and united within itself, so that, when one Person is mentioned, the other Persons are understood (i. 14). He accepts fully the doctrine of περιϕερειας, ‘circumincision’, based on Jn 14:17 ‘I in the Father and the Father in me.’

Therefore also, he writes, ‘when the Father gives grace and peace, the Son also gives it, as Paul signifies in every Epistle, writing, Grace to you and peace from God our Father and the Lord Jesus Christ’ (Antich. iii. 11).

Athanasius avoids applying directly to the Holy Spirit the contested word διάκονον, except in a very few places (e.g. Ser. i. 27).

He writes: ‘It is sufficient to know that the Spirit is not a creature (i. 17).’ He explains Spirit as ‘unity’ (πυρηνα, ἐν την Μορφή τοῦ Θεοῦ) and the Father’s essence is not a creature, but ὑπόκονον τοῦ Θεοῦ, so neither would the Holy Spirit be a creature, because His is proper to the Son (ὁ ἐκ τῆς Θεότητος ὑπόκονον του Ανθρώπου). That, and immutable and unchangeable (ἐκτενεστως καὶ ἀνάλογως, Ser. i. 26). Usually, however, he asserts the deity of the Spirit through His relation to the Son.

If the Son... (i. 9). He does not ask if His Father’s essence is not a creature, but διάκονον τοῦ Θεοῦ, so neither would the Holy Spirit be a creature. His is proper to the Son (ὁ ἐκ τῆς Θεότητος ὑπόκονον του Ανθρώπου).

v. Procession of the Holy Spirit.—Athanasius can hardly be said to have a doctrine of Procession. He approaches it in Ser. i. 15, where he represents his opponents as saying: ‘If the Spirit is not a creature (i.e. as we hold), but proceeds from (ἐκ) the Father (i.e. as ye hold),’ Cf. i. 33, ‘Who deny that the Spirit (ἐκθετο) is from (ἐκ) the Father in the Son.’ But if this seems to attribute to Athanasius the doctrine of Procession from the Father alone, Athanasius himself (Ser. iv. 4) describes the Son as ‘the Word, by which is proper to the essence of the Word,’ so that the two passages taken together supply evidence that Athanasius approximated to the Western doctrine of Procession from the Father and the Son. The same might be said of de Incarn. cf. Arrian. i. 9. ‘David (a reference to Ps 36) knew that the Son, being with the Father (παρα το Θεος ὑποτελος) is the source (ἐκ τοις πνευματις) of the Holy Spirit, but the genuineness of the passage is highly doubtful (Stückelen, p. 63 f.).

On this mysterious subject Athanasius does not forsake his custom of keeping as closely as possible to the language of Scripture. ‘The Son is the Son of God,’ he says, ‘and the Holy Spirit is the Holy Spirit, and not the offspring (ἐγεννημα) of the Father’ (Ser. iv. 4). He doubtless prefers to speak of the Procession in Time: ‘The Spirit who proceedeth from (παρα, Jn 15:26) the Father, and, being proper to the Son, is given by Him to the disciples and to all that believe on Him’ (Ser. i. 2).

vi. The Trinity.—Athanasius is clear and express in his teaching that the Trinity is one in nature and cannot be divided (Orat. iii. 15; Ser. i. 2), but he is less precise in his doctrine regarding the nature of the (personal) distinctions within the Godhead. He writes with severe restraint, keeping himself as far as possible to the words of the...
ATTHAPSCANS—THEISM

Baptistical formula (Mt 28:19) and the Pauline benediction (2 Co 13:11). Indeed, ‘Person’ is not one of Athanasian theological terms; the phrase είς τούς δύο τερατομενά ἐκ τοῦ θεοτόκου (de incarn. et c. Arianos, 10), ‘one God in three Persons’ (or ‘Subsistences’), belongs to a passage of highly doubtful authenticity. In de Syn. 36 he reckons the phrase τρεῖς υπόστασεις among the un-Scriptural phrases used by his opponents. It is true, indeed, that once (Omnia trident, §6) he uses the term much as Westerns use it:

‘For the fact of those venerable living creatures (Is) offering their praises three times, saying, “Holy, Holy, Holy,” proves that the Three Subsistences (εις τρεις ιωσταις, if the text be sound) are perfect, just as in saying, “Lord,” they declare the Divine essence.

In the Expositio Fidei, however, he points out the danger which lurks in the term:

‘Neither can we imagine three substantias (Persons) separated (μετεπαρεμελημένα) from each other, as results in the case of men from their bodily nature, lest we hold a plurality of gods like the heathen’ (§2).

Accordingly Athanasius never makes τρεῖς ιωστασεις a test of orthodoxy, and in his later years he tells the Antiochenes (Antioch, 5, 6) that he received those who professed belief in τρεῖς ιωστασεις (meaning three ‘Persons’) on condition that they in their turn received those who confessed μία ιωστασα (meaning one ‘Substance’). Indeed ιωστασεις, a synonym of οὐσια in the Nicene anathematism, could never become fixed for Athanasius himself to the meaning ‘Person,’ though he might tolerate the innovation in others. Sometimes Athanasius writes simply ἄλλος ἄνθρωπος, ἄλλος θεός (cf. Orat. III, 4), and similarly, ‘The Father is Father, and the Son Son’ (Orat. I, 2).

Conclusion. — Looking at the teaching of Athanasius as a whole, we see that it was shaped with a practical aim, and that it was expressed as little as possible in set theological terms. The profound mind of Athanasius realized that Christian truths strain to the breaking point the formulae in which men strive to express them. He invented no theological terms himself, and if in his later writings (from de Decretis onward) he strammly defended the θεοσωφία of the Nicene Council, this defence was justified by an experience of many years that in his word, and even in his action, he was the ‘pillar of the church’ (ἐκτριβείας) against Arian error (de Syn. 45).

LITERATURE.—I. Arianism. —The works of Athanasius printed in Migne, PG, xxv.-xxviii., with these works are associated a number of contemporary documents of great value. To these must be added the Pastoral Letters (almost wholly lost in Greek, but edited in Latin with an introduction by W. Cureton, London, 1843). Though several doubtful or spurious works are included in Migne, yet enough remains which is certainly genuine to yield a complete account of his life and of his teaching. Athanasius’ writings (‘Panaphilicon,’ as E. Schwartz calls them) illustrate in a living way both the vicissitudes of his own life and the controversy with his contemporaries. (The later writers, Eunapius, Sozomen, and others tell us little in addition that is trustworthy, and, moreover, manifest much which is in direct opposition to Athanasius’ writings.)

Information with regard to the MSS. of the works of Athanasius is to be found in JTS, Ill. 37-41, 245-252, two articles by F. Wals, supplemented by notes by A. Robertson, and C. H. Turner; also in JTS, v. 105-114, notes by Kirsopp Lake; JTS, v. 600-603, note by C. H. Turner, calling attention to G. Bertolotto’s art in the Atti della Societa Ligure di storia patria, 1895, pp. 1-48.

Bp. Wals’s work has been used and supplemented in the valuable account of MS given by E. von der Goltz in his ed. of Athanasii de Virginitate, Leipzig, 1865 (=TV, new ser. xiv. 29).

ATHEISM.

Buddhist (L. de la Vallée Poussin), p. 183.

ATHEISM AND ANTI-THEISTIC THEORIES. — Introduction. — Atheism is sometimes said to be equivalent to panpsychism, i.e. the doctrine that the universe consists of nothing but those physical and psychical existences which are perceptible by the senses or are cognizable by the imagination and finite understanding. Panpsychism, however, is a positive doctrine, while atheism, both by etymology and by usage, is essentially a negative conception, and exists only as an expression of the negative sentiments of those who deny the existence of a God. There is, therefore, the belief that all the entities in the cosmos, which are known to us through our senses, or are inferred by our imagination and reason, are dependent for their origin and for their continuance in existence upon the creative and causal action of an Infinite and Eternal Self-consciousness and Will; and in its higher stages it implies that this Self-existent Being progressively reveals His essence and His character in the ideas and ideals of His rational creatures and the world of which they are a part. In its earlier stages atheism conceives of God simply as the Cause and Ground of all finite and dependent existences; but as it develops, it realizes the idea of God as immanent and self-manifesting as well as creative and transcendent. Until it attains to this consciousness of felt personal communion with the immanent Cause and Ground of the universe, it is more appropriately described as deism.

As was said above, atheism presupposes the existence of theism. It can hardly be said to arise until the human mind has formed the conception of a Unitary Self-existing Cause on whom all things and persons depend, and to whom the sentiments of reverence and awe are directed. Anthropology shows that long before the idea of One Infinite Supreme Being is reached, uncivilized races, through the experience of gods and supposed ghosts, as well as through the intuitive judgment that in the universe there is some godhead, that the human volitions are the manifestations of wills resembling their own, come to believe in the existence of superhuman beings who act for or against human welfare, and are thus the objects of worship or of fear. But along with this conception of a variety of finite superhuman personalities there dawns on the more advanced minds of savage peoples, through the intuitive idea of infinity, the felt Divine authority of conscience, and the gradual
intellectual perception of a pervading unity behind all the changing phenomena of nature, the conception of One Supreme Spiritual Reality who is the component Cause that originates and controls all the forces of nature, and in varying degrees manifests Himself within the human soul.

It is not till this theistic idea is to some extent present that real atheistic negation becomes possible. It is not till a Greek can believe in one or all of the deities of his national pantheon, he would not necessarily be an atheist; for it often happened that this scepticism, which the vulgar called atheism, arose simply from a more or less clear apprehension of the One supreme object of worship. Max Müller well says in his Gifford Lectures on Natural Religion (p. 228):

"We must remember that to doubt or deny the existence of Indra or of Jupiter is not, Atheism, but should be distinguished by a separate name, namely, Adefism. The early Christians were called Anek, because they did not believe in the Greeks believed or as the Jews believed. Spinoza was called an atheist, because his concept of God was wider than that of Jehovah; and the Reformers were called atheists, because they would not defy the mother of Christ or worship the Saints. This is not Atheism in the true sense of the word; and if an historical study of religion had taught us that the God of those who do not believe in our God are not therefore to be called Atheists, it would have done some real good, and evidently be an auto da fé!"

Atheism, as we have seen, is not, like theism and pantheism, a positive belief the phases of which can be depicted in their relation to one unifying conception. It has no organic character. This history of little more than five centuries of the Instance in which doubt and negation in regard to some essential element in theism have arisen. And the occasion and cause of this atheistic frame of mind will generally be found in some new scientific or philosophical ideas, which have, for the time being at least, appeared to us to conflict with the current form of deistic or theistic belief.

The following lines of scientific and philosophical speculation have been especially influential in calling forth atheistic protests against theistic belief.

1. **Materialism**, or the theory that matter and physical forces constitute the ultimate reality of the universe, and that, through the aggregation of the elements of matter in various organic forms, life and the infinitely varied forms of consciousness have originated. Another line of speculation which has largely confounded with materialism and containing religious belief is the doctrine of **sensationalism**, which originated early among Greek thinkers, and which the genius of our philosopher, John Locke, presented in so plausible a form that both in this country and in France it led to much atheistic negation. Locke himself was a devout theist; for though, according to his usual theory, all our ideas are derived from sensations or from reflection on sensations, he still held that the human mind is compelled to postulate an adequate creative cause for all material and psychical existences. Had Locke, however, carried out his sensationalism to its logical results, it would have had him, as it led many sensationalists in France, to an atheistic conclusion. If all our ideas arose out of sensations, we could form no conception either of an infinitely intelligible God, or of ultimate causation, or of that absolute moral imperative which has been to Kant and to several other thinkers the main foundation of theism. A third source of atheistic doubt, and one which has been strongly operative since Evolution has been generally received as the method of Nature, is the **disturb of the argument from design**—an argument which, ever since the time of Anaxagoras, has been one of the chief supports of theism. This argument appears, however, to be recovering its former position in the scientific world. Fechner and other scientists have admitted that, when account is taken of the process of evolution as a whole, "it is necessary to remember that there is a wider Telos which is not touched by the doctrine of Evolution, but is actually based upon the fundamental proposition of Evolution (Huxley, *Critiques and Addresses*, 1873, p. 305). See art. Design.

Among the intellectual causes which have led, not indeed to atheism but to extreme agnosticism, is the doctrine of **natural theology**, or the notion of the mind of God, when carried to such length as it has been by the Greek sceptic Carneades, and by recent thinkers such as Mansel and H. Spencer, precludes all insight into the essential nature and character of the ultimate cause and ground of things. This complete negation of a God has been ably criticized by Calderwood in *The Philosophy of the Infinite*, and by Martineau in several of his philosophical Essays and Reviews.

2. **Criticism of atheistic materialism.**—Of the alleged reasons for rejecting theism, materialism has been, and still is, the most influential. It is the basis of much of the earliest atheism, and also of the recent atheism which appears in the writings of H. G. Atkinson,Bradbaugh, Böehner, and Haeckel. For this reason it seems desirable, before presenting a brief sketch of the present and recent instances of atheism, to state what appear to be the most potent answers given by theists to the arguments for materialistic atheism.

Idéalists, as their name implies, make the work of materialism, for they say that imagination is that matter and force have no existence apart from the sensations and ideas in self-conscious minds. Most theistic writers, however, hold that the experience of resistance to our volitional efforts justifies the conviction that entities exerting energy exist independently of perceiving minds. But while the theist maintains that these entities depend for their origination, their continuance in existence, and their special properties on the creative activity of an Infinite and Eternal Self-consciousness and Will, the atheist maintains that matter is the ultimate and self-existent reality, that in virtue of its modes of motion and the properties which intrinsically belong to it, it can, when its elements are aggregated in certain ways, manifest life and, in the case of the highest organisms, all the forms of personal consciousness and volition.

Perhaps the most conclusive reply to the atheism which asserts that out of uncreated matter and energy all that we know of life and consciousness has been evolved, is based on the recognized principle that no effect can contain more than is contained in the ground and cause from which the effect has proceeded. The American writer Dr. M. J. Savage thus expresses himself on this point:

"If you can prove to me that 'dead' matter, the matter we find in a brick or a piece of marble, under some mysterious transformation come to have the power to live, to think, to feel, to love, to hope, to sacrifice itself for another, to aspire, to look onward towards an immortal life—if you can prove to me that matter can do that, you have simply changed your definition of matter, and made it coincide with what I call spirit. (Belief in God, Lond. 1831, p. 49.)"

Haeckel would probably reply to this by saying that in his view the elements of the ultimate and self-existent 'Substance,' out of which the universe arises, have their psychical as well as their physical side or aspect, and that it is owing to the former aspect that organic compounds of matter become capable of feeling, thinking, and acting. Do we, then, mean that the higher attributes of mind are already implicit in the ultimate eternal 'Substance,' out of which, by condensation or otherwise, that which we call matter, energy, and life proceeds? Is the perfection of all human ideals already present in some mysterious invisible primeval emanation, in 'the Infinite and Eternal Energy,' which is H. Spencer's mode of describing Haeckel's ultimate 'Substance'? If so, the self-existent 'Substance' is nothing less than the theist's Eternal
ATHEISM

God; and the molecular corpuscles are simply variously limited modes which the will of God imposes upon a portion of His own eternal life, or, as Lotze and Natorp would say, are differences in the constitution of individuals or attributes of His own essential being, to which He delegates some measure of individuality or selfishness. In each of them the Ground and Cause of all created things and persons is immanent and active, and through this creative principle they all bear the marks and hallmarks of life and development of the creatures whom He calls into existence. If it were true, as Tyn dall said, that 'in matter are the promise and potency of all terrestrial life,' that could be the case only in the sense that in the ground and cause of each molecule there are already involved the energy, all the intellectual, moral, and spiritual powers and ideas, which are gradually evolved in the course of the development of the cosmos. The fallacy in Haeckel's 'Weltanschauung' is that, though he gives to the separate molecular corpuscles out of which the universe proceeds a mental side, a germ of consciousness, there is nothing in his account of these elements of matter and energy which at all explains how it comes about that all these immaterial corpuscles conspire together to produce the present harmonies and alignments of things. As Haeckel himself says, there should at length become cognizant of those authoritative ideas which prompt them to subordinate their own personal aims to the general good, and which enable them in a measure both to see and to act from the point of view of the immanent soul. It is this realization of the consciousness, the creative presence of the source of ideas throughout the course of evolution that Haeckel's theory, no less than the theories of closer materialists, must be condemned as unsatisfactory. It fails to show how these ideas, if they represent the cause and ground of all things, contains within itself the power to produce the effects which we experience in ourselves, and which we discern in the cosmos.

So eminent physicists and philosophers, including Sir Oliver Lodge, Professor J. H. Poynting, and Professor James Ward, have recently assailed materialism on the ground that the mechanical and chemical movements which matter exhibits in its inorganic condition appear to be quite different from the action of matter in the case of living organisms.

'Matter,' says Sir Oliver Lodge, 'possesses energy, in the form of persistent motion, and it is propelled by force; but neither motion nor force is in the power of guidance of a will or control. Energy has no direction power; this has been elaborated by Croll and others—see, for instance, Nature, vol. xlvii, p. 434—thirteen years ago, under the heading, "Force and Determination." Inorganic matter is impelled solely by pressure from behind, if not influenced by the future, nor does it follow a preconceived course nor seek a predetermined end. . . . the essence of mind is design and purpose. There are some who deny that there is any design or purpose in the universe at all, but how can that be maintained when humanity itself possesses these attributes? It is not more reasonable to say that, just as we are the centres of the power of guidance in ourselves, so guidance and intelligent control may be an element running through the universe, and may be incorporated even in material things?'' (Lodge, Newcastle Journal.)

The celebrated astronomer Laplace maintained that a Perfect Calculator, who for a given instant should be acquainted with all the forces by which it is animate and with the several positions of the beings composing it, if, further, his intellect were vast enough to submit these data to analysis, would include in the masses of the constituents of the largest bodies in the universe and those of the lightest atom. Nothing would be uncertain for him; the future as well as the past would be present to his eyes' (see Ward, Naturalism and Agrarianism, i. 41).

Professor Poynting pertinently asks whether the 'Perfect Calculator' would find all his predictions verified as his atoms (see ATOMISM) came in contact with living matter, and were themselves concerned with life.

'Suppose the man into whose brain the atoms entered were Napoleonic friend and chief, Napoleon. If the calculator took into account every atom in Napoleon's framework he would be able to calculate all the motions of Napoleon, all his actions on the similar surmise of the actions of atoms with equal success. Could the calculator foretell the eclipse of Waterloo as surely as the astronomer foretells an eclipse of the sun? Is man, in fact, from the point of view of a calculator, any more cognitive of the works he does, or of the conduct and behaviour as it would with the same neighbours were it part of a non-living system?'' (L.C., July 1903, p. 739.)

After having elaborately that there is contrast, rather than correspondence between physical action and mental action, Professor Poynting concludes as follows, and his testimony to the real freedom of the will is strikingly interesting and important, as coming from a high authority in physics and philosophy:

'I hold that we are more certain of our power of choice and of responsibility than of any other fact, physical or psychical. . . . it appears to us equally certain that there is no correspondence yet made out between the power of choice and any physical action, and there does not seem any likelihood that a correspondence ever will be made out. . . . holding this view, I am bound to say that the Laplacian calculator can be successful when he takes man and the mind of man into his calculations.66, p. 739.)

While Sir Oliver Lodge holds that the mind or will thus controls the atomic movements of the brain, he yet maintains that this power of guiding energy of the will can only operate upon the grosser atoms, not the more subtle. "Life," he says, 'is not a form of energy, but guides energy.' On this secondary question he appears to differ from some contemporary thinkers, who agree with Sir John Herschel that in a volitional act the will does originate some force, though it may be no greater than is required to move a single material molecule through a space inconceivably minute. 'It matters not,' says Sir John, 'whether the private mode in which this is performed. It suffices to bring the organisation of dynamical power, to however small an extent, within the domain of the personal will.' (Familiar Lectures on Scientific Subjects, p. 469.)

The difference between Sir Oliver Lodge and Sir John Herschel is of some importance in regard to the philosophy of religion; but it does not in any way affect the forces of the argument against materialism. Both authorities agree that mind or will controls and guides the atoms of the brain, and that, therefore, will cannot possibly be a mere attribute or accompaniment of the cerebral structure.

In connexion with the criticism of materialistic atheism, reference has to be made to two lines of argument which have often been employed by theists in the past, but which are now falling; and probably useless. One of these is the appeal to the inability of present science to prove the existence of any case of abiogenesis (q.v.), as if it afforded clear evidence of special Divine creation. But it is impossible to show that a natural passage from non-living to living matter has never taken place, or that it would not take place now if the fitting conditions for it could be reproduced. The argument from our ignorance is not conclusive; and probably most thinkers would agree with Sir Oliver Lodge that, 'though we do not know whether man can arise without the action of antecedent life at present, that may be a discovery lying ready for us in the future' (art. Life, in Hibbert Journal, Oct. 1905, p. 106). But if this discovery should one day be made, it would not at all destroy the force of the argument against materialism; for if under certain circumstances the elements of inorganic matter assume an organic form, and manifest psychical properties, that change can be accounted for only by assuming the presence in nature of a cause which exists in nature itself, and which is competent to confer on them, or to manifest in connection with them, the germs of that self-conscious and self-directing principle of life which
In regard to materialism and atheism there is a great contrast between China and India. The introspective and philosophic character of the Hindus led them to dwell especially on that Absolute Spirit or Self which they felt to underlie, and to reveal itself in, all finite personalities. In comparison with this infinite and eternal Being, the visible world appears to them as an illusory appearance. Hence in Hindu speculation, materialistic atheism plays but a small and inconspicuous part. In a prospectus of philosophical systems written by Madhavacharya in the 14th cent. A.D. (recently translated into English by Cowell and Gough, and published in "The Birth of Modern Philosophy," 2nd ed., Lond. 1894), there is mentioned as one of sixteen schools, including the Buddhists and Jains, a school called the Materialists, who denied the existence of the soul and God, and rejected the whole theory of karma and transmigration.

"These were known under various designations, and in the 14th cent. a.d. their ideas were fathered on a mythical age in the Madhavacharya, named Chiravaka. In their transmutation, they rejected the entire claims of the Brahmans. Matter was the only reality, and sense-perception the only form of knowledge. The pedagogical of their treatise book was written by Maheshchandra (probably Madhavacharya) (Indian)."

Atheism among the Buddhists as well as among the Greeks and Romans will be dealt with in separate articles following, and may therefore be passed over here.

3. Modern atheism.—Soon after the rise of Christian scepticism declined, and its place was taken by that eclectic blending of Platonic, Aristotelian, and Oriental ideas which flourished in Alexandria and exercised at times considerable influence over Christian thought. The influence of the Church, and the reverence for Aristotle's writings, as well as the absence of any vigorous interest in science, explain the fact that until the close of the Middle Ages atheistic speculation was to a great extent in abeyance. It was not till the Renaissance, when new scientific discoveries were made, and fresh principles of Biblical criticism began to be applied, that atheism again raised its head; and here, as in similar cases in India and Greece, the reputed atheism was in some cases genuine, but was more frequently a name applied to the theism or pantheism which was intellectually in advance of the theological thought of the time.

(a) Atheism in England and France.—It was not till the fifteenth century that materialistic interpretations of the universe began to show themselves in modern times. F. A. Lange, in his History of Materialism (vol. i. p. 229), mentions one isolated case in the 14th century—that of Nicolaus de Autricia, who at Paris in 1348 was compelled to make recantation of several doctrines, and among others this doctrine, that in the processes of nature there is no final liberation, nor any such thing as a final separation of atoms."

"Here," says Lange, "is a formal Atheist in the very heart of the domination of the Aristotelian theory of nature. But the same bold spirit ventured also upon a general declaration that we should put Aristotle, and Aversus with his, on one side, and apply ourselves directly to things in their true nature. That Atheism and Empiricism go hand in hand together! In reality the authority of Aristotle had first to be subdued, and men could attain to direct intercourse with things themselves.'"

The speculations which followed the incoming of the Copernican conception of the universe, such as those of Bruno and Vannini, were pantheistic rather than atheistic. In 1612, Galileo, then not till the first half of the 17th. cent., that the ripe fruits of the great enunciation of thought began clearly to present themselves. On the
materialistic side these fruits appeared in the writings of Bacon, Gassendi, and Hobbes, and, on the spiritualistic side, in the works of Descartes. The materialism of the former writers cannot be called atheistic, for the atoms as they conceived them, were probably a good many professors of materialistic atheism in this early part of the 17th century.

Père Mesmerne, a contemporary and friend of Descartes, makes the startling statement that there were in his time as many as 50,000 atheists in the city of Paris alone. It seems likely, however, that the majority of these were called atheists simply because they declined to accept any longer the authority of Aristotle. Descartes himself had been accused of atheism on this ground.

About this time there was much scepticism and speculation which came very near to atheism, but escaped it by an admission that was, no doubt, in some cases insincere, but in other cases genuine enough, to the national Church. Whether the attachment of Thomas Hobbes to his Juvenile Church was sincere has been questioned. His philosophy was thoroughly materialistic. He held that even human sensation is nothing but the motion of corporeal particles; but he sheltered himself from the charge of atheism by saying that, in the notion of the universe, he confined himself exclusively to the phenomena which are knowable, and can be explained by the law of causality. Everything of which we can know nothing he regards to theologians. The way in which Hobbes has interpreted religion for State purposes appears to render the genuineness of his theology very doubtful.

'He lays down the following definition, "Fear of power invisible, is the cause of religion," or imagination from tales published, allowed, Religion; not allowed, Superstition" (Lange, op. cit., vol. i. p. 255).

While both Thomas Hobbes and the other great English thinker of the 17th cent., John Locke, were attached to Christianity, and the latter no doubt most sincerely so, their writings had little effect in preparing the way for future manifestations of positive atheism. Both the materialism which formed the basis of Hobbes' sophistry, and his selfish system of morals, were quite uncongenial to theistic belief. And Locke's doctrine of the origin of all ideas in sensation, though its atheistic tendency was, as we have seen, neutralized by his reliance on a theory of the necessity of an adequate causal ground for the universe, and by his recognition of the validity of the teleological argument, yet really undermined the rational basis of theism, and when consistently carried out, it, in conjunction with Hobbes' materialism, was largely instrumental in bringing about the positive atheism which flourished in France towards the middle of the 18th century. What kept Locke and, indeed, most thoughtful persons in England from atheism during the 17th and 18th cent., was the indestructible principle thus enunciated by Locke:

'Whateverse is first of all things must necessarily contain in it, and actually have, at least all the perfections that can ever after exist; and can never give to another any perfections that it hath not actually in itself, or at least in a higher degree; it necessarily follows that the first eternal being cannot be matter' (cf. Flint, op. cit., p. 142).

It should be added that, as Dr. Flint aptly remarks, the absence in England of much positive scepticism and professed atheism during these two centuries is partly to be accounted for by the strong tendency at that time to believe that "the greater the number in the 19th cent., to refer theological insight and philosophical knowledge to two quite distinct sources. In § 1 it has been argued that in the above principle lies the most conclusive refutation of materialism and atheism. But though Locke built his own atheism mainly on this foundation, it is a principle which finds no justification in his own exposition of the origin of knowledge. It is a purely a priori conception and belief, such as are also the conceptions of moral authority and of immortality. Accordingly, when Locke's ideas were introduced into France in the 18th cent., this doctrine of the origin of all knowledge in sensation was consistently worked out, and led several thinkers to atheism. The belief in a separate and specially inspired source of theological truth had given place to a larger measure of acceptance among French thinkers; and hence what was simply new to materialism in London became often positive atheism in Paris. The physician La Mettrie, the author of L'Homme Machine (1748), was led, through observing in his own case the influence of the movements of the blood on the power of thought, to maintain that all thinking and willing have their origin in sensation. He admits that it is probable that a Supreme Being exists, but adds that, if so, it is a theoretical truth without any use in practice.

'For our peace of mind,' he says, 'it is indifferent to know whether there is a God or not, whether He created matter, or whether He is in any way directly active in the world; but a little further, in order to agree with a friend of his whom he represents as arguing that the world would never be happy unless it was atheistic' (Lange, op. cit., p. 75).

Lagrange, who gives an excellent account of La Mettrie's writings, remarks that 'La Mettrie's friend has only forgotten that even religion itself, quite apart from scepticism, must be based on natural impulses of man, and if this impulse leads to all unhappiness, it is not easy to see how all the other impulses, since they have the same natural origin, are to lead to happiness. In his treatises on L'Épistémée and L'Art de Jouir, La Mettrie seeks to justify the pursuit of sensual enjoyment in a manner which Ueberweg justly describes as 'still more artificially exaggerated than frivolous.'

About twenty years after the publication of La Mettrie's L'Homme Machine, appeared the work which is regarded as the chef-d'œuvre of French materialism. Its title is Système de la nature ou des lois du monde physique et du monde moral (1770). On its title-page it professes to be written by a M. de Mirabeau, who was a deceased secretary of the French Academy, but the real author was known to be Baron d'Holbach. Holbach's system, says Ueberweg, 'combines all three elements of the empirical doctrine, which (if I am not mistaken, have been collected, brought together, viz. materialism (La Mettrie's), sensationalism (Condillac's), and determinism (which Diderot had at length admitted).' In this elaborate treatise the atheism is most pronounced, so that when a translation of it was published in London by the secularists in 1859, it bore on its cover the title The Atheist's Text-Book. It directly attacks the existence of God, and traces the origin of religion to fear and ignorance. Holbach substitutes for God matter and motion. The work is highly rhetorical, and in parts quite eloquent. Its ethics resembles that of Epicurus. Like Epicurus, Holbach points to the pleasure and happiness which friendship and sympathy can impart, and reaches a code of morals which superciliously seems somewhat exalted. In his concluding chapter he says:

'He just, because equity is the support of human society. Be good, because goodness connects all hearts in admirable bonds! Be kind, because kindliness nourishes generosity! ... Forgive injuries, because revenge perpetuates hatred! Do good to him that injures you, in order to show them the moral order in which we are made a friend of him who was once thine enemy. Be temperate in thine enmoy, and chaste in thy pleasures, because voluptuousness beggareth weakness, intemperance engenders disease' (p. 513).

It is characteristic of this ethical theory, as of all sensational ethics, that the intrinsic grandeur
ATHEISM

and worth of all these virtues are undermined and destroyed by the egotistic motives to which they are referred.

Several of the French writers of this epoch show anti-theistic leanings, even when they repudiate atheism, such as Diderot, in his later life, Helvetius, Lalande, Marchal, etc. (see Flint's *Anti-theist, pp. 469-474*). The great astronomer Laplace is sometimes classed among atheists by some writers. Voltaire, reminded by Napoleon that in his treatise on *Mécanique Céleste* he had said nothing about God, he replied, 'Sire, I had no need of that hypothesis.' But it is quite possible that in this reply he meant simply that he could account for the celestial movement by the force of the universe and in the movement he may not have implied that these second causes do not demand for their existence a self-existent 'Cause of causes' (see § 1, above; and cf. Fiske, *Through Nature to God*, p. 141). It is related of David Hume that, with the aid of eighteen at the house of Baron d'Holbach, he expressed a doubt as to whether it was possible to find any person who would avow himself dogmatically an atheist. On which his host replied, 'My dear sir, you are at this moment still showing the age of seventeen such a new world.'

The greatest French writer, however, of this time, Voltaire, felt no respect for these sceptical or atheistic reasonings. That powerful and original thinker (like Locke in the previous century) saw that only by a spiritual First Cause could living and self-conscious beings be produced; and in the universe he saw such clear evidence of beneficent purpose that more than once in his writings he dwells eloquently on that old argument from design to which from the time of Anaxagoras and Socrates thinkers have constantly appealed, and which, as we shall afterwards see, the facts of evolution have by no means invalidated.

The materialistic atheism which flourished in France before and during the Revolution gradually decayed, owing partly to Kantian and Hegelien influence, and partly to that spiritual philosophy which was developed in France itself by Maine de Biran and Victor Cousin.

(b) German anti-theistic theories.—About a century after the advent of materialism and atheism in France there came into the German language as a result of the extreme idealistic thinking, but to a still greater extent as a reaction against it, a succession of anti-theistic writers of whom the latest, Professor Ernst Haeckel, is still exercising great influence, both in the Continent and in Britain. The first of these in date, Ludwig Feuerbach, began his intellectual career as an idealist. Along with the still more celebrated writer David Strauss, he came forth from the extreme left wing of the Hegelian school. Both of these thinkers found the supreme object of interest not in the Hegelian Absolute Spirit, but in human nature; and hence Feuerbach was a humanist like Auguste Comte rather than a materialist.

'In his view,' says R. H. Hutton, 'God is but the magnified image of man reflected back upon space by the mirror of human self-consciousness. As pilgrims to the Brook'n often observe, during an autumn sunrise, shadows of their figures enormously dilated confronting them from a great distance, bowing as they bow, kneeling as they kneel, mocking them in all their gestures, and finally disappearing as the sun rises higher in the sky, so the German Atheist maintains that in the early dawn of human intelligence, the human soul (as he understands it) was at first the god of himself, which has been childishly worshipped as an independent being and named God, but which must vanish soon ('The Atheistic Explanation of Religion,' in Essays Theological and Literary, vol. 1, p. 25. This article is an admirable exposition and criticism of Feuerbach's position.)

The traces of this novel idea appear in Feuerbach's *Essence of Christianity* (Das Wesen des Christenthums, 1841), by Miss Marian Evans (George Elliot) in 1854, which was reviewed in the before-mentioned article by R. H. Hutton, attracted much attention in this country. The feature in his thought which has led to his being classed among materialists is his doctrine that the soul is the sensation of the body.

'The body,' he says, 'is part of my being; say, the body is this totality, is my Ego.' Consistently with this view, he euphemistically rejected all belief in personal immortality.

Far more decisively materialistic than Feuerbach was Carl Vogt, who in his *Physiological Letters* (1845-1847) developed the ideas of the French author Cabanis (1798), and argued that 'thought stands from the same source as hunger, as the bile to the liver, or the urine to the kidneys.' In 1852 appeared Jacob Moleschott's famous work, *The Circulation of Life (Der Kreislauf des Lebens),* which maintains that all vital phenomena can be explained as a perpetual circulation of matter from the inorganic to the organic world, and then back again from the organic to the inorganic. This doctrine has recently been acutely criticized by Sir Oliver Lodge, who contends that the phenomena of organization and life demand their own satisfactory explanation, in the assumption that a higher principle, life, guides and controls the elements of matter and energy (see his article on 'Mind and Matter' in *HJ*, Jan. 1900). 'Without philosophus,' says Moleschott, 'there is no thought'; and he concludes that thought is a movement of the substance of the brain.

The book which in this materialistic and atheistic movement of the 19th century, had much the same position and influence as Holbach's *System of Nature* had in the century preceding, was Professor Ludwig Büchner's *Force and Matter* (Kraft und Stoff, 1855). Büchner was the first of those German materialists who afterwards came under the influence of Darwin's books on *The Origin of Species* (1859). He professed that he found in Darwinism the chief support of materialism, and in the later editions of his book he declared that the doctrine of Natural Selection had wholly destroyed the force of the teleological argument. His general inference is that—

'not God, but evolution of matter, is the cause of the order of the world; that life is a combination of matter which in favourable circumstances is spontaneously generated; that there is no vital principle, but non-vital forces, and consequently no immortality; that matter and movement proceed from life to consciousness; that there is no God, no final cause, no immortality, no birth or death of the soul' (Case, *Metaphysics*, in *E lite*, vol. xxx. p. 647).

Sometimes Büchner speaks of mind as an effect of matter, and sometimes as a movement of matter, and he uses these expressions indifferently. He does not regard the human mind as psychical activity as 'nothing but a radiation through the cells of the grey substance of the brain of a motion set up by external stimuli.' Büchner argues that his 'philosophic system, since it puts at its head not matter as such, but the unity and indivisibility of force and matter, cannot be described as materialism' (Last Words on Materialism, p. 273). But, as Professor Case points out, if a philosophy makes force an attribute of matter, as Büchner's does, it will recognize nothing but matter possessing forces, and therefore be not a materialism and monism, i.e. materialistic monism.

The most recent anti-theistic work of importance in Germany is Professor Haeckel's *Riddle of the Universe* (Die Welträthsel), of which there is an English translation, 'The Riddle of the Universe,' by Mrs. M. Cox (1896). The peculiar feature of Haeckel's theory is that, like the ancient Hylozoists, he represents the original substance as having a psychical as well as a physical side. Because of this he contends that his philosophy can be termed *materialistic monism.* He also holds that his doctrine mind is always spoken of as an attribute of body, and cannot be conceived to exist dissociated from matter, it would appear that his system, like
Bishop's, is fitly described as materialistic monism. Haeckel derives everything from an eternal primitive substance, which by condensation passes first into imponderable ether, and then by further condensation into the elements of ponderable matter. This eternal substance is God. His system bears somewhat the same relation to that of Comte as, so far as his monads possess the germs of perception and appetite. The souls of animals and men have no origin separate from that of their bodies. Sensation is the property of all matter. In plants and the lowest animals he considers sensation and will to be present, but only in a rudimentary and unconscious form. As to the point in evolution at which consciousness first clearly presents itself, he is not explicit.

'However certain,' he says, 'we are of the fact of this natural evolution of consciousness, we are, unfortunately, not yet in a position to enter more deeply into the question' (Haeckel, *Inside of the Universe*, p. 191).

On this Case makes the weighty remark: 'Thus in presence of the problem which is the crux of materialism, the origin of consciousness, he first propounds a gratuitous hypothesis that everything has mind, and then gives up the origin of conscious mind after all. He is certain, however, that the law of substance some proves that conscious soul is a mere function of brain, that soul is a function of all substances, and that God is the force or energy, or soul or spirit. (See Professor Comte's article on Metaphysics in 'Enc.' for a fuller account and criticism of the systems of Bichler and Haeckel.)

As was before marked, Haeckel's philosophy affords no explanation of how it comes about that the corpuscles from the primitive substance conquire not only to form organisms, but to produce an orderly and teleologically arranged cosmos. Which is now nothing but the psychical character which he assigns to each corpuscle, but an intelligence and will dominating the whole and co-ordinating all its separate parts. He calls his philosophy the monistic or mechanical philosophy, as contrasted with the teleological.

'There is everywhere, he says, a necessary causal connection of phenomena, and therefore the whole knowable universe is a harmonic whole.' (See *Monist*, vol. II, p. 356). But Haeckel's 'Law of Substance' gives no explanation of the cause of this 'harmonious unity,' nor does it at all account for the origin of the ideas which he makes the very bases of religion— the ideas, namely, of the good, the true, and the beautiful. The materialist, however, is inseparable, and therefore spirit can neither create nor control matter. This circumstance alone shows that there is an impassable gulf between his world-view and any world-view that can be rightly termed religious.

Along with German anti-theistic theories must be classed a doctrine which, so far from being materialistic, is intensely idealistic, namely, the doctrine of 'ethical idealism,' which is propounded by F. A. Lange in the third volume of his very able *History of Materialism*. Lange, under the influence of the agnostic side of the Kantian philosophy, came to the conclusion that there exist in the universe no reality or realities corresponding to our ideal conceptions. But these ideal conceptions, he says, have a calculable value to the soul, and it is in this sphere of the poetic imagination alone that we must look for the satisfaction of our religious sentiments and aspirations. The intelligible world is, in his view, a world of poetry: The greatest poems, he argues, have immortal worth, though the characters in them may have had no historical existence. To this illustration pastor Heinrich Lang of Zürich very pertinently replied:

'Poems hold their color when they aesthetically satisfy religious decay so soon as it is seen that the objects of faith are imaginary and not real.' An admirable criticism of the school of German materialism which Lange here exposes will be found in Martineau's Address on 'Ideal Substitutes for God' in his *Essays, Reviews, and Addresses* (vol. iv. p. 204 f.).

4. Positivism.—Positivism, both as a philosophy and as a religion, appears to have about as much influence in England as it has in the land of its birth. In Mr. Frederic Harrison's Dr. J. D. Bridges it has had remarkably able exponents and advocates in this country; and its monthly organ, *The Positivist Review*, often reaches a high level of philosophical and sociological thought. As a philosophy of the physical, it is exclusively non-metaphysical system. It teaches that the phenomenal world is the only knowable world, and it deprecates as wholly without value or interest all speculations concerning the nature of the ground or causes behind the world and the phenomena of the sensible universe. While Herbert Spencer holds that our very conception of the relative character of all our scientific knowledge compels us to believe in the existence of an Absolute Reality behind the world of phenomena, and that it is this Unknowable Reality which forms the object of religion, the Positivists, on the other hand, maintain that what is wholly unknowable is wholly without interest to mankind, and therefore can never excite or satisfy religious ideas or emotions. According to Comte's celebrated classification of the three stages of religious insight, mankind begins by assigning the causation of cosmical phenomena to the supernatural volition of personal deities, and finally to one Supreme Deity, when the stage of monotheism is reached. Reason, Comte held, gradually overthrows this, the stage of theistic, in place of a personal cause sets up metaphysical abstractions such as centrifugal force, elective affinity, or reality as the causal principles behind phenomena. Science, however, at length concludes that these abstractions rest upon no real experience; and the third and final stage is that of Positivism. The Positive stage of conviction, towards which all culture is approaching, means, he says, the recognition of the truth that all ontological causes (whether metaphysical or theological) are wholly beyond the scope of man's intellectual insight. It has been shown by many critics of Positivism that these three ways of considering the universe are not necessarily successive, but constantly occur together in the history of philosophical and religious thought.

There is one true and valuable basis for Comte's philosophy which raises it far above the level of the 18th century materialism of La Mettrie, d'Holbach, etc. They carried up the materialistic and mechanical principles, by which they explained the inorganic world, into the human and the spiritual, and made consciousness, and thus arrived at the description of man as a machine (L'Homme Machine). This, said Comte, is materialism, and against it he strongly protested. He would never allow that the mechanical theory was rationally applicable beyond the limits of the physical world, and held it to be self-condemned so soon as it was pushed into the provinces of biology and human character (Martineau, *Types of Ethical Theory*, i. 503).

Comte's religious conception appears to be atheistic, and yet the laws of evolution and nature and humanity are the products of a self-existent and self-conscious Eternal Cause. In the place of God, in the theistic sense, he substitutes the *Grand Étre—Humanity*—as the supreme object in the universe. Some critics hold that the real object of the Positivist's adoration is the ideal of human perfection, which he practically hypostatizes and adores. Positivists, however, will not admit this, for this would be, in their view, equivalent to the worship of an abstraction. In the *International Journal of Ethics* for July 1900 (p. 42), Dr. G. O. Ur. of the founder of the 'ethical culture' societies in England, says:

'So far as I am aware, the Positivists have never declared that Humanity is God. But they have maintained that all the homage
and obduracy which has been rendered to God should now be transferred to Man. They have worshiped Humanity, they have prayed to it, they have found consolation and strength in communion with it. Surely, then, it has become their God.

In the next number of the *Positivist Review*, however, Frederic Harrison solemnly disavowed this statement, and denies that Positivists have prayed to and worshipped Humanitv.

The non-metaphysical character of the Positivists' religion provokes a comparison of it with Buddhism. There is, however, vital difference between the two. The religious sentiments of Positivists do not centre in a glorified personal being; nor has Positivism as a religion anything corresponding to the doctrines of karma and transmigration, which bring Buddhism into some affinity with theistic religion. Cf., further, *Atheism*.

5. Anti-theistic theories in England in the nineteenth century.—It was not till the middle of the 19th cent. that anti-theistic writings had much influence in England. The Essay on the Origin and Prospects of Man (3 vols., 1831)—a posthumous work by Mr. Thomas Carlyle, the author of a brilliantly written novel, *Anastasia, or Memoirs of a Modern Greek*—is a confused medley of materialistic speculations respecting the origin of the inorganic and organic worlds from molecules, which are resting quietly by way of natural evolvetion from the substance of God, the invincible primary cause. On its appearance Thomas Carlyle characterized the book as 'a monstrous Anomaly, where all sciences are heaped and huddled together' (Miscellaneous Essays, iv. 31). Some of the illustrative passages are quoted from it in Flint's *Anti-theistic Theories* (pp. 476, 478).

A much more lucid materialistic treatise, and also more decidedly atheistic, appeared in 1851, in the form of *Letters on the Laws of Man's Nature and Development*, from the pen of Mr. H. G. Atkinson and Miss Harriet Martineau. In this book Atkinson says:—

'1 am far from being an Atheist, as resting on second causes. As well might we, resting on the earth, deny that there is any depth beneath; or, living in time, deny eternity. I do not say, therefore, that there is no God; but that it is extravagant and irreverent to imagine that cause a Person: the fundamental cause is wholly beyond our conception' (p. 240).

As these writers, however, always speak of matter as if it were eternal, declare that 'the mind of man is a part of material development,' and assert that 'philosophy finds no God in nature, nor sees the want of any,' it is impossible to deny that their book is fundamentally atheistic. Like most atheistic treatises, it denies the freedom of the will and the existence of God, and is no more a sin in a crooked disposition than in a crooked stick in the water, or in a bump-back or a squint. At the time of its appearance the work was severely criticized by James Martineau in the *Prospective Review*, and there is another acute criticism of it in Professor J. S. Blackie's *Natural History of Atheism* (1877).

6. Secularism.—English Secularism appears to be almost entirely an indigenous growth. During the early portion of the 19th cent. there appeared several writings which, though by no means atheistic, yet prepared the way for the incoming of a non-religious and also of an anti-religious drift of thought. The phronological writings of George Combe, though they were in his own case associated with the idea of a world's atonement, and the individualistic view of mind, Thomas Paine and Richard Carlile were themselves Deists, but many of the admirers of their rationalism did not admit the validity of their deistic views. The philosophy of the philanthropic socialist, Robert Owen, exercised a strong influence on Mr. G. F. Haeckel's, a doctrine somewhat resembling Haeckel's, in which God is conceived as permeating all the particles of the universe. At this time there was also an important circle of thinkers, of which Jeremy Bentham was the centre, and which was strongly anti-theistic and positively religious. Professor Bain in his *Life of James Mill* says:

'That Mill's acquaintance with Bentham hastened his course towards infidelity it is impossible to doubt. Bentham never in so many words publicly avowed himself an atheist, nor did he so in substance.' His destructive criticisms of religious doctrine and practice in *The Church of England* and *Ethical Religion*—his anonymous book on Natural Religion, left no residue that could be of any value. As a legislator he had to allow a place for Religion; but hurling some of its most subversive assumptions to make use of the Pope, for sanctioning whatever he himself chose, in the name of Utility, to prescribe. John Austin followed on the same lines, and his contemporary, Thomas Carlyle, is neither suit either of the Mills. It is quite certain, moreover, that the whole tone of conversation in Bentham's more select circle was atheistic' (cf. Mill's *Autobiography*, iii. p. 527).

All these circumstances had probably some influence in bringing about that secularist movement in which George Jacob Holyoake and Charles Bradlaugh were the leading spirits. Bradlaugh in the *National Reformer*, and Holyoake in the *Reformer*, appealed to a large number of readers, especially of the artisan class. The work thus begun has been continued down to the present time by a succession of lecturers and writers; but it has now to a large extent lost its positively atheistic character, and is now, and has been in recent years, more that of agnosticism, which the numerous cheap publications of the *Rationalist Press Association* are doing much to advance. The name 'Secularist,' as distinguished from 'Atheist,' was originated by Holyoake in 1851. The late years past, in which Bradlaugh had no dislike, was objected to by Holyoake on the ground that it was often understood to mean 'one who is not only without God but also without moralitv.' The two leaders were of very dissimilar types of mind. Holyoake, like Robert Owen, of whom he had been a disciple, was a creature of a constructive disposition; he would have liked to give to the word 'secularist' a meaning which would not have excluded theists. Bradlaugh, on the contrary, was naturally aggressive. He identified all theological ideas with superstition, and the work of undermining them he evidently found very congenial.

The chief logical ground on which they both rejected theism differed somewhat from that which was taken by earlier atheists of that century. The chief reason is, These, as we have seen, regarded the First Cause, though they regarded its character as wholly unknowable. Holyoake and Bradlaugh, on the other hand, started with matter, maintaining that it needed no cause, being itself self-existent and eternal. This was an extension of a view entertained by one of matter by a self-existent Spirit is inconceivable. To this the theist replies that, though we have no experience of it, such creation would violate no necessary law of thought; and he further contends that the atheist's assertion that out of lifeless matter organization and life spontaneously arose is not only inconceivable, but actually violates the law of thought which compels us to believe that no cause for an effect can be admitted unless there is some element in it which can be conceived as capable of giving rise to the effect.

Another very prominent feature in both Bradlaugh's and Holyoake's attack on theism was their attempt to invalidate that argument from design in which so many thinkers, including Locke and Gibbon, have entertained it. The atheistic belief. Holyoake in his chief works, *Paley Rejected* and *The Trial of Theism*, dwells at great length on this question. Finding it impossible to explain the order and systematic organization of the cosmos on the materialistic hypothesis, he tries to overthrow this belief by showing that, if it were a real explanation, it would involve other necessary assumptions which experience shows to have no existence in fact. Admit,
he says, that there was a designer, then that designer must have been a person; and if a person, he could not have designed the universe unless he had a mind. For we know, possessing, namely, a cerebral organization, a brain; and, he concludes, there is no evidence of the existence of such a brain. This argument has also been employed by Professors W. K. Clifford and Du Bois-Reymond. Sir Oliver Lodge has been invited by eminent thinkers, both scientific and philosophical. On the relations between mind and matter Sir Oliver Lodge says:

1. Fundamentally they amount to this: that a complex piece of matter may be called a mind or a brain, suppose if mind and consciousness; that if it be stimulated mental activity results; that if it be injured or destroyed no material residue of mental activity remains. Suppose we grant all this, what then? We have granted that brain is the means whereby mind is made manifest on this material plane, it is the instrument through which alone we know it, but we have not granted that mind is limited to its material manifestation; nor can we maintain that without matter the things we call mind, intelligence, consciousness, have no sort of existence. Mind may be incorporated or incarnate in matter, but it may also transcend it. Brain is truly the organ and mind, consciousness, but not one to assert on the strength of that fact that the realities underlying our use of those terms have no existence apart from the organ.

In § 2 reasons have been given for concluding that organization can be explained only by assuming that a higher principle guides the arrangement of the material particles. If this is the case, life is the principle of organization of brain matter, and life proceeds from the brain to the body, and is the organic whole, and the universe integrates. Dr. James Martineau, in his article on 'Modern Materialism: its Attitude towards Theology,' very carefully discussed this question. He ascribes to mind that, through a finite and extended mind needs a cerebral organ for its communication with the physical world, it is highly probable that a self-existent and eternal Mind is not thus conditioned. 'Further,' he says, 'it appears in dealing with the concept of the Universal Mind this demand for organic centralization is strangely inappropriate. It is when mental power has to be localized, bared, let out to individual natures and assigned to a scene of definite relations, that a focus must be found for it and a molecular structure with determinate periphery be built for its lodgment. And were Du Bois-Reymond himself ever to alight on the portentous cerebrum which he imagines, I greatly doubt whether he would fulfill his promise and turn there at the sight; that he had found the Cause of cause would be the last inference it would occur to him to draw; rather it would be, the consciousness, the mind, the cosmic meagerism, born to float and pasture on the fields of space.' (Elaysa, Recreations, and Addresses, vol. iv. p. 254). If the objection still insists that the Eternal Mind must have a body, then declare it Sir Oliver Lodge and Dr. Martineau point out that.

1. 'It has been surmised that just as the corpuscles and atoms of matter, in their intricate movements and relations, combine to form human beings, so from the luminous bodies, the planets and suns and other groupings of the other, may perhaps combine to form something corresponding as it were to the brain cell of some transcendent mind. The thing is a mere guess, it is not an impossibility, and it cannot be excluded from a philosophical system by any negative statement based on scientific fact.' (Sir Oliver Lodge, loc. cit., p. 255; cf. Martineau, op. cit., p. 255).

In addition to these two arguments for atheism, Bradlaugh adds one to some metaphysical obstacles which, in his opinion, bar the way to a theistic conclusion. The chief of these is that we are necessitated by the laws of thought to conceive of Substance as that which does not require the conception of any other substance, or anything else antecedent to it'; there therefore Substance cannot have been created or originated. To this Dr. Flint well replies: 'If he [Mr. Bradlaugh] can conceive substance per se, and not material substance only, then physical, mental, etc., effects, which are nothing but the effects of his own faculties, he is logically bound to abandon sensationalism and all its consequences, and betake himself to absolute idealism or nothingness. (Agnosticism, p. 517).

In a similar strain Bradlaugh contends that, if God were infinite, it would be impossible to conceive of any addition to Him, and that, therefore, an infinite God and a created universe are incompatible ideas. Such arguments as these, even if they were valid (which all theists would deny), would have little or no weight with secularists in general; for it is by no means certain that we know the nature of an a priori source of knowledge, and this very few atheists would grant.

Besides Holyoke and Bradlaugh, there have been other secularist lecturers and writers, such as G. J. Romanes, W. K. Clifford, John Tyndall, T. H. Huxley, and the philosopher, H. Spencer. In 1878 there was published anonymously a decidedly atheistic work called A Candidate for the Gods, by Physics. Many years later, Romanes acknowledged the authorship, and stated at the same time that he had then come to see that his most important objections to theism were invalid. Indeed, the above arguments the says writes, 'have time been convinced by Laden Powell's work on The Order of Nature, that this order necessitates the hypothesis of an eternal creative intelligence and will, but that, on the appearance of Spencer's First Principles and Charles Darwin's work on Natural Selection, his views had undergone a total change, and that at the time of writing the Candid Examination he felt assured that the appearance of design in the universe could be explained without the assumption of a creating mind. About the year 1899, however, he wrote three articles on the Influence of Science upon Religion, and these, together with some other notes on atheism from his pen, were published, after his death, under the title Thoughts on Religion, by Dr. Charles Gore, now the Bishop of Birmingham. In these articles Romanes declares that he recovered faith in the validity of the teleological argument.

'I think it is perfectly clear,' he concludes, 'that if the argument from theology is to be saved at all, it can only be so by eliding from its basis of special adaptation, to the universe the broad area of Nature as a whole. And here I confess that to my mind the argument does acquire a weight which, if long and attentive, may be deemed as deserving of consideration. For although this and that particular adjustment in Nature may be seen to be proximately due to physical causes...the more ultimate question arises, How is it that all physical causes conspire, by their united action, to the production of a general order of Nature? It is against all analogy to suppose that such an end as this can be accomplished by each means as those, in the way of mere chance or "the fortuitous concourse of atoms." We are led by the most fundamental dictates of our reason to conclude that there must be some cause for this cooperation of causes.' (Thoughts on Religion, p. 67.)

He then goes on to show that 'inadequate cause can be nothing short of a Divine Mind, though that Infinite Mind may be, and indeed must be, beyond the comprehension of man's finite intelligence. For the views of Dr. Romanes on the character of God, and on Christianity, the Thoughts on Religion must be consulted. But Dr. Gore mentions that his friend, shortly before his death, expressed his belief that it is by "intuition" we become acquainted with God, and added that he was in cordial agreement on this subject with Knight's a priori. (Agnosticism, p. 517.)

Professors W. K. Clifford held a world-theory somewhat similar to that of Haeckel. Everything, both physical and psychological, was, he maintained, composed of elements of "mind-stuff," and
when these elements are compounded in a nervous system, they manifest the phenomena of consciousness. As to the cause which so arranges these elements as to form out of them the actual orderly universe of matter and mind, his writings furnish no explanation. With Holyoake and Hu Bø Alien, he regards the existence of a self-existent personal cause as highly improbable, owing to the want of evidence for the existence of a corresponding brain. What has been previously said in reply to Holyoake's secularist atheism applies equally to Clifford's reasons for denying the existence of God. Clifford's view of religion was akin to Positivism.

"In such a moment of utter sincerity," he says, "when a man has bared his own soul before the insatiabilities and the storms, a presence in which his own poor personality is蔑reduced into nothingness arises within him, and says, as plainly as words can say, 'I am with thee, and I am greater than thou.'" Many names of Gods, of many shapes, have given to this presence, seeking by names and pictures to know more clearly the guide and the helper of men.

These words appear to point to a theistic conclusion, but Clifford dispenses this expectation; for his final judgment is that, after all, such a helper of men, outside of humanity, the truth will not be known. (Lectures and Essays, p. 255.)

Professor John Tyndall's Address before the British Association at Belfast in 1874 excited much attention, and called forth many criticisms from the theistic side. Among these perhaps the most important was a paper in the Contemporary Review on 'Metaphysics and Modern Materialism' by Dr. James Martineau, between whom and Professor Tyndall there had often been mental encounters at the meetings of the Metaphysical Society. (This paper, together with another on 'Religion as affected by Modern Materialism,' is reprinted in vol. iv. of Martineau's Essays, Reviews, and Addresses.)

Though in the Address Tyndall says, 'I discern in matter the promise and potency of all terrestrial life,' he declined to be called a materialist. His view somewhat resembled Haeckel's, in that he maintained that sensation could not arise unless the elements of matter had a psychical as well as a physical side. He did not, however, regard sensation as a property of matter, but rather as a peculiar relation of the sensations from the physics of the brain to the facts of consciousness he admitted to be altogether inconceivable by the human mind. As to the cause of the atoms and of the processes of evolution, his position was not atheistic but agnostic. In an Address at Birmingham, a few months later than the one at Belfast, he says, in reply to the question whether there are in nature manifestations of knowledge and skill higher than man's: "My friends, the profession of that atheism with which I sometimes so lightly charged would, in any case, be an impossible answer to this question."

Like Lange, he confines religion to the sphere of idea and creation. In reference to Tyndall, he stated that "he must radically exclude our notions of 'Matter' if we are to understand how it carries with it the promise and potency of all terrestrial life," Martineau remarks (op. cit. iv. 175) that what Tyndall says simply amounts to this: "I believe (in matter) with your quota, and I will promise to exempt them explicitly." It is easy travelling through the stages of such an hypothesis; you deposit at your bank a radish, and drawing on it at any pause, complete your grand tour without a debt. Words, however, are likely to bear such richness of premissage, will be found to stand the strain of speculation, but the grand theory has to be tried in the beechnuts of the beech-woods of Bohemia—terms that bear God in them, and thus dissolve the meaning of the words so precisely represent. Such a phrase as 'material Matter—matter that is up to everything, even to writing Hamlet, and finding out its own evolution, and substituting a molecular physiology for a wilderness of theism' is regarded as a little too modest in its disclaimer of the attributes of Mind.

The views of Professor T. H. Huxley differ in one important respect from those of his great friend, Professor Tyndall. The former, through his study of Hume, was inclined to accept the principles of sensational idealism, whereas the latter sided with the agnostic realism of Herbert Spencer. Huxley, accordingly, seeks to replace the doctrine of 'human automatism,' i.e. that while states of consciousness depend upon the molecular movements of the cerebral substance, 'there is no proof that any state of consciousness is the cause of change in the motion of the matter of the organism.' (ib. p. 214.)

At a meeting of the Metaphysical Society, when Huxley had read a paper on the subject, 'Has the Frog a Soul?' one of the members present said: 'I was walking down Oxford Street this morning, intending to go straight to the Marble Arch; but, happening to glance at my books, I saw that I needed a new pair, and accordingly walked into Regent Street, which has made me eat a horse!' Then, addressing Huxley, he asked, 'Am I to understand that the frog in the same position as my horse, would not have eaten a horse?'

'That is most certainly you are,' replied the professor.

It is clear, then, that though Huxley in words rejects materialism and assents to the position that there are only a group of mental symbols, he is virtually a decided materialist, for he represents mind as dependent for its existence on this group of mental symbols, and possessed of no power to act in any manner the reality for which these symbols stand.

As Huxley points out, if it is held that the atheism not knowable, i.e. states of consciousness, he held that we can neither affirm nor deny the existence of God or of any metaphysical realities behind phenomena. To describe his attitude towards these metaphysical questions he coined the convenient word 'Agnostic.' The charge of atheism he emphatically repels, saying:

'The problem of the ultimate cause of existence . . . seems to me . . . hopelessly out of reach of my poor powers. Of all the senseless babble I have ever had occasion to read, the demonstrations of these philosophers who undertake to tell us all about the nature of God would be the worst, if they were not so unsurpassed matter lives.' Then, addressing Huxley, he asked, 'Am I to understand that this frog which I passed in the street, without its books had no causal connexion with the change in the direction of my walk?'

'That is most certainly you are,' replied the professor.

With reference to this, Huxley has expressed himself as follows:

'No doubt, it is quite true that the doctrine of Evolution is the most formulated idea of all the other hypotheses of forms of Teleology . . . The teleological and the mechanical views of nature are not, however, of necessity mutually exclusive. On the contrary, the more purely a mechanism the speculator is, the more firmly does he assume a primordial molecular arrangement, of which all the phenomena of the universe are the consequences, and the more completely he is thereby at the mercy of the teleologist, who can always defy him to disprove that this primordial molecular arrangement was not intended to evolve the phenomena of the universe' (Critiques and Addresses, pp. 356-357).

It would seem that Huxley should here have asked himself whether this or primordial arrangement, from which a universe abounding in marks of adaptation has proceeded, does not by a necessity of human thought demand an adequate cause. Romances, as we have seen, did put this question to Hume, and the author of the fin de siécle, with whom he finally found satisfaction was that it is only on the hypothesis of the creative action of an Eternal Mind that the facts of physical and mental evolution are at all satisfactorily accounted for. Huxley, however, never fairly faces the question of ultimate cause. For the weighty arguments for the correctness of the teleological argument with the words:

'Why trouble oneself about matters which are out of reach, when the working of which mechanism is of such practical importance, affords scope for our energies?' (G. F. 307.)

He forgot that the human mind has other aspirations and faculties besides those which lead
to scientific discovery; that it cannot content itself with the ascertainment of the order of phenomenal succession, but must perceive, for the satisfaction of its rational, its ethical, and its religious nature, ever seek after insight into the reality and the exact nature of the things which are the objects of our consciousness.

Herbert Spencer's attitude towards theism was by no means so negative or neutral as was that of Tyndall and Huxley; and with good right he maintained that his philosophical system might be pantheistic, but could not justly be termed atheistic. His conception of the real character of the universe rested upon an assumed a priori principle.

In opposition to the doctrine of Mansel and Sir W. Hamilton, he maintains, "impossible though it is to give to this consciousness of the absolute and the quantitative expression whatever, it is not the less certain that it remains with us as a positive and indiscernible element of thought" (First Principles, p. 77; cf. Nineteenth Century, July 1884, pp. 5-7). In his view it is the same ultimate reality which in the inorganic world manifests itself in the form of matter and motion, and in living beings in minerals of consciousness. His philosophy, however, furnishes no explanation of how, from the modes of matter and motion which physical science discerns, organic structures can spontaneously arise. He states that the volumes in which he would have contained his explanations (The Life and Labor of the Individual) on this organic had for want of time not been written. What these volumes would have contained we can only conjecture from other passages in Mr. Spencer's writings, where he maintains that, in his doctrine of an infinite and eternal energy out of which all phenomena, both psychical and physical, arise, he has reached a reality which satisfies the demands alike of science and of religion. In 1884, he declares that "the attributes of personality, as we know it, cannot be conceived by us as attributes of the Unknown Cause of things, yet duty requires us neither to affirm nor to deny personality, because it is not in our power to establish limits of our intelligence, in the conviction that the choice is not between personality and something lower than personality, but between personality and something higher; and that the Ultimate Power is no more presentable in terms of human consciousness than human consciousness is representative in terms of a plant's functions" (Nineteenth Century, July 1884, p. 7).

Were it not for the last clause in this quotation, one might suppose that Spencer held a view akin to the theistic doctrine of Lotze, i.e. that personality under human limitations must needs be imperfect, and that it only in God that perfect personality is possible. Lotze's doctrine is atheistic, because it implies that, in conceiving of God after the fashion of the highest form of human personality, we have a real and positive, though imperfect, insight into the nature of God. The last clause of Mr. Spencer's statement, however, denies the possibility of any such insight, and thus entirely separates Spencer's doctrine from true theism.

Further, Spencer's attempt to derive all moral ideals and all consciousness of moral authority from the experiences of pleasure and pain, makes it impossible for him to recognize in our ideals any insight into the character of God; and hence his Ultimate Reality cannot be regarded as an adequate object of religious faith and worship.

This article may conclude with the obvious remark, that at the present time atheism in the definite form which it has often assumed in the past has almost entirely disappeared, and an agnostic form of rationalism has taken its place. Benn's treatise on The History of English Rationalism, the 19th Century, and Robertson's Short History of Freethought, tolerably clear idea of the forms of negation with which the defenders of atheism will probably have to deal during the present century.

Crowther, The System of the Universe (tr. by John Harrison), 3 vols. Lond. 1845; Rudolf Otto, Naturalism and Religion, Lond. 1907. Contemp. Revs., B. C. Upton, A. J. Janet, and H. L. A. Hazard. ATHEISM (Buddhist).—1. Buddhism, in so far as it is a philosophic system, is radically averse to the idea of a Supreme Being—of a God, in the Western sense of the word. It must be remembered that this atheism is not a characteristic peculiar to Buddhism alone. The "Lord" (Jiva) of the nominally theistic schools (avisarikas), when He is not conceived of as an Oriental despot, arbitrarily imputing sin or virtue and assigning hell or heaven to His creatures, is practically only an Organizer of the world, keeping account of the deeds of the initiated and assigning to their due recompense, and, after each period of chaos, re-constructing the universe in order to set each creature in the place which befits it. All the Hindus believe, as a matter of fact, in endless transmigration.

Another point worthy of remark is that, although the Buddhists maintain the uselessness of this 'Lord,' a mere delegate of the karma of creatures, they nevertheless personify the karma, or Law. 'Even if I hid my sin from every one, I should not hide it from the Law!' (cf. SBE xxxix, 265). But, as a general rule, retribution for deeds is believed to operate automatically by reason of an energy called the 'indestructible' (the 'invisible' of the Brahmanical treatises), and the system is therefore atheistic because it does away with the thought of a personal Being, who would synchronize the 'book of debts' of which their treaties sometimes speak. It must be acknowledged, however, that to believe in infallible and immutable justice is to recognize at least one of the thoughts which constitute the idea of God. This, however, is, as a general rule, retribution, and by doing so raise themselves above the purely mechanical idea of karma (q.v.), which they view as an intelligent force.

It may be further remarked, that the contemplation of the Buddha plays in early Buddhism a rôle analogous to that which the Sâkhya-Yoga assigns to the contemplation of the 'Lord' (Bhava). 2. It will be profitable to read the 2nd chapter of the Brhadaranyaka Upanishad (Hiyds Davids, Dialogues of the Buddha, Lond. 1899, p. 30), where the Buddha explains how the god Brahma, being born at the commencement of the world-age in the midst of the heaven prepared for him by his karma, unconscious of his former existences, and witnessing the birth of the other gods whom he wished to have as companions, imagines that he is in truth 'the Supreme One, the Lord of all, the Creator, the Ancient of Days, the Father of all that are and are to be.' 'These other beings are of my creation,' why should that so long ago I should have thought, 'Would it be that their wheel may come in!' And on my mental aspiration beheld the beings came.' The Kowdahallasutta (ib. p. 289) is also very instructive. It shows the reverence of the gods for the great Brahmma, and how Brahmma is inferior to the Buddha. A certain monk, in order to solve
a problem of cosmology, traverses the celestial regions, consulting the divinities. They refer him to Brahma. ‘He is more potent and more glorious than we. He will know it.’ ‘Where, then, is that great Brahma now?’ ‘We know not where Brahma has taken flight. But when the signs of his coming appear, when the light ariseth and the glory shineth, then will He be manifest.’ Soon after, Brahma became manifest, and that monk drew near to him and asked, ‘Where do the other great elements cease? Is that great Brahma then? ’ The monk by the arm and led him aside and said, ‘These gods, my retinue, hold me to be such that there is nothing I cannot see, I have not realized. Therefore I gave no answer in their presence. But I do not know where the four elements cease. Thereupon return to the Buddha, and accept the answer according as he shall make reply.’

3. In the later literature of Buddhism there are found formal proofs of the non-existence of a God who creates and organizes the world, for example in the Bodhicaryavatara, ch. ix, ver. 119 f.

‘Thists say that God is too great for us to be able to comprehend him; but then it follows that His qualities also surpass our power to comprehend them; so that we can attribute to HIM the quality of a Creator. Thists further maintain that the whole creation is comprehensible in itself. But (1) God has created neither souls nor elements which are eternal; He does not bring about the birth of all things (compare Malalas) and the knowledge of things is produced by its own work comprehensible. And (2) God himself does not act to cause things to be; nor acts He to cause the fall of things; nor does He act to destroy; therefore He is not independent; and (3) If He were independent, why does He not accomplish at the same time the creation, preservation, and destruction of the universe? And the other qualities cause ought to produce its effects at the same time. Thus everything is momentary.’

**LOUIS DE LA VALLÉE POUSSIN.**

**ATHEISM (Egyptian).—No trace has yet been found of any demonstrative atheistic teaching in Egypt.** The contradictory, wholly incompatible, but inevitable claims current in Egypt regarding the future life must have caused every thinking man to wonder and doubt, and when such a man appeared to accept them all and act upon them, if his motive was not sufficiently clear, he was regarded as an incipient superstitition of his own folk: it must have been the hope that one of the alternatives might possibly be correct enough to help towards bliss. The Song of the Harper, engraved in banquetting scenes in the tombs of kings and priests, urges the present enjoyment because death comes to all, and no one has ever returned to tell what has become of the dead; the most learned scribes and philosophers pass away and become as though they had never been, and they must be careful heart greatly; but give bread to him that hath no field,—so shalt thou have a good name among all posterity. Such is the teaching of the Song. This text dates from the Middle Kingdom, but was in vogue also later. Another, of late Ptolemaic age, when the Egyptian religion was indeed on the decline, is put into the mouth of a deceased lady. Inscribed upon her tombstone, it is addressed to her husband, the high priest of Ptah at Memphis, who was almost, if not quite, at the head of the Egyptian hierarchy. She counselled him to enjoy the eating and drinking and enjoyment in the year of life upon earth: the ‘wetern’ land of the dead is a land of wakless sleep, of heavy darkness, of forgetfulness; and apparently implies that nothing could relieve the misery if the dead could feel it. It seems that these views belonged in some degree to the varied face of orthodox, which preceded the Psychosthna and often abundant food and happiness; or, again, the attainment by the dead of all Divine powers; or, again, the sad doctrine of a gloomy existence in the dark world under, relieved only by one hour of illumination each night while the sun passed between the two of the clanging gates.

**LITERATURE.—There is no literature on the subject. For translations of the Songs, see W. Max Müller, *Die Liebesgesichte der alten Ägypter,* Leipzig, 1890, p. 29 ff.**

F. L. GRiffitti.

**ATHEISM (Greek and Roman).—As a dogmatic creed, consisting in the denial of every kind of supernatural power, atheism has not often been seriously maintained at any period of civilized thought, and Plato goes so far as to assert that, while other erroneous views about the gods might be permanent, no one, after embracing in his youth the doctrine of atheism, had ever continued in it up to old age (Legg. 10, 888 C). Thus, in dealing with the statements of Greek and Latin texts, it is necessary to distinguish those thinkers, such as Xenophanes (fr. 15, Diels, ed. of the popular religion, from those who repudiated the idea of God in its entirety. There are further difficulties arising from the fragmentary and often untranslated character of our authorities. A charge of atheism was a favourite controversial weapon, and how careful we should be in accepting isolated statements which impute it may be learnt from a consideration of the cases of Socrates (Plat. *Apol.* 26 C) and of the early Christians (Gibbon, *Roman Empire*, ii. 220). Moreover, the sceptic is always liable to be confounded with the atheist. Thus the attitude of Protagoras towards the problem of theology is sufficiently indicated by the sentence preserved by Diogenes Laertius (ix. 51), in which he declares himself unable to affirm of the gods either that they are or that they are not. Nevertheless, other authorities (Epiphanius, *mct. Heres.* iii. 2. 9; Diels, *Doxogr.* p. 591, 1) testify to his absolute denial of the existence of God. These considerations will show the difficulty of appraising the statements which impute atheism to the physicalist Hippo, the atomist Democritus, the *Naturphilosophen* (Plut. *Amot.* 31, p. 1075 A, etc.), or to the more notorious Diagoras of Melos. The latter, familiar to us from the allusions of Aristophanes (Nub. 530; *Av. 1672*), is said to have turned to atheism because the gods failed to visit with punishment a flagrant wrong which had been committed against him (Sext. *Math.* ii. 53). We have more definite information about Theodorus of Cyrene, a follower of Aristippus, who lived in the latter years of the 4th cent. B.C. His atheism was absolutely uncompromising (Diog. Laert. i. 97; Epiph. *I.C.;* Diels, *Doxogr.* p. 501, 25), and formed a reasoned element in a philosophical system which was subservive of the foundations of customary morality.

Again, atheism is the logical result of the rationalizing system of Euhemerus; but the charge is made against him (*Plut. *Jt.* xxii. 6. 3, p. 360 A) on precisely the same grounds as against the Stoics (*Plut. Amot.* 13, p. 757 C), and cannot of itself be held to imply more than his opposition to received religion. The same is true of the earlier attempt of Proclus, who held that Divine honours were in the first place bestowed upon such natural objects as the sun and moon and the fruits of the earth, and next in order upon the civilizing benefactors of the human race (Gomperz, *Greek Thinkers*, Eng. tr., Lond. 1901, i. 430) that period belongs to the Thirty Tyrants, who is ranked with the atheists by Sextus
(Math. ix. 54) on the strength of some remarkable verses, referred by other authorities, erroneously, as it would seem (Dhela, Dōsoyau, p. 59, 1), to the Sūryasūtras of Eupírides. These lines are conceived in the spirit of a Gallicae or a Thracian maenads, as we meet them in the Georgics and the Republic. The argument is founded on the Sophistic distinction between nature and convention; and the belief in God, which is made subsequent to the rule of some immaterial deity, is attributed to the policy of a cunning legislator, who sought to check secret immorality by the fiction of an eternal, all-seeing, and all-wise power, and to procure obedience to its decrees by investing it with awe-inspiring attributes.

Dr. Legg, indeed, ascribes, in a fiction in the age of the Sophists, the universality of religious belief among the nations of the world was always one of the strongest weapons possessed by the advocates of theism (Plat. Legg. 10. 886 A; Sext. Math. ix. 60).

The only exception which ancient tradition, as preserved by Theophrastus in his treatise on Piety (Bernays, Theophr. Lib. Frömlichkeit, p. 56), records was furnished by a dogfist story concerning the Thoës or Acrothoëtis. They are said to have been a tribe living on the borders of Thrace, who, like Heriod's Silver Race (Qp. 1331), neglected entirely to sacrifice to the gods, and were swallowed up by an earthquake as a punishment for their atheism (Porphy. de Abst. ii. 7, 8; Simplic. ad Epit. Exechir. 31, p. 95, 34, Dibn). Thus, whether viewed in connexion with popular opinion or with scientific thought, atheism appears to have been regarded by the ancients as a mark of corruption, depravity, or eccentricity.

LITERATURE.—See the commentators on Parmenides and Heraclitus, and L. Campbell, Religion in Greek Literature, London, 1898, p. 205. For the charges against astronomers, Plato, Legg. 12, 905 A. See also Jowett, The Dialogues of Plato, Oxford, 1892. Index; Zeller, Rostes, etc., Eng. tr. new ed. 1895, p. 465; G. Boeisler, La Religion romaine, Paris, 1882; and other ref. throughout the article. A. C. PEARSON.

ATHEISM (Indian, ancient).—The beginnings of Indian atheism can be traced back into the Vedic period. In the Rigveda the national god Indra is derided in several passages (iv. 24. 10, x. 119); and we read (ii. 12. 3, vii. 100. 3) of people who absolutely deny his existence even in those early days. We have here the first traces of that naive atheism which is so far from indulging in any philosophical rellexion that it simply refuses to believe what it cannot visualize, and which, in a later period, was known as the disbelief of the Lokayata system; that is to say, of crass materialists, or materialism (Lokaya).

It is different with the atheism which had grown into a conviction as the result of serious philosophical speculation; this, in distinction from the other naive form, we may describe briefly as philos-ophical atheism.

When the old Vedic religion developed into pantheism, the figures of the old gods faded and became transient creatures. But, as such, they still lived in the philosophic systems of India, even in the atheistic Sānkhya system (see SĀNKHYA), and in the religions of Buddhism and Mahāyāna, which found support in this system, and, like it, recognizes no real God.

Here these shadow-like gods afford an illustration of a fact which can be noted throughout the history of religion—that religious ideas belonging to earlier periods project themselves into a later and differently-conceived view of the world—one with which in essence they have ceased to have anything to do, but to which, nevertheless, they adapt themselves. In the Sānkhya system, in Buddhism, and in the religion of the Jains, we find these forgotten gods of early days, the deities, gods and demons, as well as in heavens and hells. But the gods are only more highly organized and happier than men; like the latter, they are within the saṁśajnana, 'circle of life,' and, unless they gain the saving knowledge which enables them to withdraw from worldly existence, they are obliged to change their bodies again. Nor have they escaped the power of death; consequently they are lower than the man who has reached the highest goal. In India, recognition of these facts has been thoroughly accepted, and people has been fully reconciled with the atheistic Sānkhya.

In the Sānkhya system, belief in gods who have risen to evanescent godhead (jāmjeśvērā, kāśyēśvērā) has nothing whatever to do with the question of God Eternal (nāmārthvēr), as regards whom the following rules (Bṛnd. 92, 93, 94, etc.) will apply. The use of a special term (līkṣa, 'the powerful') in Indian philosophy obviously arose out of the endeavour to distinguish this God even verbally from the shadow-like gods of the people (deev).

The positive way in which the existence of God is denied is one of the characteristic features of the Sānkhya philosophy, which on that account is also continually denoted as nāmārthvēr ('godless'). Again and again in the Sānkhya-sūtras it is stated that the existence of God cannot be proved (i. 92-94, v. 2-12, 46, 126, 127, vi. 64, 65, with the respective commentaries).

Having regard to the aporrhistic conciseness of this work, it is clear from this frequent repetition what importance was attached by the adherents of the Sānkhya system to this point—the actual absence of any strict proof of the existence of God. The denial of God in the Sānkhya philosophy is in essence the result of the following ideas: (1) the doctrine that there is inherent in unconscious matter the force which operates as a law of nature; (2) the idea of God for the purely receptive souls; and (2) the general Indian conception of the after-effects of the actions of living beings, which instigate that natural force and guide its activity into definite channels. Other reasons seem to have contributed, especially the realization that the problem of misfortune cannot be solved by any of the speculations of theism. This idea is made use of by Vāchśapatimāra (12th cent. A.D.) in the Sānkhya-tattva-kāmāntu, 57, 57, as one of the main supports of the atheistic explanation of the world. It will be useful here, we think, to give a translation of this passage, which is so important and so characteristic of Indian thought. It runs thus:

'Every conscious action is, without exception, determined either by an egoistic purpose or by kindness. Since these two natures are excluded, in the case of the creation of the world, it becomes impossible to assume that the creation of the world was due to conscious action. For a God whose wishes are all fulfilled can have had no personal interest whatever in the creation of the world, and the possibility of such action consequently disappears. But neither can God have undertaken the creation from kindness; since before the act of creation souls suffered no pain—senses, bodies, and objects not having come into existence yet—from what could the kindness of God wish to have souls released? If, on the other hand, we suppose that the kindness of God itself was shown here in the act of creation, He saw his creatures full of pain, we can hardly escape the argument in a circle: creation was the result of kindness, kindness the result of creation. But the result of the act of kindness who is actuated by kindness would create only joyful creatures, but the act of creating kindlessness. If we develop one objects that the difference results from the difference in that work for which individuals receive a reward from God, we exactly that the direction of the act is clear. The object of that consciousness, highest Being is entirely superfluous, for the effectiveness of the work performed by individuals (that is to say, the consequence of merit and goodness) is already without any supreme direction on the part of that God... .

On the contrary, the creation of creatures without the assumption of some purpose or of greater or lesser goodness, we have assumed has no egocentric purpose behind it, nor is kindness its motive; consequently it cannot be substantiated as against our theory that our animated beings are consequently subjected to the rule of a godless.}

This argument of Vāchśapatimāra was repeated almost entirely by Madhavāchārya (14th cent.)
ATHEISM (Indian, Modern)—ATHEISM (Jain)

A.D.) in the Sāṅkhya chapter of his Sarvakārikā- 
śāngraha (p. 228 of tr. by E. B. Cowell and A. E. 
Gough). These and similar reflexions had cer-
tained that Patanjāli, the founder of the Yoga sys-
tem (see art. YOGA), introduced the idea of 
a personal god in the hope that he would thus 
make the Sāṅkhya philosophy acceptable to his 
countrymen. The strict adherents of the Sāṅkhya 
dogma, on the other hand, tried to defend 
their own system new arguments by which to 
ward off the attacks made upon the denial of God. 
They placed first and foremost the sophistical 
alternative: Is God to be thought of as a free or as 
a fettered soul? Regarded as a free soul, that is to 
say, one not connected with a body or with any 
physical organ, God would be devoid of all quali-
ties, and particularly of desire and will—the 
prerequisite of all creative activity; He would also 
be without any motive for directing the world. 
Regarded as a fettered soul, God would belong 
to the class of all other beings and would be 
deluded, and be hampered by human infirmities; 
in which case again He could not be creator and 
controller of the world, but only a nominal 
(pārthābhṛtya) god who came into existence at the 
beginning of this world-period, and passes away 
with the end of it. If a theist raises against this 
argument the obvious objection that in that case 
God would belong neither to the free nor to the 
fettered souls, but must be assigned an exceptional 
place, he receives the answer, When a thing is 
defined by being the subject of a character, every basis 
upon which to argue is removed. 

This atheism of the Sāṅkhya philosophy, some-
what softened by the recognition of the gods of the 
people, was taken over, as we have already noted, 
into Buddhism and the religion of the Jains. But 
in all probability it also had an influence upon two 
schools of Brāhmaṇ philosophy—the Vaishēśika 
and the Nyāya see the two articles). These two 
schools were originally atheistic, and did not 
goit over to theism until after their amalgamation. 

ATHEISM (Jain).—Jainism is atheistical, by 
atheism we understand the belief that there is no 
eternal Supreme God, Creator and Lord of all 
things; for the Jains flatly deny such a Supreme 
God. Nor need it surprise us that atheism should 
be essential to a religious system; for even the 
most orthodox Brāhmaṇical theologians, the 
Mahābhāratikas of Kumārīdabhāṭa’s school, deny the 
existence of a Supreme God, though, of course, 
on other grounds than those of the Jains see Śākāvār-
tīka, sec. 16, Calcutta, 1907.
The Jains admit the existence of innumerable 
gods of many kinds and various degrees of perfe-
tion. But none of these gods is eternal; however 
long their life, it must come to an end when the 
merit of the god in question is exhausted. The 
longest life of a celestial being is that in the highest 
heaven Sarvārthasiddhi, which lasts between 32 
and 33 sīkṣāpargas (‘epochs of years’). Gods 
are embodied souls, just like men or animals, 
different from them in degree, not in kind; for 
their greater power and perfection appertain to 
their divine body and organisation, which is the 
reward for their good deeds in a former life, and the 
exhaustion of their merit, to be born again in some other state of life. But those 
souls who are not born again, or, in other words, 
are liberated, go up to the top of the universe 
and remain there for ever in the state of absolute 
perfection; they have no longer any connexion 
with the world, and cannot, therefore, have any 
influence upon it. Accordingly the functions of a 
Supreme God, as Lord and Ruler of the world, 
cannot be attributed to liberated souls; and as the 
not yet liberated souls, i.e., the souls in the state 
of bondage, are subject to re-birth, none of them 
can be regarded as an eternal God. Therefore 
the Jains cannot acknowledge a Supreme God in 
our sense of the word.

Following up their theoretical views on this 
point, the Jains have strenuously combated, and 
denounced the fallacies of, the arguments by which 
the Nyāya and Vaishēśika philosophers tried to 
prove the existence of an eternal and omnipresent 
God as Creator and Ruler of all things, viz., the 
famous argument that all things, being products 
of a maker who has an indestructible knowledge 
of their material cause. The refutation of 
this argument will be found in the Śāyādva-dāna- 
ījāri, in the Commentary on the Saddharma-puṇa-
chaya, and many similar works. The Jains also 
contend that the followers of the Yoga philosophy, 
the followers of the Yoga philosophy regarding 

whatever you see elsewhere is but yourself, and 
father and mother are non-entities. You are the 
infant and the old man, you are the wise man 
and the fool, the man is the stream and the 
stream is drowned in the stream, and it is you who 
pass over safely. You are the killer and the slain, 
the slayer and the enter, the king and the subject. 
You seize yourself and let go, you sleep and you 
wake; you dance for yourself and you sing for 
yourself. You are the sensualist and the ascetic, 
the sick man and the strong. In short, whatever 
you see, that is you, as bubbles, surf, and billows 
are all but water (Wilson, Rel. Sects, 361).

It was not to be expected that such a dreary 
creed would receive many adherents; it is 
doubtful if the few who were first attracted by 
it have left any representatives at the present day. 

The atheism of the Sāṅkhya school is still pro-
fessed by those learned men who follow 
that system of philosophy, and these and the Jains 
are the only real atheists of modern India.

GEORGE A. GRIERSON.

R. GADE.
of the world. But the Nyāya-Vaiśeṣikas seem to have been their most formidable opponents in this controversy as a highest deity (paramādevatā) as the object of veneration, viz. the Jina, i.e. the teacher of the sacred Law, who, being absolutely free from all passions and delusion, and being possessed of omniscience, has reached absolute perfection. He has vanquished and subjugated (jina) all his sages (nāgīkā) and has become (dhi.ṣṭadyikd) as the bestower of various gifts, and has adopted the name of Jinas. It must be remarked, however, that there are innumerable Jinas who, having proclaimed the sacred Law, have reached perfection, and have passed out of this world of change and woe. Prayers are addressed to them by the faithful, just as if they did or would bestow happiness and bliss on the devout adorer; but, of course, a Jina cannot show favour to anybody, as he is utterly indifferent to all that belongs to the world, and is entirely free from all emotions. He therefore does not accept the worship of his adorers and satisfy their wishes, but in his stead the gods who watch and control true Discipline (dātmā-dhi.ṣṭāyīyākā devatās) hear their prayers; for the practice of discipline taught by the Jinas is the best mode of worshipping them. In the case of spiritual matters, the adorer, the worshipper, the explanation given comes to this: the adoration of the Jina purifies and sanctifies the soul of the worshipper through his meditating on the perfections of the Jinas. In this sense the Jinas are regarded as the highest deity (paramādevatā); temples are erected for their worship, and a kind of divine service is instituted in them on the model of that practised in Hindu temples.

LITERATURE.—There is no literature beyond the texts quoted in the article.

H. JACOB.

ATHEISM (Jewish).—Atheism as a system of thought has no place in Judaism, and there is no equivalent for the term in the Hebrew language or literature. The deliberate denial of the existence of a Being who is responsible for the activity of nature, and for the occurrence of various phenomena, presupposes a systematic analysis and explanation of natural and historical phenomena as the necessary effects of existing uncreated causes. The ancient Hebrew had no disposition to analyze the natural phenomena of his life, nor did he trace them back to physical laws and principles—the indispensable basis of all conscious atheistic doctrines. He was more disposed to err on the side of polytheism than on that of atheism.

1. Atheism in ancient Israel.—Nevertheless there are passages to be found in the OT from which we can conclude that disbelief in the existence of God (or gods) was extant among the people in pre-exilic times, and that this disbelief was regarded by the prophets and psalmists as the source of the wickedness of the masses. It is also likely that the polytheism and idolatry against which the prophets contended were not the result of genuine superstition, but of real indifference towards all the gods served, whose worship was merely a pre-text for indulgence in all kinds of licenice and crime; and which indulgence was promoted mostly by political and social considerations. But the reason for this unbelief was always supposed to be thoughtlessness, indifference, ignorance, sensuality. There was no system of thought leading to the denial of God which could have played such an important part by political and social considerations. But the reason for this unbelief was always supposed to be thoughtlessness, indifference, ignorance, sensuality. There was no system of thought leading to the denial of God which could have played such an important part.

They merely wished to awake the people and to induce them to shake off their indifference. Jeremiah very often speaks in this tenor. The most outspoken passage is Jer 52:7 'They have denied the Lord, and said, He is not.' Here the prophet has in view the most intelligent members of his people, like the 'great men' who ought to 'know the way of the Lord' (5:7). While pleading absolute ignorance and folly for the degraded masses with whom it would be useless to argue (5:4), he addresses himself to the leaders who are avowed atheists. The fact that they are the most devoted of his people does not contradict the assumption that the prophet accuses the people of practical atheism. As their oaths are false, the perjurers only misstate the name of Jahweh without believing in His existence.

There exists a great difference between the existence of God (52:6-7), in order to convince the people of their folly. But the confident use of the proof makes it quite clear that he merely intends to dispel the thoughtlessness of the people, and not to refute any antagonistic theories concerning the natural phenomena he refers to (cf. also Is 36:14; Pr 30:4, Ps 12. 33, 58:14). Psalms 10 and 14 (53) contain passionate outbursts against the nābhāl ('impious,' 'fool') who denies the existence of God, and thus degenerates into a dangerous criminal. The implication of 14, (Ps 14) 'The wicked in the haughtiness of his countenance saith, He will not require. All his thoughts are: There is no God!' (Ps 10). The nābhāl, however, typifies the whole people. 'There is none that doeth good, no, not one.' It is not unlikely that this nābhāl is the enemy of Israel (see Baethgen, Psalmen, p. 36, Delitzsch, and others; the reading of 'Gelal' by Cheyne seems quite unfounded). Here it is the reckless ignoring or denial of the omniscience of God or His very existence that is dwelt upon by the psalmist as the immediate cause of the moral decay of the Jewish people (which in the end must lead also to political ruin). Atheism and immorality are regarded as being inseparably connected with each other.

2. Post-exilic times.—In late post-exilic times we lose sight of any atheistic tendencies that may have existed among the Jews, for there were no more prophets to chronicle the sins of the people. Moreover, the contact with Babylonian culture had given rise to the mythical beliefs which from the days of their captivity and exile were incorporated into the Bible and which have found definite recognition in the Talmudic and Rabbinic literature. Again, the revival of the religions and national spirit under Ezra was destined to dispel that ignorance and thoughtlessness which the prophets complained, and the second Temple could not very well accommodate arrogant and defiant unbelievers. The influence of Hellenism was no doubt responsible for the slackening of religious fervour and the loss of national self-consciousness during the period immediately preceding the time of the Maccabees, but that influence never went so far as to cause the Jews to adopt the Greek Pantheon or to deny the existence of an invisible God. It was their unflinching faith in their only (invisible) God that later on prevented his race, in Alexandria and elsewhere from joining their fellow-citizens in the worship of the local deities, and created the feelings of hatred which resulted in the curious charge of 'atheism' being made against the Jews—a charge which Josephus refuted with great vigour (Jos. Ant. IV. vi. 6).

3. Philo against Atheism.—Jewish thinkers, however, have never ignored atheism. Philo devotes two chapters in his de Somnibus (§§ 43, 44) to a refutation of all atheistic doctrines from a Jewish standpoint. Philo holds that the rational spirit is the only thing which is perceptible to the outward senses, and visible, having never been created, and being destined never to be destroyed, but being
ATHEISM (Muhammadan)

ATHEISM (Muhammadan).—The Muslim world has at no time been a favourable soil for the growth of atheism or communism. Among the Arabic literature unorthodox tenets of all sorts are apt to be described by the word "rendahah," which, though of uncertain origin (being derived from some by the Syriac), is probably the correct term for such systems as deny the existence of a personal God and the moral government of the world. Another name for the holders of such opinions is derived from the word "dakir," 'time,' and signifies 'believers in the eternity of the world,' i.e., in its having no beginning. The earliest system of these doctrines are certain of Muhammad's Meccan opponents, including the leader of the long-continued opposition against him, Abù Suyfàn b. Umayyah, who are all supposed to have learned their 'atheism' from the Christians of the Harrâj [Hira] (Tha'alibi, Lotto, al-Walîd. p. 64). The charge against Abû Suyfàn is not borne out by history, and of the others we know too little to estimate its probability; but the supposition that such opinions would originate from Christians, and especially monks, seems improbable due to the cultivation by Oriental Christians of certain forms of Greek philosophy; whence, in the legend that tells us how the Khalîf Ma'mûn (ob. A.D. 833) acquired his library of Greek books, the Greek king is advised to send his library to the Muslim ruler on the ground that 'these sciences' have never been engraven on a religious system without ruining it.

In early Arabic writers the system of the Zindûgûs seems to be inextricably confused with that of Manichæans, whose followers were fiercely persecuted by the early Abbasids. The locus classicus on the subject for the early Abbasid period is in the Zoûlogî (iv. 141-144) of Jalâ'î (ob. A.D. 899), where, however, a Zindûgû is confuted by the Khalîf Ma'mûn by means of a puzzle which could only trouble one who believed in dualism. The verses which the author cites show, nevertheless, that the

uncrated and imperishable, not requiring any superintendence or care, or regulation, or management. This view must lead to universal disorder and anarchy, that means to the ruin of man. All that uphold this view adhere to meet with severe but well-deserved punishment, as all wicked people always do (§ 45). The world cannot exist without a ruler, as a house cannot exist without a master, or a country without a leader (66).

4. Atheism in Talmudic and Rabbinic literature.

The final ruin of the Jewish nation and its great humiliation by the Romans in the 1st cent. after Christ made reckless ignoring or denying of the existence of God impossible. The deepening of the religious sense and the attachment to the great literary products of the past caused by the downfall led to the development of the Talmudic and Rabbinic literature, which henceforth dominated Judaism and put an end to atheistic beliefs and practices. There is no reference in the Talmud to atheism. But Rashi has kept up of God's name to prove the existence of God. The Min or the Apikoros (Epicurean) is not necessarily an atheist, but one who denies one of the principles of the Jewish faith. Immortality, Resurrection, Divine origin of the Law, and several other tenets are of equal importance. The most important is the application of the above designations. The term that approaches most closely the meaning of the word 'atheist' is kiref be'ilgor (i.e. 'one who denies the first principle'), which occurs for the first time in Rab. Shabbath, 116, and is frequently used in modern Rabbinic literature. Among the Jewish thinkers and religious philosophers of the Middle Ages, there was none who denied the existence of God or could in any way be described as an atheist (although pantheistic ideas are frequently to be found in their works). The problem of reconciling Aristotle with the Bible necessitated the discussion of the question of creation, of the attributes of God, and of the eternity of matter (maintained by the Muhammadan atheists and adopted by Crescas), but the existence of a free, personal God had never been questioned by any Jewish philosopher down to Spinoza.

5. Spinoza.—Spinoza himself can scarcely be described as an atheist. To an atheist nature is possible, but he has no part in God himself—not to mind—for its existence and development. Mind is altogether denied, for the assumption of mind is incompatible with the materialistic conception of the Universe which leads to atheism. Spinoza denies the existence of anything beyond God. Mind and matter are attributes of the same substance, of deus (sive natura). Certainly there is no free, personal God in existence according to Spinoza, and in a religious sense this amounts to atheism. But with these doctrines are certain of Muhammad's Meccan opponents, including the leader of the long-continued opposition against him, Abû Suyfân b. Umayyah, who are all supposed to have learned their 'atheism' from the Christians of the Harrâj [Hira] (Tha'alibi, Lotto, al-Walîd. p. 64). The charge against Abû Suyfân is not borne out by history, and of the others we know too little to estimate its probability; but the supposition that such opinions would originate from Christians, and especially monks, seems improbable due to the cultivation by Oriental Christians of certain forms of Greek philosophy; whence, in the legend that tells us how the Khalîf Ma'mûn (ob. A.D. 833) acquired his library of Greek books, the Greek king is advised to send his library to the Muslim ruler on the ground that 'these sciences' have never been engraved on a religious system without ruining it.

In early Arabic writers the system of the Zindûgûs seems to be inextricably confused with that of Manichæans, whose followers were fiercely persecuted by the early Abbasids. The locus classicus on the subject for the early Abbasid period is in the Zoûlogî (iv. 141-144) of Jalâ'î (ob. A.D. 899), where, however, a Zindûgû is confuted by the Khalîf Ma'mûn by means of a puzzle which could only trouble one who believed in dualism. The verses which the author cites show, nevertheless, that the
persons with whom he is dealing held the leading tenets of the atheists: "You have given presents," says Hammād 'Ajrād in a lampoon on 'Umārah b. Ḥarībīyah, "to one who asserts that the heavens made them thus by their own hands and not laid them out by its Creator." On this the author makes the curious remark that no one asserts that the universe with its organization came of itself, and that Hammād's inscription of this doctrine to the persons whom he lampoons might count as a proof that he held them innocent; and that, in fact, the satirist was himself a colleague of the objects of his lampoon. Jābiz then proceeds to enumerate the persons who constituted this society of sceptics, and his list contains some names that are familiar from the Kitāb al-Aghfānī, where others are more obscure: Hammād 'Ajrād, Jābiz, 'Alī b. al-Zairīqān, Yūnus b. Ḥarīm, 'Alī b. al-Khalīl, Yazīd b. al-Fā'īd, 'Ubūdah, Jamīl b. Māhīzīn, Qāsim, Mu'tī, Wāfīsh b. al-Jabbaḥ, Abīn b. Abīl Anā'ī, 'Umārah b. Ḥarībīyah. "All these were in constant communication, and might be considered one person." Of these, Yūnis addressed a pamphlet to the Byzantine emperors, showing up the vices of the Arabs and the defects of Islam. Abīn figures in a satire by the well-known poet Abū Nuways (ob. A.D. 810), partly as a colleague in this satirical club, and partly as a poet.

"I sat one day with Abīn (plague on him), while the time for the first prayer came, and the call was duly uttered by a correct and clear-voiced voice.

"We all repeated the call to prayer to the end. Then said Abīn: "How could you testify to this [i.e. the Muslim formula of testimonies] if you have no belief in God? I live and I never atest anything but what I see with my eyes." Then I said: "Glory to God!" he said: "Glory to Manes." I said: "Jesus was an Apostate!" he said: "Of Satan, I continue! And Moses, was the interlocutor of the Gracious and Faithful One." he said: "Then your God must have a tongue and an eye, and did He create all those who create Him!" So I held my tongue before this obstinate blasphemer.

"The poet then gives a list of sceptics, containing several of the names that have already been mentioned. In the tales told about them in the Kitāb al-Aghfānī they are not distinguished from dualists, and "their book," which was said to be in the hands of the daughter of Mu'ta'b b. Ḥiyās when arrested for zindiqah, was probably the work ascribed to Manes. In Tabari, iii. 588 (A.D. 758), an account is given of their system which is clearly more positive than negative, enjoining washings, to which Jābiz (loc. cit.) adds respect for animal life and vagrancy.

"Vagrancy means with them that they may not abide two nights consecutively in the same place; the vagrants travel in pairs, and adopt four rules—saintliness, purity, veracity, and poverty.

"Many of them tell a story about two of these Zindiqs, who suffered themselves to be beaten almost to death on suspicion of stealing jewels which they had seen an ostrich swallow, rather than let any harm happen to the ostrich. From these 'adlicks' par excellence other free-thinkers were careful to distinguish themselves: e.g. the poet Bassālīr b. Burd (ob. A.D. 783), who himself had a reputation for unorthodoxy, and in one of his verses prayed to the Prophet Muhammad to join with him in an attack upon the Deity. Abū Nuways himself was severely punished for being a "dualist," because he ridiculed the angels (Tabari, iii. 964).

Although this sect was persecuted almost to extermination in the 2nd cent. of Islam, this fact did not prevent the rise of other systems branded by the materialists.

The most famous founder of a system of the sort in the latter part of this and the first half of the 3rd Islamic cent. was Abūl-Husayn Abūn b. Yahyā al-Rawandi, reckoned by later historians as one of the "terrorists of Islam." A sect bearing the name Rawandi is mentioned by Tabari shortly after the accession of Mūsār (A.H. 140 [A.D. 757–8]). 'They came from Rawandi in the country between Qisān and Isfahān, and held the strange opinion that Mūsār was himself the Deity. Mūsār liked the heresy and was not luke-warm about it, imitating the organization and style of his predecessors. This sect seems to have made its appearance in the time of Yazīd in the 3rd cent., and was suppressed in the 5th cent., and the only work we have of it is the commentary of Mūsār on the Qurān by Abūn, which is in the format of a Muhaddithi book. It contains a number of interesting reflections, such as: 'It is the most fortunate of men to have a mouth with which to taste the garment of hunger' (Qur. xvi. 113) which was really an Arabic phrase.

*One of his criticisms on the Qurān is quoted in the Letters of Hananidi, letter 236 f. (A.D. 900) by Bāyān. He asked the grammarian Ibn 'Arabī whether 'to make one taste the garment of hunger' (Qur. xvi. 113) was really an Arabic phrase. 
epigrams composed by or attributed to this author is to be found in Yaqūb’s Dictionary of Learned Men (i. 80–90, ii. 95–107, and, indeed, there is no direction to agnosticism as far as it is possible to go. All known religions are branded as error. Mankind consists of two classes—the wise who have no religion, and the fools who are religious. The real meaning of the assertion that there is a Creator and an existence since and time is that he who asserts it has no intellect.

* Do not suppose the statements of the Prophets to be true; they are all fabrications. Men lived comfortably till they came and ruined life. The sacred books are oracles; idle tales as any age could have and indeed did actually produce. What inconsistency that God should forbid the taking of life, and Himself send two men to take each other's place for the promise of a second life—the soul could well have dispossessed itself with both existences.

It is remarkable that the author should also have preached vegetarianism in an extreme form, as apparently was done by the earlier Zindiqs; still more, that he should have devoted much of his time to the composition of sermons and other works of an edifying character.

The orthodox circle of philosophical books long continued to be an indication of heretical tendencies, and the burning of such books by authority was not uncommon. The employment of Avicenna and similar students of Greek systems in government offices was unpopular; and is condemned in a treatise under the title of At-Tawāfi. In the Fatimid Shiism, which produced a series of works which, under pretense of orthodoxy and devoutness, in reality substituted for the personal God and the future life of Islam notions that were irreconcilable with either and were supported by an interpretation of the Qur’ān so far-fetched as to be ludicrous and irreverent. The most famous of these are the poem of Ibn al-Farid (595–623 a.H. [A.D. 1161–1233]), called from its rhyme Tā’īyāh, and the treatise of Ibn ‘Arabī (590–628 a.H. [A.D. 1155–1240]) called Fugās al-Hikān, ‘Gems of Maximus.’ Both these works at different times brought their owners into danger, and were the cause of riots (see Ibn Iyās, History of Egypt, ii. 119 [875 A.H.] and 219 [888 A.H.], where the latter book is described as the work of a worse unclevenor than Jew, Christian, or Idolater). Of the comments on the Qur’ān which this work contains it is sufficient to cite that on the story of the Golden Calf; according to Ibn ‘Arabī (or the Prophet, who records it from his teacher who disowned his brother for not approving of the worship of the Calf, since Aaron should have known that nothing but God could ever be worshipped, and therefore the Calf was (like everything else) God)

Refutation of the opinions of the ‘atheists’ was one of the purposes of the science called kāthān, or metaphysical theology. They are divided by the theologian Ghazālī (ob. 505 A.H. [A.D. 1111]), in his treatise entitled At-Tawāfi nūn al-dālūl, into three classes: the dukhān, ‘the person who disowns the Creator, maintained the eternity of the world, and the eternity of generation, —these are the Zindiqs’; the ‘Naturalists,’ who allow the existence of a Creator, but suppose the life and soul to be the result of the mixture of elements and humours in the body, and to cease at death; and the ‘Deists,’ viz. Socrates, Plato, Aristotle, and their followers.

A somewhat different division is given in the treatise on Sūrah by Ibn Hazm (ob. 455 a.H. [A.D. 1064]), where, after refutation of the Sophists, who make knowledge either non-existent or relative, the author deals with those who (1) say the world is eternal, without Creator or Governor; (2) say that the world is eternal, with a Creator and Governor; (3) say that, besides God, Time, Space, and the Soul are eternal. In addition to the other names that have been mentioned, that a little gives the believers in these positions the name wāhīlik, ‘heretic,’ and gives the name of one of the upholders of the first as ‘Abdallah b. ‘Abdallah b. Shu‘a‘īf. It could not be expected that many names of the supporters of such unpopular opinions would be recorded.

LITERATURE.—There is no treatise, so far as we are aware, in any European language bearing on the subject. The original sources are given in the course of the article. D. S. MARGOLIOUTH.

ATHLETICS, ATHLETICISM.—Athleticism, notwithstanding the great and elaborate developments which have taken place in the last hundred years, is to be understood only as an expression of a very primitive instinct—the instinct to play. All the evolution of twentieth century sports and games—the elaboration of rules, the development of muscle and nerve—is a provision for the impulse, the same in lambkins and in babies, in savages and in civilized men and women, to stretch their limbs, to overcome elemental forces, to contend against self-imposed difficulties and against each other.

It is interesting, in an attempt to analyze athleticism or to review athletics, to note the various forms of amusement which have sprung from that instinct to play. All sports are based on the laws of nature in modern sports which make them appeal to various people. It is impossible to treat the subject exhaustively; one could scarcely enumerate all the different kinds of sport, much less discuss them. There are, however, some points worthy of consideration as supporting the different kinds of development in physique and in character, acquired by different forms of exercise. Walking, running, leaping, dancing, hill-climbing, and swimming are our simplest sports. In these a man pits himself against natural difficulties, for the most part fighting against the force of gravity, and develops muscle and nerve in comparatively gross combinations of movements. In other words, there is achieved by these primitive exercises the kind of development of muscle and nerve which all young animals achieve when they learn to disport them- selves in air, on land, or in water. That is the elementary stage of athletics, very like what the savage attains to when he executes a war-dance. It represents the demand of the body to be allowed to grow in its full stature and freedom. The surplus we call play. In these days the same kind of simple development is achieved by such exercises as are now in England associated with the name of Sandow. If one has not opportunity to climb hills or battle with waves, one may 'bring up' the muscles by daily contest with improvised forces of an elastic nature, when the strain and the stress are finely adjusted and each day's ambition is to increase both. At this level of athleticism there seem to be only two kinds of gain—the opportunity to get rid of surplus energy and the function of the muscle substance and the skin in disposing of elements in the blood which clog the vital mechanism.

Another kind of effect is experienced when implements are introduced for outdoor sport. About the simplest of exercises at this level are still-walking and pole-vaulting, and here we begin to realize a development which can never be achieved by primitive exercises. The feeling one has in pole-vaulting, when, by his own effort, he raises himself on a pole to a height different from the effect in simple high leaping. So also is the effect of high still-walking. In both of these there is demanded also a skill in movement which, added to the pleasant sensation,
Athletics, athleticism.

The most important injury is perhaps that which is suffered by the arm, the shock when engaged in sport, and that means that he has neglected his exercises and allowed his blood-vessels to become hard, then has subjected them to an unvoiced stress. It is doubtful if bones become brittle from want of exercise, though some authorities have maintained to the contrary. There is certain that, without exercise, muscles become flabby and cannot meet unvoiced demands of a severe kind. In wrestling, for example, which has become very popular of late (and deservedly so, for it calls into play more functions than any other game not implemented by tools), one is apt to ask the bones and muscles to do too much, and strain and laceration of muscle are very likely to follow. The lesson to be gathered is that one should keep oneself as fit as possible, take as much moderate exercise as may be, but never attempt anything severe without due preparation.

1. The hygienic effect of athleticism is its first justification. The contribution to the health of the community derived from sports is incalculable. It consists chiefly in the development of the chest from full breathing of fresh air; in the increase in the circulation from the acceleration of the heart's action; in the quickening of appetite and the promotion of digestion; in the elimination of waste products achieved by muscular exercise, rapid breathing, and perspiration; and, perhaps most important of all, in the tone of the heart afforded to a tired and dull brain. When we hear any one ask what form of exercise would be best for him, our answer, especially in the case of adults, should almost invariably be—that which he will enjoy. Hence exercise, however, whether walking, or croquet, promotes nearly all the good results just enumerated if entered into with zest and keenly pursued. On the other hand, caution should be exercised lest excess of effort lead to injury. The most important ill effect, and one not sufficiently considered and often entirely overlooked, is a dilatation or strain of the heart. This sometimes occurs in young people who are pressed to do too much. Boys at school may suffer irreparable injury from being made to play a strenuous game of football, or take a long cross-country run, when they are not toned up to the effort. More frequently heart-strain occurs in adults who are of a sporting nature—men who, perhaps on the occasion of their school sports, come ill-conditioned from the desk and try a quarter-mile race; or who attempt for eight hours on the 'Twelfth' without preparation; or who are carried away in the Christmas vacation, after weeks of muscular idleness, and ride to the finish on their first day with hounds. The next most important injury is perhaps applied with individuality. It is not infrequent that some one having suffered a paralytic stroke when engaged in sport, and that means that he has neglected his exercises and allowed his blood-vessels to become hard, then has subjected them to an unvoiced stress. It is doubtful if bones become brittle from want of exercise, though some authorities have maintained to the contrary. There is certain that, without exercise, muscles become flabby and cannot meet unvoiced demands of a severe kind. In wrestling, for example, which has become very popular of late (and deservedly so, for it calls into play more functions than any other game not implemented by tools), one is apt to ask the bones and muscles to do too much, and strain and laceration of muscle are very likely to follow. The lesson to be gathered is that one should keep oneself as fit as possible, take as much moderate exercise as may be, but never attempt anything severe without due preparation.

2. The good and the ill effects of athletics in moulding character are not to be so plainly set forth. It is certain, however, that sports have been and are of enormous importance in their effect upon a nation's mind and morals; and probably nowhere so much as on British soil. The kind of trite saying which echoes 'the Duke's' remark about our battles being won on the playgrounds of our schools, describes only a fraction of the influence exerted by athletics on the British boy. He will be apt to be healthy and cheerful, to be a good student, and an unconditional advocate of sport; but it is useful to try to see the effects of it are.

It may be well to dispose first of the evil effects often attributed to athletics. And, at the outset, let us observe that athletics never do in fact or boy, woman or girl, what they did not have at least potentially before. Athletics are a form of education, and can only elicit and develop the qualities, physical and mental, good or ill, already gifted by nature. Thus, for example, we are told that athletics tend to make men brutal, but that is true only of those who are already cruel. In any case, well-conducted sport, as, for example, modern football with its penalties for rough play, tempts all the other way. In the present writer's opinion, the charge is most fairly laid at the door of those who conduct big 'shoots' in which there is wanton destruction of birds which may almost be described as domesticated fowl; and there are other so-called sports sometimes conducted so as to transgress the law of sport that every creature should be treated to the best of the trainer's exceptions. A good Master of Hounds is as humane as he is expert, as just as he is ingenious, in the pursuit of stag, fox, or otter. To a big-game hunter the temptation to kill for killing's sake, when, as it is, a mere licence, is, as he can see his hand to see, may be considerable. But even then self-restraint and humanity are part of the etiquette of the sport. Sometimes it is alleged of single-handed games, like golf, that they are selfish; that, when a man is playing for his own hand, he is doing something not so good as when he is playing for his side, as in cricket. The argument is superficial, as both results and theory show. It is safe to assert that the average cricketer plays as selflessly as the average golfer. In both cases the play itself makes wholly for self-forgetfulness. The man who, at the moment of the stroke, thinks what is going to happen to him because of it will thereby spoil his game. Both games, and all games, need out those whose attention is not wholly upon the thing to be done at the moment. It will be noted that 'selfishness' in games crops up in the talk of the pavilion or clubhouse, when the salutary stimulus of the game is withdrawn. Other evils spoken of, and especially gambling, are quite accidental, and are no more part of athletics than they are of geography.
ATIMIA

The distinction of three degrees of 'atimia,' made by Meter in his treatise de Nonis Dramatorum (Berl. 1819), which he entitles infamia maxima, media, and minima, upon the analogy of Roman law, though it is true, that in the passage of Andocides, does not seem to be substantiated by the evidence. For the passage of Andocides is clearly of the nature of a popular classification, and cannot be adapted as it stands, to the traditional categories of offences, and is in general devoid of any logical principle of division. It would seem safer to adhere to the view enunciated by Calilhoun, according to which 'atimia' per se was limited to the civic status of the subject; but we must also recognize that in practical effect it was a necessary concomitant of a sentence of exile (ἀποσύνεξη), and that, on the other hand, confiscation might in certain cases be conjured with a sentence of atimia.

From this point of view 'atimia' must be distinguished simply as (1) total, and (2) partial.

1. Total 'atimia' meant the entire loss of civic personality (Lat. capsul), so far as its active functions were concerned. The citizen who was pronounced totally άτιμος was incapable of holding any civil or public office within the Athenian empire, or of acting as herald or ambassador; he might not appear in the Agora or attend meetings of the Senate or Assembly, or appear in any public sanctuary or public ceremonial; nor could he appear either as plaintiff or defendant in any suit, or give evidence. For the enumeration of disabilities in Exkines, i. 21; Demos, Meid. 87: ati aλαχονδραδύθερα. Under the conditions of Athenian life the prohibition against taking part in the business of the public Assembly (negoiv καὶ γράφον) naturally covered most of the privileges into which citizenship entitles, and consequently this right is frequently spoken of as that which par excellence was forfeited by the άτιμος (Demos, Steph. i. 79: τίνα τήν πόλεσ χαίρετο, καὶ τήν εν αύτϊ παρομείας ἀπòστερον). In general, the condition of the ατιμος was inferior to that of the alien (Demos, Theor. 88: μηδί οὐκ εἰσήκουσα εἷλα μετασχεν τήν καὶ τάς ιερας δοκομενας παρομειας), and is spoken of by Isocrates as worse than exile (Isocr. xvi. 47: τίς ατιμος, ἢ ἐγὼ δραγηθή θείοι και τινάι μοίσυ πολλά γάρ ἀδικήτων παρά τοις αυτοίς πολλών ζημιωμένοι οίκιον ἢ παρά ιερας μετασεις).

The άτιμος, in fact, was in the State, but not of it. Precisely how far his disabilities extended is not known; our authorities do not furnish an answer to all questions which suggest themselves. It has been pointed out, for example, that ADOPTION (Greek), that άτιμος on either side would be a practical bar to adoption; but whether in law it was so is uncertain, and the suggestion might be hazardous that, in order to prevent the extinction of a family, testamentary adoption, probably the only, or the only legal, means of avoiding the penalty, might not have been denied. Again, the case of one holding an hereditary priesthood presents a difficulty. And we may ask what legal protection was given to the life and property and personal dignity of one who was άτιμος, and under what forms. The consequences of άτιμος in detail are not treated by modern writers, who content themselves with the above-given generalizations as to its significance; but even these cannot be taken quite aix poide la lettre. It may be conjectured that, at least, redress of personal wrongs in the case of an άτιμος was secured, if at all, by means of a public prosecution (γράφο) undertaken by a friend of the aggrieved (see Demos, Meid. 47). The free use of depositions, which obtained in Attic legal procedure, would obviate the difficulty in regard to evidence (cf. Demos, Meid. 95). If so, we must say that in point of law a sentence involving total

6 Dig. iv. 5. 11: 1 Captulis deminulatione tis sunt genera, maxima, media, minima; tis enim sunt quae habemus, liberatim, civitatis, familiae, habentur. (c.g. by death or slaver), maximum esse captiis deminuionem, cum vero amittimus civitatis, liberatiam retinamus, mediocris esse, etc.

7 Cf. Demos, Meid. 87: άτιμων οπεράτορα των της πόλεως καί κοινωνίας άτιμων γενών, etc.

8 Cf. Atit. Alc. i vili. 5: άτιμος είναι καί της πόλεως μη καταχθεί.
The crimes for which total disfranchisement was the penalty were the following: 

1. Treason, Cospansion (κοσπανσία).—The penalty was death, confiscation of property, and a declaration of anāmia, which became the unapportioned status of a man who had been disfranchised, and which also applied to any who subsequently adopted them. To the same penalties those who conspired to subvert the democracy (δημοκρατία) were sentenced.

2. Theft (κλοπή) in its more serious forms; cf. Andoc. I.c.: ἀλλώποι κλέων... διότι ταύτην εἶναι καὶ αὐτοῖς καὶ τοῖς ἀλλοις ἀπιγράφων (Deb. Med. 115).

3. Corruption (κοµποσία) or barochois of the recipient; δοκιμασία of the public debtors (Deb. Med. 115). For some forms at least of this offense the penalty was hereditary anāmia and confiscation of goods.

In respect of violation of oaths by sea or land—refusal to serve, desertion, cowardice in the field, etc. (Andoc. I.c.: ἄλλως χένθος τῶν ταύτων ἡ στρατεύματος ἡ διάλεκται ἢ ἀποτίμησις τῆς διάλεκτος καταπολέμου). For all such offenses disfranchisement was the penalty, and in some cases confiscation seems to have been conjoined.

The following classes of offenses (with the particular variety φιλοκεραία, false assertion of service of war). According to Andoc. I.c., disfranchisement was handed only after a third conviction had been obtained (see Wyse on Incens, v. 17 and Art. Proclus, v. 82).

4. Unofficial conduct (κοινοισία νομίσματος).—The law seems to have specified four varieties of the offense—actual ill-treatment, withholding food, evidence, or expulsion from the house, and refusal of funeral ceremonial.

5. If a man gave in marriage an Athenian citizen a foreigner (cf. some text referring to a hireling and a woman citizen of Athens, he incurred loss of civic rights and confiscation (κατάληψις). The penalty for any proposal to modify the old (Oraokranion) law relating to houses.

6. Combination of a wife's adultery, if she were caught in the act of conjunction.

7. A law attributed to Solon visited with less of civil rights the man who in time of patriotism (ουρανό) did not take a side (Holteob. 30; other authorities seem to prove that a single conviction was sufficient (see Wyse on Incens, v. 17 and Art. Proclus, v. 82).

8. An unauthorized proclamation by the herald in the theatre.

9. Any one who published or released at the bounds of the public arbitrators (κατάληψις) may appeal to the whole Board of Arbitrators; and if they found the magistrate guilty, the law enacts that he should lose his civic rights (Arist. Ath. Pol. 25: 2; see the context).

11. Combination of a wife's adultery, if she were caught in the act of conjunction.

12. A law attributed to Solon visited with less of civil rights the man who in time of patriotism (ουρανό) did not take a side (Holteob. 30; other authorities seem to prove that a single conviction was sufficient (see Wyse on Incens, v. 17 and Art. Proclus, v. 82).

13. An unauthorized proclamation by the herald in the theatre.

14. Any one who published or released at the bounds of the public arbitrators (κατάληψις) may appeal to the whole Board of Arbitrators; and if they found the magistrate guilty, the law enacts that he should lose his civic rights (Arist. Ath. Pol. 25: 2; see the context).

16. Combination of a wife's adultery, if she were caught in the act of conjunction.

17. A law attributed to Solon visited with less of civil rights the man who in time of patriotism (ουρανό) did not take a side (Holteob. 30; other authorities seem to prove that a single conviction was sufficient (see Wyse on Incens, v. 17 and Art. Proclus, v. 82).

18. An unauthorized proclamation by the herald in the theatre.

19. Any one who published or released at the bounds of the public arbitrators (κατάληψις) may appeal to the whole Board of Arbitrators; and if they found the magistrate guilty, the law enacts that he should lose his civic rights (Arist. Ath. Pol. 25: 2; see the context).

21. Combination of a wife's adultery, if she were caught in the act of conjunction.

22. A law attributed to Solon visited with less of civil rights the man who in time of patriotism (ουρανό) did not take a side (Holteob. 30; other authorities seem to prove that a single conviction was sufficient (see Wyse on Incens, v. 17 and Art. Proclus, v. 82).

23. An unauthorized proclamation by the herald in the theatre.

24. Any one who published or released at the bounds of the public arbitrators (κατάληψις) may appeal to the whole Board of Arbitrators; and if they found the magistrate guilty, the law enacts that he should lose his civic rights (Arist. Ath. Pol. 25: 2; see the context).

26. Combination of a wife's adultery, if she were caught in the act of conjunction.

27. A law attributed to Solon visited with less of civil rights the man who in time of patriotism (ουρανό) did not take a side (Holteob. 30; other authorities seem to prove that a single conviction was sufficient (see Wyse on Incens, v. 17 and Art. Proclus, v. 82).

28. An unauthorized proclamation by the herald in the theatre.

29. Any one who published or released at the bounds of the public arbitrators (κατάληψις) may appeal to the whole Board of Arbitrators; and if they found the magistrate guilty, the law enacts that he should lose his civic rights (Arist. Ath. Pol. 25: 2; see the context).

31. Combination of a wife's adultery, if she were caught in the act of conjunction.

3. Conditional atimia. —To these two degrees of disfranchisement, a third variety, which may be styled 'conditional atimia,' must be added. This form was adopted in the earlier stages of the process, whereby citizen offenders were deprived of the right of sitting in the Senate or the Assembly. Andoc. mentions other cases of deprivation of specific rights, but we know not on what grounds it was inflicted.

3. Conditional atimia. —To these two degrees of disfranchisement, a third variety, which may be styled 'conditional atimia,' must be added. found a verdict of guilty, sentence of disf
franchisement was for 10 years imposed. Whether from the moment of the challenge the right to ascend the Bema, etc., remained in abeyance until the issue of the trial was uncertain.

It is to be observed that a sentence of 'atimia,' once pronounced, was perpetual, and, moreover, was in certain cases an inheritance. No more avoidable
by a man’s heirs than was his other estate (see art. 
INHERITANCE). Rehabilitation, at any rate, was so hedged round with conditions as to make it hopeless in the vast majority of cases. No citizen could propose a restoration of civic status to one dis
franchised, without the protection of a preliminary Bill of Indemnity (δίδακα), for the validity of which at least 6000 votes were requisite (Demos. Týmapor. 46: ἔλος αὐτὸν νόμον, οὐκ εἰς τεῖς τῶν ἄτιμων οὐδὲ τῶν ὑπελογίων λέγει οὐδή χρησιμότης τείς ἀνθρώπων οὐκέτας, ἐν μὲ τῆς ἄτιμας διατάξει, καὶ ταύτη μὴ ἔλαστον ἢ ἑγκυκλιόν ψυχαντος,—by which we should probably understand 6000 votes in all, not 6000 affirmative votes. If the Bill of Indemnity were passed, the main proposal would be this: that the claimant and the procedure of his lawful right should be a
omnibus habere, de omnibus rebus solet excitae exitiales habere, ut damnati in integrum restituantur, vindici solvuntur, exules reducantur, res indicate restituantur). Examples from Athenian history are the decrees passed just before the battle of Salamis, and during the siege of Athens, and after the defeat at Chæroneia; see art. AMNESTY.

In the above account no notice has been taken of a species of ἀτιμία which, although natural consequence of certain acts, was yet not part of their legal penalty. 'Atimia,' in this non-legal sense of the verb of popular opinion, is alluded to by Demos. Meid. 72 (of the insult of a blow received in public), and by Aristotle (of the dish
honour attaching to the suicide). Similarly, and equally naturally, the ascetic, the ἀγαθονομικόν, the son of a man who had been executed, were all under this species of 'atimia' (cf. Demos. Arist. i. 30).

'Atimia' in this non-legal sense in Athens is akin to 'atimia' as it presents itself at Sparta, where the same development of legal ideas and procedure; but all the more strong there was the force of public opinion, which per
haps to a greater degree than elsewhere in Greece was identical with law. At Sparta such 'atimia' fell upon all departures from the customs of the community (Xen. Besp. Lec. x. 7, iii. 3). An ex
ample is the case of Aristodemus who survived the battle of Thermopylae (Herod. vii. 231: άνωνυμον
στήνει ἢ ἀκολούθωσας εἴσε ἑσοθε τό καὶ ἄτιμως; cf. Xen. or. ed. i. 4; Plat. Aesp. 89). The law who survived the custom, however, was treated more leniently (Thuc. i. 34: ἄνα καὶ ἄργυς τῶν ἄτιμων τόπων, ἄτιμως ἐς ἐναπό ὅτε μέτρον ἄρχων μήτε γραμμαντών τῆς πλειονότερος κινούμενον, a penalty corresponding to 'partial atimia' at Athens). The number of those defeated at Lencstra made it impossible to carry out the law even to this extent. Spartans who remained unmarred were also subjected to a certain 'atimia,' being deprived of all claim of respect from their juniors, and excluded from all the choicer privileges. The inability to provide the fixed contribution to the

common bases excluded a Spartan from sado fluid from the class of Pears (ψατών), which probably implied the loss of political rights, as distinguished from the civil rights, of citizenship (Arist. Polit. ii. 9; Xen. Hell. iii. iii. 5). Apparently full rights were at once recoverable by conformity to the required conditions; even Aristodemus had been restored to the former caste, though not, indeed, entirely (Herod. vii. 231 and ix. 71). It would hence appear that 'atimia' at Sparta was in general analogous to what we have called 'con
ditional atimia' at Athens.

The existence of 'atimia,' as a penal measure is proved for other States of Greece (e.g. Chalcos and Eretria in Euboa, Chios, Lokris, Ephesos, etc.) by inscriptions ranging in date from the 5th to the 1st cent. B.C. In certain cases Athenian influence may have operated, as in Euboa (see Hicks, Manual of Greek Historical Inscriptions, No. 40: ὅπως δὲ Χαλκίων τοιούτου ἄτιμα. δὲ δὴ μὴ ἤδη ἄτιμως ἄτιμον εἰς καὶ τά ἰχθύσματα ἄτιμον δημόσια); and perhaps also at Delphi, where, in the 2nd cent. B.C., at any rate, State-debtors were ἄτιμον (Ditten
berger, Sylloge 29). It is probable that the penalty of ' atimia ' was prac
tically a universal method among the Greek States, and followed immediately from the Greek conception of the relationship between the State and the individual (on this subject see Newman's Politics of Aristotle, p. 241). LITERATURE.—Besides the works above specified, see also P. van Lelofy, De infamia sine Attico, Anstat. 1858; H. M. E. Meier, 'Historische Tatsachen zur Onomastik der antiken Attiker,' Erg. 1819; Thomson, Le Droit pénal de la république athéni
eenne, Brussels, 1875; Paul Usteri, Ächtung und Verbanbnung im griechischen Recht (Berlin, 1890), gives the most exhaustive treatment of the subject; following out the ideas of H. Swob
boda (in Arch.-Kynigl. Mitt., u HRESULT. Ger. xvi. [1896] p. 491.), it draws a sharp distinction between the legal and 'outlawed' and ἄτιμως 'disfranchised,' but without apparently attaining any very significant conclusion.

W. J. WOODHOUSE.

ATISA (or Dipánkara).—A learned Indian Buddhist friar, who effected the most profound re
formation of Lámaism. Entering Tibet in a.D. 1608, and finding the prevalent Buddhism in the hands of an immoral priesthood and extremely debased by demonology, he founded a new Order, on a purer Buddhist model, which he called ' Bound by the Orders ' (Kah-abom). This afterwards be
came the 'Yellow-cap' sect or the 'Virtue Prot
ectors' (Gel-lung pa-lugs). In his reform Atisa restored celibacy and purified the ritual of much of its grosser devil-worship. He wrote a great many doctrinal works, and trans
lated into the Tibetan scriptures a large number of Indian Buddhist commentaries. The beneficial effects of his teaching also initiated other semi
reformed sects, the Sakraya and Kargyn, which arose somewhat later. He died in A.D. 1652 at Ne-Tang, near Lhasa, where a large funeral mound, or stupa, was erected over his grave and still exists.

ATITS or, incorrectly, Athits; AVADHÚTS, sometimes Abdhús, Ādhibs, Ādhvths (Sr. atita, 'passed away from worldly care'); avadhítas (‘shaken off’); avadhítas (‘shaken off’); avadhítas (‘shaken off’); avadhítas (‘shaken off’), has been t
taken together. They are generally applied in India to any religious mendicants, as indicating that they have ' passed away ' from or become liber
ated from worldly cares, or have 'shaken off' all caste and personal distinctions. They are applied to both Vaishnavas and Saivas (qq.v.); but, so far as the present writer is aware, Atit is applied only to the latter. Mr. Risley,* however, states that Vaishnava Atits exist in Bihar. In this technical

* Fries and Castes of Bengal, e. c. ' Atit.'
ense, māndūka often occurs in Sanskrit literature, but the technical use of atīta seems to be more modern, and to be confined to the vernaculars. Atīt is often confounded with the word atīth (Skr. atīthi), 'a guest,' which has more than once given rise to fanciful explanations. In addition to this customary general sense, both words are sometimes used to indicate special classes of religious mendicants.

In this narrower sense Atīt is applied to six and a half of the Dāsāntis, or ten sections of Saiva mendicants, who claim spiritual descent from the great reformer Saṅkarāchārya (q.v.). Three and a half of the Dāsāntis are Dāpals from the habits of carrying a dāpdla, or staff, are considered to have retained Saṅkarāchārya's doctrine in all its purity. The rest, viz. the Vannas, Arap-yanas, Paris, Giris, Parvatas, Sāgaras, and half the Bhirats, are reputed to have fallen to some extent from orthodoxy, but are still looked upon as religious characters. These are the Atītas. Unlike the Dāpals, they carry no staff. They differ from the latter also in their use of clothing, money, and ornaments, their methods of preparing food, and pointing to mannerisms drawn from any order of Hindús. Some of them lead an ascetic life, while others mix freely in the world, carry on trade, and acquire property. Most of them are celibate, but some of them marry, and are known as bhūjagī ('married') or gharbāv ( 'householder'). Atītas are often called monasteries, and some officiate as temple-priests. They wear ochre-(śārā-)coloured garments, and carry a rosary of the rudrakṣa seeds sacred to Siva. They do not eat flesh or drink spirits. They worship Siva, usually under the name of Mahādeva or Bhairon, and also pay devotions to the monkey-god Hammān or Mahāvīra. Their religious theories (when they have any) are based on the adeiita Vedānta (q.v.) of their founder Saṅkarāchārya.

The Saiva Advaitācārya (when the word is employed in the narrower sense) are ascetics of a stern mould. They wear as few clothes as possible, making up the deficiency with mud, and let their hair grow long and matted (technically called jūlī). They practise silence, and live on alms. In the cold weather they may be seen cowing over a small fire. Their life is in every way an extremely hard one. Goraṅhānī (q.v.), the founder of the sect of Kāmāmat Yogis, is often referred to as a typical Advaitācārya of this class.

2. Philosophical meaning.—It is evident from this that the idea of atman, 'self,' is relative, and the meaning of atman came very early to signify 'the self in contrast, with that which is not self,' and this meaning developed in four directions: (1) the own person, the own body, opposed to the outside world; (2) the trunk of the body as opposed to the limbs; (3) the self as opposed to the body; (4) the essence as opposed to what is not essence. Examples of these various meanings are frequent in the Vedic texts.

3. Brahman and Atman.—There are two words, brahman and atman, which are often used in the Upanisads to signify the inner essence of the individual as well as of the whole of the phenomena. But these latter cannot be considered separate from each other. Brahma means originally, and wherever it occurs in the Rigveda, 'prayer'; and it is very strange (and recalls the similar case of the Biblical nēgō)
how this word came to mean the essential principle of the world. In prayer the devotee felt himself elevated above his own individuality, above the phenomenal world, in union with the gods; in prayer he felt swaying within himself a world, a self, that was above all beings, above all worlds, and even above the gods. So it came about that to the question already raised in Rigveda, s. 8. 4, 'What was the wood, what was the tree, of which they have carved heaven and earth?' the following answer is given by the word *brahman* from the original meaning 'prayer' came to signify the 'principle of the world.' It might be supposed that a similar development could be traced for the word *atman*. And, indeed, there are some who believe that, side by side with the theological significance attached to the word *brahman*, there was a more philosophical tendency which circled round the word *atman*, and that both views expanded more and more until they coalesced in the identification of *brahman* and *atman* as it is found in the Upanisads. (Chhand.) Atman may be defined by the facts. It is useless to attempt to gain in the hymns and Brāhmanas the necessary materials for a history of the word *atman*, as we can for the word *brahman*. On the contrary, we see the word *atman* emerging here and there, and quickly disappearing again, until the Indian thinkers, becoming aware of the advantage of this term, began to use it more and more frequently to express what they felt without being able to clothe it in words. In fact the word *brahman*, 'prayer,' originally expressed by *atman* was made by them into an intensifying this subjective, and at the same time metaphysical, character that they came to take hold of the word *atman* as the most striking and happy expression for the inner essence of the individual, and for the inner essence of the whole world. These few examples may serve to illustrate this process.

4. Examples from hymns and Brāhmanas.— Even as early as the Rigveda, in the profound and difficult hymn of Dirghatamas (i. 164. 4), the poet and seer tells us: *"Atman emerging here and there, and quickly disappearing again, until the Indian thinkers, becoming aware of the advantage of the term, began to use it more and more frequently to express what they felt without being able to clothe it in words. In fact the word 'brahman,' 'prayer,' originally expressed by 'atman' was made by them into an intensifying this subjective, and at the same time metaphysical, character that they came to take hold of the word 'atman' as the most striking and happy expression for the inner essence of the individual, and for the inner essence of the whole world. These few examples may serve to illustrate this process."

Many other quotations of similar import will be found in the present writer's Geschichte der Philosophie, i. 1, especially p. 533 f. It is said, for example, of Prajāpati (a mythical personification of the creative power) in the Taittirya Arāpyaga, i. 25: 'In building the worlds and the beings he entered with his own Self (*atman*) into his own Self (*atman*)'; in Atharvav. x. 8. 44: 'He who knows him does no longer fear death, he knows the wise, unencumbering, ever-young *atman*'; in Taitt. Br. ii. 12. 9: 'Whoever has knowledge of the hidden things, exalted by glowing fire—only the knowers of the Veda who are true.' And this life understands him, the great omniscient *atman*. He, living in the Veda, is himself the source of the arts.* Others, however, were more evangelical, as an exclamation between himself and the priests one—he is the intellectual Self (manasātman *atman*) in man.

These passages already approach the standpoint of the Upanisads, which is fully reached in the so-called 'Vedas of Saippūla' (Sātap. Br. x. 6. 3) and Chand. Up. iii. 14: 'Verily this world is Brahman. Let a man meditate upon it in silence as Tātmaka (origin, annihilation, and breath of the world). Mind him, think of his Self, lift his heart to his Self the infinite. All-working is he, all-wishing, all-smelling, all-tasting, all-embracing, silent, unconscious; He is my soul (*atman*) in the inner heart, and more vast, larger than the mustard seed, or a millet-corn, or a rice-corn's kernel; He is my soul (*atman*) in the inner heart, greater than the earth, greater than the atmosphere, greater than the heaven and all the worlds. The all-working, all-wishing, all-smelling, all-tasting, all-embracing, silent, unconscious, He is my *atman* in the inner heart. He is the Self in all. He shall enter. Whoever obtains this, verily he does not doubt!' Thus spoke Saippūla, Son of Saippūla.

5. The Atman in the Upanisads.— The words just quoted, 'He is my *atman* in the inner heart, He is the *brahman*, contain the two words about which circle nearly all the thoughts of the Upanisads. They are seen to be used without any distinction; but whereas in the quotation just given, a difference is observable, *brahman* means the eternal principle as realized in the whole world, and *atman* the same principle as realized in ourselves. Assuming this, the fundamental thought of all the Upanisads can be expressed by the simple equation:

*brahman = atman*,

meaning the identity of *brahman* and *atman*, or, as we should say, of God and the soul. It is thus expressed in the so-called 'great words': *tat tvam asi*, 'that is thou'; and *tadv brahman asmi*, 'I am *brahman*'; (Bhīṣ. Up. i. 4. 10). That means: *brahman*, the power which creates all the worlds, supports them, and destroys them. This all-mighty, all-pervading, eternal power is identical with the soul, with that which, rightly understanding, we have to consider as our soul, as our own unchanging, imperishable Self. The grandeur of this thought is manifest. We do not know what ways are reserved for philosophy in future ages, we do not know what specific form in future ages it will take, but we know in certain, if a solution of the riddle which this phenomenal world presents to us is possible in any way to mankind, the key to that riddle can be found only where Nature manifests herself not merely from the outside, but where she exceptionally reveals her secret to us, and allows an insight, however limited, into her abysmal depths, i.e. into our own inner Self, into our *atman*. This way was trodden by the Indian philosophers in the Upanisads, and also by future thinkers. But what have we to consider as our *atman*? It was not without serious researches that the Indians came to a satisfactory answer to this question. *Atman*, the Self, might be simply the body, it might be the vital principle, the individual soul (jīva) in us, it might be something higher than all this. It is wonderful to follow the Indian thinkers in their researches after the real essence of the *atman*, as they lie open before us in the various Upanisads; here, however, we must limit ourselves to a few examples.

In the second *sūtra* of the Taitt. Up. the philosopher takes man as he appears as a bodily existence. In so far he consists of food, he is a composite, *consisting of the essence of food*; but this body is only the shroud which envelops something else, the *prājñāvāya *atman*, 'the Self consisting of vital breath.' This again, holds another being, the *bhrātāvāya *atman*, 'the Self consisting of will.' This, again, contains the *vijñānāvāya *atman*, 'the Self consisting of consciousness'; and only by reducing everything as an extreme to *atman*, (the inner Self, the *sāddvāntāvāya *atman*, 'the Self consisting of bliss'). Having come to this, the text says: 'Verily this is the essence; for whatever is it consists of the Self—of *atman*.' For who could breathe, who could live, were not this bliss in the other of his *atman*. In this case it is he who creates bliss. For whoever in that Invisible, Inconceivable, Unsearchable, Unfathomable finds peace, finds rest, he really has come to peace. But whoever assumes this bliss as a function in the individual soul and this *atman*, there is fear for him; it is the fear of the man who thinks himself wise' (Taitt. Up. ii. 7).
text speaks of three ātmanas—the corporeal, the individual, and the highest ātman. In Chândogya, Upan. viii. 7, Prajâpati said: 'The Self (ātman) which is free from sin, free from old age, from death and grief, from hunger and thirst, whose wishes are true, whose counsels are true, that is to be investigated, that is to be understood; he belongs to all worlds and all wishes, wherever have been found that Self.' These words of Prajâpati were heard by the gods and by the demons; and in order to learn the true Self the gods sent Indra, the demons Virochana, to Prajâpati. He consented to teach them, and began his instruction with the words: Look here in a vessel filled with water, and tell me what of your Self you do not see there.' They answered: 'We see, O venerable master, this our entire Self even to the hairs, even to the nails.' And he said: 'Well, that is the Self, that is the Immortal, the Fearless, that is the Brahman.' They went away with satisfied heart, but Prajâpati said: 'There they go away, without having perceived, without having found the Self.' Virochana, the messenger of the demons, remained content with the answer; but Indra, without returning to the gods, came back and said: 'O venerable master, just as this Self is well adorned when the body is well adorned, well dressed when the body is well dressed, well cleaned when the body is well cleaned, even so that Self will be blind when the body is blind, lame when the body is lame, crippled and, in fact, will perish as soon as the body perishes; therefore, I see no consolation in this doctrine.' Prajâpati then led him to a higher conception of the Self, saying: 'He who moves about happily in dreams, he is the Self; this is the Immortal, the Fearless, this is Brahman.' Indra departed, but, before reaching the gods, came back and said: 'Venerable master, it is true that the Self is not blind when the body is blind, not lame when it is lame, it is true that it is not affected by the infirmities of the body; it is killed when the body is murdered, is not lamed when it is lamed, but it is as if it were killed, as if it were vexed, as if it suffered pain, as if it wept,—in this I see no consolation.' Prajâpati gave a new instruction: 'When a man, being asleep, reposing, and at perfect rest, sees no dreams, this is the Self, this is the Immortal, the Fearless, this is Brahman.' Indra departed, and returned again: 'Venerable master, in that way he does not know himself, does not know 'I am this,' nor does he know anything. Anything that is gone to annihilation, I see no consolation in this.' And now Prajâpati, after having led his pupil from the bodily Self to the conscious individual Self in dreams, and from this to the unconscious individual Self in deep sleep, revealed the full truth about the Self: 'O mighty Indra,' he said, 'this body indeed is possessed by death. It is the abode of that immortal, incorporeal Self. Possessed is the incorporeal Self by pleasure and pain; for, because it is incorporeal, there is no escape from pleasure and pain. But the incorporeal Self is touched neither by pleasure nor by pain. Bodiless are winds, clouds, lightning, and thunder; and as these, being hidden in the heavenly ether, rise from it, and, approaching the highest light, appear in their own form, thus does that serene being, arising from this body, approaching the highest light (the knowledge of Self), appear in its own form. He then is the highest spirit. He obtains all worlds and all wishes that who knows and understands this Self.'

6. Conclusion.—Even in the oldest texts of the Upaniṣads there is found a bold ideâלism which maintains the sole reality of the ātman, and denies an existence beyond the ātman. This standpoint, however, could not be maintained for any length of time, for the reality of the phenomenal world imposed itself upon the mind; and, therefore, the desire to satisfy both convictions, that of the sole existence of the ātman and that of the reality of phenomena, led to a kind of panteïsm (represented chiefly by the Chândogya Upaniṣad), whose thesis was the identity of the universe and the ātman. This identity, however often proclaimed, was and remained unintelligible. Substituting for it the more comprehensive concept of causality, the thinkers of the Upaniṣads came to what we would call cosmicism, asserting within the cause, and the world its effect. The ātman creates this world, and, having created it, He incorporates Himself in it as individual soul.

Taitt. Up. ii. 6: 'He desired: 'I will be manifold, I will propagate myself.' He performed austerities. Having performed austerities, he created this whole world, whatever exists. Having created it, he entered into it.'

Even thus the ātman remained what it was before, the Self in us. This Self creates the world, and enters into it as the individual soul. As early as the Kathâka Upaniṣad this theory developed into a kind of theism, distinguishing between the highest ātman who creates the world, and the individual ātman who lives in it. It is very remarkable that this theism then passed into the atheism proclaimed in the Śâkalya system. The highest ātman, being distinguished from the individual ātman, in which it had its real certification, was no longer sufficiently certified, and was rejected by the latter, being regarded as a kind of Stoic philosophy. There remained only material nature called purâyati, and a multitude of individual ātmanas called purâya. The last step in this process of degeneration was the apophysis of the Buddhists and the Chârvâkas, who left nothing certain, in part denied, in part doubted, the ātman altogether.

Thus the lofty idealism of the Upaniṣads was altered, and at last destroyed, by the realistic tendencies of a later age.

ATOMIC THEORY.

Greek (W. KROLL), p. 197.

Indian (H. JACOB), p. 199.

ATOMIC THEORY (Greek).—The originator of what is called the atomic theory was Leucippus, of whom even the ancients knew so little that Epicurus could entirely deny his existence—a conjecture which was revised in modern times, but may perhaps be put on more solid foundation. Leucippus' native country was Ionia (Miletus?), and he lived between the times of Parmenides and Democritus. We are acquainted with his teaching only in the form which it took in the mind of his disciple, Democritus. The latter was born at Abdera; but the ancient writers knew nothing about the period in which he lived except what he himself had stated in a written work. He was a young man, evidently, when Anaxagoras had attained a rank in admiration among the Greeks and Ionians, and we may probably imagine that he was in his prime in the years B.C. 450-429. The logical consistency of his thought, the wide range of his knowledge of natural science, and the excellence of his composition, made the success of

his numerous writings very considerable. His views were thoroughly discussed and opposed by Aristotle and Theophrastus. 

Lucretius was led to his theory by the reaction against the Eleatic School, whose views had been placed on a scientific basis by Parmenides. It had denied all motion and change, and declared them to be an illusion of the senses; the truth being, they maintained, that reason leads us to perceive that what exists is unchangeable. This assumption so entirely contradicts all experience that a name plausible explanation which was accepted in nature had to be found; account had to be taken of Heraclitus' correct observation that a continual change is taking place in the world. But it was no longer permissible to explain—as was formerly done—this change as due to transformations of a primordial substance, for neither could the conversion of fire into water and earth, and vice versa, as Heraclitus claimed, be grounded on experience, nor could the Eleatic principle be ignored that anything that is permanent must be present in the change. While the Pythagoreans explained the number element in number, and therefore entirely abandoned the explanation of materialism, Lucretius and Democritus recognized it in atoms—those particles of matter so minute that they cannot be further divided, and are not perceptible to the senses, and which are all consisting of the same substance, or matter, which cannot be more narrowly defined. Particular things come into existence when these atoms combine, and disappear when they separate; but the atoms themselves are eternal and inutterstrucible. The combination and separation of the atoms are not possible unless there be motion, nor this again, as the Eleatic School had already asserted, unless there be empty space; but whereas the Eleatics had denied motion and empty space, the atomists held both to be real, indeed to be the only reality (Democ. Fragm. 125, Diels: ῥωμ. χρῶν, χρῶν γλώσα, χρῶν πειρὼν, ἐπειδ′ ἀτομὰ καὶ κενὸν). For these principles Democritus also found support in special observations; e.g., a body can grow only by the nutrient penetrating the open pores, form, composition, and condition; with the form is connected the size, and on this depends the weight. But these characteristics of bodies are primary, all other sense-qualities being secondary; e.g., warmth was supposed to be a quality brought to the atoms and the given size of atomic form. Democritus, in his idea of gravity or the necessity of falling; and this makes the dispute very difficult to decide. In this motion the particles impinge upon one another, seemingly in consequence of their unequal weight, receive blows, break off other particles, and so produce the whirlings, motions in circular dance in which several atoms combine, provided that their form renders them capable of adhering to one another (the modern theory has actually been led to make similar assumptions). Every such whirl may develop into a world; and this led the atomists to a kind of pantheon in which Plato objected (Tim. 55 C)—that there were innumerable worlds, several of which had passed out of existence again through colliding with greater ones. The space between these worlds Epierinus called ἀνερραθοῦς (in Cicero, interludum). Round the whirling mass of atoms a crust was formed out of hook-shaped particles. This crust, in the course of a long process of rotation, became thinner and thinner (the θεωρία πνευμάτων of Leucipus, i. 73). The heavier atoms gathered in the middle and formed the innermost part of this crust at the circumference. The crust holds fast those bodies which, coming from without, conglomerate at the edge of the world, and are all awame with the velocity of their motion: these are the stars. Worlds may perish by becoming too old, but also by colliding with other worlds. In psychology also Democritus carried his views to their logical consequences. The human soul consists, in like manner, of atoms, and of the most mobile of these—that is to say, of fire-atoms, which are so distributed throughout all bodies that between every two body-atoms there is one soul-atom, and which produce both motion and thought. The preference here given to fire is again due to the influence of Heraclitus. Even the sensations are explained atomically: for instance, sight is supposed to be excited by fine particles, which retain the form of bodies (ἔναθα, δείνα), detaching themselves from the surface of bodies and pressing upon the eye. Similarly sound is a material thing. But perception gives only a dull cognition; thought alone makes the soul (γνώμη) whole, and consists of atoms only of matter, μὴ γιγαντία, ὡς ἐκ σκότους καὶ σώκος μὲν τὰς σύμπαστα, ὅμοιον, ὅμοιον, ὅμοιον, ἅπαντα ὑπὸ γνώμης ἀπόκρημον δὲ τοῖς. Fragm. 11 Diels).

To the school of Democritus belonged Nausiphanes of Thebes, Fragm. 52, Diels, i. 482; who became the teacher of Epierinus (c. 325 B.C.) and introduced him to the atomic theory. But while it had been the aim of Democritus to explain the world-phenomena in a uniform way, Epiericus merely wished to give his own views on human happiness a satisfactory basis in natural science (Sent. Sent. xii. οὐκ ἔνων φυσιολογία ἀκριβῶς τὰς ἀναλογίας ἀποδιδόμενας; he regarded the whole of natural science as superfluous except in so far as it served this purpose, and declined to recognize even the final causes (ὅτι καὶ ὁ ἔσχος ἐν αὐτῷ ἀναγκαῖος, ὡς τῆς βίους ὀργῆς τε καὶ τῆς ὑποστάσεως). Consequently he accepted Democritus' theories without introducing much change into them (Cic. de Fis. i. 21: 'Quae sequitor, sunt tota Democriti. Atomi, immo, imaginies, que ẹlva nominantes'). A number of the changes which he did make have been abortive and, when carried to their logical conclusions, are such as to shake the foundation of the system. For instance, even the ancient writers had noticed that Democritus did not avail himself of chance as in his explanations (Francisci Simplicii, in Phys. 330, 14). Epiericus, on the other hand, made frequent use of this expedient. Again, the only existing things, according to him, are atoms and empty space, and he finds the former characterized by hardiness (ἀστρεβλότης), and the latter by pliability (ὕπασμα). The atoms, on
The atomic theory makes an integral part of the Vaiśeṣika, and it is acknowledged by the Nyāya. The Prabhavaṇī philosophical schools which have originated with, or at least been favoured by, secular scholars (paṇḍits), rather than by divines or religious men. Among the heterodox it has been adopted by the Jains, and, as is stated in the Abhidharmaṇaṇa-vyakhyā, also by the Ajīvikas. It seems to have formed an integral part of the Pali scholasticism; for the well-known Pali scholar, Professor Franke, states that no mention is made of it in the Pali canonical books. It is different, however, with the Northern Buddhists; for the Vaiśeṣikas and the Nyāya philosophers, and in the atomic theory, while the Mādhyamikas and Yogāchāras opposed it, as they declared the external world not to be real. The speculations of the sects and philosophical schools just mentioned may be arranged in three groups. The first is represented by the Jains; the second by the Vaiśeṣika and Nyāya Sātur and the Bāhūga on the latter by Vatsyāyana, and, on the other hand, by the Northern Buddhists; while the last phase of the theory is that which appears first in the Prabhavaṇī, the oldest system to have undergone an exposition of the Vaiśeṣika system, and has since been generally adopted by the combined Vaiśeṣikas and Nyāyāvikas.

I. We place the Jains first, because they seem to have worked out their system from the most primitive notions about matter. These may be taken to be the following. Matter is an eternal substance, undetermined with regard to quantity and quality, i.e. it may increase or diminish in volume without addition or loss of particles, and it may assume any forms and develop any kind of qualities. Material substances are divisible into many of substance, and one substance may divide into many.

Now, the Jains maintain that everything in this world, except souls and mere space, is produced from matter (paṇḍala), and that all matter consists of atoms (pradeṇa). Each atom occupies one point (pradeṇa) of space. Matter, however, may be either in the gross state (sthāte, bādava), or in the subtle (shāleśu). When it is in the subtle state, immaterial atoms of it occupy the space of a single particle. The Jains do not assume that there is any other substance besides matter in the universe, and all the qualities are to be considered as modifications of matter. The Jains, therefore, hold to the teaching of its founder with greater tenacity than any other, and consequently in ancient times atomism subsequently underwent no development. Thus Lucretius, although he is hardly indebted directly to Epicurus, but to later Epicureans, faithfully reproduces the views of the master. A little before him lived the physician Asclepiades of Bithynia, who grounded his theory of medicine on the basic ideas of the Epicurean doctrine of atoms (M. Wellmann, in Pauli-Wissowa, ii. 1632).

ATOMIC THEORY (Indian).—In the oldest philosophical speculations of the Brahmans as preserved in the Upaniṣads, we find no trace of an atomic theory; and it is therefore controverted in the Vedānta Sūtra, which claims systematically to interpret the teachings of the Upaniṣads. Nor is it acknowledged in the Sākhyas and Yoga philosophies, which have the next claim to be considered orthodox, i.e. to be in keeping with the Vedas; for even the Vedānta Sūtra allows them the title of Śruti. But the atomic theory makes an integral part of the Vaiśeṣika, and it is acknowledged by the Nyāya. The Prabhavaṇī philosophical schools which have originated with, or at least been favoured by, secular scholars (paṇḍits), rather than by divines or religious men. Among the heterodox it has been adopted by the Jains, and, as is stated in the Abhidharmaṇaṇa-vyakhyā, also by the Ajīvikas. It seems to have formed an integral part of the Pali scholasticism; for the well-known Pali scholar, Professor Franke, states that no mention is made of it in the Pali canonical books. It is different, however, with the Northern Buddhists; for the Vaiśeṣikas and the Nyāya philosophers, and in the atomic theory, while the Mādhyamikas and Yogāchāras opposed it, as they declared the external world not to be real. The speculations of the sects and philosophical schools just mentioned may be arranged in three groups. The first is represented by the Jains; the second by the Vaiśeṣika and Nyāya Sātur and the Bāhūga on the latter by Vatsyāyana, and, on the other hand, by the Northern Buddhists; while the last phase of the theory is that which appears first in the Prabhavaṇī, the oldest system to have undergone an exposition of the Vaiśeṣika system, and has since been generally adopted by the combined Vaiśeṣikas and Nyāyāvikas.

I. We place the Jains first, because they seem to have worked out their system from the most primitive notions about matter. These may be taken to be the following. Matter is an eternal substance, undetermined with regard to quantity and quality, i.e. it may increase or diminish in volume without addition or loss of particles, and it may assume any forms and develop any kind of qualities. Material substances are divisible into many of substance, and one substance may divide into many.

Now, the Jains maintain that everything in this world, except souls and mere space, is produced from matter (paṇḍala), and that all matter consists of atoms (pradeṇa). Each atom occupies one point (pradeṇa) of space. Matter, however, may be either in the gross state (sthāte, bādava), or in the subtle (shāleśu). When it is in the subtle state, immaterial atoms of it occupy the space of a single particle. The Jains do not assume that there is any other substance besides matter in the universe, and all the qualities are to be considered as modifications of matter. The Jains, therefore, hold to the teaching of its founder with greater tenacity than any other, and consequently in ancient times atomism subsequently underwent no development. Thus Lucretius, although he is hardly indebted directly to Epicurus, but to later Epicureans, faithfully reproduces the views of the master. A little before him lived the physician Asclepiades of Bithynia, who grounded his theory of medicine on the basic ideas of the Epicurean doctrine of atoms (M. Wellmann, in Pauli-Wissowa, i. 1632).
earth-souls, water-souls, fire-souls, and wind-souls, i.e. souls in various phases of development, which are embodied in particles of earth, etc. The elements must accordingly be regarded as the bodies of these particles of matter, i.e. as the coming together between them at any rate they are not without beginning or end.

We must mention the opinion of the Jains concerning karma, i.e. merit and demerit, in its bearing on the atomic theory. Karma, according to them, is of material nature (pranastha). The soul by its commerce with the outer world becomes literally permeated with material particles of a very subtle kind. These become karma and build up a special body, the kiṣṇa-rūp, which never leaves the soul till its final emancipation. Thus the atom is really regarded as a part of the outer world, because jointly, was current in India probably long before the philosophical systems of which we are speaking came into existence. We first meet it in the Chhandogya Upanishad (vi. 2 ff.). There it is said that fire, water, and earth were created fire, fire created water, and water created earth (śvayam), and that these three elements combining produce all existing things. In other places, wind (vāyu) is regarded as an element, and at last space (ākāśa) was reckoned as the fifth element; for it seemed proper that there should be five elements corresponding to the five organs of sense.† This theory of the five elements has been adopted in the Śākyan philosophy, and there it has been further developed by distinguishing two sets of elements, subtle (tanmātra) and gross (anubhūta). The elements in Śākyan are, however, not atomic or eternal, but are developed from primeval matter (prakṛti) by a process which need not be detailed here. Of these traditional five elements, the fifth, ākāśa, has a peculiar character of its own, as it is not considered to enter into combination with the other elements, but to be a simple, i.e. an infinite and continuous, substance; nor did the Buddhists even reckon it among their elements (anubhūta). And the Vaiśeṣikas also, who distinguished space (śūν) from ākāśa, held the ākāśa to be the common count, the latter among the simple and infinite substances (abhāva), together with time, space, and the souls. Accordingly, both Brāhmanical and Buddhist atomists admitted only four atomic substances, viz. earth, water, fire, and wind. But in other details their opinions vary.

As we have as yet but defective and second-hand information about the atomic theories of the Buddhists, we shall first describe that of their opponents, the Vaiśeṣikas and Naiyāyikas.

By Brāhmanical atomism we mean the union of physics, and Naiyāyik metaphysics and dialectics, the physical side of the atomic theory was more the province of the former, and the metaphysical of the latter system. Hence it may be supposed that the atomic theory is more intimately connected with the Vaiśeṣik school, and the authors of the Brāhmanical element, regards it as their cardinal tenet.‡

The opinions of the Vaiśeṣikas on atoms and their qualities, as well as on the forms and combinations of these, are contained in two popular treatises, the Mahabhidāryan and the Naiyāyika, and the metaphysical side of the atomic theory, the Bhaṭṭa, who held a very similar opinion, regards it as their cardinal tenet.

Sūtras by Kaṇḍā. They reasoned in the following way: Things that exist and are not produced from a cause are eternal; they may be inferred from the proof that all other kinds of products. Besides, as we call everything we perceive non-eternal, this idea of non-eternity presupposes eternity (ib. i. 1–4). And finally the fact that when the cause of their existence is destroyed, causes of things, constitutes our ignorance, and thus we are forced to assume that these ultimate causes are eternal.

But there is another method of reasoning based on the sūtra (v. 1. 9), which consists only of one word, ignorance; i.e., as we can imagine no other cause of existence we may assume the existence of the same causes, or that the disjunction or destruction of its causes, it follows that the last causes must be eternal.

For the interpretation of the sūtras here given we prefer the more recent and the more conservative commentators (for there is no old one in existence), as on their refutation by Sankara, which shows us what was the meaning attributed to them more than a thousand years ago. It is to be understood that these eternal causes, the causes of non-eternal ones, are the atoms; but they are not visible. For the sūtra goes on to declare that a great thing may be visible, if it has many constituent parts and possesses colour (iv. i. 6). The next sūtra (not in our text, but as quoted in the Nyāya Vārtika, v. 238) states that the states of four elements are defective, because it is not composed of material parts. Now, a thing is great if it is composed of many constituent parts, or if the parts themselves are great, or if they are arranged in a peculiar way (vii. i. 9, not as in our text, but as quoted by Sankara on Vaiśeṣika Samhita, vii. i. 11). This holds good with the small elements (i.e. atom); that is to say, the atom is not composed of parts.

The discussion, carried on in the next sūtras (10–29), comes to this. The expressions 'great', small, long, short, as used in common parlance, are relative terms, the terms 'great' and 'small' with reference to one thing and small with reference to another. These expressions refer to great (or long) things only, since only such are visible, and therefore they are used in a secondary meaning. In their primary sense 'great' and 'small' are not relative terms, but denote distinct kinds or genera of dimension (just as red and blue are different kinds of colour). For otherwise we should speak of great or small greatness, i.e. we should attribute qualities (great or small) to a quality (greatness or smallness) which is an exclusive principle that qualities have no qualities. Greatness and smallness are non-eternal in non-eternal things; in eternal things they are eternal, i.e. absolute or infinite. The absolutely small is called globular (paripūrṇa).

About the other properties of the atoms we have the following statement. The qualities of earth and other things—colour, taste, smell, and touch—vanish on the destruction of the thing itself; accordingly they must be eternal in eternal things, i.e. in atoms. And so they are in the atoms of water, fire, and wind. In earth, however, as well as in atoms of earth, (some) qualities are pāñcakā, i.e. changeable by heat (v. 1. 6). Different atoms may come into conjunction (v. 2. 4). In the beginning of the creation the atoms are set in motion by adṛśa, i.e. mark or demerit of creatures in the past period (v. 2. 13). The internal organ also is an atom (v. 2. 29).

This is all the information about atoms we can gather from the Vaiśeṣika Sūtras. But, short though it be, it is enough to show us the actual state of the atomic theory at the time of Kaṇḍā, and the arguments used by him in establishing that theory. Two things deserve to be noticed. First, the word for 'atom' used in our text, and, it may be added, in the Nyāya Sūtras too, is anu; only in the sūtra quoted in the Nyāya Vārtika do we meet with parānā, the usual form with all later authors; but it may be a mistake of the Vārtakāra, who quoted from memory. The second argument for the existence of atoms, which is based on the impossibility of unlimited division of a thing, was not yet made use of by the author of the Vaiśeṣika Sūtras.
Vatsyayana, who wrote in the 5th cent. A.D. or earlier, one aspect of the atomic theory is discussed, and objections raised to it by opponents are refuted. Ganaurus shared the opinions of the Vaisëikas on the physical properties of the atoms discussed, and, since it is relevantly remarks (v. i. 67) that the black colour (of earthen atoms) is not eternal (though existing from eternity), it follows that he considered the properties of water, fire, and wind to be eternal. The metaphysical questions, however, relating to atoms and derived from Vaisëikas, are not fully discussed by Ganaurus. They are further explained by Vatsyayana.

In the two places (ii. i. 56 and iv. ii. 14Ec) where they occur, they are brought in at the end of the discussion of the 'whole and its parts.' The Naiyayikas maintain that the whole is something more than its parts; it is a different thing (atithdhati), not separated from its parts, but rather something in addition to them. We perceive the whole thing as such, e.g., a tree, though we see only the front parts, and not the middle and back ones; and thus we see a thing that does not exist in the parts, which is all.

The question of atoms is then discussed in this way. A consisting parts of is called a whole, but each part must again be considered as a whole, and so the parts of a part, and so on ad infinitum. If we never could come to last parts, we would be able to form the ideal of a whole, thus the whole would be dissolved into nothing. But the division reaches its limit in the atom, which cannot be divided any further, as we assume it to be absolutely small.

Another proof is the following. If the division into parts has no limit, the note (tattv) would not differ in size from the highest mountain, because both would have the same number of parts (n. f.), and each new division of the objections raised against the notion of atoms as indivisible smallest things would be meaningless. For the Naiyayikas assert, is a simple, all-pervading, and infinite substance. The question put whether it penetrates the atoms or not. For it, the atom must have parts; otherwise, it could not be all-pervading. The reply is that the atom has no exterior or inferior, nor is it hidden inside, but it is a simple not a compound thing. It is further objected that, since the atom has a form, being global, and since the form of a thing consists in the disposition of its parts, the atom must have parts. And again, when three atoms are in juxtaposition, that the middle touches the one to the left with its right side, and that on the right with its left side; and when the atom is surrounded on six sides, we distinguish six sides of the atom which must be considered its parts. And if the six sides were reduced to one (i.e. if the atom were a mere point), the objections are removed. This, however, is not possible, for if the atom were not to take up more space than one atom, and consequently a jar could be reduced to the size of an atom, and hence become invisible. These objections are then met with the declaration that the division of the atom into parts is not real, but a mode of expression only.

The following are some opinions on atoms, which appear in Abhidharmakosa (6th cent. A.D.), but the authors of which are not ascertained. Some thought that the note which is seen in a ray of the sun entering a window is an atom. Others believed that atoms do not occur singly (asaishata), but always in aggregates (p. 234). Some, apparently Buddhists, maintained that the atoms were not eternal, because they possess motion. The Naiyayikas agree with the Vaisëikas that the atoms are set into motion by adhyeta, i.e., merit and demerit, and expressly state that God (Isvara) does not set the motion of the atoms.

3. The chief opponents of the Naiyayikas, who held different views on atoms, were Buddhists of the Vaibhasika and Sauffrntika schools, as was said at the beginning. The Vaibhasikas maintained that external things can be directly perceived, the Sauffrntikas that they can only be inferred. Saikara, who comprises both under the name of Sarvasvastidhati, describes their opinions on atoms in his commentary on Vad. Sut. ii. ii. 18 thvs:

"The Buddhists acknowledge the four elements, earth, water, air, and wind, and all their properties and products, including the organs of sense; the four elements are atomic; the earth atoms have the quality of harshness, the water-atoms that of viscidity, the fire-atoms that of heat, and the wind-atoms that of motion; in combination these atoms form earthly things,' etc.

More details we learn from the work of the Tibetan byon yon bskd po, of which Wassilieff has given an abstract, 9 from the Abhidharmakosa vyakhyay, a work of the idealistic school Yoga-

The Vaibhasikas admitted that an atom had six sides, but they maintained that they made but one, or, what comes to the same, that the space is infinite, and therefore not being bounded or limited, has been disputed by the Naiyayikas in an old verse quoted in the Nyayag Vartika (p. 521). They further asserted that atoms were amenable to sense-knowledge, though they were not visible at all, just as a dim-sighted man sees a mass of hair, though he cannot see a single hair. This view, too, was disputed by the Naiyayikas, who maintained that the atom is transcendental (adindriya), not perceptible to sense (adindriyaka).

The Sauffrntikas seem to have regarded the aggregates of atoms as compound (napa). Their opinion seems to have been that the (globular) atoms did not touch one another completely, but that there was an interval between them; but some held different views. All agreed that the atom is indivisible, though some are admitted that it might be divided as having parts, viz., eight sides. Both the Vaibhasikas and the Sauffrntikas declare that atoms are not hollow, and cannot penetrate one another.

Most points in the Buddhistical opinions which we have here indicated appear in the Nyayag Sutra, Bhâgaga, and Vartika; all the speculations on atoms we have dealt with in this our second group (the Vaisëikas perhaps excepted) must, therefore, be regarded as having been current in the same period, i.e., in the beginning of our era down to the 6th cent. and later.

III. The latest improvement of the atomic theory consists in the assumption of deyyikas, etc. It was first taught by Bhaisajyaguru (p. 28), and is plainly referred to by Ulyotakara; it was received as a tenet in all later works of what may be called the modern schools (the Vaibhasika, Sautrantika, and one called Paramasritya, a title accorded only to the highest authority. From that time deyyikas are quite familiar in Sanskrit writers. It is assumed that two atoms (paramasr) form one binary (dayakas), and that three or more (deyyikas) form one trinity, which is 'great' and perceptible by the eye. From trinity are produced all things. Modern writers further assume chartrikas, formed of four trinity, etc. The reasoning that led to this highly artificial theory is the following: The rule that the quality of the product is derived from the corresponding quality of the cause does not apply to deyyikas and tryarrkases. For in that case the 'small' deyyikas would produce a 'small' tryarrka, not a 'great' one as required. And if the smallness of the deyyikas were produced from the like quality of the paramasr, it would be of a higher degree, just as two great things produce one greater

2 Cf. Hironaka, op. cit., p. 325. Prof. Wassilieff has given an abstract of these Buddhistical works on deyyikas (see his Nyayag Vartika, p. 119).

thing; but the pararnaya is that which is nothing new imagined. Therefore it is not the dimension of the cause, viz. of the parts, which produces the peculiar dimension of the deyugyuk and tryagvyuk, but another quality: namely, that number of the infinitesimal great ones, e.g. space and non-eternal, so both kinds must be found in 'small' things. Eternal small things are, of course, the atoms. Non-eternal ones must therefore consist of atoms; they are the deygvyuk.* Now number is produced by the 'notion which refers to many unities' (apekshatattvadhi), and such a notion presupposes an intellect to form it; in our case it must be the intellect of one who perceives all the atoms and deygvyukas, and who therefore must be omniscient—that is, God. Without him in whom the notion of duality in deygvyukas exists, there would be not be any deygvyuk or any tryagvyuk, and consequently there would not be anything whatever. This strange idea, found in nuce already in Prakrtastapida, was brought forward by Udayana (12th cent.) and adopted by his successors.

Having passed in review all forms of the atomic theory which are known to us at present, we must now inquire into the origin of that theory. Two points appear to be of chief importance for our inquiry: firstly, that the name of the atomic theory, 'small', or pararnaya, 'absolutely small'; and secondly, that 'small' was generally considered to differ not in degree but in kind, from 'great.' In accordance with this notion which is shared by all, even by the opponents of the atomic theory, the small, or, as we had better call it, the infinitesimal, had to be assumed as existing, and needed no further proof. The idea of the infinitesimal in this sense seems to have already been current in the time of the Upanishads, where we frequently meet with the statement that Brahman is smaller than the atom.** The Sautrantikas have divided the infinitesimal into four classes according to the four elements, while the atomists have divided it into five classes according to the five skandhas. The Buddhist explanation of the atomic theory as a prop for their fundamential dogma, but advocated it because it belonged to the stock of physical and metaphysical ideas which passed current during the early centuries of the Christian era in Northern India.

H. JACOBI

ATOMIC THEORY (Muhammadan).—The genesis of atomic theories among Muslim thinkers is shrouded in obscurity. It is probable that such theories found their way into Islam through the medium of the chief ancient Physiologists, and still more so through the Platonist commentators dealing therewith. As far back, at all events, as we can follow the growth of atomicism in this field, we find it imbued with the conceptions of Aristotelian and Neo-Platonic thought, and we can trace the presence of such atomic doctrine as early as the 9th century. Al-Nazzām († A.D. 845) is mentioned as having been an opponent thereof, and al-Kindī († A.D. c. 870) wrote a treatise against its adherents.

The first recognizable form of the doctrine is that which it assumed in the hands of Al Abū Hāshim of Bagrān († c. 933 A.D.). His theory, which is practically

‡ Die atomistische Grundlage der Vielgelehrtheit, Rostock, 1900.
that of the Basrensian Mu'tazilites of the 10th cent.,
is found in the Kitâb 'I-nawâyi'll of Abû Rashîd Shâ'd b. Muhammad b. Shâ'd al-Nâsîbârî,
whose works date from 986 and 1068.
We give here a concise summary of his views.
The atom (al-jât' al-adâdî l yatâyjzâ), or, as it is
called commonly, the substance (al-jâhur),
possesses in itself (jâhur farâh), as the attribute
involved in its very essence, the capacity of filling
space (bahrâyjz). Besides existence and spatiality, each
has like a capacity to change its state or
condition, by means of which others are prevented
from usurping its position. Finally, the sub-
stances have the property of assuming accidents,
in virtue of which they are qualitatively
determined.

These substances move in empty spaces, and
interact by pressure and impact. The proof of
this is sought not merely on deductive lines, but
by way of simple experiments. According to the
other form of atomism, as set forth by Democritus,
Nothing is no less a fact than the atom, and
by ‘nothing’ in this case was meant simply empty space. As a result of the
inflation of later theories, however, this idea is
wholly discarded in Islam, and the states of being
and not-being are distinguished as existing in the
substance itself; or, in other words, even the non-
existent, as something known, i.e. distinguished
from something else, is possessed of substantiality.

The essence of the atom, or substance, is in-
dependent of its existence—a statement which
probably means that even existence might form the
content or object of the Divine thought or that
human knowledge. The substances are not created
by God: He simply brings them into existence, or
lets them come forth. When they have attained
the status of actual being, they have certain neces-
sary modes of existence (âkûlîa), such as motion
and rest, union and separation. Other accidents
again are contingent, i.e. each several substance
may assume an indefinite number and variety of
accidents, so long as these are not mutually
exclusive.

The substances and the bodies they go to con-
stitute are endowed with duration in time. Their
annihilation—the cessation of their existence—is
possible, but only in their totality, i.e. only if the
whole world were to pass away at once.

In order to explain the differences of view, was the theory of the Basrensian thinkers.
From these the scholars of Baghdad differed in
many ways. The teaching of the latter school is
known to us mostly in the form subsequently
given to it—first of all, probably, by Abû Bakr
al-Baqillânî († 1019)—in the Ash'arite or orthodox
Kâtîm. A most comprehensive account of this
discipline is given by Maimonides (1135–1294), and
it is largely upon his description that the following
outline is based.

The entire world, of which God is the absolutely
free Creator, consists of indivisible substances or
atoms, and their accidents. These substances,
taken separately, are mere points; they have no
magnitude or extension, and are thus imperceptible
to sense. They have their âkûlîa, or natural posi-
tion, which is the same in all substances; but, in
contrast to medieval atomism, it does not involve
quantity or spatial magnitude. Only by aggregation
do the inimissible substances become spatially extended bodies occupying the
tri-dimensional mahânâ. By union or separation
of substances—which can carry all other accidents
are produced or dissolved. What is true of space
holds good also of time. The latter is generated
by the combination of points of time or moments
(ukâtîl). Motion also, like space and time, is
discontinuous.

Every individual substance possesses at all times
a large number of accidents. Some thinkers even
hold that it possesses all possible positive accidents
or their opposites. Negative states, or privations,
in fact, are just as truly accidents as positive
states; they are, however, not separable from
knowledge, etc. Life, feeling, thought—in a
word, the soul—are quite consistently classed
amongst the accidents. Some writers regard the
soul as belonging to all the atoms of the body,
while others are of opinion that it is composed of
finer atoms, or substances not separable from the
mind apart from only one particular atom in the body.

No accident can subsist for more than an instant,
and as the substance is inseparably united with its
accidents, the measure of its persistence likewise
shrinks a moment of time. Now, since the entire
aggregate of spatial points which constitutes the
world can maintain itself only for a moment,
it must follow that the world is created anew
by God every instant. There is no such thing as
causal connexion or natural law, nothing save
the arbitrary fiat of God as to what happens to whom
being and not-being are alike. God creates
as many worlds one after another as He chooses,
and when He ceases to create any more, what He
then really creates is Nothing.

Here, then, lies the religious purpose of this
atomistic doctrine achieved. The theory is meant
to be, not an explanation, but a subversion,
of nature. All natural causes whatever are sacrificed
to the arbitrary fiat of Allah. Anything is possi-
ble; whatever is capable of being figured in
thought or imagination may come to pass. Of
everything that happens the opposite might quite
as well happen, if Allah but willed it so.

This atomistic teaching seems almost an antici-
pation of Occasionalism, especially as applied, not
to the course of nature merely, but also to human
action. The classical illustration is that of a man
engaged in writing. It was maintained that Allah
creates within him, and, indeed, creates anew
every instant, first the will, and then the capacity,
to write; next, the movement of the hand, and,
finally, the motion of the pen, concurrent there-
with, etc. Every factor in the transaction is
independent of every other, all the several stages
of the process emanating from God alone. It
is only in appearance that we have a coherent action;
only in appearance is there a self-consistent and
harmonious order in the working world. That
the world and human life appear to be pervad-

ed by a causal nexus is due simply to the fact
that meanwhile, and as a rule, Allah does not
choose to interrupt the continuity of events by a
miracle. It is possible, however, that He might so
intervene at any moment.

ATOMIC THEORY (Medieval and Modern).—

I. HISTORY.—If we seek for an explanation of the
phenomena of expansion, contraction, solution,
and precipitation, we are inevitably led to adopt
the hypothesis of a pre-existing structure in the
formed of particles with interspaces. If matter is
a continuum, these phenomena are ultimate facts,
not to be likened to, and not to be explained by, any other facts. We may conceive the possibility of expansion and contraction of a continuum, but we cannot explain it. If, however, we assume that matter consists of discrete particles, a crowd of particles is like a crowd of people. If we widen out, contraction is a drawing in, of the crowd. Solution is the thorough mixture of two crowds, precipitation is the expulsion or segregation of certain members of the crowd. Other pheno-

omena can be explained in an easy explanation. Thus, evaporation is the dispersing away of certain members of the crowd from its boundary. It is no necessary part of the hypothesis that the space between the particles is a vacuum. We know that there is air between the members of a crowd of people. So there may be some kind of material between the particles of matter, displaced when other particles squeeze their way in.

When we trace the history of the speculations about the constitution of matter from medieval times, we find that the atomic doc-

trine of Greek philosophers—the doctrine that minute particles are indivisible—has fallen into disfavor (see ATOMIC THEORY [Greek]). The medieval philosophers no doubt thought of matter as composed of minute parts, and they followed Democritus in regarding the parts as of four kinds, four elements—fire, air, earth, and water. Ordinary bodies were ‘mixed bodies,’ mixtures of these four, in different proportions in different bodies. But the elements were not always elements in the modern sense. It was sometimes thought that they could be transformed one into another. Roger Bacon, for instance, in the 13th century, held that the four elements were made of 'fable' (Spa), that each could be converted into the nature of another, and everything into anything (a possible condition). He speaks of 'this kind of invisible, and man and man is possible wheat (de Arte Chymiae).

Four of these elements were still dominant when modern science began; and long thereafter they hindered progress, not disappearing indeed till the 15th century. At the beginning of the modern period, matter was regarded as consisting of these four par-

ticles, but the particles were not atomic. Thus Francis Bacon in the Novum Organum (1620) in several passages mentions the 'atomi' of Luccippus and Democritus only to discard them, and in one passage even says: "Nor by this are we brought to the (Epicurean) Atom, which presupposes a vacuum, and matter immutant (both of which are false), but to true Paricles, as they are found to be' (Voc. Orig. bk. ii. § 8, Kitchin's Ed.).

Bacon made an important contribution to the theory of matter by his clear statement of the doctrine that heat is a mode of motion of the particles.

'Heat is motion, not expansion uniformly in the whole, but

expansive through the lesser particles of the body; and at the

same time struggled, repelled, and reflected; so that it obtains an alternative motion, ever hurrying, aspiring, or being irritated by repulsion; whence the fury of fire and heat has

It is the motion, expansive, re-

strained, and struggling through the lesser parts of a body' (bk. iv.).

These passages clearly imply a crowd of separate particles knocking each other further apart when heated, that is, when thrown into mutual motion. Between the particles Bacon appears to have supposed that there was an intangible, weightless, continuous material which he called 'ether.

He speaks of the action and motion of spirit enclosed in tangible bodies. For everything tangible that we know contains an invisible and powerful triple source (of effects) and wondrous process of spirit in a tangible body. For spirit in a tangible thing, (1) if emitted, contracts and draws up bodies: (2) if retained, softens and melts them; (3) if neither entirely emitted nor entirely retained, models them, gives them lines, assimilates, carries them out, organizes them,' etc. 'Spirit has no weight' (op. cit. bk. ii. § 40).

It may be worthy of note that Bacon held that the totality of matter is constant.

The first attempt to state a detailed theory of the constitution of matter was made by Descartes in his Principia Philosophiae (1644). He held that whenever we can clearly perceive that true, clear perception being of that which is present and manifest to the mind giving attention to it (pt. i. xxx., xlv.), applying this doctrine to the parts of matter, he is led to the rejection of indivisible atoms. For however small we suppose the parts, we are always able in thought to divide any one of them into two or more smaller parts, and may accordingly admit their divisibility. Again, he holds that a vacuum or space in which there is absolutely no body is repugnant to reason. Extension in space is extension in substance. All space, then, is filled with matter. Sensible bodies are composed of insensible particles (pt. iv. ed.). These insensible particles are made of three elementary forms (pt. iii. lli.), though constituted out of the same kind of material. The first element consists of very minute bits, of irregular shape and capable of very rapid motion; chips off the particles forming the second element, and entirely filling the spaces between them. The particles of the second form have become spheres by attrition. They are very minute, and beyond the range of vision. The third form is larger and slower in motion. The sun and stars are composed of the first element, the sky of the second, and the earth of the third.

The second and third elements appear to have vortices of the first element round them, and these vortices account for the forces which the particles exert upon each other. They are like the vortices which Descartes supposed to exist round the sun and planets to account for the great orbital motion.

This theory of the three elemental forms of matter, fanciful in its beginning, becomes more fanciful as he builds it up. It does not appear to have served, except in the mind of Descartes, to co-ordinate facts or to stimulate investigation. But it is important historically, as the first suggestion that it might be possible to consider in detail the ultimate structure of matter and to explain phenomena by this structure. It is important, too, in that it is purely mechanical, that all phenomena are explained by the motion and the sensation of the ultimate particles. Descartes insisted that the sensations are excited by the motion of matter only.

Our mind is of such a nature that the motions of body alone are sufficient to excite it in all sorts of thoughts, without being necessary that these should in any way resemble the motions which give rise to them, and especially that these motions can excite in it those confused thoughts called sensations' (pt. iv. excvii, Veitch's tr.). We perceive nothing outside ourselves 'except light, colours, sounds, tastes, sounds, and the tactile qualities; and these we have recently shown to be nothing more, at least, so far as they are known to us, than certain dispositions of the objects, consisting in magnitude, figure, and motion' (pt. iv. excvii).

That is, there is not a separate light principle or substance, smell, sound principle. These are in our minds. All the different sense are excited by the size, shape, and motion of the small particles of which matter consists.

Like Bacon, Descartes held that heat is a mode of motion of the particles (pt. iv. xxix.).

The most influential writer on the structure of matter in the generation succeeding that of Descartes is Robert Boyle, who in the Sceptical Chymist (1661), Origin of Forms and Qualities (1666), and other works, laid the foundation of modern chemical theory. He was partly an atomist.

'Ve may consider,' he says, 'that there are in the world great store of Particles of matter, each of which is too small to be, whilst single, sensible; and, being entire, or undivided, must needs both have its determinate shape, and be very Solid. Insomuch that though it be mentally, and by Divine omn-
Sulphurous, there all the in supposition of the corpuscles of the former Minima Naturalia, and while the hypothesis was advanced, and their Anomalies, the 3rd series of Prima Naturalia that composed it, or perhaps into other little fragments, yet, for the reasons freshly intimated, they very rarely can be actually dissolved, but remain entire in a great variety of sensible bodies, and under various forms or disguises, or qualities and quantities.

Yet in the prescriptive address to the reader in the same work, he says that he forbore to use arguments that are grounded on or suppose indivisible corpuscles called atoms. Though not a Cartesian he followed Descartes, as indeed all the world has followed, in ascribing all alterations of natural bodies to the 'Catholic and fertile Principle Motion, Bulk, Shape, and Texture of the minute parts of Matter' (Forms and Qualities, last page). He, too, regarded heat as a vehement agitation of the parts of a subtle matter. But it is for his clear idea of the nature of chemical combination that we are chiefly indebted to Boyle. In the Sceptics he dislikes disarrayments of corpuscles, he dislikes the earth, and water, and says that these three are to be regarded as made up of mixed bodies rather than mixed bodies as made up of them; and by mixed bodies he means ordinary bodies which had been regarded as mixtures of air, earth, and water, and the common hypothesis of small bodies. He dwells on the idea that an enormous number of compounds may be made by various arrangements of corpuscles, and that they differ from each other in nothing but the various textures resulting from the mixture, shape, motion, and arrangement of the small parts.

One and the same parcel of universal matter may by various alterations and contextsures be brought to deserve the same, sometimes of a sulphurous, and sometimes of a terrestrial or aqueous body (Shaw's ed. iii. 252).

Boyle agreed, then, with Descartes in thinking of matter as one in kind, to different corpuscles being due mainly to shape, size, and motion of the parts.

Newton does not appear to have concerned himself very much with speculations about the ultimate structure of matter. He was, above all, an experimental philosopher, determining laws by experiment and observation. He deduced their consequences, and comparing these consequences with further experiment and observation, thereby verifying or correcting the laws. The framing of atomic hypotheses did not come into this programme. In the Principia, he hardly uses the hypothetical structure of matter at all. There is a suggestion of it in the determination of the velocity of sound, but a mere suggestion. In the series of queries at the end of the Optics (2nd and 3rd editions) he gave himself free play, and among a number of speculations he declared himself an atomist. 'It seems probable to me that God in the beginning formed matter in solid, masy, hard, impenetrable, movable Particles' (3rd ed. p. 375). In the history of the subject Newton is mentioned only as in all probability deferring attention from it. His immediate successors were occupied so much in following out his methods that theories of matter of apparently little studied or considered by leaders in physical thought.

But the atomic doctrine was probably making way. Newton's contribution to the particle theory was made by D. Bernoulli in his Hydrodynamics (1738), § x. He suggested that a gas consists of very minute corpuscles moving with very great velocities in all directions, and that the pressure of a gas against the walls of a containing vessel is due to the bombardment by these corpuscles. He showed that with this constitution the pressure would be inversely as the square of the distance of the corpuscles, which is Boyle's Law; and that if the temperature were raised by increase in the velocity of the corpuscles, the pressure would be proportional to the square of the velocity. His reasoning is somewhat obscure and unconvincing, and, perhaps, on that account, his theory remained almost unnoticed for more than a century, when it was re-discovered and was developed on better lines.

In 1758, Boscovich published his Theorin Philosoplia Naturalis. In this work he begins with his celebrated hypothesis of the nature of an atom, and then seeks to show how physical phenomena, such as the law of gravitation, or the pressure, size, and elasticity may be accounted for if matter is composed of atoms such as he imagines. According to his hypothesis, an atom is a central point to which mass or inertia is assigned, a mass-point let us say, and towards this point force is acting so that another mass-point is urged towards it with an acceleration proportional to the mass of the first point, and varying with the distance in such a way that at a great distance the attraction is inversely as the square of the distance. But when the distance is reduced there are either one or more alternations of repulsion and attraction, finally ending with a repulsion which is infinitely great when the two points are infinitely near each other. Two central mass-points can therefore never actually coincide. Boscovich did not assign any formula for the force, probably considering that future experiment alone could determine the law, but it is easy to devise expressions which satisfy his general conditions.

For instance, if a mass-point is distant r from a mass-point m, and if its attraction to m is exerted on it as the force, then (r-2a)3a7, the force is attractive, and inversely as the square of the distance if r is very great, it increases as r diminishes to a certain point, and then diminishes to zero when r=2a. Between r=2a and r=2a it is a repulsion, again vanishing at r=2a. Between r=2a and r=0 it is an attraction changing again to a repulsion when r is less than a, a repulsion becoming infinite when r is infinitely small. Whatever the velocity of approach, that velocity will be destroyed before the two points coincide, i.e. they never will coincide.

Perhaps we can form an idea of the way in which Boscovich's atoms would act, by imagining that two solid surfaces are brought together. At great distance there is no repulsion between the first square law of gravitative attraction. When, however, they come very near, there is mutual pressure, which we may represent by supposing that the surface atoms have come into each other's first sphere of repulsion, and outside pressure is required to overcome such repulsion. If the outside pressure is made very great, we may force the atoms through this sphere of repulsion into the second sphere of attraction, and we may have equilibrium at the point where the attraction again changes into repulsion. If we can reach this point, the outside pressure is removed. Thus the hypothesis explains the adhesion of bodies pressed very closely together.

Boscovich's predecessors had, like Newton, imagined a little hard nucleus round the centre of the atom; this would have been totally unnecessary. Its place was efficiently taken by the repulsive force rapidly increasing as the centre was approached. The nudens had no part to play, and might be disregarded.

The hypothesis, we have noticed, was attended by some excited attention. It was adopted, as Priestley's instance, by Priestley (Vision, 1772, and Matter and Spirit, 1777). In the next century it attracted Faraday, who definitely adopted it (see two letters to R. Phillips, Researches in Electricity, 1844-56, i. 254, iii. 477). Faraday laid stress on the uselessness of the little, and of the finite size
—an idea which had again gained ground in the form of the atomic hypothesis of Dalton. He urged that the powers of matter, the forces which it exerts, are all that we know about it. These powers or forces are the matter, and where they extend the matter also extends. Each atom, then, extends through all space. Faraday symbolized the forces by straight lines extending out on all sides from the point, and oxygen removed it, too, from the list. Earth was resolved into at least several different earths, and the discovery by Lavoisier of the part played by oxygen in ordinary combustion killed phlogiston. Fire and flame, however, still remained as substances; for the idea that heat was a form of phlogiston could not save the energy, so often put forth in the 17th cent., had fallen into abeyance, and heat was regarded as a subtle substance. The way was being prepared for the atomic theory of Dalton, and there were several foreshadowings of it, the most notable by William Higgins, who in 1789 published A Comparative View of the Phlogistic and Antiphlogistic Theories, in which he says that we may justly conclude that water is composed of molecules formed by the union of a single ultimate particle of dephlogistized air (oxygen) and an ultimate particle of light inflammable air (hydrogen), and that they are incapable of uniting to a third particle of either principle. But it is doubtful whether he considered this as an example of a general principle, and he does not appear to have considered the 'ultimate particles' of and an atom—he uses the terms indifferently—in a simple body are all exactly alike, and in a finite space enormous in number.

In 1804 the modern doctrine of chemical combination was definitely formulated by Dalton, and communicated to his friends. In 1808 he first published it in his New System of Chemical Philosophy. According to Dalton, the particles or atoms—he uses the terms indifferently—in a simple body are all exactly alike, and in a finite space enormous in number.

Chemical analysis and synthesis go no farther than to the separation of particles from one another and to their reunion in a new creation or destruction of matter is within the reach of chemical agency. We might as well attempt to introduce a new planet into the solar system, or to annihilate one already in existence, as to create or destroy a particle of hydrogen. All the changes we can produce consist in separating particles that are held together by a state of cohesion, and joining those that were previously at a distance.' Compounds are definite groupings of definite atoms. Thus 1 atom of A + 1 atom of B may form 1 atom of C, binary compounds; or 1 atom of A + 2 atoms of B may form 1 atom of D, ternary, and so on.

Here he uses 'atom' for C and D where we now use 'molecule'; and it is evident that he does not think of an atom as an indivisible particle, but as the smallest particle of a body which loses the properties of the body. If this particle is divided, the substance is resolved into different substances. Dalton goes on to show that the relative weights of two elements entering into, say, a binary compound are proportional to the weights of the atoms themselves, and he gives the first table of atomic weights of the elements, taking the hydrogen atom, the lightest, as having weight 1.

Dalton's great advance appears to consist in the clearness of his conception of an element as consisting of particles all alike, and not, yet indivisible by ordinary chemical agency, and in his supposition that compounds consisted in general of small groups of these elementary particles or atoms. This gave an easily pictured hypothesis to the chemical facts, by this time established, that the elements combine in definite proportions, which are always integral multiples of the smallest proportions in which they enter into combination. From this time forward, chemists, already freed from the burden of the four kinds of phlegistic fire, or the seven elements, or the four humors, or the four bodies which were not to be decomposed by ordinary chemical and physical agency. These they termed 'elements,' and they investigated the
proportions in which the elements entered into compounds.

Soon after the publication of Dalton's theory, Avogadro put forward the hypothesis that in gases at the same temperature and pressure equal volumes of different numbers of molecules are in the same relation as the squares of their molecular weights. This hypothesis was restated by Gay-Lussac; and it was not long before it was supported by experiments on the combination of gases, and since shown to be in accord with the kinetic theory of gases.

We have seen that with Dalton the atom was not necessarily indivisible, but merely indivisible in modern times. But the notion of indivisibility held the position of an idea. Indeed, quite early in the development of the atomic theory by chemists, the old idea was revived, that the atoms of the different elements were really made of one kind of material, differing only as to the number of their constituents and the configuration of that material. Prout held that all the atomic weights were exact multiples of the atomic weight of hydrogen, a supposition which seems to imply that other elements were really groups of hydrogen atoms not to be divided by known agency. Later, it was suggested that discrepancies with this theory might be accounted for by taking one half or one quarter of the hydrogen atom as the unit out of which other atoms were built. But subsequent research on atomic weights has not supported these suggestions. There are, however, other evidences for supposing some community of plan in atomic structure. If weights of different metals be taken, containing, on the atomic hypothesis, equal numbers of atoms, nearly equal quantities of heat are required in many cases to raise these weights through one degree of temperature. In electrolysis, equal quantities of electricity are required to turn equal numbers of atoms out of combination. If the atoms of different elements had, as their only common property, weight or gravity, and in other qualities were entirely differing only, we should hardly expect these quantitative relations.

The chemical atomic theory, as set forth by Dalton, is a statical theory. For chemical purposes the atoms may, up to a certain point, be considered as little bodies somehow held together in compounds by forces which need not be specified; and their motion and the motion of the molecules need not be regarded.

By the middle of the 19th century, the researches of Joule and others had led every one to reject the doctrine of indivisibility. Joule brought to the front the old idea that heat was the energy of motion and of separation of the atoms and molecules. The dynamic aspect of the atomic and molecular theory now began to be seriously studied. We have seen that D. Bernoulli made an early but fruitless attempt to show that gas pressure could be accounted for by molecular motion. Other attempts were made by Horath in 1821, by Waterston in 1846 (published only in 1892, when Lord Rayleigh disapproved the paper from the archives of the Royal Society), and by Joule. In 1848 (Scientific Papers, I. 290), was the first to publish a calculation of the velocity with which the molecules are flying about. But the general acceptance of the dynamical, or, as it is now termed, the kinetic, theory began with the work of Krönig, Clausius, and Maxwell about 1856, and from that time onwards the theory has been developed in a series of memoirs by various authors, especially by Clausius, Maxwell, and Boltzmann.

2. Kinetic Theory. The kinetic theory has been studied chiefly with regard to gases. It supposes that a gas consists of an enormous number of molecules, all exactly alike in a given gas, but so small that their average distance apart is very great compared with the size of any one molecule. These molecules are flying about in all directions with very great velocities, continually colliding with each other and with the walls of any containing vessel. The collisions are of such a kind that on the whole the energy of motion remains constant; the same so far as the totality of all the molecules is concerned. The molecules are so far apart that they do not act upon each other except just during the moment of collision. Between collisions, then, they move in straight lines, and the average length of path between two collisions is called the 'Mean Free Path'. The velocities of the molecules at any instant, and therefore the mean of the squares of the velocities, if \( p \) is the pressure, and if \( \rho \) is the density, then \( \frac{v^2}{2} = \frac{3}{2} \rho p \). If we suppose that \( v^2 \) remains constant so long as the temperature is constant, when the density is changed by changing the pressure, \( \frac{v^2}{2} \) is constant. This gives 'Boyle's Law.' The mean velocity is not quite the same as \( v \) (the square root of the mean of the squares), but the difference is only small. For hydrogen at \( 0^\circ \) C. \( \frac{v^2}{2} \) is about 1800 meters per second—over a mile per second. For oxygen and nitrogen \( \frac{v^2}{2} \) is about 2500 and 750 meters per second. It can be shown that in a mixture of gases it is necessary that the average kinetic energy of each kind of molecule be the same in order that the collisions shall not affect the general condition; hence it can be further shown that the number of molecules in equal volumes of two gases at the same temperature and pressure is equal. This is 'Avogadro's Law.' Experiment shows that the pressure of a gas in a closed vessel increases by equal amounts with equal rises of temperature, and is, in fact, proportional to the temperature. But the pressure is produced from the impact of the atoms, and \( \frac{v^2}{2} \) is also proportional to this temperature. Or the mean kinetic energy of the particles is proportional to the temperature reckoned from \(-273^\circ \) C. On this scale of temperature the sun's surface is probably about twenty times as hot as the earth's surface, so that the molecules of hydrogen there have about twenty times as great a \( \frac{v^2}{2} \) as they have here. Their velocity is thus about 4\( \frac{1}{2} \) times as great, say, some 5 or 6 miles per second.

So far it is not necessary to enter into the structure of the gas molecules or any developments with regard to the specific heats of gases, structure has to be taken into account, and difficulties arise into which we need not enter.

The mean free path, or the average distance travelled in a straight line between two collisions, plays a very important part in the theory. It is evident that the rate of diffusion of one gas into another, or the diffusion of one part of the same gas into another part, will depend partly on the mean free path, partly on the velocity; and from certain phenomena depending on the rate of diffusion, most simply from the resistance to the travelling of one layer of gas over another, the mean free path can be calculated. For hydrogen at atmospheric pressure it is about 0.00002 cm., or, say, a little less than a hundred thousandth of an inch. For air it is almost half as much. This implies that the hydrogen molecule is effectively less than the air molecule, since it can thread its way farther through its neighbours without collision.

The greatest triumph of the kinetic theory consists in its explanation of the constitution of the molecules and of the number in a given space. By the size of the molecules we are not to suppose some definite solid shape. Imagine two molecules approaching so closely that they just begin to deflect each other, i.e. just begin to collide. Draw equal
spheres round each, just touching. Then the radius of either sphere is termed the radius of molecular action, and the sphere round each molecule is called a sol. Though the atomic centres may be far within the sphere of the liquid, it is evident that the mean free path of a molecule depends partly on the number of molecules in a given space, and partly on their size, just as the distance a man can walk straight on a street without touching another passerby will depend partly on the number of people, partly on their breadth from shoulder to shoulder. A relation can be found connecting the mean free path, the molecular size, and the number present, and actually a known, as we have seen, this gives a relation between size and number. Another relation can be obtained from the supposition that when the gas is condensed to a liquid the contraction is due to all the molecular spheres coming into contact. We may illustrate this by thinking of a cloud of equal water drops in a vessel as representing the molecules. When the cloud sinks to the bottom of the vessel, the volume of water at the bottom will be equal to the volume of each drop multiplied by the number of drops. If the observations are made in the laboratory, where a given volume of gas condenses may be taken as equal to the volume of each molecule multiplied by the number of molecules. At least it may be taken as nearly equal. We cannot say how closely the molecules are packed in a liquid, and thus some uncertainty is introduced into the results obtained. Thus we have two relations between number and size, and from these two we can calculate approximately both number and size. The result obtained is that the number of molecules in a cubic centimetre of a gas at 0°C and atmospheric pressure is approximately the volume divided by the partial pressure of a molecule of hydrogen, which we must suppose to consist of two atoms, is a little less than 10^24 of a gramme. The radius of molecular action, differing somewhat for different gases, lies between 10^-7 and 10^-8 of a centimetre. The number of molecules in a cubic centimetre of water is about 10^23, and the distance from centre to centre about 10^-8 cm. (These results can be translated into inches if it is remembered that 1 inch = 2.54 cm.) The number of molecules of gas per cubic centimetre has been calculated from the observation and use of the results of experiments on electric discharge, and the results obtained are in fair accordance with those given above. Unless, then, we reject the theory altogether, we may assume that we know with fair accuracy both the ‘size’ and the average distance apart of the molecules in a body.

The kinetic theory, when applied to account for the properties of solids and liquids, has made very little progress. In the gaseous condition the molecules, according to the theory, spend most of their time in moving in straight lines, and when the collisions do occur there is no need to consider the forces acting. It is enough to assume that, on the whole, collisions do not alter the general condition. Many properties can then be accounted for. But when we come to solids and liquids, the molecules are supposed to be so closely packed as to be always entangled with each other, and there is no mean free path. Hence we cannot go far without knowing the forces between the molecules; and even if we could specify the forces, the calculation of the effect of such complex systems would be exceedingly difficult. In the solid condition, we must suppose that the molecules do not move far from a mean position. Each is held by its neighbours, so that though it may be agitated slightly in one direction, yet it was, to one spot. In a liquid, the molecules are still entangled with each other, but they possess more energy, and are able to break away every now and then from their anchorage and get into new surroundings. A liquid may probably be regarded as a somewhat solid-like if time be reckoned by millions or billions of a second, gas-like if it be reckoned by seconds.

3. Atomic and molecular structure.—Since the kinetic theory of matter arose, several attempts have been made to magnify atomic structures which should serve to give some account of phenomena. Rancine (Nichol's *Encyclopedia, s.v. 'Heat,' p. 353) assumed that the atoms were little nuclei surrounded by atmospheres whirling round them in vortices—a revival of Descartes’s idea. Though Raukine made use of the theory himself, it is obscure in detail, and has not been used by others.

The vortex atom of Lord Kelvin (PRSE, Feb. 1867) is a much more celebrated hypothesis. This atom is founded on Helmholtz’s investigations on fluid motion. We are to suppose that space is full of a frictionless incompressible fluid of uniform density throughout. An atom is a vortex ring in this fluid, a ring-shaped portion of the fluid distinguished from the rest by its whirling motion. The whirling motion may be understood by running an india-rubber umbrella ring along its stick. The friction makes it move round and round as it travels. The rings which an expert smoker makes are vortex rings. A spoon drawn sharply across a cup of tea makes half a vortex ring of which the two cut ends, as it were, appear as little whirlpools, the half ring being below the surface. We can make rings in real fluids, because they possess viscosity or friction. But in a frictionless fluid, the creation and equally the destruction of vortex rings is possible, which the fluid itself does not possess; so that a ring if in existence must have existed in all past time, and will persist in all future time, the same portion of fluid always existing in it. We thus have a suggestion for an indivisible and eternal atom. The difficulty of the mathematical investigation of the mutual actions of vortex rings is so great, that little progress has been made in the theory. But it possesses value in suggesting the possibility that all energy is of one kind, energy of motion either of the fluid outside the rings, or its energy of motion in the fluid itself. In accounting for the eternity of the atom it perhaps goes too far. In recent years the theory has dropped into the background.

Another hypothesis, due to Larmor (*PS Lxi.* [1897], p. 275), supposes that space is filled with an elatic solid, or jelly, capable of vibrating and carrying waves. An atom is the centre of a strain or twist in the jelly. The strain is persistent, but it can move from point to point in the jelly, using new parts as it travels along. It is the form of strain which is the persistent atom. The atom may be likened to a kink on a rope which travels along the rope, new material continually passing into the kink to take the place of the material which passes out of it.

Larmor has developed this hypothesis in several memoirs, showing how electrical and optical phenomena are to be interpreted in terms of it.

The latest atomic hypothesis is one which assigns an electrical structure to the atom. Here we can only give a sketch of the subject. Fuller details will be found in *Electricity and Matter* and *The Corpuscular Theory of Matter,* by Sir J. J. Thomson, on whose researches the hypothesis is chiefly based, and in *Electrons,* by Sir Oliver Lodge.

The idea that the forces keeping the atoms together in the molecule are electrical in nature is
as old as Davy. It is rendered probable by the fact that electric charges put into a liquid will decompose it, and by the fact that one of the chief sources of electricity is the volatile cell in which chemical combination occurs and charges are given out. In the process of decomposition it is evident that in the two constituent atoms or groups of atoms, one of these is positively electrified and the other negatively electrified, and that it is the attraction between the two charges which binds the atoms together in the cell.

Faraday discovered that, when a liquid is decomposed by an electric current, a definite charge of electricity of each kind is required to disengage a definite amount of an element from a compound, and that, if we accept the atomic theory, the charge is proportional to the number of atoms disengaged. The hydrogen atom always requires the same charge. Other atoms require either the same charge as the hydrogen atom or twice the charge or a small multiple of it. There is no evidence for the existence of a smaller charge than that on the hydrogen atom, and apparently all other charges are exact multiples of it. Thus electricity appears to be, as it were, atomic. Any quantity of it consists of multiples of the hydrogen atom charge, which is an indivisible unit. We have seen already that to each constituant of a molecule, each constituent has a charge, one positive and the other negative, and we have to put in equal neutralizing charges to render the products of decomposition neutral. This interpretation of Faraday's discovery may be regarded as the foundation of the theory of the electrical atom.

The superstructure began with a discovery made by Crookes, when investigating electric discharge in highly rarefied gases. If the discharge takes place between two metal plates in a space sufficiently rarefied, Crookes found that a stream of negatively electrified matter shoots straight out from the plate to which negative electricity is supplied. This stream of matter can be deflected by a magnet. Sir J. J. Thomson found that it can be deflected also by electric force. In a series of brilliant experiments on the deflections by known magnetic and electric forces, he made the immensely important discoveries that the mass carrying a given charge is the same whatever the gas used, and that it is $\tau v^2$ part of the mass of the hydrogen atom charge. By further experiments he showed that each particle in the stream carried a charge equal to that of the hydrogen atom, so that the mass of each particle is $\tau v^2$ part of the mass of the hydrogen atom. This negative electricity he termed 'corpuscles.' They are usually now called 'electrons.' We must suppose that the electric forces during the discharge tear away the negatively electrified parts of the atoms at the negative plates, that these are alike for all atoms, and that their mass is $\tau v^2$ part of the mass of the hydrogen atom. If the atom was neutral before the corpuscle was torn from it, an equal positive charge remains behind upon what is left.

In building up the electric atom we must bear in mind that all experiment shows that there are equal quantities of the two opposite charges, and that we do not know of such a thing as a charge of one kind alone. One kind of charge is always accompanied by the other kind of charge — either united to it as in a so-called neutral atom, or separated from it by a greater or less separation in a conductor or by electric forces. We imagine, then, that an atom consists electrically of a charge of positive electricity and a greater or less number of electrons, and there are reasons for supposing that the number of electrons is proportional to the atomic weight. The oxygen atom will possess, for instance, $\tau v^2$ times as many electrons as the hydrogen atom. The positive charge is equal to the sum of all the negative charges on the electrons. This positive charge is supposed to be spherical, and to be distributed uniformly within the sphere. In some way it holds, and is supported by the constant volume of the atom. The spherical supposition is made for simplicity of treatment. The electrons are moving about inside the globe, and can move without resistance through the central core. With these suppositions, it can be shown that, if there were a single electron moving within the globe of positive, it would have a definite period of revolution round the centre of the globe, the same whatever its distance from the centre. With a number of electrons moving in orbits round the centre, each would affect the time of revolution of the others, but certain arrangements of orbits would persist. Other arrangements might be unstable, and then electrons might be thrown out of the atom. As the electrons circulate in their orbits, they radiate out energy in the form of waves, one wave for each revolution, and the hypothesis seeks to account for light and other radiation of like kind. If two such atoms approach each other, one may be so nearly unstable that it parts with one electron to the other, giving it a self-contained atom.

The atom possesses an enormous store of energy in the motion of the negative electrons. It may become unstable through mutual action of these in their orbits, and some part may fly off to form a new atom. Thus the hypothesis seeks to account for the breaking down of the atoms which appears to occur in radium and other radio-active bodies.

We have seen that the mass of each electron is $\tau v^2$ part of that of the hydrogen atom. The hypothesis gives an account of this mass which we owe to J. J. Thomson. If a body with an electric charge upon it is moving, it acts like a short length of electric current, and it is surrounded by a field of magnetic force; that is, there is magnetic energy in the space around as well as electric energy. If we consider the charge upon its surface, the quantity of magnetic energy is directly proportional to the square of its velocity, and is inversely as its radius. Now, the mass of a body may be measured by the energy required to get up to a velocity $v$, for that energy is $mv^2/2$. If the sphere has masses $m$ and no charge, its energy when moving with $v$ is $mv^2/2$. If it has a charge, then there is in addition the magnetic energy also proportional to $v^2$, say, $m v^2/2$, or the total will be $(m + m^2) v^2/2$. Suppose that when without charge the sphere has no mass, $m$ will be 0. When it has a charge, there will still be mass $m^1$, or rather the sphere will behave just as if it had this mass. It is possible, then, that the mass of the electron is entirely due to its charge. Calculation shows that a massless sphere carrying equal charge equal to that of the hydrogen atom, and about $10^{-12}$ cm. in radius, would behave as if it had mass $\tau v^2$ of the hydrogen atom.

If we could suppose that the hydrogen atom contains 1700 or 17000 charge, we could thus account for its whole mass. But it appears much more probable that what we account for is not a single electron, but a few or many electrons, so that if we are still to give an electrical account of mass, we must break up the positive globe into very small spheres each containing a nearly full charge, far smaller than...
that on the electron, these being scattered through the globe. But for this supposition there does not as yet appear to be any justification, i.e. it does not follow that the electron is an actual entity.

Certain experiments do seem to show that the mass of the electrons is fully accounted for by the magnetic energy of their charges when in motion; but even if we accept this account it is very doubtful if we have 'explained' mass. Certainly all our measurements of energy involve the idea of mass, and it may perhaps be maintained that the magnetic energy in the space round the moving electron implies the existence of mass in that space to serve as a seat for the energy. If so, the electron theory may be described as the mass from the inside of the moving sphere and spreads it through the outside space. Again, we come to the Bosovich-Paraday conception, that an atom is wherever its force acts—not at the centre alone, but spread through all space.

Summary.—Present position of the atomic theory.

—The belief that matter is granular in structure, that it consists of exceedingly minute discrete particles, is irresistible. The particle is consistent with a vast host of observed facts, for which no other explanation has been suggested. We must be content to accept the proposition by means of hypothesis, and are willing to content ourselves with mere description of phenomena—a frame of mind which is non-existent. When we pursue the particle structure into detail, we find an excellent explanation for the facts of chemistry in the hypothesis that, in a definite chemical compound, the particles are molecules, all alike, and that each molecule consists of a group of still smaller particles, which, without prejudice to their divisibility, we call atoms. The chemist finds that the compounds are resolved into bodies, each of which is incapable of further resolution by ordinary chemical agency, and which he terms 'elementary.' An element is supposed to consist of atoms all alike in each one kind. No explanation other than this has been devised for chemical phenomena, and it works so well that it has been universally accepted. So far, we cannot even conceive of any other hypothesis. The hypothesis that in a gas the molecules are, on the average, far apart and rushing about leads to a similar conclusion. Many gas phenomena which has suggested properties hitherto unknown which investigation has shown to exist. Again, no alternative hypothesis has been offered; and if we accept this, we are bound to accept the determinations of number and size, determinations arrived at also from other starting-points.

So far, no special assumptions need be made as to atomic or molecular structure. But if we seek an explanation, on the atomic hypothesis, of certain electrical phenomena, we must imagine some definite structure for the atom. The electrical atom, in some such form as that described, is the only atom yet imagined which has any value for the purpose. It has served to explain many of the phenomena, and it has suggested researches which have led to new and important discoveries. It is easy to criticize it, to point out the large assumptions on which it is founded. There is, for instance, the coherent globe of positive electricity held together by unknown agency and allowing the magnetic energy to pass through it. Further, this we require properties unlike the properties of any known electrical system. But the chief value of such a hypothesis lies, not in its objective truth, but in its success in accounting for, in co-ordinating, we desire actually and in predicting results which are afterwards verified—the electrical atom as a 'working model' which gives the same results as the actual atom, though, it may be, by quite different machinery. From this point of view the electrical atom is a brilliant success.

We observe phenomena due to matter in large masses. Our senses of sight, hearing, taste, smell, and touch are due to the action of large masses of atoms. This is the phenomenon which we can observe and the only way we can observe it is by means of the microscope, and perhaps the sparkling of zinc sulphide when exposed to radium is the only phenomenon which can fairly be ascribed to single atoms, each sparkling being assigned to the impact of one atom. When we go behind observed phenomena and attempt to take into account for them—a structure far beyond the range of our senses in minuteness, and probably utterly beyond direct verification—it is possible to imagine many types of structure which will account for the effects as when we turn the hands of a clock which we cannot open, we can imagine many different trains of wheel-work which will account for the motion of the hands. We must, therefore, accept only provisionally any one type of atomic structure which may be offered. It is, I think, the highest type of the problem. We must be prepared for alteration, for addition, for re-construction, as new phenomena are observed and need to be accounted for. We must be prepared even to abandon it altogether if something fundamentally new is observed. The hypotheses of science are continually changing. Old hypotheses break down and new ones take their place. But the classification of known phenomena which a hypothesis has suggested, and the new discoveries of phenomena to which it has led, remain as positive and permanent additions to natural knowledge when the hypothesis itself has vanished from thought.

ATONEMENT.—See EXPIATION AND ATONEMENT.

ATROPHY.—This term in its simplest meaning signifies lack of nourishment, but in its strictest use is applied to the diminution and enfeebled state of the limbs and organs, or parts of organs, of complex animals and vegetables as a result of disuse. The rapid decrease in weight of an animal as a result of starvation, or the wasting (emaciation) so commonly seen as a consequence of protracted fever or malignant disease, does not even in the medical sense come under the term 'atrophy'; this term is used to express such changes as the wasting of a muscle when its nerve supply is cut. Muscles are in reality the specialized end-organs of motor nerves, and without the necessary nervous stimulus they can perform no work, and are useless. The atrophy of a muscle is brought about not only by dividing its dominant nerve, but also by destroying the nerve-centre in the spinal cord or brain from which its impulses to contract are derived. Examples of atrophied muscles from these causes may be found in the battlefields of the Great War, and in the field of a large number of diseases. Similar results may be studied in other special sense-organs like the
eye; when the optic nerve is divided, or the visual centre in the brain destroyed, the retina, the delicate structure in the eyeball which is the recipient of light rays, quickly atrophies. It is likewise a matter of importance for the preservation of highly organized structures that they be moderately used. It is common knowledge that living animals kept in dark places lose their acuteness of vision, and in fish, crustaceans, and burrowing forms of animal life the sense of vision is not only diminished but is actually lost, and the eyeballs diminish to inconspicuous dots.

The most interesting case of atrophy and suppression of parts are those which come under the observation of naturalists and morphologists. These observers are especially interested in the effects produced by disease of organs of animals and plants caused by changed habits of life, or by the increasing importance of other organs. This is illustrated by tadpoles. When the frog embryo emerges from the egg, it has a long tail and external gills; in the course of its metamorphosis limbs appear, and the tadpole assumes more and more the form of a frog; the gills and tail do not drop off, but are slowly absorbed and disappear, and the aquatic tadpole is changed to the amphibious frog. The disappearance and modification of the cartilaginous arches which supported its gills, and some correlated changes in the framework of the head and neck, the lungs, gills, gills, ovaries, etc., due to the development of the atrophy of the tail. Similar atrophy of organs may be studied in many animal forms which in their early life enjoy a free existence, but later become fixed forms, such as ascidians. Many animals which are always swimming, when atrophied and disappear, as larval organs may be studied among invertebrates, especially sea-urchins and star-fishes. Whilst wondering at these remarkable things, we should not overlook the fact that many instances of this suppression of parts occur in the highest mammals, even in man. The fall of the milk-teeth is due to a process similar to that which causes the loss of the tail in tadpoles and ascidians. Puppies are born blind, owing to the existence of a vascular membrane occupying the space known as the pupil of the eye; this membrane atrophies, and the eyes become sensible to light. In the human embryo this membrane is also present, but it disappears shortly before birth.

The bodies of all mammals contain many remnants of organs which in the early stage of their development were of first-rate importance in their economy; but when the animals are born and become lung-breathers, the alteration in the manner of respiration leads to great changes in a few of the larger blood-vessels, causing them to atrophy; but they remain throughout life detectable by the eye and scalpel of the anatomist. Even more remarkable are the great number of vestiges of parts which may be discovered in every special organ of the body; and the more specialized these organs become, the more atrophied parts it contains. The brain abounds in such remnants, and contains rudiments of a third eye. The organ of hearing, and even the external ear, or auricle, contain many atrophied parts. In this true of the eyeball and its protect- ting lids, a large external ridge, or a dog has three eyelids, merely by holding the paired eyelids apart: and if he examines the nasal side of his own orbit he will see the little pink cone representing the third eyelid (nictitating membrane), and with a magnifying glass may distinguish the delicate hairs upon it. The larynx, the heart, the liver, the intestines, and even the limbs abound in vestiges. In those remarkably modified mammals the whales, the blind limbs are represented by mere rudiments concealed in blubber.

Probably the result of atrophy in producing profound modification of outward form and structure and yet leaving traces of its steps in the form of atrophied organs is nowhere so convincing as, or more easily observed in, these interesting flowers known as orchids. The present writer believes that it is hardly an exaggeration to urge that orchids hold the same relation in the floral world in regard to modification of form through atrophy and suppression of parts—the results of a changed economy—that whales hold for the same reasons among mammals.

Not the least important aspect of atrophy is its relation to sexual organs. It is well known that flowers represent the reproductive organs of phanerogamous plants, and that in many of them a single flower contains male and female parts. In some plants the sexes of the flowers are separate, some being male and others female. A careful investigation of the development of certain flowers which, when fully blown, are of single sex, shows that they possess the germ of organs belonging to both sexes, and that in the course of growth the organs of one sex develop and attain maturity, whilst those of the opposite sex remain rudimentary or completely atrophy. It happens, and not infrequently, that in a flower of a plant normally unisexual there may develop the flower equally: such are called hermaphrodite. Exactly similar conditions have been detected throughout the animal kingdom, even to its summit—man. In the higher mammals, hermaphrodite forms are known in which the ovary is so developed that they are equivalent to ovaries, and similarly the testes are developed into testes. In addition to suppressed or atrophied parts remaining a former higher grade of development, they may even in their degenerate condition, like idlers in a community, be a source of much trouble. Very many curious and often dangerous conditions, known to surgeons as cysts and tumours, arise in the remnants of boted organs. Many occur in the neighbourhood of the mouth, tongue, and neck. Probably the two most persistently fatal are the vermiform appendix, and the remnant of the representative of the yolk-sac, known as Meckel's diverticulum, a fertile source of intestinal obstruction as well as a cause of malformation in that part of the alimentary canal known as the ileum.

When an organ, or part of an organ, which is usually suppressed, or represented by an atrophied rudiment, is developed, as in certain amphibious animals, in an animal, it is regarded as a malformation. For example, men and women normally possess twelve pairs of ribs, but the vertebral segments in the neck, and some of those in the loin, possess minute undifferentiated ribs. In many vertebrates the corresponding cervical and lumbar vertebrae bear well-developed ribs, but, as they are always present, it is usual to speak of them as normal. Occasionally in man the rudimentary ribs in the neck and loin appear as well-developed elements in the skeleton, and are described as being abnormal. The condition has a deeper meaning. The interpretation which the morphologist places on the matter is this: Man is descended from an ancestor who normally possessed more than twelve pairs of ribs; more cavity and limb parts have atrophied, suppression, and are represented by rudiments or vestiges. When a vestige of this character re-appears in a functional form, it is described as an example of atavism (q.v.) or reversion.

Atavism has been studied at considerable length in plants. This has been a subject of great fascination since Goethe drew the attention of botanists to the fact that the various parts of a flower may be regarded as modified leaves. This does not mean that each
ATTACHMENT—ATTENTION

part of a flower is a metamorphosed leaf, but that we are able to trace every structural gradation, from leaves to bracts, from bracts to scales; and not infrequently serpals will be replaced by or become converted into true leaves. The changes from serpals to petals, and from petals to stamens, are as gradual as from bracts to serpals; and the homology is often declared by the stamens becoming petals, and petals appearing as leaves. Even stamens occasionally revert to this way, and constitute abnormalities or monstrous

Atavistic conditions of this kind are met with in animals, especially in connexion with the appendages of crustaceans; and it is astounding to see a lobster with an antenna surmounting its eye-stalk and replacing the whole or part of its eye. Yet parallel malformations occur in sheep, dogs, and children, when the conjunctival covering of the eyeball reverts to skin and produces hair. Though men offer explanations of these curious phenomena, and call them reversions to ancestral types, yet they often have no environment to solve them by the phrase ‘natural selection,’ it must be admitted that the cause still remains veiled in impenetrable mystery. It is also certain that, if we knew the cause of the shedding of the scale, we should be at once convinced of the origin of the species, and the cause of the great division of plants and animals into males and females. See also Degeneration, Disease.

J. BLAND-SUTTON.

ATTACHMENT.—Attachment may be considered in three relations: (1) attachment to the things of sense; (2) to objects of affection; (3) to the whole mind.

1. Attachment to the Things of Sense.—This is the uncontrollable attraction that the physical and emotional environment has for the lower consciousness in man. Now it is obvious that attachment in this sense is perfectly natural, and is quite necessary for long stages of evolution during which the ego in man is gaining experience and learning the necessity for self-control, while the various faculties of the mind are developed through the activities induced by the struggle for life and goods. The characteristic of this form of attachment is that it is associated with the self, and is essentially selfish, and so cannot be an abiding condition in the life of humanity. A time comes in the evolution of each individual soul when that attachment is weakened and a new centre formed; and it is religion that then begins to draw in opposition to that downward absorption in worldly affairs which claims so strongly the energies of man. There may indeed be long periods during which the attraction towards a spiritual life may seem almost imperceptible, but sooner or later man must come to the conversion to a new course of life, when the old way will be forsaken and an upward path adopted.

2. Objects of Affection.—Though attachment here, in the more primitive phases, is strongly perverted with selfishness, yet there is always and in all cases a centre of attraction formed outside the self, and this change, implying new motives, at once begins to humanize and improve the entire nature. From sex and family affections—extended gradually to parents and friends—there eventually arises a wide love of mankind, losing all the elements of attachment as it grows in unselishness and approaches union with the Divine.

3. The Fruits of Action.—Man seeks advantages, and he is proportionately elated or depressed as events turn out in accordance with his wishes or against them. He is attached to the outcome of his efforts, and is not content solely with doing his duty, or his best, and leaving the result to God. It is on this kind of attachment that the Bhagavad Gita (ch. 5) has so much to say: ‘The man who is devoted and not attached to the fruit of his actions obtains tranquility; whilst he who through desire has attachment for the fruit of action is bound down thereby.’ Man acts less and less selfishly as he rises towards perfection, and hence becomes undismayed when the results appear adverse. When he has rid himself of all the lower attachments, he is no longer a slave to the lower desires, and has become ready to enter the abode of bliss, or the Kingdom of Heaven, for he has conquered self and obtained freedom.

G. A. GASKELL.

ATTENTION.

‘Strange to say, so potent a fact as the perpetual presence of selective attention has received hardly any notice from psychologists of the English empirist school. The Germans have explicitly treated of it as a faculty, as a natural function, and have even classified it into the different types of sensations (forms), and have attempted to reduce the phenomena of the mind are pure products of “experience.” Experience is supposed to be of something simply given. Attention, implying a degree of reactive spontaneity, would seem to break through the circle of pure receptivity which constitutes “experience,” and hence must not be spoken of under penalty of interfering with the smoothness of the whole’ (James, Principles of Psychology, 1, 493).

This is the opening paragraph of James’s chapter on Attention, which introduced into English-speaking countries a magnificent and better way of treating the subject. Other writers on Psychology have written luminously on the subject, and readers of the works of Ward, Baldwin, Stout and others, may now have an adequate conception of the function of attention in the evolution of mental life, and of its significance in mental work.

While the empirists have, for the reason stated by Professor James, thrust attention into the background, and have neglected the whole function of mental activity in experience, other schools also have conspired towards the neglect of attention. Idealists in all its forms finds scarcely any place for it and its function. As the empirist, in the interest of a view which regarded experience as given and determined by the pressure of the external order on the mind, insisted that all experience is implicit in sense impressions, so the idealist regarded experience as determined by the evolution of the Idea. Will is, for some of them, especially for Mr. Bradley, the self-realization of the Idea. But in the evolution of the Idea there is no room for selective attention; there is scarcely room for any activity of the subject at all. It is curious that both idealists and empirists come to practically the same result. Empirists ignore selective attention, because they wish to account for all the products of experience by laws of association which cluster things together independently of the activity of the subject; and idealists, in the interests of the ideal order, regard experience as dictated by the objective selection of pure thought.

In truth, the question of attention and its significance involves the whole question of the possibility of spontaneity in life, and of whether the movement of life is wholly determined from without, or whether the organic being has the power of selecting, out of his power of life, what will be and do. Is there such a thing as subjective selection, as Dr. Ward calls it, or organic selec-
tion, as Professor Baldwin calls it? Or is the life of an organism determined for it by factors in which it has no function? Is there subjective selection, or is it determined by what is called Natural Selection? The question is too large to be argued here, but it is named because the same fundamental issue is raised by writers on attention. It may be well, then, simply to state the issue and to present from this view of biology before we discuss it from the narrower view of Psychology and Ethics.

The question may be broadly stated thus: Is there an autonomy of life? Is the proper activity of the organism a real factor in biology? And are there the conditions of life, in addition to those which are required for an adequate account of the phenomena of the inorganic world? A quarter of a century ago, it was strongly affirmed that a true and adequate scientific account of vital behaviour could be reached only when the behaviour of life could be expressed in terms of physics and chemistry. Vital phenomena were only transformed physical and chemical processes. They were altogether determined by the pressure of physical and chemical agencies, and the work of our senses is a chemical one, and the art. 'Zoology' in Ehr., and it will be seen that the physical and chemical explanation held the field. It held the field no longer. There are now many who do not fear to speak of the autonomy of life. Why do we not hesitate to affirm that the chief factor in biological life, as the proper activity of the organism. It is questioned now whether any organic feature can be explained, even in the most general way, by the action of physical forces.

What at first seems to be the result of mechanical pressure may afterwards be found to be an active process of growth, and what at first seems to be a full effect of capillarity among the leafless stems of the ferns, afterwards may depend on the specialized metabolic conditions of the surfaces as its principal cause (Driesch, The Science and Philosophy of the Organism, 1, p. 93).

As Driesch further shows, these processes do not constitute life, 'they are used by life.' In this sentence the issue is stated with clearness and precision. Life uses for its own purpose the physical and chemical processes, and account must be taken of the activity of life, if we are to understand the problem of vital behaviour.

Life, then, uses the physical and chemical processes, and by its own activity disposes of them for its own purpose, and puts them to uses not further capable of mechanical explanation. The processes are taken up, transformed, raised to a higher level, and used for the well of the organism. Life selects out of the environment what is needed for itself. There is selective activity on the part of life; it takes what it needs and neglects what it does not need.

'Turn a miscellaneous lot of birds into a garden: a flycatcher will at once be intent on the gnats, a bullfinch on the peas, a thrush on worms and snails. Scatter a mixture of seeds, evenly over a diversified piece of country: heath and cistus will spring up in the dry, flags and rushes in the marshy ground; violets and ferns in the shady hollows, gorse and broom on the hilltops... by the principle of subjective selection special equations is brought about by different individuals from the general environment.' To this, it is replied, there is no necessary competition. Two artists or two anglers may be in each other's way, but an artist and an angler will hardly inconspicuously each other. A garden would still interest a flycatcher if there were neither pease nor cherries in it, provided there were gnats. The same with bullfinch would at once forsake it. Natural selection, as distinct from subjective selection, comes into play only when two contending for the same food, two contending for the same place, where one early bird gets the worm that the later one must go without.' (Driesch, The Science and Philosophy of the Organism, 1, p. 93.)

For a complete explanation of biological phenomena, account must be taken, no doubt, of the two comprehensive factors summed up under the names of 'natural selection' and 'subjective selection.' This is not the place to deal with them in any comprehensive manner (see art. Activity and other related articles). Here it is sufficient to say that both natural selection and the subjective selection working under the influence of all external conditions, and all that Darwin sets forth under the comprehensive title of Natural Selection) is not sufficient to describe the behaviour of life, or to account for its manifold activities. In the conduct of life itself, for example, assimilation, growth, assimilation, and reproduction attest the activity of life. These show that life so far selects its environment, and that, if there are a thousand species in a square mile of ground, each selects its own environment, and each uses it in its own way, and for its own ends, the further the phenomena of life.

The wider problem set to biology by the activity of the organism, and by subjective selection in relation to natural selection, is parallel to the problem set to the psychologist and the moralist by the relation of attention to the general conditions imposed on conscious individual life by the fact that there are legal laws, laws of association, psychological conditions of thought, action, and feeling, and other conditions which seem to determine the limits within which attention is to be directed. Does natural selection account for vital experience without the postulate of the activity of the organism? so here we ask the question, Do the logical, psychological, and other laws and conditions of mental life account for mental behaviour without the postulate of the conscious activity of the individual subject?

As regards life in general, it is to be observed that its first work is concerned with those movements which are indispensable to vital functions and to its existence as a living body. As a primary condition of existence an organism must adapt itself to its surroundings, and a series of actions must proceed in order that such an end may be accomplished. These activities relate themselves to the general ends of self-preservation and the preservation of the species. A full account of the phenomena connected with this problem would lead us into the region of the relation of organ and function, the relation of appetite and desire to their objects, and also the relation of feeling generally towards physical, chemical processes on the one hand, and mental processes on the other. Without entering into these, we shall merely notice here that life can be described only as a series of actions having reference to an end. That end is the preservation of the individual or the preservation of the species. In the species, there is a question of instinctive activities which are said to be instinctive in the individual are really so; that is, whether they are the outcome of activities which at the outset were acts of choice, these being by repetition consolidated into habit; or whether they were automatic from the beginning. Some contend that actions at present instinctive were originally the outcome of choice, and that these actions, stimulated by a feeling of pleasure, which usually accompanies the exercise of vital functions, have been translated into habit, and have passed into the region of reflex action. Habit is 'lapsed intelligence,' I.e. voluntary action may become instinctive, or impulsive, and in the evolution of life may become habitual or reflex action.

But, if we take any organism as it stands, leaving undecided the question as to the forces which have operated to make it what it is, there is no doubt that every organism has to adjust itself to its environment. Whether it has been made by natural selection, or whether it has had something to do with the making of itself, yet, as it is there in its circumstances and conditions, it has to strive,
to work, to adapt itself to varying conditions; and if it is to survive, it must select the most advantageous course of action. In the case of life generally this is comparatively simple. The individual organism adapts itself to its environment through a series of actions directed to the main ends of self-preservation or the preservation of the species.

All acts of willing, whether external or internal, are divided into two groups: the first group comprising single actives; the second, complex acts, which imply freedom of choice. Simple or impulsive acts are determined by a single motive, whereas complex acts, though they may be determined by a single motive, imply a choice between several. An impulsive act, whether internal or external, is therefore quite as much an act of choice, which is preceded by a feeling of doubt and hesitation. The latter is also termed a free act, or an act of "will" (subjective consciousness), which expresses more clearly the freedom, spontaneity, and independence of the individual, with regard to external stimuli. Impulsive acts are also acts of volition through a lesser degree than acts of free-will. We possess the character of spontaneous consciousness, which distinguishes all manifestations of the will (Villa, Contemporary Psychology, p. 219).

In an ordinary organism, up to the appearance of reflective consciousness, action is directed to its ends mainly by what Villa calls a single motive. Dr. McDougall, speaking of the impulse of hunger or love, the action of the organism may go straight to the object. Whether this is the outcome of natural selection, or whether it is acquired by the organism itself as the result of a process of education, it is not necessary here to decide. For in either case the action as a whole in accepting the name is the result of subjective need finding its satisfaction in an appropriate object. In any event, the action and its motive are simple, direct, and imperative.

In a life which is merely organic, the need of the organism may be regarded as in direct and simple relation to its external objects, and proceeds straight to the appropriation of them; in conscious life, or in the life which is on the way towards self-consciousness, other factors enter in, and the situation becomes more complex. Yet the more complex situation rises naturally out of the simpler. There is no abrupt break in the evolution of mental life, and we can scarcely say when we call attention begins to be properly exercised. In every organism there is a centre, to which all movements are referred. The organism is aware of its own needs, and of the objects which are to satisfy those needs. With the growth of consciousness, the awareness becomes intensified, until, in the fully-developed self-conscious life, consciousness is aware of itself and of the actions which it has performed in general is just this awareness, and this awareness involves that mental activity which we call attention. More fully described in the words of Dr. Ladd, attention is "a purposeful volition, suffused with peculiar feelings of effort or strain, and accompanied by a changed condition of the field of discriminative consciousness, as respects intensity, content, and clearness" (Psychology, Descriptive and Explanatory, p. 61). While the description just given, shows how to apply its fullness only to a mental life complete in itself, it is applicable to all conscious life. It will be observed that in the definition given above there is no attempt to limit attention to the exclusive operation of any particular activity of the mind. It is, on the contrary, the synthesis of all the activities of the mind, whether of feeling, of action, or of thinking. Attention is thus elementary and universal; it belongs to every state of consciousness, and is present in every field of consciousness, or, Dr. Ladd says: "As to the subjective relation of objects, the relation of presentation itself, we have merely to note that on the side of the subjective consciousness of a word, may be called attention, extending the denotation of this term to all cases, even what we ordinarily call inattention. Attention so used will be dependent by consciousness of much of it, that is, as answers to being mentally active, active enough at least to "receive impressions." Attention on the side of the subject implies intensity on the side of the object: we might indeed almost call it an objectification of the attention, without which it is a nonentity" (Villa, art. 'Psychology,' p. 419).

Awareness of the stream of consciousness, as it passes on, becomes attention in the stricter sense as elements in experience become more or less intense. It is impossible to describe all the elements which enter into consciousness, nor is it necessary. For the reaction of the mind against its presentations, whatever these may be, gives us at once the elementary condition of attention. At the outset, before the elementary consciousness itself, it is possible that attention is without purpose, that it is aroused by change in mental experience—by pleasure or pain, or by the over-stimulation of sense or faculty—and that it is exercised in an unthinking, involuntary way. But such rudimentary forms of conscious activity are the foundations on which voluntary, deliberate, and sustained attention are built up. Some, indeed, limit the term 'attention' to its more developed form, and refuse to recognize the more rudimentary forms as worthy of the name. But without the rudimentary forms there can be no possibility of the development of mental life, and no possibility of the deliberate sustained attention which fashions for itself a scheme of living, and shapes means for realizing it. Mental activity in this book is the result of the fundamental finding that it can enhance the intensity of some elements, may hasten or retard the flow of the stream of consciousness, may also discriminate between desirable and undesirable elements, and thus the value of attention is recognized. For mental life cannot grow without proper mental activity, and the proper name of such activity is simply attention. Usually the conditions of attention are just the conditions of consciousness in general. We have seen from Dr. Ward that a large part of the stream of consciousness is properly included under the phenomena of attention. It so happens that many writers on this topic so describe the conditions of attention as to leave out of sight any proper activity on the part of the subject. It is possible so to describe the effects of attention as to leave out all reference to the selective activity of the individual. One may say, with Professor Pillsbury, that 'the essence of attention as a conscious process is an increase in the clearness of the one idea or group of ideas that are in the field of attention' (Attention, p. 11). This is quite true, only it leaves out the essential element of how attention was directed so as to produce that result. In fact, in the able work cited so much stress is laid on processes and conditions of attention that attention itself scarcely ever appears. Thus there are many valuable descriptions of the mot concomitants of attention, of its conditions, of the effects of attention on consciousness, and so on, and yet the proper character of mental activity receives scarcely any recognition. The following summaries, usefully appended to each chapter. The summaries of the chapter on 'The Conditions of Attention' are these: 'The conditions of any act of attention are to be found in the present environment (objective conditions) and in the past experience of the individual (subjective conditions). The main objective conditions are the intensity, extent, and duration of the stimulus. The stimulus which is validly perceived must be in the mind at the time, in the mood of the moment, the education, previous social environment, and heredity of the individual.' (p. 22).

Professor James has said: "My experience is what I agree to attend to. Only those items which I notice shape my mind; without selectivity interest is no more than the mere fact of perception. The emphasis, light and shade, background and foreground—intellective perspective, in a word. It varies in every creature, but without it the consciousness of every creature would be a grey,
chotic indiscriminativeness, impossible for us even to con-ceive" (Psychology, 1, 602.)

But Professor Pillsbury in his summary of the chapter on 'Interest and Feeling of Activity as Conditions of Attention' speaks:

'Neither interest nor "mental activity" can be regarded as a condition of attention. Interest is either a general name for the tendency of attention which is directed to the object, or it is used to designate a mood which accompanies all attending. Mental activity is truly bodily activity—a mass of sensations originating from the contraction of muscles in different parts of the body. The contractions result from motor innervations which accompany attention (p. 66).

Professor Judd in his write "we attend to things because they are interesting. Professor Pillsbury is of opinion that 'things are interesting because we attend to them, or because we are likely to attend to them: we do not attend to them because they are interesting. Frohlich, the cart and the horse are somehow united, but we are left in doubt as to which comes first. To us it appears that in the solution of Professor Pillsbury the cart is before the horse. His book is the largest and most elaborate of any work we know on 'Attention,' and contains many things which are of the highest value. But it does not seem to cast much light on its main theme.

Attention in its proper meaning seems to be conspicuous by its absence. We quote from the chapter called 'General Conclusions':

"An act of attention, as a type, is possible to bring many of the other mental processes under that head and to make it seem the classification of minds. We have, for example, that attention influences recalled im-pressions in practically the same way that it influences their original impressions. With a minimum of consciousness it once given, it will be retained very much as a perception received immediately from the external world. Furthermore, attention can be determined whilst of the many possible associates of any impression shall become actual. In this sense it selects the memory offered by association just as it selects the objects of sense that shall be permitted to enter. By attention in this sense we mean again from the side of the conscious, the sum of the sum-total of previous conscious states, as united in the purpose of the moment, the general trend of the preceding thought, the character of the man, his knowledge and experience. We lock the complete series of earlier experiences and inherited tendencies which make him what he is. His thought about any subject, no matter what the starting-point, is an expression of himself in the fullest mean-ing of the term" (p. 312.).

When Pillsbury in the passage quoted describes attention as 'the most essential of all the attendant states,' etc., has he not left out the most essential element in attention? When he speaks of the complete series of earlier experiences and inherited tendencies which have made 'him what he is,' has he not neglected the most potent factor, namely, 'me,' which he has in making of himself? Take members of the same family, descended from the same parents, subject to the same kind of earlier experiences, the same inherited tendencies, responsive to the same environment in family, school, and neighborhood, and how on his principles does he account for the manifold differences between them? It seems to the present writer that Professor Pillsbury, in his earnest desire to lay stress on the general conditions, has forgotten the personal equation of each individual. He has justified the procedure of the biologist, who lays the whole stress on natural selection, and neglects the part played by the subjective in the evolution of life. General laws can never account for particular effects. It is a useful study to seek to find out the general conditions which have helped to make a man what he is; but that has to be supplemented by a par-ticular study of the man in his habit as he lives. It does not help us much to say that Shakespeare was an Englishman, and that Burns was a Scotsman. We are still to learn what were the topics which interested these great men, and what was the interest which directed their attention to this or to that line of thought and action.

It is possible that we may never be able to give a scientific explanation of the individual in this relation or in any other; for the individual, as such, is outside of general rules, and must be accepted in all his concreteness as a subject of study by himself.

It is pointed out by Hulding (Outline of Psychology, 1, 214) that, in immediate sensations and in the flow of them, interest and the attention determined by the interest play an essential part. He points out (p. 120) that we are not given over in a purely passive way to the impressions of the external world. Excitations from without call forth movements which serve them. An involuntary search and accommodation help to determine the character of the sensation.

'If a sensation takes complete possession and almost succeeds in driving all else out of consciousness, it then arrests our activity also. An exclusive sensation therefore presupposes attention, but is not one with it. Besides, how does a sensation become exclusive? Excitations can flow in upon us simultaneously from several sides. The eye, e.g., receives simultaneous excitations from several points of light. Several senses, moreover, may be in operation together. If purely passive, sensorium perception would afford at every instant a clash of diverse sensations. But from the multitude of these diverse sensations, in every instant, one is selected which becomes the centre. Reflexly and instinctively the attention moves from one excitation to another . . . . The motive which decides the attention to leave one excitation and turn to another is to be looked for in a sense of fatigue or in a feeling of dulness' (p. 118-119).

Furthermore, attention can be determined whilst of the many possible associates of any impression shall become actual. In this sense it selects the memory offered by association just as it selects the objects of sense that shall be permitted to enter. By attention in this sense we mean again from the side of the conscious, the sum of the sum-total of previous conscious states, as united in the purpose of the moment, the general trend of the preceding thought, the character of the man, his knowledge and experience. We lock the complete series of earlier experiences and inherited tendencies which make him what he is. His thought about any subject, no matter what the starting-point, is an expression of himself in the fullest meaning of the term" (p. 312.).

Referring to the whole discussion for further elucidation, we may now say that even in sensations and in the flow of them choice has a part, and attention may determine what sensations may occupy the centre of consciousness, what may be thrust into the background, and what may be thrust altogether outside the threshold of con-sciousness.

But such attention may be involuntary, or may have the character of reflex movement. His elementary choice is the necessary condition of such new arrangement of sensations as will be transformed into those results of human effort which we recognize in the contents of science, art, philosophy, and in all other results of human effort. But, it may be said, that the almost unconscious attention come the magnificent results which we have already named. We may attend to things because we cannot do other-wise. But when we have an express volition to attend to something, or to that, that is the attention. All other attention is called non-voluntary or spontaneous. The relations between spontaneous and voluntary attention are manifold. They may be antagonistic to one another, or they may act in such a way that the one passes over to the other, or that voluntary attention to an uninteresting object may invest it with such interest as to make attention to it a spontaneous matter. For example, when we are occupied with any matter, as when a great misfortune has be-fallen us, or when we pass in review a certain course of events, in order to find the cause of failure, it may take possession of our minds to such a degree that no effort of will can make us cease from brooding over it. An article has to be written, or a book is in process of preparation; the work is in such a condition that the writer are unable to tear ourselves away from it; the attention which began voluntarily has become an obsession.

On the other hand, experience shows that, by the constant exercise of voluntary attention, a subject which at the outset was dry and uninteresting may become full of interest as we master it, and learn its meaning and its issues. The power of concentrating our attention on the subject may become stronger, the intervals of con-
ATTENTION

centration may become more prolonged, until no effort is needed to attend to the subject. Volun-
tary attention has become spontaneous (see Stout, Analytic Psychology, vol. i. p. 241 f.).

At the individual level, the unique experience is profitable to enumerate the various kinds of involuntary attention. Reference may be made generally to systematic treatises on Psychology, in which the various kinds are described. Vital needs, the calls of love or hunger, pleasure and pain, every relation between the organism and its en-
environment, may give rise to that exaltation of consciousness which calls forth the reactive energy which we name 'attention.' It is possible, however, to classify all of these under two general divisions, and to speak of them under the general heads of 'external' and 'internal.' The external are the presentations with the accompanying emotions which precede action. These are usually simple and single in their procedure. The internal are those which, as already indicated, consist in a variation of the current of presenta-
tions and feelings. In these we have emphatically the presence of choice, of the selection of one motive out of many, with the increase of intensity and urgency resulting from the concentration of the mind.

In the description of these external and internal movements an attempt has been made to intro-
duce greater precision into psychological phrase-
ology. Instead of the phrases 'involuntary' and 'voluntary,' which many still use as adequate, some psychologists have introduced the terms 'perception' and 'appereception' (q.v.). By 'perception' they mean a content of which we are conscious. When we concentrate ourselves on a content of consciousness so that it stands out distinctly or as distinctly as possible, we say that it is perceived. This content may be found in the history and meaning of this term; it is sufficient to say here that those psychologists who use attention in this sense define it as that peculiar state, characterized by certain special feelings, which accompanies appereception. Spatial illustrations are used to describe the state of appereception. Consciousness is figured as a circle, the centre of which represents the focus or point of appereception. The circumference of the circle represents the threshold of consciousness; and of all the movements of the mind out of the circle, while others pass along a diameter, and so through the centre. Or it might be represen-
ted by a reference to the great circles of navi-
gation. These pass through the centre of the earth. Appereceived mental contents correspond to great circles, which pass through the centre of conscious-
ess. These spatial illustrations do not add much to our knowledge, yet the distinction between perception and appereception might be very helpful, it writers on Psychology were to use the term in this manner.

With regard both to our perceptions and to our appereceptions we are never wholly passive. We have seen that even in the immediate sensations, as well as in the flow of them, the attention is determined by interest, and the interest has a determining influence on sensations selected for closer examination. So it is in the flow of ideas. Here, too, interest has a determining influence. We can never account for the association of ideas, or the movement and interaction of the ideas, and the many highly-evolved forms of life, which come together in the mind, by a mere regard to the laws of association, or to any other laws of a general kind. There are laws of association, as there are laws of science, of logic, of psychology, but these do not act as if they aggregated them-
selves into an organic whole. There are other general laws, by which parts, as well as the whole, are guided.

regards mental laws they are used by the mind. The determining influence is in the conscious mind itself, which guides its action by its own law of action, so that each experience is essentially a determining factor. Fortunately, accurately the practical problem of attention for any individual would be to determine the real character of per-
sonality. But that is beyond the scope of science, which deals with the general, and with the super-

One will find that the characteristic difference between perception and appereception, or between involuntary and voluntary attention, is that in the one case the strain follows directly on the presentation of the stimulus, and in the other case the strain, or the turning of the mind, in a certain direction towards a certain object, is present before the stimulus.

The fusion of the sensation with the corresponding idea, whence perception arises, takes place in inverse order in voluntary and involuntary attention. We see in great measure what we wish to see, and as a general rule are able to see only what we wish. Hence the possibility of strokes of genius and prophecies, as also of literary interpretations of facts. The originally sublime tendency of human nature anticipates ex-
p erience, and only gradually accepts correction from it. Fortunately experience per se has the power to force us to see. But the activity of the will is always an essential condition (Holden, Outlines of Psychology, p. 310).

The relation of the mind to the life which the system in which we live is too large a subject to be discussed here. Generally it is analogous to the relation of life to the system of which life forms a part. The conscious subject lives in rela-
tion to an environment. In interaction with it, it realizes itself. But the process of self-realization is an active process. It reacts against the en-
environment, it selects out of it what it can use, and what it needs and wants, and it makes out of it something new. Merely organic life modifies itself in order to adapt itself to its surroundings.

Conscious Life modifies the environment, and does so to make it in a measure accomplish its ends. It im-
presses itself on the environment, and modifies the earth so as to command its resources in the shape of food, clothing, and houses. Homes are built, cities are founded, facilities of travel are made to abound. We need not enumerate the resources of civilization. The forces of nature are at the service of man, just because man has modified nature to accomplish his ends. But these are the out-
comes of active purpose, and the great importance of the mind lies in the way attention is directed to the laws of the system. Attention of the intellectual kind may be set forth as the activity arising out of the desire to know what are really the laws of the system in which we live. No doubt this is the characteristic of the highest form of intellectual life. But it exists, and ought to be recognized. Into this also choice enters, for it is allowable for a man to think twice, or more than twice, in order that his thoughts in their flow may correspond with reality. Thus into the most abstract and intellectual of our pursuits voluntary activity may enter.

Truth has thus a value of its own, and the greatest determinant of attention is just the scale of values which human judgment has set up for itself. It is the value of values that determines our interest, and our interest dominates our attention. Referring to the art, VALUE for the full account of the doctrine of values, we state briefly here that it is the characteristic quality of art and of workmanship, which in the exchange and commerce of the world, will correspond with its highest ideal, and be the image of its deepest thought. What forms these may take, and what strivings may issue from the attempt to make a world in which our values may be realized, has been already described here. But whatever value may be striven
ATTIS

after by this people or by that, or by this man or by that, it can be realized only by thinking about it, attending to it, working at it, till airy nothing obtains a local habituation and a name. Thus, for the man of science, truth may have the highest value, and he may concentrate his attention on the highest of the laws of thought, and it is, for philosophy, everything else may be neglected in the desire to know reality, and to see it in its wholeness; while for the artist a thing of beauty is a joy for ever, and the beautiful is the value that is highest. On the other hand, for some the highest of the laws of thought, and so do around the whole circle of human activity. In whatever direction we look, we find that it is the scale of values that determines the interest of men, and sets him to work for its realization.

What constitutes, perhaps, the ethical, the spiritual—Are the dominating interests of conscious life, and these are the ends which all men seek to realize.

For the conscious spirit, then, the given world is plastic, something to be formed into a world of specific value in which it may find its appropriate home. In Plato's world, its laws, whether mental or material, may submit to new directions, take on new meanings, and issue in results not to be accounted for apart from the activity of the conscious spirit. Material laws may enter a new expression in the Principles of Newton, or, after all, in the poetry of science. It is nature as transformed in the mind of Newton. The philosophy of Hegel, e.g., or of other great masters in philosophy, is a revelation of personality, as much as, or even more than, it is a transcript of the meaning of reality. For each mind in the world has to make a world for itself, and it will be the centre of its own world. How each world so made corresponds to the world which is common to all, how the general is related to the individual world, is another question. Well interpreted, some religious, some moral—Are which we call voluntary attention is the chief means by which the world of values is made; and without its working no world is possible for man.

JAMES IVERACH

ATTIS.—Attis was a male Asiatic deity whose relation to Cybele, the Great Mother, was analogous to that borne by Adonis to Aphrodite, Besal to Ashtaroth, Osiris to Isis, etc. Of Semitic origin, or at least greatly influenced by Semitic religion, his worship, always in dual connexion with that of the Great Mother, and never independent of it, became strongly centralized in Phrygia and Asia Minor, spread to adjacent countries, was introduced into Greece, and later became known throughout the Roman Empire. According to the legend given by Pausanias (vii. 17) as current among the Phrygians, the seed of Zeus, discharged in sleep upon the earth, begot the hermaphroditic monster Agdistis, who was afterwards deprived of male organs by the gods. An almond tree having sprung from these, the daughter of the river Sangarius ate of its fruit and bore Attis, who, after having been exposed, was reared by a hermaphroditic mother, beautiful, and inspired passion in Agdistis. Being about to displace the king and his daughter, Attis was struck with madness by Agdistis (who suddenly appeared during the nuptial hymn), and emasculated himself. Agdistis in repentance prevailed upon Zeus to preserve the body of Attis from wasting away or decaying. In Arnowilis (ude. Nations, v. 5-8) the fruit is the pomegranate, the daughter of the river-god is named Naia, and the king and his daughter are Medas and Ia. The Great Mother, created by Deucalion and Pyrrha on Mount Aegus, also loves Attis, and by his interpolated marriage in order to rescue him from the shameless love of Agdistis, who strikes the entire company with madness. Agdistis mutilates herself under a pine tree, and Ia, after wrapping Attis in wool and mourning over him, kills herself. The fatal pine is borne by the Great Mother into her own city, where she and Agdistis are yearly feasted. Zeus allows the body of the youth to remain undecayed, his hair to grow, and his little finger to move. Agdistis has the body of the youth consecrated at Pessinus, a city in Galatia to whose capital Attis' spirit—itself—was installed, and the Great Mother institutes annual ceremonies in his honour. The little finger (digitus, δάκρυς) is interpreted as the phallos by Georg Kaibel (GGN, 1901, p. 519). In Diodorus Siculus (iii. 38, 59), Attis is a stripping whom Melo, the king of Phrygia and Lydia, slays because of an intrigue between him and the king's daughter Cybele. As a consequence of plague and famine, worship of both is instituted by the Phrygians. In Ovid's version of the legend (Fast. iv. 232 ff.), Attis breaks his pledge of chastity to Cybele; Saguntus, the nymph who has sinned with him, is destroyed by the Great Mother, and Attis, dying from his own in a frenzy on Mount Dindymon. In the version of Arnowilis the blending of two forms of the Attis legend is apparent—one accounting for the birth of Attis, the other for his relations to Cybele—and the latter and Agdistis are really identical. A Lydian form of the legend, in which the youth is killed by a bear, is found (Paus. vii. 17).

There is no evidence of an Attis cult in Asia Minor until the 4th cent. B.C., though it must have existed long before that time. It never attained to great prosperity in Greece, because of the strange and un-Hellenic nature of its rites. The same is true of it in Italy up to the Empire. There is no direct evidence of the existence of the worship of Attis at Rome under the Republic, and the general probability of its existence is rendered very slight by the lack of monumental and literary evidence where such evidence might be expected (Showerman, 'Was Attis at Rome under the Republic? in TAPA xxii. 1909, pp. 46-59). Under the Empire, however, from the time of Caligula onward, it becomes of great importance, Attis being worshipped side by side with the Great Mother, and frequently appearing in literature and on the monuments with her. His prominence in the cult is indicated by his part in the annual season of festivals in honour of the Great Mother which covered the period March 15-27 (Hepdng. Attis, seine Mythen und sein Kult. Giessen, 1903, pp. 123-176). On March 15 the college of Cannophori, or reed-bearers, took part in the ceremonies of the day by carrying reeds in procession—a custom explained as a commemoration of the finding of Attis by the Great Mother on the reedy banks of the river Gallus, but more likely a reminiscence of a primitive phallic procession (see Showerman, 'Canna intrat und der Cannophori' in the Classical Journal, ii. 28-31). Sexual abstinence and fasting were prescribed for the day. On March 22 the sacred pine, the emblem of the self-mutilation of Attis, was borne in procession by the Den- drophori to the temple of the Mother on the Palatine, covered with flowers which covered its branches and its branches hung with garlands of violets, the whole being regarded as a commemoration of the wrapping of Attis' body in wool by Ia and the deckiing of the original tree by the
If we adopt the analysis given by Kant ("Monedologia physica, 1756, and Metaphysische Anfangsgründe der Naturwissenschaft, 1786), we may even add: the very existence of a space-filling body presupposes that the body must resist compression (repulsion), or it would become a mere mathematical point; and, again, it must resist expansion, or it would be scattered indefinitely through space.

Attraction and repulsion are to be differentiated from two other similar forces, tension and pressure, in that they act from a distance; and this characteristic has made them especially the subject of philosophical discussion. Can a body exert a force where it is not? The day has gone by when the metaphysicist had to demand, involving a priori answer to the question thus simply put; but in the 17th and 18th cent. the correct answer was a frequent matter of debate. The followers of Descartes, including Leibniz, were strongly opposed to the affirmative answer; for it seemed contrary to 'natural light' that a body can act where it is not (cf. Leibniz, Erdmann's ed. p. 707).

For us of to-day the question is more complicated; but it still involves a truly metaphysical or a priori problem. On the one hand, empirical evidence seems to lead us to believe that we do not exert any force upon the distant instance in nature of absolute contiguity between bodies. Moreover, mathematical intuition would add that the only true contiguity is where bodies have one point in common, and this, in turn, would involve complete coincidence of the two bodies; for the same problem of contiguity must be raised regarding all the points in each body. On the other hand, there is much prejudice, well or ill grounded, against the doctrine that a body acts at a distance. Faraday, it seems, had this prejudice; and it discovered that the force was acted upon by magnetic forces, along with evidence of tension and pressure within this medium, justified his point of view. Again, there have been repeated attempts to reduce the forces operating in the phenomena of gravitation to pressure (cf. the theory of Le Sage, and Clark Maxwell's article 'Attraction' in Ebr.3). Possibly this prejudice has its origin in the fact that our bodies must come in contact with objects to move them or to exert a force upon them, and, in turn, that when this happens we often have the sensation that we have bodily contact with a body, or medium, upon the surface of our body. Such an explanation of this prejudice does not, however, do it full justice.

Here, then, the metaphysical problem arises: Is there an ultimate presupposition actually present in man's attempt to explain nature, forbidding him to rest satisfied with an explanation that involves the action of one body upon another from a distance? Whenever we are forced to adopt as an explanation such a force as gravity, ought we not simply to regard it, not as a final solution, but as a confession and an assumption? Does there not remain in all such cases an unsolved problem bidding us seek for a medium between the two bodies? Faraday sought a medium in one set of cases, and found it. Ought not science to seek it in all cases? Hence, is not this prejudice a fundamental methodological attitude? If so, we can call it an axiom, meaning by an axiom an assumption that seemingly we have to make, but have no hope of either proving or disproving. We cannot prove that bodies do not act upon one another from a distance, nor can we prove that they do; for these latter cases mean, at the most, that we have not as yet been able to find any known medium.

Moreover, the mathematical statement that in a continuous space all particles of matter must be separated, and therefore cannot be in absolute
contiguity, does not contradict this axiom. It simply introduces the larger metaphysical question: Is not nature a continuum, and therefore an inexhaustible source of problems; that is, does not all scientific explanation leave residual problems which arise the moment we think of any given system isolated into yet another entities then the which remain considering, and so on to infinity? In short, our axiom means contiguity relative to the type of spatial objects involved in the problem at hand, not absolute or mathematical contiguity. Cf. art. ATOMIC THEORY.

AUGSBURG CONFESSION.—See Confessions.

AUGURY.—See Divination.

AUGUSTINE.—See Divination.

AUGUSTINE.—1. Life. Aurelius Augustine (the prævarum "Aurelius" is attested by contemporaries but does not occur in his own works or in his correspondence) was born of mixed heathen and Christian parentage, 13 Nov., A.D. 354, at Tagaste, a small municipality in proconsular Numidia. He was taught in his childhood the principles of Christianity, and great sacrifices were made to give him a liberal education. From his youth he was consumed by an insatiable thirst for knowledge, and was so inflamed by the reading of Cicero's Hortensius in his nineteenth year that he thenceforth devoted his life to the pursuit of truth. The profession to which he was bred was that of rhetorician, and this profession he practised first at Tagaste, and then successively at Carthage, Rome, and Milan up to the great crisis of his life (386). In his early manhood he had fallen away from his Christian training to the Manicheans, who were the rationalists of the age (373); and subsequently (383) had lapsed into a general scepticism; but he had already fought his way out of this, under the influence of the Neo-Platonists, before his conversion. Towards the end of his life Christianity took place at Milan in the late summer of 386. He spent the interval between this crisis and his baptism (Easter, 387) in philosophical retirement at Cassiciacum, and then, after a short sojourn at Rome, returned to Africa (autumn, 388) and established at his native town a sort of religio-philosophical retreat for himself and his friends. Early in 391 he was almost forcibly ordained presbyter at Hippo Regius, and nearly five years later (shortly before Christmas, 395) was raised to the rank of coadjutor-bishop. From the first he sustained practically the entire burden of the administration, and, soon succeeding to its sole responsibility, continued bishop of that second-rate diocese until his death, 28 August 430.

In this simple framework was lived out the life of one who has been strikingly called incomparably the greatest man whom, between Paul the Apostle and Luther the Reformer, the Christian Church has possessed.1 We cannot date from him, it is true, the external fortunes of the Church in the same sense that we may from say, Gregory the Great or Hildbrand. He was not, indeed, without ecclesiastico-political significance. He did much to bestow great eulogies upon the African Church. He regenerated the clergy of Africa by his monastic training school. And it must not be forgotten that the two great Glycyripi stood upon his shoulders. But his direct work as a reformer of Church life was done in a corner, and its results were swept away by the flood of the Vandal invasion.

2. Writings.—It was through his voluminous writings, by which his wider influence was exerted, that he entered both the Church and the world at large, and, as it were, made a new creation, a work which indeed created an epoch in the history of the Church but has determined the course of its history in the West up to the present day. He was already an author when he became a Christian, having published (about 380) an aesthetical study (now lost), On the Pulpit or Lyceum. But his astonishing career of productivity began with his conversion. His first Christian writings were a series of religio-philosophical treatises, in which he sought to lay the foundations of a specifically Christian philosophy. These were followed by a great number of controversial works against the Manicheans, Manichaean and Pelagian, interspersed with Biblical expositions and dogmatic and ethical studies. The whole was crowned by four or five great books in which his genius finds perhaps its fullest expression. These are his Confessions (397–403), his great and masterly analysis of his religious experience and creates a new genre in literary form; the De Doctrina Christiana (397–426), in which the principles of his Biblical exposition are expounded; the Enchiridion ad Laurentium on Faith, Hope, and Charity (421), which contains his most serious attempt to systematize his thought; the De Trinitate (385–420), in which its final formulation was given to the Christian doctrine of the Trinity; and the De Civitate Dei (413–419), in which are laid the foundations of a rational philosophy of history. He seems to have been so swept up in the current of the influence of his written works as to extinguish its stream; but his writing continued for many years to influence the development of the Church in the West and to be read with profit by the clergy and laity of the Western Church.

3. Influence.—(a) Its extent.—The greatness of the influence exerted by Augustine is fairly intimated by the suggestion that the division between the Eastern and Western Churches may properly be represented as having been "prepared" by him.2 No doubt, according to Renan's saying, the building of Constantinople contained in it the principles of the division of the Empire, and the division of the Empire the prophecy of the division of the Church. But it was Augustine who imputed upon the Western section of the Church a character so specific as naturally to bring the separation of the Churches in its train. It must not be inferred, however, that his influence was felt only in the West. The prevailing impression to this effect implies some failure to appreciate not only the extent of the intercourse between the East and the West in Augustine's time but also the extension of the East to the West for its theological constructions. The interest of the Antiochenes in Western Christo-

1 Harbach, Monasticism and the Confessions of Augustine, p. 123.

2 Renaut, Augustinische Studien, vii. 499.
logical thought, as illustrated, for instance, in the *Erasmians* and the correspondence of Theodoret, is only one example of a much wider fact; and in any event, the great doctrines of the Trinity and the Virgin Birth from almost the very tweniety of 'dogma' in the East, so far from being a gift from the East to the West, as often represented, had their origin in the West, and were thence communicated to the East—the former through the intermediation of 'the great Hesiodus,' and the latter through that of Leo the Great. Augustine, through whom—working, no doubt, in full knowledge of what had been done by the Greeks, but in entire independence of them—the doctrine of the Trinity received its complete statement, cannot be late to affect the Greek construction of this doctrine and to give form on this great topic only to the thought of the West. But his Christological conceptions underlay the formulations of Leo, as those of Ambrose underlay his, and through Leo determined the Christological definitions of the East as well as of the West. Accordingly, while the doctrines of the East and the West on the Person of Christ have remained identical, in their doctrines of the Trinity the two sections draw somewhat apart, not only with respect to that perennial bone of contention, but also with respect to that matter of the procession of the Spirit, but in what underlies this difference—their general conception of the relations of the Trinitarian Persons. This in the East is ruled by subtle subordinational inheritances (embodied in the Nicene formulay in the phrase φανερωμένη και ιδιατικά and its equivalents), while in the West it is dominated by that principle of equalization which found its sharpest assertion in the ascription of *aoromorphi* to Christ by Calvin, whose construction marks the only new (subordinational) particularization of the dogma of the Trinity after Augustine. This complete determination of Western thought on the fundamental Christian doctrine of the Trinity fairly illustrates at once the place of Augustine in Western Christia thought, and the extent of his supreme influence there in creating a specifically Western type of Christianity.

It is worth while, no doubt, to distinguish between the actual influence exerted by Augustine in the West, and what may perhaps, in a more external sense, be ascribed to him through the name in the Latin Church. To no other doctor of the Church has anything like the same authority been accorded, and it seemed for long as if his doctrine of grace at least was to be treated as a definitely defined dogma, *de fide* in the Church. Already in 431 Celestine sharply reproved the bishops of Gaul for permitting Augustine's authority to be questioned in their dioceses; and soon afterwards, Gelasius (493) addressed to the bishop of Pescium a similar letter of rebuke for the like carelessness. Subsequently, in 529, Boniface II. (530-531), and John II. (534) confirmed the authority thus assigned him; and their encomiums were repeated by many later Roman bishops. It very naturally became, therefore, the custom of the 'Augustinians' in the Church of Rome—like Diego Alvarez, Jansenius, Noris—to ascribe 'irrefragable authority' to his teaching; and the question was gravely debated among the theologians whether a truly plenary authority were really to be attributed to him, or whether he were only a master of the first rank of the Church and of the teachers. The result was very naturally that every tendency of thought in the Church was eager to claim for itself the support of his name; and the extraordinary richness of his mind, and the remarkable versatility, of so to say, the extent of his teaching, lent him not only outwardly to the appeal of numerous and even divergent points of view. The possibility of this was increased by the long period of time covered by his literary activity, and the only gradual crystallization of his thought around his really formative ideas. The Augustinian of Cassianus or even of the presbyterate was a somewhat different Augustinian from the Augustinian of the episcopate; and not even at his death had perfect consistency been attained in his teaching. Accordingly the most fascinating variety of conceptions of the peculiarly receivable subject, throughout the Middle Ages, and later in the Church of Rome, has sought support for itself in some saying or other of his; and both sides of almost every controversy have appealed with confidence to his teaching. Schools of thought which had drifted entirely away from his most fundamental postulates still regarded and represented themselves as 'Augustinian'; and the Church of Rome itself, whose whole history since the second Council of Orange (529) has been marked by the progressive elimination of Augustinianism from its teaching, is still able to look upon him as the chief doctor of the Church, upon whom its fabric is especially built. Confusion became so confounded that the Confession of Faith which Pelagians presented to Innocent was inserted in the Nicene Creed, though it was not even produced by the Sorbonne in 1521 against Luther as Augustine's own.

Obviously this universal deference to the name of Augustine furnishes no accurate measure of his real influence upon supplies, how ever, a fair general refection of its extent. In point of fact the whole development of Western life, in all its phases, was powerfully affected by his teaching. This, his unique ascendency in the direction of the thought and life of the West, is due in part to the marked particular preoccupation of his books done, in part to the richness and depth of his mind and the force of his individuality, and in part to the special circumstances of his conversion to Christianity. He stood on the watershed of two worlds. The old world was passing away; a new world was arising in him. His heritage and it fell to him to mediate the transference of the culture of the one to the other. It has been strikingly remarked that the miserable existence of the Roman Empire in the West almost seems to have been preordained by the work of Augustine; affording an opportunity for the influence of Augustine to be exerted on universal history. He was fortunate even in the place of his birth and formative years; although on the very eve of its destruction, Africa was at this precise moment, in the midst of the universal decadence, the scene of intense intellectual activity—into which he entered with all the force of his ardent nature. He gathered up into himself all that the old world had to offer, and re-comining it sent it forth again bearing the light of a new day. What belonged to the East already to the peculiarities of his genius that he embraced all that he took up into himself with all the fibre of his soul: not, as has been said, 'with his heart alone, for the heart does not think, nor with the mind only, for he never grasped truth in the abstract, and as if it were dead, but with his whole being, giving himself to it and soul ing it forth from himself as living truth, driven on by all the force of his great and inspiring personality. Accordingly, when, having tested everything in his heart and found it wanting, he gave himself at last to Catholic Christianity, it was with no reserves. Catholicism, frankly accepted as such, became his...
passion, and into the enthusiastic maintenance of it he threw all his forces. It was primarily as a Catholic Christian, therefore, that he thought, and worked, and lived. But the man who threw himself with such faith into the bosom of Catholic Christianity was a man who had already lived through many experiences and had gathered much spoil in the process. He had sounded the depths of heresy in its most attractive form, and had drunk the waters of philosophy in its culminating development, and entered with the spirit of the speculative and in the circle of culturot heathenism was alike familiar to him. But, above all the spoil he brought from without, he brought with him himself. He was a man of the highest and most individual genius—intellectual, but far beyond that, religious genius, and his own personal contribution to make to thought and life. If we cannot quite allow that there were in very truth many Augustines, we must at least recognize that within the one Augustine there were very various and not always consistent currents flowed each of which had its part to play in the future. Within the Catholic Christian a philosopher of the first rank was restless activity; and within both a religious genius the highest order was working; while for the expression of the resulting complex of fears and hopes within the consciousness of the individual there is no salvation was fundamentally the hierarchal institution. It was Gregory the Great who first spoke of the organized Church as the Divine cives, To Augustine the Church was not the foundation of the congregatio sanctorum, the Body of Christ, and it is this Church which has in mind when he calls it the Civitas Dei, or the Kingdom of God on earth. He is, however, not carefully observant of the distinction between the empirical and the ideal Church, and repeatedly—often apparently quite inconsistently—carries over to the one the predications which, in his fundamental thought, belonged properly to the other. Thus the hierarchically organized Church tends ever with him to take the place of the congregatio sanctorum, even when he is speaking of it as the Kingdom of God or City of God in which the deepest communion with God is possible here, and through which alone eternal blessedness with God is attainable hereafter.

In the Donatist controversy, although the distinction between haeres and utiles of saltare habere is made to do yeoman service, the conception of the Church as the sole sphere of salvation, passing into the conception of the Church as the sole mediator of grace, and therefore the sole distributor of salvation, was necessarily thrown into high emphasis; and the logic of the situation too directly and too powerfully identified this Church with the empirical Church for the deeper-lying conception the congregatio sanctorum to remain in sight. Thus Augustine, almost against his will, became the stay of that doctrine of the Church as the sole instrument at once of true knowledge of the Divine revelation and of saving grace which provides the two fori about which the eclipse of Roman Catholic doctrine revolves. What before him was matter of assertion became in his hands a religion, and went forth to conquer the world. His profounder conception of the Church as the congregatio sanctorum, and the consequent distinction between the empirical and the ideal Church, with all its implications with respect to the action of the sacraments and the claims of ecclesiastical decrees, and even of excommunication, did not indeed remain unobserved or unutilized when occasion demanded. Thus, for example, they came forward in their completeness
in the arguments of the Imperialists in the great controversies of the later 11th century. These themes are the foundations of the Scholasticism that developed from that debate. They were 'Augustinianism.' But the main stream of Augustine's influence flowed meanwhile in the traditionalist channel, and gave the world the Church as the authoritative organ of Divine truth and the inerrant vehicle of saving grace, through which alone the assured knowledge of the revelation of God could be attained, or the effectual operations of His redeeming love experienced. Many of the subsidiary conceptions which fill out the system of Roman Catholic doctrine also find their direct prop in his teaching. — His doctrine of the distinctions between concepts and conunds, mortal and venial sins, and particularly the elaborate sacramental system, with its distinction between matter and form, its assertion of ex opere operato action, and of the indelible character of baptism and ordination, and even the doctrine of intention. On this side of his teaching the Roman Catholic Church may well be accounted Augustine's monument.

(c) As a thinker. — But beneath Augustine the traditionalist lay Augustine the thinker, of profound intuitive insight. He was not only to the world, but to his own times, so deeply sunk in doubt and darkness, a child of his age, and yet such a one as he never ceases to be. ¹ Yet this single great philosopher on the basis of Christianity proper the world has had — in the richness of his thought and poetry of his expression, not unworthy of comparison even with his great master Plato.² He brought with him into Catholic Christianity not only a sufficient equipment of philosophical knowledge, but a powerful and trained intelligence, and an intellectual instinct which had to find scope. It was in the role of Christian philosopher, seeking to give form and substance to fundamental verities from the Christian standpoint, that he first came forward in the service of faith; and though later the religious teacher and defender of the faith seemed likely to swallow up the philosophical inquiry, they never really did so, but his rich and active mind kept contact with the world, and the world not only was impelled to it all teaching an unwonted vitality, originality, and profundity, but the activities set in motion were not confined to the narrow circle of theological science, but extended widely into the whole fabric of human life.³ In every department of philosophical inquiry he became normative for the succeeding centuries; and until the rise of Aristotelianism in the 12th cent. and its establishment in influence by the advocacy of such teachers as Albertus Magnus and Thomas Aquinas, Augustinianism reigned supreme. Throughout the remainder of the Middle Ages it contended masterfully with its great rival, forming many compromises with it, and tending to off-set the rationalism into which Aristotelianism was ever degenerating by itself falling into mysticism. It thus became the support of the tendency towards Mysticism which prevailed through the Middle Ages, or rather its protection from the pantheism into which, when drawing more directly from Neo-Platonic sources, it was ever liable to deteriorate. From it every Catholic Reformer drew his strength, and to it the whole body of Reformers before the Reformation made their appeal. From its partial obscuration it emerged at the Renaissance, and burst again into full view in the 17th cent. to lay the foundation of the rationalist philosophy that is ceaselessly exemplified in the work of the French philosophers. The shorter of these evidences is devoted to the question of the exactness of the designation, he is free to allow that the modern world finds in Augustine many points of contact, and, not only in questions of religious philosophy perhaps, may wisely take his start from him rather than from Luther or Thomas, Schleiermacher or Kant, but in purely philosophical matters will find him in many respects more modern than Hegel or Schleiermacher.⁵

It was in these spheres of psychology and metaphysics that the dominion of Augustine was most complete. He aspired to know nothing, he tells us, but God and the soul; but these he strove with all his might to know altogether. His characteristic mark as a thinker was the inward gaze; the realities of consciousness were the primary objects of his contemplation; and from them he took his starting-point for reflexion on the world. Antiquity supplies no second to him in the breadth and acuteness of his psychological observation. And in his attempt to establish a philosophy of 'formulas of life,' as Windelband calls it, in 'the controlling central position of philosophical thought' he transcended his times, and became 'one of the founders of modern thought.' If he may truly be said to have derived from Plato and Plotinus, in a far truer sense than his contemporaries Kant and Hegel, and of his lineage have come Descartes and Malebranche and all that has proceeded from the movements of thought inaugurated by them. Even the famous ontological argument for the being of God, and, indeed, the very very word of God, as it is, has been put into the mouth of the Son of God, and is made to bear the stamp of his own recognition. This is the only single fact in the history of the Church and dogma which lies in his giving to the West in the place of the Stoic-Christian popular morals, as that was recapitulated in Pelagianism, a religious, specifically Christian ethics, and in the philosophy of the Church that at least its formulas maintain up to-day their supremacy in the whole extent of Western Christianity. Indeed, we might do worse, in seeking an index of his influence as a thinker, than fix upon the place he has occupied in political theory and practice. The entire political development of the Middle Ages was dominated by him; and he was in a true sense the creator of the Holy Roman Empire. It was no accident that the de Cividate Dei was the favourite reading of Charlemagne; 'he delighted,' Einhard tells us (Vita Caroli, 24), 'in the books of St. Augustine, and especially in those that bear the title Of the City of God.' And in the great struggle between the Empire and the Papacy in the later 11th cent. it was expressly to him that the controversialists on both sides made their appeal. No Father is quoted by them as often as he, except, perhaps, Gregory the Great; and no series of documents is cited more frequently than his writings, except, perhaps, the pseudo-

Isidorian decreals. Not only do writers like W alram of Naumburg and Wido of Ferrara reflect accurately his conception of the Church, with its exalted character and its position between the ideas of the congregatio sanctorum and a hierarchical organization—echoes of which still sound in William of Occam's Defensor Pacis and the discussions of the conciliatory party in the Roman Church whose ornament was Perso—but the other knowledge Augustine had, his acquaintance with the writings of the anti-Pelagian Augustine in their endeavours to give validity to their defence of the State as a Divine institution, of the moral significance and relative independence of the earthly sovereignty, of the necessary concordance of the moral and political order, and the like. On the theoretical side he must be accredited in this aspect of his thought, with the creation of the science of the Philosophy of History. For the primary significance of the City of God lies in the fact that 'in it for the first time an ideal consideration, a comprehensive survey of human history found its expression.' No doubt his external position at the division of the ages, when the old world was dying and the new world, under the dominion of Christianity, was struggling into its place, supplied a motive to the creation of this new science; and the demands which the times, in the crash of the secular order, made for an apology for Christianity, powerfully determined him to a general historical philosophy. But it was Christianity itself, as the entrance into the world of a renovating force, and his own particular conception of Christianity (leading him to conceive the history of human society no less than the course of the individual life, as the continuous evolution of the Divine purpose, and impelling him to interpret all the forces of time as working harmoniously onward towards that far-off Divine event to which all creation moves) that gave him not only the impulse to work out a philosophy of history, but the elements of the particular philosophy of history which he actually presents in his epoch-making treatise, which, incomplete and perhaps one-sided as it is, still retains full validity in its fundamental traits.

(d) As a religious genius.—Not even, however, in Augustine the philosopher do we find the Augustine whose influence has wrought most powerfully in the world. The crisis through which he passed at his conversion was a profound religious revolution; and if he gave himself at once to the task of constructing a philosophy, it was distinctively a Christian philosophy he sought to construct, built truly and solidly out of the material of the life of the Church. Augustine, in his earliest of the writings in which this task was prosecuted, ranked with him even above that of reason. And if he devoted all his powers to the exposition and defence of the Catholic faith, it was because he saw in the Catholic faith the pure expression of religion, and poured into the Catholic faith all the fullness of his religious emotion. It is not Augustine the traditionalist, or Augustine the thinker, but Augustine the religious genius, who has most profoundly influenced the world. The most significant fact about him is that, first among Church teachers, gave adequate expression to that type of religion which has since attached to itself the name of 'evangelical'; the religion, that is to say, of faith, as distinct from the religion of works; the religion of a man who throws all his hope on God, as opposed to the religion which, in a greater or less degree, trusts in itself; in a word—since religion in its very nature is dependence on God—religion in the purity of its conception, as opposed to a quasi-religious philosophy. What requires particularly to be noted is that he gave full expression to this type of religion both in its vital and in its ethical aspects—the former most profoundly in his treatment of the theme of grace, which reveals his soul, and admits us as spectators to the struggles of his great heart as it seeks to cleave itself of all trust in itself and to lay hold with the grasp, first, of despair, next of discerning trust, and then of grateful love, on the God who was its creator and its shared force. He is in these long series of writings in which he expounds, defends, and enforces with logical argument and moving exhortation the fundamental elements of the theology of grace, as against the most direct assault of his age and the like. It was not until he had long passed over the great Christian world, and come upon to meet in the whole history of Christian thought. The great contribution which Augustine has made to the world's life and thought is embodied in the theology of grace, which he has presented with remarkable clearness and force, vitally in his Confessions, and theologically in his anti-Pelagian treatises.

It would be altogether a mistake to suppose that Augustine consciously discriminated between the theology of grace which was his personal contribution to the doctrine of faith, and the traditional Catholicism which he gave to that doctrine and propagated. In his own consciousness, the two were one: in his theology of grace he was in his own apprehension only giving voice to the Catholic faith in its purity. Nevertheless, however unreservedly Augustine gave it to the Church teaching, it was only recovered for the Church by Augustine, though in that age, dominated in all its thinking by the dregs of Stoic rationalism, it came with all its weaknesses: it was the formative power of the Catholic Church's thought; and Augustine did not discover it all at once. Because his conversion was a vital religious experience, in which the religious relation was realized in thought and life in unawont purity and power, the fundamental elements of his religious revolution were from the first present in his mind and heart; in his earliest Christian writings he already gives expression to both the formal and the material principles, as we may term them, of the theology of grace. The authority of the Divine revelation in and through Christ, embodied in the Scriptures, and the utter dependence of man on God for all good (potestas nostra sse est, da fidem), are already the most intimate expression of his thought and life. But just because the religious system to which he gave himself on his conversion was taken over by him as a whole, time was requisite for the translation of the whole mass by the consistent explication, and conscious exposition of the 'Augustinianism' implicitly summed up in such maxims. The adjustment went on slowly, although it went on unbrokenly. Not only did Paulinism attain a fully consistent positive enunciation (first in the work, De diversis quesiti-
danger which threatened the Reformation. Where this tone of thought was dominant the Reformation failed, because religious depth was wanting. What Spain, for example, lacked, says R. Saint-Hilaire justly, was not freedom of thought, but the gospel.'

In the first stages of the Reformation movement in the North, this same spirit, however, was shown by the constantly pursued effort of Roman Catholicism to neutralize, and which in very fact either must be neutralized by, or will neutralize, Roman Catholicism. Two children were struggling in the womb of his mother. There can be no doubt which was the child of her heart. His death, however, which he had received from his predecessors, and he gave it merely the precision and vitality which ensured its persistence. His doctrine of grace was all his own; it represented the very core of his being; and his whole progress in Christian thinking consists in the growing completeness with which its fundamental principles applied themselves in his mind to every department of life and thought. In this gradual addition to them of every element of his inherited teaching, it was inevitable, had time been able, that Augustine's doctrine of grace over the Church, too, with all its implications, would have gone down before it, and Augustine would have been swept to the Church, not 'problems, but a thoroughly worked out system of evangelical religion.'

(c) Augustine and Protestantism.—The problem which Augustine bequeathed to the Church for solution, the Church required a thousand years to solve. But even so, it is Augustine who gave us the Reformation. For the Reformation, inwardly considered, was just the ultimate triumph of Augustine's doctrine of grace over Augustine's doctrine of the Church. This doctrine of grace came from Augustine's hands in its positive outline completely formulated: sinful man depends, for his recovery to God, and to God, entirely on the free grace of God; this grace is therefore indispensable, prevenient, irresistible, indefectible; and, being thus the free grace of God, must have lain, in all the details of its conference and working, in the intention of God from all eternity. But, however clearly announced and forcefully commended by him, it required to make its way against great obstacles in the Church. As over against the Pelagians, the indispensableness of grace was quickly established; as over against the Semi-Pelagians, its prevenient character with almost equal rapidity manifested itself. But there was the necessity of prevenient grace was thereafter (after the second Council of Orange, 529) the established doctrine of the Church, the irresistibility of this prevenient grace was put under the ban, and there remained no place for a complete 'Augustinianism' within the Church, as Gottschalk and Jansen were fully to discover. Therefore, when the great revival of religion which we call the Reformation came, seeing that it was, on its theological side, a return to this 'Augustinianism,' the Augustinianism of the West, and that this Augustinianism of the West must be (as the thotetical expression of religion in its purity), there was nothing for it but the rending of the Church. And therefore also the greatest peril to the Reformation was and remains the diffused anti-Augustinianism in the world; and, by a curious combination of circumstances, this, its greatest enemy, showed itself most dangerous in the hands of what we must otherwise look upon as the chiefly ally of the Reformation—that is to say, Humanism. Humanism is really an unneutralized Augustinianism in so far as it too worked for the emancipation of the human spirit; and, wherever it was religious, it became the seed-plot of the Reformation. But there was a strong anti-Augustinian party among the Humanists, and from it emanated the gravest
taught Aurangzeb the lessons of strategy, and taught his followers to respect their commander's courage. They laid the foundations of his future dominating influence. He was again governor of the Deccan in 1655–57, when the illness of his father brought about a check to the struggle for the throne between him and his youngest brother. Murad Basha, Aurangzeb defeated the Imperial army under Jaswant Singh at Bharatpur on April 23th, 1658, and again at Samugarh on June 2nd, when his eldest brother Dara was forced to flight. Agra fell into the hands of the victors. Shah-Jahan was held a prisoner till his death seven years later; the other brothers were ruthlessly killed; and Aurangzeb, who had already been proclaimed Emperor at Delhi in July, 1658, formally ascended the throne on May 26th, 1659, with the title of 'Alamgir, 'World-glorifier.'

Though he had won the throne by treachery and by the murder of his brothers, Aurangzeb was humane by nature, and no subsequent act of barbarity has been proved against him during his reign of half a century. The keynote of his character was a rigid Muslim's puritanism. It is impossible to doubt his sincerity, for he had nothing earthly to gain and everything to lose by his stern adherence to every little of the law of Islam. He might have cast Muhammadan's precepts to the winds and granted other indulgences, and only strengthened his hold of his Hindu empire.

'There was nothing but his own conscience to prevent Aurangzeb from adopting the eclectic philosophy of Akbar, the humanism of Shah-Jahan, or the wisdom of Shah-Jahan. The Hindus would have preferred anything to a Mughal, and other hindus had done so, and only strengthened his hold of his Hindu empire.

In his daily life Aurangzeb observed not only the minute details of the Muslim ritual, but an extreme austerity. He ate no meat, drank only water, kept all the fasts and vigils, passed whole nights in prayer and reading the Qur'an in the mosque, gave alms profusely, and used the utmost simplicity in his dress and manners. In accordance with his monarch's principle, every Muslim should practise a trade, he made skull-caps; he was also a fine calligraphist, and twelve copied the whole Qur'an, which he knew by heart. Laxity of morals, lewd conversation, the dancing of the Nautch Girls, he pronounced anathema, and every detestation. Since to the fanatical puritanism of a strict Muslim were added an indomitable will and a courage so cool that he would dismount and recite the ordained prayers at the customary hour in the very thick of a battle, it is clear that far-reaching changes were in store for the social and political life of India. The storm began to gather in 1669, when the temple of Venu at Benares was destroyed by his order, and the idols buried under the feet of good Muslims at the mosque at Agra.

Three years later the Imperial forces of the Hindus, led by, a ruler of the House of Gorkha, known as Sattamis or Narmad, which was sternly suppressed. Soon afterwards Aurangzeb imposed the intolerable jizya, or poll-tax, upon all non-Muslims, and turned the whole Hindu population against him. An interference with the mint princes of Marwar led to a revolt of the Rajaputs, and though this was more or less extinguished in 1658, Aurangzeb lost thereby the support of the finest fighting force in Hindustan.

The loss of Rajaput loyalty was felt as soon as the sudden and unexpected succession of the Deccan, which he regarded as "India's land," Dör el-harb, and resolved to make Dör el-Islám. He had nearly conquered Gulkanda when he was called away to fight for the throne in 1657, but since then a new Hindu power, more formidable than the Muhammadan kingdoms of Bijapur and Gulkanda, had arisen under the energetic, but not Maratha freebooter, who had gradually established an era of brigandage on an heroic scale, built up a kingdom in the Western Ghats, and widened his authority to the extent of levying blackmail over a great part of the Deccan. His death in 1689, when the victory was won, was found that he had to deal with an indomitable nation of freebooters, whose strength and skill in guerrilla warfare he was never able to break. The Mughal generals had been too often repulsed, and the Emperor himself led his army in person in 1663. He first attacked the old Deccan kingdoms which appeared to shelter the Marathas: Bijapur fell in 1666, and Gulkanda in the following year. Their extinction, however, only strengthened the Marathas, whose disbanded armies swelled the forces of rebellion. The effeminate Mughal troops, deprived of the Rajaputs' stiffening, grew more and more demoralised by year after year of guerrilla fighting; and, whilst Aurangzeb effected a kind of military occupation of the whole Deccan, except the Portuguese possessions in the south, his own county was often the scene of distress, and his own persons was ill-served by the army: and the moment the Mughals turned their backs the hardy Marathas emerged from their mountain fastnesses and recovered the territory lately occupied by their enemy. The country was too large for the army to subdue it in person, and in extreme age was barely withheld from leading the assault. It was all in vain; Hindustán itself was full of revolt in the prolonged absence of its Emperor; the Deccan was a desert; the army was embittered and clamouring for its pay; and the Marathas ever hung about its skirts and insolently defied it. Finally Aurangzeb died, alone as alone he had lived, with all the puritan's sense of sin and unworthiness and dread of death, and full of the deception of a colossal failure, on March 16th, 1686, in the 48th year of his reign and the 82nd of his age. With him the orthodox Muhammadan revival in India died also.

AURELIUS-AUSTERICISM

AUSTERICISM.—1. Introduction.—Asceticism, strictly so-called, is not found among peoples of lower grades of culture, but the practice of various kinds of austerities is very common. These take the place in the social, moral, magical, and religious life of savages which asceticism holds in that of more advanced peoples, but it is also noticeable that in certain instances, as where these austerities have the form of a self-discipline or are performed as part of the service of the gods, they approach very near to some aspects of asceticism. In savage life the primary motive for self-denial, the struggle for food, the constant state
of warfare between different peoples, the ravages of diseases whose nature and prevalence are quite unknown, and many other things, are productive of much suffering and call for great endurance on the part of those whom they affect. More particularly women must undergo many austerities, whether as mothers, or as workers, or as suppliers of food; yet many of them are without the sexual existence of child-bearing. When carrying her child for miles on long journeys in great heat and often with little food, and in relieving its wants at the expense of her own comfort, the savage mother, in thus fulfilling her functions of motherhood, will willingly undergo pain and discomfort. Nor are similar forms of austerity lacking, especially among the poor, even in our highest forms of civilization, where want, toil, and suffering must be undergone to satisfy the conditions of existence. The savage methods of punishment, the various forms of the ordeal, of revenge or retribution, are usually of the most cruel and painful kind. But all such forms of austerity do not concern us here. Those alone are dealt with which are self-inflicted or which are willingly borne, for definite purposes, subserving moral and religious ends, and which are specially intended for the purpose of strengthening the soul for manhood; and such, when they are well directed, may become aids to the object in view. Unwilling as the savage is to suffer pain, his theory of the universe constrains him to undergo it on many occasions in order to fit him better for the ends of life, or to make life more tolerable, or to guard against the aggression of his fellows, or to strengthen himself to surround. Such austerities, undergone at one time for magical purposes, frequently change their nature. Thus they may come to be regarded as possessing a disciplinary character, in which case they are hardly to be differentiated outwardly from the disciplinary exercises, often of the same kind, of a higher asceticism, though they may not possess the same ethical or religious content. Others, again, as time goes on, may assume a more or less symbolic character, their excessive severity being then much lessened. On the other hand, even where such earlier forms of austerity survive in higher forms of religion, their severity is often by no means decreased, although the motive may have become a nobler one. Examples of this will be found in the various forms of austerity discovered in this connexion. These are mainly austerities connected with a variety of initiatory ceremonies, flagellation, fasting, mutilations of the body, tattooing, and medical rites, while some notice must be taken of self-restraint among savage races.

Austerity and Exposure. It is possible that the universal custom of sacrifice, involving a greater or less renunciation of property and possessions, of food-stuffs, and not infrequently life itself, or, as a substitute for that, of some part of the body, is a marked form of austerity; and its equivalent in the higher ascetic life—the devotion to poverty, the willing renunciation of comfort and luxury for the sake of life to God—has surely received a considerable impulse from this wide-spread custom of ethico-religious origin, though the motives be not more fully detailed here, life itself is sacrificed in suicide, often through pride or shame or a sense of duty (see A. Sutherland, Origin and Growth of the Moral Instinct, London, 1898, i. 35). Or, where it is thought that one ought to pass into the other world before the body and mind have become frail, deject, and worn out, life is often freely yielded up by the aged or the sick (see Abandonment and Exposure). Though the custom may appear cruel and frequently is accomplished by cruel means, it is mostly a willing self-surrender of life that a higher life may be attained beyond the grave (see Letourneau, Sociology, London, 1893, 154 f.; Westermarck, Origin and Development of the Moral Ideas, vol. 1., London, 1906, p. 533 ff.).

2. Adolescence initiation ceremonies.—Among savage tribes the beginning of manhood or womanhood is usually accompanied by a number of ceremonies, several of which are more severe and painful, but must be undergone willingly in order to preserve their effect. This stage of life, being a highly critical one, the beginning of a new life which requires ceremonies of a purificatory kind, besides purifying them of the taint of new relations with the other sex. Hence there must be seclusion for a time, while the youth is usually debarked from intercourse with any kind of the other sex, and silence is frequently imposed. Fasting is also made use of, either in the sense of complete abstinence from food for a longer or shorter period, or abstinence from certain foods which are taboo at such a stage. This is intended to prevent the entrance of evil influences to the body with such foods, or to prepare the way for receiving their influence. Other ceremonies are directed to the purpose of strengthening the youth for manhood; these are often of a severe character, and, joined with others which are intended to purify from the contagion of evil, easily pass over into more or less severe—the more severe forms being circumcision, loss of a tooth, or cutting of the flesh,—is frequent. In this case, perhaps, the primary intention is, by losing some part of the body, to secure the rest from evil influences; but it easily passes over into the idea of the body being cleansed by purificatory ceremony, or simply a test of endurance. Again, the youth at this period sometimes obtains a guardian spirit, whose nature is revealed to him in most cases by fasting in solitude, exposed to all the terrors which imagination and the sense of mystery may conjure up. This sense of mystery existing fear is usually present at all these initiatory ceremonies, for now the youth is instructed not only in sexual matters but in such tribal lore—magical, religious, moral, or otherwise—as is connected with the medicinal arts, though in different places the nature of the rites may vary, or their severity be greater or less, they call for the endurance of great austerities on the part of the youth. See art. INITIATION.

A few examples chosen from different localities will show the nature of the austerities undergone at this period of life by the northern tribes of Central Australia the long and complicated ceremonies of initiation to manhood include beating, which must not be received, circumcision, sub-incision or cutting open the urethra, and cutting the youth's scalp; while, as a rule, though fasting is not carried to an extreme, severe foods are taboo. During the painful rites of circumcision and sub-incision the youth's mouth is gagged with 'fur-string' to prevent his crying out, while no attempt is made to spare him pain when his scalp is bitten, the object being to cause a plentiful growth of hair. With some of the tribes knocking out a tooth is a part of the ceremony, with others it has no connexion with the purificatory ceremony, or simply a test of endurance. Again, the youth at this period sometimes obtains a guardian spirit, whose nature is revealed to him in most cases by fasting in solitude, exposed to all the terrors which imagination and the sense of mystery may conjure up. This sense of mystery existing fear is usually present at all these initiatory ceremonies, for now the youth is instructed not only in sexual matters but in such tribal lore—magical, religious, moral, or otherwise—as is connected with the medicinal arts, though in different places the nature of the rites may vary, or their severity be greater or less, they call for the endurance of great austerities on the part of the youth. See art. INITIATION.
end of this time a tooth was knocked out, and a year later a further test of endurance was applied (Haddon, Head Hunters, London, 1901, 90ff, 191). Similarly in Mahua nau dia were tested and the girl was permitted to associate with a factory boy, who was spared, scraped, or beaten with the wets of green ants which stung him furiously (G, 140). In many tribes ritual sacrifice and some among the natives of the Borneo region the gatore ceremonies include passing the new initiate through a pageant of death, in which the initiate comprises a plant which burn his skin, incision of tribal marks on the arm, and the performance of secret ceremonies in some of which he is seen to make a sign in his skin, death occasionally resulting (Daly, JAI 1896, xxxvi, 159ff.).

But it was among the tribes of North America that such awful trials were imposed on the girl, and especially when they were connected with the ceremony of aanutum. Thus among the California tribes the ascenience and indifference to the suffering of the young girl were unexampled, and before the youth could rank as a warrior his naked body was stung with newts and serpents; his arms and shoulders were laid out, a nest of a virulent species of ant, which, swarming over his body and stinging it, caused him fearful agony. To discover his manhood he was set on fire, and a sure being cut with a sharp tooth, after which she was bound and hung in a hammock, in which she remained without food or drink for three days. Similar ordeals were inflicted in other ways, and remained in the hammock under less strict rules of abstinence until the girl perished (JAI, 1904, xxviii, 222). This is also found at higher levels of civilization (Lv 1909, 62ff). Similar ordeals were imposed on boys and girls among the Bokwun tribes, the girl was subjected to the greater score of trials and punishments (Tanner, anthrop. 1891, 140).

In Guinea the hammock seclusion lasted for a month, after which the girl's naked body was exposed to the bites of venomous ants (Lalat, Voy, en Guadeloupe, Amsterdam, 1782, i, 235).

Similar instances might be cited, occurring among more advanced races, e.g., the Hindus, though with less severity. Here it may also be noted, that, on account of similar beliefs regarding the danger and impurity of menstruation, women, among most savage tribes, must go into seclusion, often at some distance from the village, abate from certain foods, or fast (see above). The custom is also found among the Peruvians, rigidly enforced for a certain number of days, and short periods were among the means employed in solitude for obtaining mystic dreams and a knowledge of the munion (Hill Tont, JAI, 1904, xxxvi, 222). The Gagens, living in an island of the Bismark's, were subject to similar trials as regards boys and girls, who were allowed to eat no food, drink for a month, and afterwards abstained from all fresh meats (O, xxxiv, 136). In S. America these customs also flourished among nomadic races, especially when they were associated with the girl's naked body was cut with a sharp tooth, after which was bound and hung in a hammock, in which she remained without food or drink for three days. Similar ordeals were inflicted in other ways, and remained in the hammock under less strict rules of abstinence until the girl perished (JAI, 1904, xxviii, 222). This is also found at higher levels of civilization (Lv 1909, 62ff). Similar ordeals were imposed on boys and girls among the Bokwun tribes, the girl was subjected to the greater score of trials and punishments (Tanner, anthrop. 1891, 140).

3. Admission to secret societies or 'mysteries' at opening manhood or womanhood was, in many cases, and characterized by severe austerities, which, though it might require the passing of some years for the revelation of secret knowledge, myths, or ritual, can hardly be separated in their origin from the pains undergone at puberty, while in some cases they seem to have been invented also as puberty ceremonies. Yet, in so far as these and certain original initiatory ceremonies pave the way for the communication of religious and, occasionally, moral teaching, we see such forms of austerity almost passing over to a kind of disciplinary asceticism, and certainly preparing the primitive meaning of austerities as 'training.' In Australian mysteries, for example, the advice given by the old men was intended to soften the heart, and, as among the Kurnai, the stomachs of the boys were kneaded to drive out selfishness and greed (JAI, 1905, xxxvii, 296; 1854, i, 296). One of the aims of selfishness is taught in the Yau mysteries, a selfish person being called uninitiated (Macdonald, Africana, London, 1832, i, 130; cf. the moral teaching given by headmen to boys at circumcision and initiation during the painful rites attendant theron among the Mavanhand of S. Africa, JAI, 1905, xxxvi, 263). Further, in many of these mysteries, the initiation to which lasts for a long period of time, the candidate is supposed to die and come to life again as a new being, the idea being that he is actually undergoing a process of intimation of ascetic renunciation—Stift und worte—yet in it and in the moral training for the attainment of 'solfesseness,' so far as a savage can grasp the idea, we see a conection with the later ascetic ideals.

In Africa, examples of such initiation are numerous. Among others may be cited those of the west coast, in which the youths are confined in a sort of cell and are permitted to have food and drink only a once a week. Many a time the girl is shut up in a cage with a small hole, in a hut, where she remained on mats and knives. This treatment lasted for a month. Among the young men of the Shewani tribe the naked body was cut with a sharp tooth, and the girl was exposed to sun, rain, and wind (JAI, 1905, xxxvi, 221). Bancroft cites many instances among the tribes of the Pacific coast. Thus among the Isthmian tribes the girl was closely confined, sometimes for a period of two years (XR 1722, cf. 82, 110, 197, 375). Among the Californian tribes she was laid over a hole previously heated, and kept with fire and the fat of a deer or an elk imprisoned in a box with a sharp tooth, after which she was bound and hung in a hammock, in which she remained without food or drink for three days. Similar ordeals were inflicted in other ways, and remained in the hammock under less strict rules of abstinence until the girl perished (JAI, 1904, xxviii, 222). Similarly among the Shiwani tribes—a woman's society—the initiation lasts for two weeks, and is accompanied by severe orders and fasting, while the girl is shut up, and the naked body is exposed to sun, rain, and wind (JAI, 1905, xxxvi, 221). The ordeals are intentionally hard, so that the wills of the candidates may be broken and secrecy ensured (Nassau,
Petechiae (in W. Africa, London, 1904, 249). With candidates for the Malanda society among the Batangas the sun- 
gazing ordeal is applied to the ladis; then, when everything is 
arranged and the candidate has been placed by his friends 
confined in a hut for twenty days along with a corpse, and 
has been kept there fasting, hot and with a wholly 
rigid position, he is permitted to fast for another day 
(Trav. & Expl. in the Insular Archipelago, 1903, 187). In 
Melanesia entrance to such societies is possible only after 
severe initiation, including hardships and tortures. In other 
cases, in the practice of the business of the candidate 
are made to fast and to take live eunuchs in their hands, and 
are trodden upon; or, as in the Welu society, they are each placed in 
the grave of a deceased relative and thus thrown with clay, charcoal, mud, or filth, which must not be washed 
down to the corpse. On the other hand, the more or less 
protracted use of fasting, or of clothing the body in such a way 
as to indicate the end of life, is as it did in certain Greek mysteries (Long 
and Customary Myst. London, 1846, 49; JAI, 1839, xix. 201; 
Demosthenes). The ancient initiatory customs used in the Eleusinian and other Greek 
mysteries, in which, besides other tests, the candidates had to 
prepare themselves by fasting for several days; the similar 
lasting before initiation to the cult of Osiris and Isis in Egypt; 
and the various tests of endurance undergone by 
candidates for initiation to Mithraism (see art. Mysteries, 
Mithra, SECRET SOCIETIES, and Apul. Metam. xi). 4. Initiation to the priesthood. — As in savage 
societies the priest, sorcerer, or medicine-man has a controlling influence by virtue of his relation to the spiritual 
world, it is natural that those who seek to enter 
upon that profession should be subjected to a severe course of training, involving many austeri-
ties. The candidate who, with the other world are usually associated 
with a state of trance, or his revelations are 
given in some ecstatic condition, the candidate's 
course of training is intended to adapt him for 
the production of those states either by reducing him 
to an abnormal condition of body, mind, or 
or by accustoming him to the use of such severe 
methos as will readily produce them. The pheno-
mena of hysterics, epilepsy, catalepsy, and such-like 
diseases are believed by savages, and indeed by many Europeans, to be wrought up by swallowing 
poison or inspiration by gods, spirits, or demons. 
Hence such persons as are subject to them are 
often deliberately chosen for the profession of 
medicine-man, while their abnormal states are 
only heightened by the austerities undergone. In 
other cases, in accordance with the prevailing 
theory of the nature of inspiration and of the 
state into which the inspired person is thrown, the 
production of such states at will is the object of 
the painful processes to which the candidate must 
submit himself. This is shown by such facts as the 
attainments, exposure to the elements, scarring the 
body, castigation, fasting, and drinking various 
unwholesome beverages. By all these means the 
candidate soon arrives at a hysterical or 
abnormal state. He acquires the faculty of seeing visions, 
of producing a convulsionary state of body, or of 
falling into a trance. A few examples of the 
method of training will suffice to show its severity 
and the painful nature of the austerities undergone 
(see also art. MEDICINE-MAN and PRIEST). 
Sorcerous School of Zanzibar. — A school of witchcraft 
which begins at an early age, and includes retirement into solitary 
prison, and the wearing of the marks of fasting. By 
means of the ties which are produced in which the novice obtains a tornam, or guardian 
spirit, or falls into its in which his ravings are held to be com-
 munications from the spirits (Bink, Tales and Traditions of the 
Pokhina, London, 1875, 58; Cazan, Erländand, Leipzig, 
1770, 269). Among the American Indians similar methods are adopted: 
protracted fasts, severely bodily exercises, and solitary vigils all 
reduce the candidate to a hysterical state, in which he dreams of 
the revelations of the gods, and the greater his judgments are, the more 
violent and copious are his visions, and hence the higher is the estima-
tion in which he is held (JAI, 1904, xxvii. 59; Schoolcraft, 
Reminiscences of Indian Life, among the Iowa, 1851, 124, 
yet are chosen for their natural aptitude to the office of priests, 
or sorcerers, and are confined in a solitary place, subjected to a 
specific disease, and the marks of fasting thrown upon them. 
In the island of flame, or living only on a scanty diet of vegetables and 
water; while all sexual intercourse is prohibited (JAI, 1777). 
In S. America we find similar modes practiced. Among 
African ascetic aspirants they had to remain seated on the branches of a tree and to fast 
for several days. By this means they contracted a weak-
ness of brain, a goddessness, and kind of delirium, which makes 
them imagine that they are gifted with superior wisdom, and 
give themselves out for magicians' (Dobrinholter, Abgesen 
Societies, London, 1832, 150; for the dance of the 
Guiana involves a painful and severe trial of endurance. The 
candidate is clothed with paint, and is cast into some 
acrimonious state, and accustoms himself to drinking large draughts of 
tobacco-juice mixed with water. The tortures of solitude and 
fasting, and the process of meditation, are said to 
be conducive to self-control, and prepare him for the work of 
medicine.}
austerity, but it may also be a pathological form of asceticism. Or, again, it may be used as an erotic stimulation, though here it assumes a pathological form as subserviving genetic excitability. In other cases its religious disciplinary use is conjoined with erotic purposes, as in the case of Brother Cornelius and his penitents, or of Père Girard (Cooper, *Hist. of the Rod*, London, 1870, 122 ff.; Zöckler, *Askese and Mönchthum*, 6, 600). The pain caused by flagellation, again, made it an obvious and well-nigh universal form of punishment. With this and its previous use we are not concerned here. Finally, it remains to notice how, while subserving its primitive purpose or used simply as a means of producing pain, it may be regarded as a form of sacrifice to gods who will that their worshippers should suffer, or it may pass as a substitute for an offering of the person himself as a human sacrifice. Most of these purposes are also served by using instead of a scourge some stinging plant or some substance causing pain to the tissues when applied to the body, as has been seen in several cases of initiation rites.

The primitive purpose of flagellation is seen in the fact that those animals or men on whom the evils of a community were laid (scape-goat), and who were driven away or slain, had probably in their punishment received the representation of a spirit of vegetation who was slain. They were frequently scourged, and the scourging had the effect of driving off 'any malignant influence by which at the supreme moment they might conceivably be beset' (Cash, 125). In some cases when they were regarded simply as scapegoats, the scourging became a means of causing pain. Instances of this use of flagellation to drive away evil are found in many places. When a king was installed in the Sandwich Islands, the priest struck him on the back with a whip, in order to purify him from defilement (Ellis, *Polyenes. Researches*, London, 1829, iii. 110). Brazilian Indians scourge themselves on the genital organs with a certain plant at the time of the new moon (Nery, *Folklór brasilien*, Paris, 1889, 253). Sometimes the scourging is done on a substitute, as in New Caledonia, where, when a chief is ill, a girl is severely whipped to drive away the evil (Featherman, *Soc. Hist. of Races of Mankind*, London, 1891, ii. 92). Or it may be mutually inflicted, as in Peru at an autumn festival, when one part of the people was scourged by the other with torches, saying, 'Let all harm go away' (Acosta, *Hist. of the Indies*. Hakl. Soc. 1880, ii. 375). Similar practices still survive in folk-custom (GP iii. 131 ff.).

The same object of driving out the demon of disease which has entered into a patient's body, in accordance with the universal primitive view of the cause of sickness, flagellation is resorted to in savage medicine, the patient often undergoing great suffering through this cure. Thus among the Californian Indians, in cases of paralysis, the affected parts are whipped with nettles (NZ i. 419). Among the Ainuus beating with herbs to drive out the demons of sickness is part of the healer's method (Batchelor, *Ainus and their Folklore*, London, 1904, 315). In Timor-Laut, if a smallpox prao should be stranded on the coast, the people are beaten with branches, which are then put on the prao before it is launched away again, and the demon of smallpox is besought to depart (GP iii. 98, citing Nielsel). Women suffering from demoniacal possession were thrashed with a stick, the demon alone being supposed to feel the blows (Bastian, *Ostl. Asien*, Jen., 1866-71, ii. 192). These methods survived into later medicine, especially in the case of madness, though here the curative virtue was evidently supposed to lie in the rough treatment to which the patient was subjected (Cooper, *op. cit.* 204).

The magical value of flagellation is seen in the flogging of women with thongs cut from the skins of the sacrificial goats by the Laperes at the Laperes. The magical act, communicating to them magically the beneficial effects of the sacrifice, was believed to render them prolific (Ovid, *Fasti*, ii. 267 ff.). Although the numerous cases of scourging or stinging at initiation frequently have the primitive purpose here discovered, they are sometimes expressly said to be done with the view of causing pain or testing endurance. Thus, among the Bavendus, after circumcision, the youths, stripped naked, are beaten and suffer other hardships by exposure to the intense night cold, in order to harden them (JAF, 1905, xxxv. 252). Among other Bechuana tribes, after circumcision the youths are scourged at intervals with great severity, and it is a point of honour that they should show absolute impassibility even though the blood spouts from their backs, and the whip leaves life-long scars. At the same time they are allowed no flesh meat but what they can themselves obtain, and are subjected to the endurance of cold and hunger (Livingstone, *Missionary Travels*, London, 1857, 146 ff.; JAF, 1899, xix. 268 ff.).

The primitive view of scourging has here, as in other cases, a very ancient connotation and conception of it as a painful test of endurance. At this point the cruel flogging of youths at Sparta in connexion with the cult of Artemis—the blood from the wounds caused by the whip being shed on the altar—can scarcely be viewed in any other light than that of a survival of earlier rites of initiation, especially as the Spartan youths, like the Bechuana, were allowed no food save what they could discover for themselves. The flogging was done in presence of their parents, who encouraged them to show no sign of suffering; and so severe was it that the youths sometimes died. Various mythical explanations of this flogging were current, but it was generally regarded as a substitute for human sacrifice ordained by Lycurgus (Paus. iii. 16; Lucian, *Anacharsis*). But in the light of similar customs elsewhere, the origin must be sought in old initiation rites of a savage past, remains of which, like the 'bull-roarer' (phonos) and daubing with mud, were also found in the Greek mysteries. Similar scourgings to take place at the departure of other tribes were used in Greece, Edinburgh, 1824, i. 258); and among the Thracians, according to Artemidorus, flagellation in honour of their Artemis was also practised.

Such tests of endurance by flagellation enter sometimes into the festival day of the Arawaks, where the men armed with whips lashed each other alternately until they were covered with bleeding wounds, yet the pain was 'borne and inflicted with perfect good temper' (Im Thurn, 326; cf. a striking match, resulting often in death, among the Mosquito Indians, NZ i. 735). Probably this is to be connected with a group of rites in which blows, effusion of blood, etc., are intended to promote fertility (see § 5(b)). For the discipline of self-flagellation in the Christian Church, see artt. ASCETICISM, FLAGELLANTS; Zöckler, *op. cit.* 485, 525 ff.; Cooper, *op. cit.*. Beginning as an act of monastic asceticism in the 11th cent., it assumed a pathological form with the later orders of Flagellants (especially during the ravages of the Black Death), who regarded it as more efficacious than the sacrifice of the Purim Purim. Flagellation as a sacrifice or as a substitute for sacrifice has already appeared in the case of the Spartan youths. Perhaps the mutual flagellation of the Galli at the spring festival at Hierapolis, accompanied as it was by self-cuts (Lucian,
AUSTERITIES

reserve (JAI, Hunger, the rendered concerned, religious initiated, war. medicine purely for the being attention and Bushman whole food go fasting likely here London, On cation. The say, the fasting or aperiod unfselfish act, giving his food to his starving children or sharing his scanty supply with his fellows, who, when it is exhausted, starve to death with him (Nansen, Eskimo Life. London, 1898). The Bushman is largely abstemious, especially in regions where the food supply is scarce, are forced upon him. We are here concerned, however, with voluntary fasts rather than with those imposed upon savage man. A fast stamps habitually the civilized ascetic, and usually has no strong wish to suffer the pangs of hunger, yet voluntary fasting is forced upon him for different reasons.

The origin of fasting is complex, but on the whole it seems to have been adopted at first for magical reasons. Man's experience of hunger in times of scarcity may have suggested to him that fast voluntarily might guarantee him against scarcity, and also have the effect of increasing the food supply. Thus at the Intichima ceremonies of the Cherokees (see: Travels in the Interior of North America, 1854) the purpose of the increase of the totem food supply, fasting is a part of the rite (Spencer-Gillen, 290). On more purely religious grounds an analogy is found where the sacrifice of one person wards off danger menacing a whole group. Fasting is also intimately connected with the system of food tabus. In some cases these may arise from the selflessness of stronger members of a human group, who forbid others to touch certain foods sacred to themselves, or again from the wise practice of early peoples, who, being able to provide foods which are likely to become scarce, as in Polynesian, where, if a bad harvest is feared, a tabu is placed on bananas, hens, etc., to establish a reserve (Lettourney, Sociology, 489). But they often arose out of man's peculiar views regarding the contagion of evil influences which might be warded off by, so to say, sacrificing a part in lieu of the whole. Food was eminently a vehicle for evil influences entering the body, hence by the tabouing of some particular food other foods would be rendered unattractive, and thus kept out of the range of negative influences, where some particular animal or plant species is not eaten by those whose totem it is. But it also has a much wider range, and affects foods which may not be eaten at certain periods of life, e.g. before a youth is initiated before marriage, during pregnancy, at the time of the convalescence during hunting or war. In this aspect fasting from the taboued food also acts as a kind of purifi-
cation. Fasting in all such cases includes such varieties as abstemious from certain foods, or from meat, or from food with which certain women are tabued (sexual tabu), or from all food for a varying period. In certain cases kings or priests might not eat certain foods for tabu and other magical reasons, such as being recognized as incarnate divinity, which often occurs. Frequently, too,
The origin of gashing or cutting the body may be found simply in ecstatic expressions of grief, at first spontaneous, then reduced to a custom. The pain caused by such methods of wounding, though in the ecstasy and delirium of grief it may be less than we imagine (Beckworth says of the horrible gashings of the Crow Indians that "they seemed to feel no pain," 14 REEW, p. 385), is itself an expression of sorrow. But other meanings were perhaps given to these self-inflicted wounds. Thus there may have been some idea of union with the dead through the blood spilt on the grave, as in N. Wales, where the men stood over it and cut each other with their home-ranges, letting the blood trickle down into it (W. R. Smith, 305). This bond of union with the dead implies "on the one side submission, on the other friendliness" (Spencer, Cerebr. Inst., London, 1879, 70). The blue blood of the dead in order to refresh them (ib. cf. Westermarck, Origin and Development of Moral Ideas, i. 476). In either case the rite would have a propitiatory aspect. It is found among the Australians, Melanesians, Polynesians, in Africa, among the American, and it existed in ancient Israel (Lv 19), among the Greeks, Turks, Huns, etc. (cf. Stoll, op. cit. 88 ff.; Spencer, op. cit. 70-71), and with some of these peoples assumed a ghastly form, while it was frequently proportionate to the rank of the deceased. The wounded either cut or pierced their bodies, cutting or cutting the arms, breasts, or legs, piercing them, slitting the ear lobes, wounding the head, etc. Thus the Crow Indians made two cuts down the length of the arm, tearing away the skin, or cut the flesh on the breast and shoulders (JE, loc. cit.). The Tongans cut and bruised themselves with shark's teeth, shells, axes, clubs, and knives (Mariner, Tonga Islands, 1817, i. 380, 403; the Spartans tore the flesh from their foreheads with pins and needles to gratify the ghosts of the dead, cf. Plutarch, Stier. SPEC., 402). Among savages, the conceptions of mourning ceremonies among all savage tribes supply copious instances of the severity of these lacerations.

(2) The mutilation of some member of the body, usually a finger, occasionally an ear, is also found as a common sign of grief at mourning ceremonies. Spencer regards this as an act of sacrificial appropriation of the dead and a sign of submission (op. cit. 56), and it certainly has the significance of a propitiation of divinities or spirits, e.g. in cases of illness, etc. It is regarded as a substitute for human sacrifice, giving a part in place of the whole, as when a widow has her finger chopped off in the Nicolai Islands, evidently in place of being slain at her husband's grave (Tyler, ii. 365). But it might readily become a formal expression of grief. In Fiji, where, on the death of a chief, orders were given that a hundred fingers should be cut off (Williams, i. 197). Even yet in Fiji a child's finger was cut off as a sign of affection for a dead father (ib. p. 367). Usually a joint or the whole of the little finger is cut off, though another finger may be removed later when this is lacking. This painful custom is found among other Australian tribes, in Tonga and Fiji, among various N. and S. American Indian tribes, among the Hottentots.

Harper's Magazine, 1889, xvii. 451). Again, where foods are taboo, either through totem restrictions or for some other reason, abstinence from them is frequently regarded as a hazardous duty done by an animal or a divinity, who would resent any breach of the rule, or it has the nature of a sacrifice committed among the Fijians, the Javanese, and others, certain animals, which were probably earlier taboos, were believed to be incarnate gods or sacred to particular deities, and eaten by the deity. In my own day the native of the Andaman Islands abstains from a certain number of foods at the absolute request of the god Pulunga requires them at these times (JAF, xi. 154), as anomalous when committed by primitive tribes. A certain prohibited food or animal, which a man will not eat even when suffering from hunger, is 'literally a sacrifice or offering to the deity by him and his parents and is a gift to the governing spirit of his life,' and to eat of it would be a sin at once punished by the spirit and requiring atonement however much the man might need the food (Stoll, op. cit. 78; M. Kingsey, Travels, 460), or they are not eaten because they are dedicated by man to the use of his attendant spirit (Dennett, Signs of the Times, 3). From because the god Pulunga requires them at these times (JAF, xi. 154), as anomalous when committed by primitive tribes.
when a widow re-marries, and occasionally with Chinese widows as a sign that they will not re-
marry.  The period of mourning varies from 53 to 65 days (Kolh, Caput Bone Spei, Nuremberg, 1719, 572; 
Giles, China and the Chinese, London, 1879, 202).  (3) The custom of fasting is here met with once 
more as a natural expression of mourning, often of a severe and prolonged character.  The Fijians 
fasted for a dead chief for ten or twenty days (Williams, i. 197).  Some of the Salish tribes of 
British Columbia fast for four days after a death, while a widow must not eat fresh meat for a 
year, a widower for a shorter period (JAI, 1905, xxxv. 462).  Before death, the bodies of the 
chief were found among the Basutos and other African tribes.  Among the Kikuyus, and in many 
other places, the ceremonies by which the Indians performed their rites as a sign of mourning 
were held in the paths where the dead had walked.  Even among the Tubu, the spirits of the 
dead are supposed to visit the earth at certain times, and to demand the food and drink of their 
owns, or certain favourite foods, and these relations are often joined in this custom by other members of 
the tribe as a token of sympathy (JAI, 1882, xii. 142, 146).  The Japanese partake only of a spare 
vegetable diet during the period of mourning, while in Korea the mourners drink rice water 
for some days, and then are allowed to partake of gruel for the rest of the time (JAI xii. 225, 
xxxv. 359).  (4) Finally, though the custom of a wife's being shaved andburned, in India, has become a 
mere customary rite, and though its origin may be sought in sacrificial ideas and in the belief that 
she must accompany him beyond the grave, it is frequently found as an extreme act of austerity 
devo t ion, the wife devoting herself to death out of pure love and devotion.  Among the Naiad 
in Piji (Williams, i. 189), where wives were frequently sacrificed at their own instance; in India, where a 
wife lit the pyre with her own hands; in China, where wives will take their own lives to follow 
their husbands into the next world (de Groot, Rel. System of China, Leyden, 1894, i. 1. 756 ff.); among 
the ancient Greeks, with whom historic instances of this suicidal devotion are recorded (Euripides, 
Supp., 1000 ff.; Paus. iv. 2, 7); and among the ancient Celts (Leachy, Heroic Romances of 
Ireland, London, 1805, i. 105; cf. Cesar, v. 19; slaves and clients beloved by the dead; Mela, iii. 
2. 19; see artt. SATI and MOURNING).

S. MUTILATIONS.  A great variety of ethnical muti-
lations involving a considerable degree of pain 
may be observed among primitive races.  Sometimes 
these may have a different origin or intention, 
some may be mere customary or symbolic follow-
ing s of archaic rites, but this makes no difference 
in the degree of suffering which is borne or in the 
stoical patience with which it is endured (see art. 
Mutilation and Torture).

(1) The custom of cutting the body and using the 
blood for some specific purpose is widely extended, 
and has already been met with as a mourning 
ceremony.

(a) It is found as part of the ceremonies of initi-
ation in various quarters.  Thus in North Central 
Australia the final ceremony among several of 
the tribes consists of making a series of cuts on 
the back and one on the neck of the candidate. 
These are said to commemorate certain events in 
the Alcherings, or mythical period (Spencer and 
Gillen's, 335).  A similar rite is found among 
the Australian tribes (Schurmann, in Nat. Tribes 
of S. A., Adelaide, 1879, 231 ff.).  Scars are also 
made on the face and body at puberty among the 
Basutos (JAI, 1905, xxxv. 462) and elsewhere in 
Africa (Burton, Abokcuta, London, 1863, i. 
104; Denham, Travels in Africa, London, 1828, 
iii. 175: "the process is said to be extremely pain-
ful on account of the heat and flies.").  These 
appear to be in the nature of marks, not curses, 
or tribe marks.  Among the Abipones the marks 
were made with thorns, and ashes were rubbed into 
the wounds—a species of tatuage (Dobrizhofer, ii. 
30 ff.).

(b) Cutting or gashing the body in order to 
obtain blood, usually for magical purposes or for 
use in various for magical purposes or for 
use in various for magical purposes or for magical 
uses in various forms is frequent in Aus-
tralia.  Thus among the Dieri two men are bled 
with a sharp flint, and the blood is allowed to 
flow on others of the tribe.  The ceremony was 
intended to produce rain, the blood representing 
rain (Gason, in Nat. Tribes of S. Aust. 276).  Among 
the Wiradjuri tribes, at initiation rites, men 
wounded their gums or the flesh under their 
tongues with sharp pieces of bone, and allowed 
the blood to fall on the seat used in the ceremony; 
and among the Kamilaroi, at the boora, quantities of blood were frequently shed from certain 
finger nails of those who have carried a corpse to the 
grave are scratched with a knife, and magic stuff 
is put into the wounds to remove the contagion 
of death (GB. ii. 302).  Here, too, may be mentioned 
a group of customs already alluded to (§ 5), in 
which the Indian tribes, at the dissolving of a 
magical ceremonial, cut themselves, parties 
and engage in a sham fight, in which, how-
ever, severe blows are given and received, blood is 
shed, limbs are broken, and sometimes life itself 
is taken, the fight lasting for some hours.  This 
fight takes place at some given moment in the 
processes of agriculture, and has for its object 
the promotion of fertility.  The rationale 
probably is that the blood shed fertilizes the earth, for 
among the Aboakwanas of Peru women caught 
the blood and sprinkled it on the fields (Bastian, 
Der Mensch in der Geschichte, Jena, 1890, lii. 75). 
Similar fights, more or less severe, have been ob-
served among the Tongans, American Indians, 
African tribes, among the Khonds, in China; they 
occurred in the form of stone-throwing in Greece 
at certain festivals, and they still occur in a modi-
fied form in European folk-custom (see Frazer, 
Pauanzins, i. 267).

(c) Incisions in the flesh and blood-letting are 
also customary before marriage in many places. 
Incisions which leave raised scars are made on 
the bodies of men and women, and the Kikuyus 
of E. Africa, the purpose being ora-
mental (JAI, 1905, xxxv. 255).  Elsewhere the 
bleed-letting, followed by each spouse drinking or 
swallowing the blood in food, has the purpose of 
uniting them, and shrinks in some cases to a mere 
symbol (Crawley, Mystic Rose, 385; see artt. 
BLOOD, BROTHERHOOD [artificial]).  Or, again, 
the opening of a vein in both bride and bride-
groom is a species of blood-offering, mainly among 
American Indian tribes (Zo6ckler, op. cit. 270).

(4) Frequently the making of scars and cicatrices, 
rainful as the process is, seems to have mainly an 
oncarnal purpose, as among the Australians 
(Spencer-Gillen's, 50), Tasmanians and Melanesians 
(Letourneau, Sociologia, 50), and N. American tribes, 
e.g. the Thlünkks (NR. i. 15), though with most of 
these they are also made for other purposes.

Among West Coast African tribes, with whom 
tattooing is rare, cicatrices are made by cutting the 
skin and then placing in the wound the fleshy 
part of the tail of the rabbit.  H. Kingdon 
(Hadon, 113).  In New Guinea women make scars on the 
chest when a brother spears his first dugong

(c) Finally, gashes are frequently used to draw 
blood as a propitiation of the gods.  Thus, among
the Mosquito tribes of Central America, besides sacrifices to influence the gods before war or any important undertaking, blood was drawn from tongue, ears, or other parts of the body (Nic. i. 723, 740). Similar gashings were made by the priests of a human sacrifice among the Goths, which made an incision in the victim's flesh (Pomp. Mela, iii. 2, 18). But possibly they may have been intended to promote union with the divinity through the vehicle of blood. Connected with this is the custom of self-castration seen in the Phrygian worship of Cybele and analogous cults in Syria, etc. In these the priests also wounded themselves in the arms and scourged each other (Tert. Apol. 25; Lucian, de Dea Syria, 50). Similarly in the Roman cult of Belona the priests made gashes in their shoulders and the blood was sprinkled on the image of the goddess and used in the sacrifices (Luctantius, i. 21; W. R. Smith, 304). (2) Amputation of fingers.—This practice, already met with as a mourning ceremony, is also found sporadically as a sacrificial observance. In sickness or victory the tip of the fingers was cut off (Farrer, Prim. Manners and Customs, London, 1879, 143). The Cochinches of California, when all other means had failed, cut off a finger from a daughter or sister of a sick man, in the belief that the blood would preserve him (Nelsan, Gesch. von Califor., Longo, 1759, i. 76). This was also done by the Tongans in cases of illness as a propitiatory offering to the gods, while a man would also cut off his own finger to aver his anger when danger threatened (Mariner, Melv., iii. 210). During initiation the candidate among the Mbutians held up his finger to the Great Spirit expressing his willingness to offer it, and then had it chopped off with a hatchet (Lewis and Clarke, Travels, London, 1817, 80). In India the practice is found in custom and myth. Mothers will cut off their own fingers as sacrifices for the preservation of their children, while Siva has to cut off his finger to appease the wrath of Kali (Tylor, i. 401). Mothers in Bengal frequently draw blood from the finger tips of a sick child, in the same manner to propitiate the goddess Chandika (Rajendrabala Mitra, Indo-Aryans, London, 1882, i. 111). This may also have been a Celtic practice, since in one legend Æðne the Horrible is said to have cut off the ends of her children's little fingers to make them longer-lived (Windisch-Stokes, Frische Texte, Leipzig, 1891-1897, iii. 363). We may compare with these rites the Chinese custom of cutting pieces of flesh from the thighs, while offering a prayer to Heaven to accept this as a species of self-immolation on behalf of a sick relative, who then was given the flesh to eat (de Groot, op. cit. iv. 2, 386). (3) Circumcision.—This has already been found as one of the rites of initiation to manhood; and, in general, where it occurs it is performed at puberty, though sometimes, as with the Jews, it takes place in childhood. We are not concerned here with the various reasons assigned for it by the different peoples who practise it, or with its original intention, though this may have been, as already stated, for the prevention of danger from the whole organ by removing a part, which part might also harbour dangerous influences. What concerns us here is the painful nature of the rite, and its wide-spread use. Practised by many peoples of antiquity, Egyptians and others (Herod. iv. 47), it is found among most African tribes, in N. and S. America, in Polynesia, Australia, and parts of Melanesia, and sporadically elsewhere. Among most of these peoples it is regarded as a disgrace not to have it done, or as rendering a man unclean. If the patient shrieks or cries, this is done not uncommonly, but occasionally he is in such a frenzied state at the moment. But sometimes, besides the actual pain of the cutting, the youth has to undergo other ordeals. Thus, among the Bantu peoples of W. Africa ecyzume knife is spared on the wound made by the Christian missionary. Among the Mavendans of S. Africa the candidates are subjected to exposure for some time in a nude condition and to treatment of a harsh nature (JAI xxxv. 263). See art. CIRCUMCISION, and Andre, Ethnographische Untersuchungen über Paradies, Leipzig, 1854, and Ploss, Das Kind, Leipzig, 1884, i. 340 ff.; Stoll, op. cit. 499 ff.; Wellhauen, Protopenmena, Edinburgh, 1885, 360; L'Anthropologie, Paris, 1896, vii. 653 ff. (4) The practice of sub-iniation or mikva or para-aritho-krama has already been referred to (2). This terrible rite involves the slitting open of the under side of the urethra, and is found in Queensland, N. S. Wales, S. Australia, and among N. and W. African tribes (Spencer-Gillen, 212 ff.; ib. b. 133, 328 ff.). Analogous to this is the custom of semi-castration, practised, according to Kolb, by the Tongans as a joint rite. It has been questioned by later observers; it is also found among the Ponapes in the Caroline Islands and in the Friendly Islands (Finsch, ZE xii. 316). For other mutilations of the sexual organs for different purposes among the Dayaks, Bataas, ancient Romans, etc., see O. Hovorka, Mitt. der Anth. Gesell. in Wien, 1894, xxiv. fusc. 3; JAI, 1892, xxiv. 45; Stoll, op. cit. 406 ff., 421 ff. (5) Girls at puberty among many separate peoples must also undergo the equally painful rite of circumcision, probably as a means of self-cleansing, as circumcision, and like it frequently an initiation ceremony. It is found among various African peoples, in Nubia, Abyssinia, Gallia and Masai lands, on the west coast, and also in the south, while it is also met with among several S. American peoples, occasionally in N. America, and sporadically in Indonesia (Stoll, op. cit. 523; Ploss, Das Kind, i. 379 ff.; Merker, Die Maoris, Berlin, 1894, 60 ff.; Martinis, Zur Ethnog. Amerikas, Leipzig, 1875, 267, 445; ib. a. xxiv. 143). With it may be classed the cutting or artificial slitting of the hymen, mainly among several Australian tribes, but occurring elsewhere also. While the Australians it is an initiatory rite, and also serves as an immediate preparation for marriage (Spencer-Gillen, 25; ib. b. 135). Even more painful is the rite of 'infibulation' of marriageable girls, which is found mainly in the Nile region, the Sudan, Gallia and Somali lands, Nubia, Kordofan, and the Abyssinian highlands, and also in Pegu (Stoll, op. cit. 548 ff.). (6) Among other forms of mutilation causing considerable suffering may be mentioned (a) knocking out one or more of the front teeth, usually as an initiation ceremony, though various interpretations of its purpose are current among those who practise it, and with some it is regarded as an ornament. Perhaps arising as a preparation for the reception of new food at puberty, it soon became a mark of acquired manhood, and sometimes, as with the Kavirondos, any one not undergoing it endangered his life in battle (Stoll, Uganda Protectorate, London, 1902, ii. 728). Among many African tribes it is found as a regular initiation ceremony performed only on youths, but among the central tribes it has ceased to be so, and is performed on both sexes indiscriminately (Spencer-Gillen, 588 ff.). The custom is found among most African tribes,
AUSTERITIES

Banta and Negro; in N. America, e.g. among the Seri Indians, who practise it on girls before marriage (17 RBEW, p. 169); in Fornos among the Pepos, who think it assists breathing (Ploss, Dies Kind, ii. 424); in the ancient Peruvians, who regarded it as a punishment ordained on their ancestors and binding upon themselves, or as a service rendered to the divinity (Garcilasso de la Vega, ix. 3; Herrera, Historia general, Madrid, 1759, v. 6, 1). It is also found as a mourning mutilation at the death of a chief in the Sandwich Islands (Ellis, Tour through Hawaii, London, 1826, 146).

(b) Filling the teeth, usually to sharp points, grinding them down, and breaking part of them, and then inserting gold or blackened metal. The operation sometimes causes great pain (Marsden, Sumatra, London, 1811, 52; Hist. gén. des voyages, Hague, 1757, xv. 97; Ling Roth, Notices of Sarawak, ii. 78). But the object of the operation was merely to make the teeth more beautiful.

(c) Making holes or slits in the nose, lips, cheek, or ears, in which are inserted various objects, is a world-wide practice, and, though regarded as a means of ornamentation, was probably in its origin of a magical character (the objects serving as amulets), while it was also and still is in many cases associated with initiation rites. Frequently the hole or slit is begun in childhood, but the permanent object is inserted only at puberty. Only the most extreme instances of this form of mutilation need be referred to here. Among the Thln-kets the under lip of female children is pierced and a small object inserted. As time goes on, a larger object is inserted, and this is sometimes repeated, causing a painful and continuous strain, until, at the age of maturity, a grooved block of wood sometimes six inches long and half an inch thick can be inserted (NR i. 399). The Botocudos of S. America treat the under lip and the ear lobe in the same manner; gradually enlarging the apertures, until wooden plugs of a considerable size can be inserted, the ear lobe sometimes reaching to the shoulder (von Wied-Neuwied, Reise nach Brasilien, Frankfort, 1820, ii. 5). Every variety of these mutilations, either singly or together, is found over the American continent; lip-slitting occurs in Africa, ear-slitting and ear-extension in Fiji, Easter Island, and the Nicobar islands, while ear-piercing, with a religious significance, occurs all over India, Burma, and the Malay Peninsula (see Stoll, op. cit. 398 f.; Hovorka, 'Verzieren der Nase,' Mitt. der entl. Ges. in Wien, xxv. pts. 4 and 5, 1875: 3 RBEW, p. 76 f.).

(d) The well-known and painful custom of deformation of the foot among Chinese women is regarded as a world-wide practice, and, though regarded as a means of ornamentation, while it has apparently also some erotic character. The process is begun in early childhood by bandaging the feet firmly so that all growth is hindered, until they become little more than stubs. This clumping is found in the Oriental (Brandt, Sittenbildner aus China, Stuttgart, 1885, 53 ff.; Ploss-Bartels, Das Volk, Leipzig, 1904, i. 173 ff.). A similar custom is found among the Kutchin Indians, where a child's feet are bandaged to prevent growth, small feet being there thought handsome (Richardson, Arctic Searching Expedition, London, 1852, 262).

9. Tatung.—This custom is of world-wide extent; but while every variety of motive is ascribed to it, it frequently has a religious or magical significance, and it is commonly done as an initiation rite. Among the Eskimos the process usually consists in making a needle and thread dipped in soot below the skin (Egede, Besch. von Grönlund, Copenhagen, 1790, 153). More usually pricking the skin or cutting it, and then rubbing in some pigment, is resorted to. Or in some cases figures are cut out of the skin and the faces painted, as in the Desean and among the Mosquito Indians (Forster, Voyage round the World, London, 1777, 588; NR i. 716). Still, however done, the process involves much suffering, especially where great parts of the body are tatted; but to shrink from it or to show signs of suffering is held as evidence of cowardice. Mereenhout says of the operation in Polynesia that it was the cause of such sufferings that sometimes the girl died under them. Yet in spite of this the operation, which is a tedious one, is seldom or never refused (Wilson, Miss. Voyage, London, 1799, 339). Nearly every observer says that the actual carrying out of the process speaks of its extremely painful and even dangerous character. Hence it may be regarded, for whatever purpose it is undergone, as by no means the least serious of the many kinds of austerities practised by lower races. Thus, when it is undergone at puberty, it affords a test of the individual's capacity for enduring pain and showing courage (cf. JAI, 1882, xii. 331). Where it has a religious significance, as in Fiji, where it was held to have been imposed by the god Ndengi, it may be regarded as a kind of offering made to a divinity, while it also secured the entrance to, or the recognition of the individual in, the other world, untutored persons being there subjected to torture (Williams, Fiji, i. 160; cf. Pl. 1894, v. 23, 318; Hall, U.S. Explor. Expet., Philadelphia, 1846, 90, for other instances). The practice of making marks or designs on the body by cuts or scars, into which some pigment is often rubbed, is found among many peoples, especially those with dark skins (Australians, Papuans, etc.), and must involve considerable suffering. See art. TATUNG; Joest, Tätowiren, Narbenzeichnen und Körperbemalen, Berlin, 1887.

10. Medical austerities.—The methods of healing used by the medicine-man, or doctor, in savage societies are often of a drastic and even cruel nature, though they are generally borne submissively by the patient. Resting mainly upon the theory that all disease is caused by evil spirits, the object of the treatment is to drive these away or to obtain possession of the object which they have placed in the body. Hence a great part of the treatment consists of yelling and singing, noises of all kinds, dances, and invocations. But in addition the patient is subjected to a variety of rigorous remedies wrought upon his body. Among the most common of these are scarifying the flesh and bleeding. Thus among the Anda-nese the flesh is cut with quartz or glass flakes (JAI, 1882, xii. 83), elsewhere, as among the Dinkas (JAI, 1904, xxxv. 156), with knives, and sometimes, as among the Kemerinas, by a very nasty method, the whole body being rubbed with a medicine in rags rubbed upon the body (JAI, 1895, xxx. 215). Similar scarifications are used by many other peoples—Australians, Papuans, American Indians, both north and south. A primitive method of treating the patient is to produce a disagreeable taste, consisting of making an incision in the flesh, plunging a horn above the incision, exhausting the air by
suasion, and then closing the orifice. The horn is then gradually filled with blood (Nassau, op. cit. 1885, 315); but a higher level is not allowed to fill it, for fear of blistering, or sucking blood from an incision in the flesh, is common, e.g. in N. America ( Bancroft, passim; Pictit, Traditions indiennes, Paris, 1836, 434). There, too, kneading and pounding the body violently, and pressing the lins into the pit of the stomach until the patient’s strength is exhausted, are in great favour, and occasionally the medicine-man bites the patient with his teeth and shakes him (VR i. 246, 355; Kane, Wanderings, London, 1839, 225). Another remedy is to make, when possible, use of a hunting- spear, and to rub it down with nettles (GB- i. 301, iii. 216). This, like flagellation in cases of madness, is intended to drive off the demon of disease. A favourite remedy for fever and other diseases among American Indians is the sweat-bath. This is a small hut which by various means is heated to suffocation. In it the patient is placed, and afterwards, dripping with perspiration, he rushes out and plunges into cold water. This treatment sometimes causes death, but is generally curative (VR i. 246, 285). A similar remedy for madness is found in Gabun (Nassau, op. cit. 273). It is to be noticed also that sometimes the relatives of the patient, or even of the medicine-man, fast, to assist the progress of the remedy (Ploss, Das Kind, i. 152). Sometimes these circumstances are combined (JAI, 1889, 349). In the latter case the patient is placed, sometimes, in a box with the bark cut off, and is placed in a current of air, and sometimes even exposed to the cold of the night (Im Thurn, 229). Again, probably on the principle of sympathetic magic and the intimate connexion between a man and his wife, fasting and other forms of rigorous discipline are enjoined on women in many quarters while the men are absent on war or the chase. For such a period the women must fast and abstain from sexual intercourse (Riedel, Séleurs en Papouas, Hagué, 1886, 341).

The rule of continence is also followed in various other circumstances. In Congo, when the Chitomb is on circuit, a fast of continence is proclaimed, the penalty for breaking it being death. By such a rule men are forced to make a common tabu after slaying a man or touching the dead, here probably connected with the contagion of death, which necessitates the avoidance of one’s fellows till a certain time has elapsed or certain purification have been performed. Fastling frequently accompanies ceremonies of a religious character. Among the Chaluaras, for instance, fasting with women is forbidden for one month after the shedding of blood among the Kikuyus of E. Africa (JAI, 1890, xxxiv. 264); and among the Natchez, after the first scalp-taking or securing a prisoner, the warriors of the tribe fast for four days, abstaining from eating flesh for a month (Charlevoix, Histoire de la Nouvelle France, Paris, 1744, vi. 196; cf. Western-mack, op. cit. i. 375). In many places continence must be observed for a time after marriage and after a birth (Crawley, op. cit. 345 ff.; Lubbock, op. cit. 81). Even among savages chastity on the part of the priesthood is sometimes a necessity. Thus Algonquin priests were ordained to a life of chastity, and could not eat food prepared by a woman (NR ii. 212), and in Yucatan the ‘captain,’ during his three years’ tenure of office, had to observe the same rule (ib. ii. 741). This corresponds to the general rule of chastity found among higher priesthoods, while there too, celibate orders are found, e.g. those in Mexico dedicated to the service of Quetzalcoatl, and the virgins of the sun in Peru, who, though not celibates, yet annull all contact of the flesh, and otherwise, on pain of a cruel death, to live in chastity, in this exactly resembling the Vestal virgins in Rome (Zöckler, op. cit. 83; Prescott, Peru, London, 1839, 53; cf. also the purity enjoined on the Roman phase of the Roman household).

LITERATURE.—This is given in the article. 

J. A. MACCULLOCH.
AUSTRALASIA (Ethnology, Religions, and Ethics).—*AUSTRALASIA* is here taken in its widest sense, so as to cover the great insular world which comprises nearly the whole of the Indian and the Pacific Oceans, and constitutes one of the five main divisions of the globe. The term is practically synonymous with a southern extension of the Indo-Malayan, and for which English writers now generally substitute *Australasia,* as harmonizing better with the other divisions, and at the same time serving to recall its essential characteristics—firstly, that it is geographically an eastern extension of the Philippines, and secondly, that the great island-continent of Australia forms its central and most important feature (A. R. Wallace, *Australasia,* p. 2).

As thus understood, this Oceanic region comprises five main insular groups, which form the subjects of separate articles, but may here be briefly tabulated with their more important subdivisions:

I. **AUSTRALIA** with **Tasmania.**

II. **MALAYSIA,** comprising the Malay Peninsula; the large islands (Jalak, Lumbock, Sumbawa, Flores, Sumban, Allor or Onlay, Timor, Wetta, Serawati); Borneo; Celebes; Jilolo or Jiloke (Ternate, Tidore); the Moluccas; Sulawesi; Moluccines; Formosa; and the outlying Andaman and Nicobar groups.

III. **PAPUA,** with two sections:

1. New Guinea, with the D' Entrecasteaux, Lonsdale, and other islands.
2. Melanesia, comprising the Bismarck Archipelago (New Britain, New Ireland, Duke of York); Solomon; Santa Cruz; Banks; Fiji; New Hebrides; New Caledonia; and Loyalty Archipelages.

IV. **POLYNESIA,** including New Zealand; Tonga (Friendly); Cook or Herman Islands; Mangaia, Raratonga; Sanea (Tuvalu); Society (Tahiti); Low (Tahitou); Marquesas, Nakuru, Futauha, etc.; Navigators (Savai, Sini, Tukokesia); Ellice (Funafuti); Savage (Niue); Sandwich (Hawaii) and Easter (Rapanui) groups.

V. **Moluccas,** comprising the Bajau (Palaun); Ladrones (Samarra); Caroline; Marshall (Balick, Rudaki); Gilbert (Kirguina); Phoenix and Penrhyn (Manahulu) groups.

For purposes of this article it should probably be included in No. II., see art. **AFRICA.** The Secesshells, M around, and other scattered clusters in the Indian Ocean are excluded because unimportant when discovered, and the same remarks apply to Norfolk, Kermadec, Pitcairn, and a few other South Sea islands. Note that South Sea is synonymous with Pacific Ocean.

All the lands in this table have been occupied by man since the remotest times, and it is argued in the art. **ASIA** that the cradle of the human family lay most probably in Malaysia (Java). From this central area of dispersion the first migratory movements ranged north to Asia, west to the Caucasus, and south to the Oceanic world by land connections which have since been greatly reduced by subsidence (see art. **ETHNOLOGY,** § 3). It would thus appear that the first inhabitants of Australasia must have been direct descendants of a Pleistocene precursor whose prototype is found in the Japanese *pikunotsumyre cretus,* and who are themselves represented by the black elements still persisting in Malaysia (Malay Peninsula, Flores, Timor), in Papuasia, Australia, and even in Polynesia and Melanesia, though their numbers have been reduced by later intruders from Asia. As in Africa, there are two black elements in Oceania: (a) the dwarfish *Negritos* surviving in the Andamans, in the Malay Peninsula (Sakais, Semangis), in the Philippines (Abor), and in Java (the nearly extinct Kalangis); and (b) the medium-sized or even tall *Papuans,* who form nearly the whole of the population in New Guinea (Papuans proper), and throughout Melanesia. For several reasons, such as their physical, linguistic, and religious differences, it is desirable to separate them from the Melanese as two distinct though closely related sub-groups, while both may be conveniently comprised under the collective name of *Papuans.* The Melanesians, for instance, are of Malay-Polynesian speech, and worship no devils, whereas the Papuans speak numerous languages fundamentally distinct from any others, and are pronounced demonologers. Dr. Haney speaks of their origins as lost 'dans les profondeurs d'un insomniable passé,' while W. Volz shows that in pre-Malay times they occupied all the Pacific Ocean (A. A., Nov. 1894). Their westward extension to the large Sunda Islands, where no full-blooded Papuans are now found, is also established by B. Hagen, who groups together the Batacas, Gayos, and Alas of Sumatra, the Ulu-yars of Borneo, the Semangas and Aetias of Malacca and Singapore, the Kajays, and the Celebes recently discovered by Dr. Saras in Celebes, the Melanesians, Papuans, and Australians, 'as local varieties and remains of a great wide-spread primitive southern race,' which he calls 'the old pre-Malay racial element,' in *Oceania* (Globes, 1894, 76, No. 2, p. 241). These pre-Malaysians therefore constitute the substratum, the true aborigines, everywhere in Australasia.

Their watery domain was later, but still in remote pre-historic times, encroached upon first by the Caucasians and then by the Mongoloids who came from the Asiatic mainland. It is shown in art. **ASIA** that during the Stone Ages two branches of the western Caucasians reached the uttermost confines of the continent, one probably from Europe through Mongolia to Korea and Korea southwards from North Africa through Irania to India and Indo-China. Some of the northern branch, all dolmen or megalithic builders, appear to have passed from Japan to Micronesia, where they may have joined hands with those of the southern branch, who ranged from Indo-China southwards to Malaysia and thence eastwards to Polynesia. Thus are explained those astonishing *mararis* and other monolithic structures which are found scattered over the Pacific islands as far east as Rapanui (Easter Island), and even the works of Ponape (Eastern Carolinas) with cyclopean walls 10 to 18 feet thick, constructed of huge basaltic blocks, some measuring 25 ft. in length by 8 ft. in circumference (F. J. Moss, *Atolls and Islands, pessoun*). There is a trilithon at Maui (Tonga group) which looks like one of those 'Drunken-like shrines' seen by Mr. R. T. Turley in North Korea, where some of the people 'show Caucasian and not Mongolian features' (*Geograph. Jour.,* April 1904, pp. 478, 479). That the two races of Caucasic streams have met and mingled in these North Pacific waters is shown, amongst other indications, by the fact that the Nukoro islanders near Mortlock (Central Carolinas) still speak a pure but archaic form of the Maori language away to the south (New Zealand). In order to distinguish between the Mongolid (Malayan) peoples and these primitive Caucasians who long sojourned in the Eastern Archipelago, and are there still represented, amongst others, by the Mentawi islanders (west coast Sumatra), the term *Indo-Malay* (now but applied to Malay, which is sometimes treated as a colony of the Melanesian), can no longer be seriously questioned, since by the unanimous testimony of all competent observers they are one of the very finest races on the globe, with physical characters connecting them anthropologically with the globe.
the western Caucasians. Of the Tonga, natives Lord George Campbell writes: 'There are no people in the world who strike one at first so much as these friendly Islanders. Their clear light copper-brown colored skins, yellow and curly hair, the tint of their tout ensemble, formed a novel and splendid picture of the great and powerful type. But the physical appearance gave one certainly an impression of being a superior race to ours' (Log Letters from The Challenger; and see also Guille- mard's "Australia, ch. 14). But it was shown above that the whole Oceanic area was first peopled by the Papuans, which explains the constant occurrence of a black strain, very marked in Micronesia, but also met with all over the Pacific. The natives of New Guinea (New Island) have a tradition that, when they occupied the island from Samoa, they found a black population with whom they intermixed. The same statement is made by the Harvey people, and is confirmed by their dark complexion and kinky hair, while in the present the Melanesian features—grizzled hair, dark-brown skin, and full beard—predominate. Even the Tahitians and Mauritians, both in other respects splendid Caucasians, here and there betray the dark element in their protruding lips, very dark-brown skins, curly hair, and slightly developed nose. In Micronesia the above-mentioned Mentawai islanders are the finest of all the surviving Indonesians, and of them Von Rosenberg writes that, 'as regards physical appearance, speech, customs, and usages, they stand almost quite apart. They form a near strain of the Oceanic race that one might far sooner compare them with an inhabitant of the South Sea Islands' (Der malayische Archipel, i. 189). "It is somewhat difficult to say what the original type of the true Polynesian was: but it is probable that the forerunner, the oval-faced, high-brown, lithe, active, light brown, black straight-haired, black or very dark-brown-eyed, cheery, dignified individual so frequently met with, is the nearest to the true original Polynesian" (Perey Smith, Hulaula, p. 14).

As the western Australians moved eastwards to their present homes in the Pacific, their place was taken by the Asiatic Mongols, who are now represented in the Eastern Archipelago by the light- or olive-brown populations commonly called Malay. They form, in fact, the Oceanic section of the Mongol family, and as their right to be regarded as members of this family is no longer contested, the point need not here be laboured. Intermingling with the pre-Malayan dark and fair elements (Papuans and Indonesians) have caused considerable local modifications and given rise to some new types of mankind, especially in the New Guinea, the Bornean Dayaks and Kayans, the Bugis and Min-hassas of Celebes, the Tagalogs and others of the Philippines, and the Formosan aborigines. But the dominant historical Malays, whose original home was in the Menangkaban district of Sumatra, and whose language has become the language of the Archipelago, are a true Mongolid people, distinguished by their 'light yellowish and brownish skins, long lank and black hair, short stature, rather oblique eyes, and prominent cheek-bones' (Dr. Lhü, in Voyage dans le royaume de Siam, etc., Paris, 1868, p. 216). The organic kinship is still especially marked in the many languages of the Oceanic Mongols reached their present domain in remote times, before the Indo-Chinese tongues had become disintegrated—that is, before the development of monosyllabism by phonetic decay. Not only do such untoned languages still survive on the mainland, but they so closely resemble the Oceanic tongues that they may be called proto- or archaic-Malayan. Of the continental Malay mother tongue there are several varieties, such as Kinner (Cambodian), Redai, Balair, Samur, and Charany, which are all tonel and have a great number of words in common with the Oceanic Malay, while 'the grammatical structure of both is absolutely identical' (C. Fontaine, quoted by H. Mouhot, in Voyage dans les royaumes de Siam, etc., Paris, 1868, p. 216). The organic kinship is seen especially in the first or archaic stage, which is everywhere precisely the same, as in the Kinner sauk, 'to corrupt,' saunaw, 'a brieve'; the Malagasy tady, 'twisted,' a 'rope,' tonaday, 'strong'; the Javanese hurab, 'dame,' kunurab, 'to flare up'; the Tagalog kapot, 'brother,' kisap, 'brotherly'; the Malay sipit, 'to graze,' sinipt, 'an anchor,' and so on (the inflex elements always the same, m, n, and s).

A harder problem is the extension of this race group into the continental races (Dr. Hany) not only to the Malayans, the Mongolo-Asiatic aborigines of Malaya, but to the Malaysians, whose black inhabitants speak many more primitive variations of Malayo-Polynesian than either the Polynesians or the Malays, although they are neither Polynesians nor Malays themselves, but a branch of the primordial Oceanic Negroid race. Here Dr. Cordyton gives the leading authority on the subject, vouches for three essential points: (1) the substantial unity and homogeneous character of the Melanesian tongues, under considerable dialectical diversity, and apart from the number of languages, the Tonga, Ongtong, Futuna, Fato, Moe, Tikopia, and Ontong Java; (2) their fundamental kinship with the Malay-Polynesian family; and (3) their archaic character as compared with all the other members of that family. 'As compared with Fiji [a Melanesian tongue], the languages of Tonga and Samoa [Indo- nesian] are late, simplified, and decayed' (Cordyton, Melanesian Languages, Oxf. 1885, p. 26). The question therefore arises, How came these savage head-hunters and cannibals to lose their original forms of speech? Some such as still survive in their kindred black peoples of New Guinea and of Australia, and have but recently become extinct in Tasmania? And then, how did they everywhere, from the Bismarck to the Loyalty groups, acquire Malayo-Polynesian languages of primitive type? Early Indonesians or Malayans conquerors, followed by miscegenation, naturally suggest themselves, but are excluded by the absence of those modified Negroid physical characters which most necessarily have resulted from such postulated intermingleings. The Melanesians are quite as much as the Papuans, and show even more marked Negro features than the somewhat modified Australian aborigines. Cordyton, who gives a few instances of mutual assimilation and interchange of type and speech, especially in Fiji, remarks that—
It is conceivable, on the supposition that the languages now spoken by Melanesians are not originally their own, that their original stock has been lost as in the case of the vocabulary or in grammar, that languages derived from without have entirely taken the place of some earlier [Papuan and New Guinea] special stock, it may be allowed to be no uncommon case. In Malaya, there is the great difficulty that the present Melanesian languages certainly have not been introduced by intruders speaking an Austronesian or Polynesian language. Is there a tentative solution of the problem which would account for the Polynesians having a language allied both to the Malay and to the Melanesian? (p. 31).

It should be added that Malayo-Polynesian has not the remotest connexion either with the heterogeneous tongues of the New Guinea Papuans or with the homogeneous agglutinating languages of the Australian aborigines. As a rule the Negritos both of the Philippines and of Malacca have lost their original tongues, and generally speak those of the surrounding Malayan peoples. On the other hand, the Andamanese may claim to have developed in their long secluded island homes perhaps the most remarkable form of speech known to philology. It has no kinship with any other, and its most striking feature is a superabundance of pronominal prefixes and formative postfixes, so that ‘in adding their affixes they follow the principles of the ordinary agglutinating tongues; in adding their prefixes they follow the well-defined principles of the South African [Bantu] tongue’ (R. C. Temple). Thus it is clear that these principles in full play have never been found together in any other language. In Andamanese both are fully developed, so much so as to interfere with each other’s grammatical functions.’ (R. C. Temple, Anthrop. Journ. 1882, p. 120). Yet, like the Australians, these paradoxical ‘Mincopies,’ as they were formerly called, have an infinitive arithmetical with no words for the numerals beyond two.

In the Oceanic area the various religious systems may be broadly described as consisting of diverse forms of belief and doctrine, the most important of which is animism, leading in some places to the purest, most stringent, in others to nature- and ancestor-worship, above which has been raised a luxuriant growth of myth and legend. With all this are combined some strange aspects of demonology and tabu, wide-spread over the Indo-Pacific domain, besides totemism, ordeals, omens, and fetishism, in forms which throw light on the origin of these practices. Less wide-spread are true idolatry, shamanism, priestcraft, and other merely oriental features, like the florid cult, witchcraft, the evil eye, rain- and weather-doctoring, and the other superstitions usually associated with primitive religions. The ethical standards present enormous differences, although the Oceanic peoples may in a general way be spoken of rather as non-moral than immoral. In fact, the moral sense, as understood by more advanced races, must be regarded as still dormant amongst Polynesians, who indulge openly in unbridled licenoe; Melanesians and Borneans, who glory in the trophies acquired in the shooting expeditions; and Papuan marauders, who treat with fiendish cruelty the captives secured for their cannibal feasts. Nor are these atrocities confined to the lower races, as seen by the unspotted horrors of the cage-prisons in the unprotected Malay States described by H. Clifford (In Court and Kampung, p. 161 ff.).

In Sumatra also the Bats open hostilities by offering to their war-god a boy eight or ten years old, who is buried to his neck in the ground, and covered with a mixture of ginger, red pepper, and salt. When he is nearly raving mad with thirst, he is induced by the offer of a little water to promise to plead the tribal cause in the next world. But, the promise made, molten lead instead of water is poured in his eyes and throat, and his head is cut off and buried in an earthenware pot under a large tree in the village. These Battas are idolatrous cannibals, who, before the fight begins, prepare a rudely carved wooden effigy with a square hole in the place of the navel. The pot is then dug up and the soft parts of the head are thrust into the effigy, which is carried to a leaft plate. The idol thus becomes animated (hat hierdurch seine Seele bekommen), and is at once sent off to the enemy, from whom another is received in exchange, and the pot is put aside for future use (Von Rosenberg, Die wotatjewische Archipel, i. 60).

And thus we seem to get a hint of how crude animism may in some places have passed through the fetish stage of the indwelling soul up to true idolatry or image-worship. The Panguluw-belang, as the Battas call this wooden effigy, has already become a true anthropomorphic entity — has received its soul — and, like the war-gods of Olympus, can now champion its cause in this and the next world.

Amongst the Karo Battas the doctrine of soul receives its utmost development. Here the tendi, like the kro of the Gold Coast negroes (see art. ETHNOLOGY, § 9), is a second ego—a sort of ‘double’ dwelling in the body, which it may occasionally leave — and at death becomes a bogu (spirit, properly ‘shade’) on earth, or a dibatta (god) of the middle spaces. Often there are as many as seven such tendisi, which are continually engaged in eating, drinking, and other activities or properties of man. Two are clearly distinguished, one more specialized which later becomes a bogu, the other representing more generally the vital force, and after death resolved into breath, or becoming wind, and returning to the soul of the world (Weltseele). Not only men, but animals and even plants, are endowed with tendisi, and the Si Dayang, as the rice tendi is called, is represented as a goddess who plays a great part in the creation myth. She is the maker of man, the source of creative and sustaining power of the All-life, the gracious mother of nature, these cosmic notions being no doubt due later Hindu influences (J. H. Neumann, quoted by W. Foy, in Centralblatt f. Anthrop. 1894, v. 299).

In the neighbouring Nias archipelago the Malay nates are both idol- and devil-worshippers, and also head-hunters in the southern districts. Having no idea of a pure soulless spirit, they fabricate numerous stone and wooden statues as tutelar deities, protectors of the chief, of the village, or the war-party, to ward off sickness and other troubles. The chief god, however, is Lulu-langi, who dwells in the wind, which, although it is invisible, can still be felt. This god is conceived as a tree waving in the atmosphere, and shedding fruits which become either spirits or men, forefathers of the present generation, according as they fall in space or on the ground. In fact, Lulu-langi is the origin of everything, and from him comes nothing but good.

Their forefathers dwell in constant association with him, and it is they who are invoked for blessings and against all kinds of evils. Here we have a peculiar form of ancestor-cult, which is paid also to the subordinate chthonic god Batu-beano, while appeal is likewise made to the other deities, amongst them some goddesses, all collectively called Ajii. But more numerous appear to be the demons, of whom the most powerful and most dreaded is Nadaise. Of them no images are made, since they dwell in the woods, the fields, the gardens, the house itself, even in houses when they fall sick. Then they send for the Ere (wizard), who smells out the particular spook that is causing the mischief, and brings him with the heart and blood of a fowl to leave the sick man and go away. If this and stronger measures fail, it is concluded that there are devils about, and these are got rid of by stopping all the
doorsways except one, through which they are driven by cutting and slashing in all directions and making a tremendous uproar with much shouting, tom-tomming, and beating of pots and pans. The Nins people are not clear about an after-life, but say that the body came from and returns to nothing, while the soul joins an ordinary state with the ancestors with Lu-bu-lang, nothing being said about rewards or penalties. Earthquakes, the tides, eclipses, and other natural phenomena are due to sinister influences, even the rainbow being a net cast out by Nadiyaya to ensnare mortals, although the souls of the dead pass through the birds' entrails, exactly as amongst the old Etruscan bau-rupes; and children are specially guarded against the evil eye of passing strangers. Much dancing accompanies all festive gatherings, which would appear to have a sacred character, since they are performed in honour of the victim being obtained by raiding a neighbouring island. The sinatu (fiends) are of course the root of all evil, and when they are appealed to in the woodslands which they infest, they are supposed to reply in the thin sneaking voice of an old man (Von Rosenberg, i. passim).

Most of the other Sumatrans, and all the Javaneese, formerly Buddhists and Brahmins, have been Muhammadans since about the close of the 15th cent.; but the new religion is merely lip service, a three-square clock that ticks over the still flickering glimmer of Hinduism, which itself barely conceals the everlasting vesture of pagan times. Here, therefore, and especially in Java, we have three religious systems intermingled, or rather superimposed one on the other (cf. Art. ABBRIGINES, § 5). Hindu blood still flows in the veins of the Javaneese nobility, such as the 'Emperor' of Solo (Surakarta), and the Prince of Jokjokarta, while the triumphs of Hindu architecture are still everywhere conspicuous, as on the Borobudza and Paling uplands of Sumatra, even in Bali and Sumatera, in the large stone temple of Boro-budur in Central Java. Hence it is not perhaps surprising that the early Indian religions and moral notions still survive and display a more vigorous growth than the arid teachings of Islam. The Qur'anic texts may be daily read in the tasteless mosques, but in serious trouble Allah and his Prophet are forgotten, and resort is had to the ancient shrines, where sacrifices and prayers are still offered to the old Hindu deities. Even the pineal tree-sole is kept alive, the chief object of veneration being one of an odd number of the fig-tree, such as the pidal (Ficus religiosa) and F. benjamina. Beneath the shade of these wide-branching giants the natives often gather to worship the old earth-gods, for whom long-forgotten names those of the Hindu pantheon are substituted. Respect is also paid to the turtle-doves and to the monkeys (Cercopithecus and Simnopithecus) which have their homes in the branches of the sacred pidal-tree, and even to certain strangely shaped blocks and piles carrying the mind back to the stone-cult of prameval times (E. Cautius, in Königliche Zeit., Aug. 26, 1906).

Hinduism still holds its ground in Bali and parts of Lombok, but is here also associated with many old superstitions, so that these islands present the strange spectacle of large Hindu communities professing every form of belief, from the grossest heathendom to pure pantheism. It is everywhere evident enough that 'just as Hinduism has only touched the outer surface of their religion, it has failed to penetrate into their social institutions, which, like this nation, originated from the times when Polyenian [Indonesian] heathendom was all-powerful' (W. Cool, With the Dutch in the East, p. 130).

A local myth relates how these gods established themselves in Bali after their descent from Java by the end of the 15th century. They had first to contend with the wicked salvationists, who fiercely resisted the invasion, but in the struggle were annihilated; but the still worshipped Vena, Dewana. Then new thrones for the Olympians had to be thrown as in Jokjokarta, and being no remains of that time in Bali, the four nearest hills in East Java were brought over and set down in the east, west, north, and south, and assigned to the different gods according to their respective ranks.

Hinduism never made much progress in Borneo; nor has Islam anywhere penetrated much beyond the seaboard, so that the great bulk of the Dayaks, Kayans, and other aborigines are still pagans. Head-hunting, cannibalism, and human sacrifices, attended with shocking atrocities, have been slowly repressed by the British and Dutch authorities; but the Muslim and Christian propagandists appear to make little headway amongst the heathen tribes of the interior. All are still in the wild state, and the whole island has not inaptly been described as a living museum. As in Africa, the human sacrifices, formerly universal, were the direct outcome of the prevalent ancestor-worship, the ostensible motive being to dispatch messages to dead relatives, or to honour them by these sanguinary rites. For this purpose a slave was tied up and bound round with cloths, and then, 'after some preliminary dancing and singing, one after another would stick a spear a little way—an inch or so—into his body, each one sending a message to his deceased friend as he did so' (W. B. Pryer, JAL, 1886, xvi. 234). The wicked, however, cannot receive their messages, since they are doomed, Siyaphus-like, to be everlastingely clawing up the rugged slopes of Kima Bana, the highest peak in Borneo (nearly 14,000 feet). The good, that is, those who have collected most human heads in this world for provision in the next, easily reach the top, whence they are ushered into heaven. But in other places, where the mountains are not so high, even the elect have to overcome many obstacles during their long wanderings up hill and down dale, and to appease the irascible gods of fire and water, until 'at last they are safely landed in the heaven of their tribe' (C. Bock, Headhunters of Borneo, p. 223).

Dr. W. H. Furness describes the Borneans as 'savages of a high order,' without 'any definite forms of religions worship,' although they make 'wooden idols,' regarded apparently as mere scarecrows to frighten off evil spirits (Folklore in Borneo, p. 4). They are 'saturated with superstitions; every pool, every tree, every rock is the haunt of some one of an unnumbered host of the forest, who are constantly whispering. Everywhere are signs and omens to warn man of danger, or direct his course,' and the mountains are so infested with antu (demons) that 'the summits can be gained only at the risk of body, and, still worse, of soul' (ib. p. 6). Head-hunting is part of their religion; no house is blest which is not sanctified by a row of human skulls, and no man can hope to attain to the happy region of Apo Leggon unless he, or some relative of his, has added a head to the household collection (ib. p. 14). The custom is explained by the myth of the great chief Tokong, who when on a raid was told by Kap, the frog, to carry off the heads of the enemy. Having done so, the war party retreated quickly to the river
down which they had come. After they had again embarked, the current of the stream was, for their sakes, reversed, and like a flash they were carried up-stream to their homes. During their short return to the rice crop had ripened, the sick were all well again, and the lame could walk and the dying and so they ever afterwards observed the custom that Kop had taught them (p. 15). In the Kayan cosmogony there was at first nothing but sky and water, when a huge rock fell from the heavens, and rising above the surface was covered with soil by the action of the little halang worms. Then from the sun was dropped the wooden handle of a big sword, which, taking root in the soil, grew to a great tree, with branches spreading over all the new land, and this was followed by a rope-like vine from the moon, which also took root and wound itself round the tree. Now the vine became the husband of the tree, which gave birth to a male and a female, from whose union are sprung the Kayans and all the other Bornean tribes, and lastly Tokong, father of head-hunters. At first they were only half-human, with head, chest, and arms, but no legs, so that they had to crawl along the ground by their arms, an idea perhaps suggested by the octopus, which plays such a large part in the Oceanic mythologies (pp. 7-9). The Kayan Hades is not in the Underworld, the home of Demon Hades, has its Charon and its Styx, a deep wide ditch swarming with worms, and crossed, not by a ferry, but by a fallen tree-trunk which is guarded by the great demon Malagong. By all him come spirits, and if they have no strength to survive, no store of captured heads, the tree-trunk is shaken until they fall into the ditch, to be tortured for ever by the worm that dieth not. But there are 'many mansions,' as for those dying a violent death, or on the battlefield; for mothers dying in childbirth, and to him the request of the king is granted. Logen, one of the chief divisions, dwell those dying of sickness or old age, and these 'have much the same lot as they had in this world; the poor remain poor, and the rich maintain their rich estate' (p. 16).

In Malacca the dominant Malays are all nominal Muhammadans; but here, as elsewhere in the Malay world, the cloak of religion is a very loose garment which covers a multitude of primeval rags and tatters. These were never touched or repaired by Roman Catholic, or planted. Farther than Singapore, the 'Lion City' over against the mainland. Hence Islam is here directly superimposed on the old heathendom, which it has scarcely penetrated a little below the surface. Raja Dja (mysticism) is a Malay belief that the people of Perak are still specially noted for many strange customs and superstitions 'utterly opposed to Muhammadan teaching, and savouring strongly of devil-worship. . . . An enormous belief in the supernatural is possibly a relic of the pre-Islam state' (JAL, 1858, xvi. 227). One is here reminded, however, that even the Arabs, if they do not worship the devil, still pelt him with stones at Muna near Mecca 'in the name of Allah.' Referring to the Malays generally, Miss Bird (Mrs Bishop) wishes that 'it were possible to know to what extent they are a people like people as Musulms. That they are bigots and have successfully resisted all attempts to convert them to Christianity there is no doubt, as well as that they are ignorant and grossly superstitious' (Golden Cherubineer, Lond. 1853, p. 361). Elsewhere (p. 321) she tells us that 'Buffalo Groove is sacrificed on religious occasions, and at the births, circumcisions, marriages, and shaving of the heads of the children of wealthy people. The buffalo sacrificed for religious purposes must be always without blemish. Its bones must not be broken after death, neither must its horns be used for common purposes. It is slain near the mosque with solemn sacrificial ceremonies, and one half is usually cooked and eaten on the spot by the 'parishioners.'"

But the most striking survival from pagan times is the universal belief in the werewolf superstition, which here of course takes the form of the wer-tiger. In Borneo there are wooden idols of tigers with indwelling souls (C. Bock, op. cit. p. 226). But in the Malay lands the tiger himself is worshipped, and the belief that men assume this form at night is inextinguishable. H. Clifford remarks that—

'In the Malay Peninsula we live in the Middle Ages. Magic and evil spirits, witchcraft and sorcery, spells and love-poisons, demons and incantations are as real and as real to these as fighting and everyday life as are the miracle of the growing rice and the mysteries of the reproduction of species. Tales of the marvelous and the supernatural excite interest and fear in the Malay, but they occasion no surprise. Every Malay knows that strange things have happened in the past, and are daily occurring to them and to their fellows. Thus the existence of the Malayan Loup Garenz to the native mind is a fact and not a mere belief. The Malay knows that it is true' (op. cit. p. 60).

Then follows a wer-tiger story which for vividness and intense horror could scarcely be surpassed. For details, see art. Lycanthropy; and for prevalent religious notions in Minahassa and other parts of Celebes, see art. Air.

Even magic, however, has gradually divorced from the religions of more advanced peoples, is still interwoven with the beliefs and practices of the Malayan Muhammadans. In his Malay Magic (p. 60) W. Skeat tells us that one of the ways by which the Malays 'get magic' is to run against the ghost of a murdered man. As this mystic ceremony must be performed at the grave on a Tuesday at full moon, when the person needing help conjures the departed spirit and states his request. After a time an aged man appears, and apparently beside, as if possessed, and is supposed to be ultimately granted. The magic here in question appears to be what is elsewhere called mana (Melanesians), wabanda (Dakotans), orenda (Iroquois), arunyanthk limited in the Malay, and by other names. It colours all primitive beliefs, from which it is inseparable, although to some recent theorists it has been regarded as something apart from religion.

A link between the Malayan and Papuan domains was discovered by Wallace in the island of Jilolo (Sulawesi, formerly called Malhama), where the children is not only said to be a mixture of those of the Papuans; their hair is semi-Papuan, neither straight, smooth and glossy, like all true Malays, nor so frizzly and woolly as the perfect Papuan type, but always crisp, waved, and rough, such as often occurs among the true Papuans, but never among the Malays' (op. cit. p. 310). The term Alfuro applied to these aborigines has no etymological value, being the general Malay designation of the uncultured non-Muslim peoples in the eastern parts of Malaysia.

From them the transition is easy to New Guinea, the home of the true Papuans, on whose religious views much light has been thrown by the works of the late L. H. Bureau. In the western parts, subject to Holland as far as 140° E., prevalent features are pure demonolatry and the worship of ancestors represented by the so-called wooden Kurew effigies of the dead, fashioned by the wizards. In the Sekar district, accidentally visited by Captain Jameson, food, tobacco, and sugar-cane are scattered about wherever goblins are supposed to be lurking. Here the arch-fiends are the so-called Atitti, gigantic monsters of white colour, with an eye in front and another behind, six fingers on each hand and the right index finger furnished with a very
long sharp nail. They dwell in underground caves, and hunt down mortals, whom they eat if the flesh is found to their taste. To test the quality, a piece of the flesh is first scooped out with the long finger-nail, and then the hand is thrust into the cavum but otherwise is allowed to go free. These supernatural beings are vulnerable only in the eyesockets. Here the tabu marks (kere-kere)—leaves, rugs, shells, fast, and the like, with a painted male figure attached to a post sunk in the ground—are very often seen by the villages among the Majore (not Nuyfre) of the North-West Coast, and appear to be real idols, not merely ornaments or emblems, as is often asserted. He calls them Ahnenbilder, ‘ancestral effigies.’

After a burial a block of wood is brought from the west, and first roughly hewn and then furnished with eyes, nose, ears, and mouth, usually by the village magician, all amid much feasting and dancing, which is kept up for several days. When the supplies, mostly sago and palm-wine, run out, more is sent for. Meanwhile the soul of the departed is still fighting about, and every effort is made to entice him back to the life of animal enjoyment. A tremendous uproar is raised with shouting, yelling, and drum-beating in all the houses and neighbouring hamlets, and this is continued for days. Various holidays, a whole day’s holiday, the block in his hands with much contortion of face until he feels that his soul has entered the corpse, and from which it can no longer escape and go about working mischief. Henceforth much homage is paid to the idol, which is carefully kept in another, the best, corner of the house, and hidden from the eyes of any uninitiated guests. It is consulted and invoked on all occasions by the near relatives, its intimation being sought by offerings of tobacco, by adorning it with shreds of bright cloth, and holding it in the hand till it moves, that is, till it answers. It accompanies travellers on long journeys to guard them from harm, until at last, having lost its virtue (its mana), it is thrown aside as so much lumber, or otherwise treated with much contempt. And in consequence there is no doubt that ‘the Moars worship the departed spirits.’ This belief in the immortality of the soul is the main principle of their religion, and with it are associated many tales and images.” (Glider u. Sitten der Papuas, etc., passim.)

In recent times the upper reaches of the Fly River, about the Anglo-Dutch frontiers, have been depopulated by the incessant ravages of the ferocious west coast tribes, especially the Tugare or Tugare cannibals, whose extreme savagery and cruelty may be taken as representing the lowest state of human culture in New Guinea, if not in the whole world. Little is known about their religion, if they have any; but we have now official information regarding the almost incredible horrors accompanying their slave-raiding expeditions. ‘They are a cannibal tribe of pirates,’ writes the Rev. S. MacFarlane, ‘who make periodic raids upon the villages along the eastern coast. They break the arms and legs of the prisoners, so as to prevent their fighting or running away, and then keep them as fresh meat until required, cooking one or two bodies at a time’ (Cannibals of New Guinea, London, 1888, p. 166). Or else the captive is left for some days; or he is taken alive, to be sold or exchanged with the interior tribes. The natives rush with knives in their hands, each slashing a piece of the body, which may be still alive, in the midst of diabolical noise and yells of rejoicing.” (L. Loris, Official Report, 1885, Appendix 1.)

In British New Guinea, witchcraft causes much trouble, and everywhere presents the same general features. A sorcerer, paid for the purpose, prepares a parcel of rubbish containing a hair or something taken from the person to be operated upon. Then the sorcerer takes an individual person and frightens people, who sometimes sicken and die through fear. Thus the sorcerers cause great trouble, and the people generally would gladly see them put down, but fear keeps them from reporting their threats and swindles” (Report for 1892–4, p. 37).

Various forms of tabu are everywhere, but in the British districts it has never been grounded on any deep religious sentiment, consequently has never taken deep root. So far as is known at the present time, the only tabus prevailing are those connected with the taboo food, prohibitions against eating certain foods, usually the cocoa-nut, for a coming feast. It is most frequently applied to cocoa-nut and betel-nut trees. In some places the prohibition is announced by a syren of wood on a string wielded by a fishing-rod. From the Fly River to the far east, branches, usually of sago, are tied on the prohibited trees. Sometimes strings are put round gardens; branches are tied into the door of a house that is not to be entered, or are laid across a road that is not to be traversed” (ib. p. 38). With the statement about storing up food there should be added the tabus connected with the taboo tree (Tucjare, or any tree, for instance) at the other end of Papuasia. Here tapu has no religious significance, and is associated exclusively with the question of food—that is, the question which most interested primitive peoples. It is much the same in the Marshall Islands, where Mr. F. J. Moss tells us that recently the despotic king of Majuro feared a man for picking a green coconut ‘when the tapu had been placed upon them’ (Through Atolls and Islands, p. 120). The reservation and safeguarding of food, particularly in times of scarcity, would thus appear to be the original purpose, the institution of the religious sanction being a later development, as amongst the more advanced Indonesians of New Zealand, where ‘tapu and its observances, in a sense, took the place of religion’ (A. Hamilton, Art Workmanship of N. Z. Moari Race, 1885, p. 370).

Both in British and German New Guinea ancestor-worship is a prominent feature of the religious systems, and here the moral sense is scarcely yet awakened, so that little or no provision is made against immoral sins in the after life. Thus in Murina (Woodlark Island and the east end of New Guinea, ‘all people, whether good or bad, when snatched away by death, go like the wind to the small island of Watum; there they enjoy the full pleasures of life, the women culti

voL. II.—16
AUSTRALASIA

pected (Bilder aus der Südsee, 1904, passim). Yet the strictly religious views of these undoubted savages may be called 'respectable,' in some instances almost elevated—a phenomenon obviously due, perhaps like their language, to the proximity of the founders, invoking Polynesia, by whom all occasioned by the somewhat costly appeal in the last resort to the supreme god—that is, to the tribal chief. In theory this chief is absolute, but does not receive divine honours until after his death, and, as the souls of all the departed are also supposed to be deified, the number of the auns (spirits, minor gods) would be legion, but for the provision that practically only those are honoured who were distinguished by some special qualities when alive. They do not communicate directly with mortals, but only through the wa-so-ar, a large bird of shaman, whose office is not hereditary, each deity choosing one for himself without monopolizing his services, since he is still free to act on behalf of any other god willing to employ him. Besides the tribal (ancestral) gods there are several others, such as the war-god Arong, honoured in the form of a fish, and Ann-set, the sea-god. Arong represents a famous hero, Rassau, who was slain in the island of Lukunur and buried in the sea; hence all warriors who fall in battle are now also buried in the sea, so that they may join the gods in the mythical garden of the sea. Whether the myth was invented to explain the practice, or is a local tradition coloured by the surroundings, is uncertain, but it shows how 'religion, like all other institutions, has been profoundly influenced by physical environment, and cannot be understood without some appreciation of those aspects of external nature which stamp themselves indelibly on the thoughts, the habits, the whole life of a people' (J. G. Frazer, Adonis, Attis, Osiris).

Besides the ancestral and other gods, there is no lack of demoniacal beings—demons, who infest the large trees, but is dangerous only to young girls and children. Apparitions and other supernatural phenomena are much dreaded, and no Micronesian would venture from home alone after nightfall. They also believe in divination, and 'have two ways of foretelling the future, one by means of knotted cocoa leaves, the other more complicated, but known only to the professional soothsayers' (Kulab, Die Bewohner der Mortlock Inseln, p. 290). Tabu is universal, and there is a 'mourning' for the dead, the chieftain, however, being the only one who, by his exalted position, is burdensome to their bereaved subjects. Other forms are concerned with the food question, as in New Guinea and New Caledonia.

Polynesia (see Table, p. 289, No. IV.) is a region of surprising, almost monotonous, uniformity in the physical and mental characters, the speech, social and religious institutions, and oral literature of its Indonesian inhabitants. The oral literature is partly historical and traditional, but mainly sacred and religious—cosmogonies and theogonies merging into semi-divine grovings; mythology, on the other hand, an underlying system of primitive religious notions, without some knowledge of which it is impossible to understand them. Despite the labours of Sir G. Grey, G. Turner, W. W. Gill, A. Forndamer, Percy Smith, and some other Indonesian students, only a few of these legends have yet been rescued from oblivion, and so great are their volume and variety that Adolph Bastian, their chief interpreter, venture to say that 'the Polynesian range of thought is next to or behind the Buddhist the most extensive in the world, stretching through the length and breadth of the Pacific Ocean, and even farther if Micronesia and Melanesia as far as Malaya be included'; and he adds that the mythologies are meaningless without a knowledge of the religious substratum on which they are
raised (Die heilige Sage der Polynesier, p. ix.).

In this work Bastian himself has published three priceless documents with valuable commentaries: a very old creation myth from New Zealand (Die Schöpfungssage der Maori); from Hawaii a complete theology, beginning, like all Polynesian myths, with Chaos and Night; and The History of Ancient Tonga in the Hawaiian language, by David Malo, a converted native.

Apart from their great variety and the sublime cosmic concepts often embodied in the texts, students are puzzled to understand how such voluminous and written records could be handed down from very remote times, as many of them certainly have been. On this point Mr. Percy Smith remarks that "it is difficult for a civilized people which habitually uses writing in recording events to conceive of the powers and memory possessed by people who have nothing but the memory to trust to. Some few instances of this may be mentioned. A Maori and his wife dictated to Mr. Elsdon Best over 400 songs, and could generally tell the names of the composers and performers. This has been copied by Mr. Best and dictated to the writer 164 songs, and these were so impressed on his memory that the quotation of one line was sufficient to recall the whole of the song at once. Another has written eleven volumes of MS. treating of the traditions, songs, customs, etc., of his tribe, and峨峨 dictation to the writer. All of this matter having been retained in his mind, and including hundreds of proper names (Smith, Hawaiiki, p. 20). It is to be remembered that most of the documents are of a sacred character, hence jealously guarded by the priests, who were mostly hereditary, so that it was the duty of the father, and very often the grandfather, to educate their offspring in the tribal lore. This teaching was accompanied with many ceremonies and karakins, or incantations, invocations, etc., in order to impress the pupil with the importance of the matter. There was a special sanctity attached to many things taught: deviation from the accepted doctrines was supposed to bring on the offender the wrath of the gods" (ib. p. 19).

The statement may thus be accepted that the Maori cosmogony is of immense antiquity, having been transmitted ex-batin from priest to priest for thousands of years. In this as in many other such records the distinction is not always clearly drawn between the divine and the human elements. Sometimes gods become human in the narrative, and men are called genealogies, and often merge imperceptibly in the human genealogies, as if the "inspired singers," after deriving the deities from mortals, had reified the balance by reversing the process. Thus Moana, who looms so largely in Polynesian romance, appears to be at first human, and then through his exploits becomes clothed by later generations with divine attributes, and in another place we are told that one Maui (for there are several) is the son of Tangaroa, and becomes man, Tangaroa becoming the sky. The renowned chief Tu-tarangi also, who in Rarotonga is only an eponymous hero, or at most a demigod, is known to the Niue islanders as a deified ancestor. Now Turner, a great authority, tells us that "the Savage [Niue] islanders worshipped the spirits of their ancestors" (Samoanism: A Hundred Years Ago, p. 306). Here perhaps we have an explanation of the apparent confusion. The all-pervading ancestor-cult evidently underlies the whole mythology: it is the superstructure, and from this source were derived many of the gods of Polynesia and Olympus. But the living chiefs are the direct heirs of these Olympians, consequently their genealogies are mere continuations of the theogonies, and to the native mind there is no real confusion at all. Thus it is that, as above remarked (by Bastian), everything becomes clear when we grasp the root ideas out of which flourish these wonderful efflorescences of Indonesian thought.

At times the Polynesian singers appear to soar into the ethereal spaces and to realize the concept of a Supreme Power in the transformed body of Tangaroa (Taaroa). In one variant the lesser gods, the demiurges, fabricate the universe, and Taaroa himself is spoken of as Toiti, the 'Eternal,' or else, like the Hindu Brahma, or the Dusonian Zeus that "was, is, and shall be," is described in the loftiest language as dwelling 'in the limitless void of space, when the World was not yet, nor the Heavens, nor the Sea, nor Man; from on high he calleth, changing to fresh forms, root of the earth, under-prop of the sky, Taaroa as the Sea-sands in the broad expanse, bursts into Light, cometh down as Wisdom, born the Hawaiian land, Hawaii the Great, the Holy.' Similar elevated language pervades the Mangarian cosmogony, which begins with Te-aka-i-Roa, the "Root of all Being," and is logically developed in harmony with the other island systems (Gill, Myths and Songs, passim). Here, too, the genealogies of the gods pass gradually, as in Hawaii, and with scarcely a break, to those of mortals, all in the interest of the living rulers of the land. Such sublime conceptions, such subtle theologies, are in many cases the vehicles of the dimmest, gloomiest, quaintest, and other purer abstractions, in these children of nature, excite wonder and remain inexplicable in their present fragmentary state. Everywhere we find Heaven, Earth, the Universe, the After-World, recurring under diverse names and forms, personified by language, emblazoned in theocratic and anthropomorphous philosophies—echoes, as it were, of the Vedic hymns reverberating from isle to isle over the broad Pacific waters. The question arises, Have there been Vedic or Sets? It is a chronological question which cannot be answered until the date is approximately determined of the eastward migration of the Indonesians from Malaysia. Did the migration precede or follow the arrival of the Hindustani missionaries in that region? This vital point has engaged the attention of Mr. R. Studholme Thomson, whose 'Origin of the Maori' appeared in The Maori Record for 1906-1907.

Some light is thrown on the origin of a whole class of bird-omens by what Dr. Turner tells us of a superstition in the Marquesas Islands. It is said that where 'Sepo Molosi' ("Sepo the Strong") was worshipped as a war-god, and incarnate in the large bat, or flying-fox. While the bat flew before the warriors all was right, but if it turned round and shut up the way it was a sign of defeat and a warning to go back (op. cit. p. 51). And again: 'The bat was also an incarnation of Taisuanulie, "Tide gently Rising"). One flying ahead of the troops was always a good omen' (p. 57). We are at once reminded of the flights of the eagles seen by Romulus and Remus at the fountain of the Tiber, although at that time the Western Aryans may have ceased to believe in any spirits incorporated in the birds. We also learn something about the origin of ordeals from the statement that in the time of Taroona the sons of Tahiti were kept on the island, shells, and other such objects of superstitions veneration, which were used as aids in the administration of justice. In the presence of such ordeals 'the truth was rarely concealed. They firmly believed that it would be death to touch the cup [these shells] and tell a lie, and when these things became discredited, as having lost their hidden virtue—their mana, so to say—they were replaced by more efficacious processes: the poison-cup, hot iron bars, stones to be fishes out
of boiling water, duel-ling and the like. But the people who hold the same or a similar belief in a supernatural power regulating the application of the tests in the interests of justice. For other Indonesian beliefs and religious observances, see art. POLYNESIA.

Owing perhaps to the difficulty of distinguishing between the legally social and the religious institutions of primitive peoples, a great diversity of opinion prevails even amongst the best observers regarding the religious views of the Australian aborigines. Some hold with Ernest Giles that they have no beliefs on the subject of gods or spirits at all, and yet others whose works are replete with such notions 'have been imposed upon, and that until they had learned something of Christianity from missionaries and others, the blacks had no beliefs or practices of the sort' (Australian Travels Troveed, Lond. 1, 1889, 45). This may be taken as the extreme view on the negative side, and with it Carl Lumholtz so far agrees as to assert that 'at all events it is certain that neither idolatry nor sacrifices are to be found in Australia. Nor have the natives, so far as I know, ever been seen to practice fire-stick, and the belief in a certain supernatural principle has been generally condemned by the local inhabitants, who, while they do not repel the fire, have no special notion of it. Yet perhaps the belief still survives, and totems are even assigned to the mysterious Iruterinina entities, vague and invisible incarnations of the ghosts of ancestors who lived in the Achroringa (q.v.) time, the dim remote past, and who, perhaps, as the beginning of things, were more powerful than living men, because their spirit part is associated with the so-called churinga, stones, stones, or any other object which is deemed sacred as possessing a kind of mana which makes the yams and grass to grow, enables a man to capture game, and so forth. That the churinga are simply objects endowed with mana is the happy suggestion of Sidney Hartland, whose explanation has dispelled the dense fog of mystification hitherto enveloping the strange beliefs and observances of these Central and Northern tribes.

'They are mysterious objects in the closest association with the tribal ancestors, the outward and visible sign, if not the embodiment, of the ancestral souls or invisible portions, and as such regarded with veneration. They are endowed with mana, emanating from the ancestors whom they represent—mana, which not merely heals wounds, but when the churinga are brought ceremonially to an approaching patient produces their physical, mental, and even moral effects... The churinga is equivalent to a sacred sign, which, at the same time, as just as human beings have, which can be soothed by the rubbing in the same way in which those of living men can be' (Address at Arts Assoc., 1891).

Hence a man, as he sings and rubs it with his hand, 'gradually comes to feel that there is some special association between him and the sacred object—that a virtue of some kind passes from it to him, and also from him to it' (Spencer-Gillen, Northern Tribes, ch. viii. p. 278). By whatever name it be called, this is obviously aruaugultha, the Australian mana, and it is equally obvious that the primitive Australian religions are still interwoven with magic (see above).

About the religious and ethical views of the extinct Tasmanians, it is only fair to state that a great deal of information has been gathered from various sources by Brough Smyth (Aborigines of Victoria), J. Bonwick (Daily Life, etc., of the Tasmanians), and Tylor (JAI xxxii. 141, Nov. 1883). Socially they appear 'to have remained to our day living representatives of the early Stone Age, left behind in industrial development even by the ancient tribes of the Somme and the Ouse. . . . The life of these savages proves to be of undeveloped type alike in arts and institutions, so much so that the distinction of being the lowest of all nations of mankind is properly to be claimed for them' (Tylor, loc. cit. 148, 152). Yet the religions sense had certainly been awakened. They feared to move about after dark, believing that their deceased relatives might be hovering about, and
there was a god who presided over the day and an evil spirit or demon over the night, and to the god the women addressed songs or prayers to secure the safe return of their absent husbands (Smyth, ii. 390). Bonwick, however, doubts this, while admitting that the Tasmanians had some dim apprehension of a supernatural being (p. 172), and refers to the case of a native who put a spear in a tree beside a dead body, 'to fight with when he sleep' (p. 174). The evidence is altogether very conflicting, although on the whole rather against the belief in a beneficent deity, and Dr. Nixon, first bishop of Tasmania, states that in the Aborigines, 'not a trace of the existence of any religious usages, or even sentiment, amongst them, unless, indeed, we may call by that name the dread of a malignant and destructive spirit, which seems to have been their predominant, if not their only, feeling on the subject.' (p. 172). And there the matter must rest, since the last of the race died about 1890.

AUSTRALIA.—1. Introduction.—Linguistic research shows that Australia is occupied by three distinct groups of languages, of which two are related to each other, while the third is independent. The groups shows little internal cohesion. The last group, named 'northern' by Schmidt, occupies the north of Australia and descends beyond 20° S. only in the centre, where it is found as far as 27° S. (the Aruntas). The other two groups, 'old' and 'new' Australian, distinguished by the way in which they form the genitive, occupy the remainder of the continent. By far the greater area falls to the 'new' group, split into nine sub-groups. The main 'old' Australian area is in Victoria with traces along the coast; it corresponds to the Australian languages. The 'new' Australian groups are related to each other in syntax and vocabulary, but less intimately than are the component parts of each group among themselves (Menz, 1908). The grouping of tribes arrived at on this philological basis does not correspond very closely to those given by any other mode of classification, for material culture, social organization, initiation ceremonies, and burial customs give somewhat conflicting results; but on the whole the nuclei of the different groups which may be harmonized with the linguistic group, if we allow for a certain amount of lateral transmission. Thus, the eight-class tribes are wholly within the 'northern' area; they reckon descent in the male line, and though there are other districts in Aus-

tralia—notably parts of Victoria and the coast of Queensland—where there is patrilineal descent of the classes or phratries, both these and the no-class areas belong to the old Australian speech-groups or are contiguous to them.

The same holds good with regard to the initiation ceremonies. The rites of circumcision and sub-incision are unknown in Victoria, New South Wales, the greater part of Queensland, and the coastal portions of West Australia; but we may readily explain their penetration into the Neo-Australian area as a result of transmission, though, of course, some amount of infusion of foreign blood may have contributed to the result. Simple burial is, as a rule, characteristic of both the Australian groups, and in the old group it is accompanied by the practice of building a hut upon the grave—a custom which they shared with their neighbours, the Tasmanians. The grave seems to be looked upon as the abode of the soul, though we find sporadically the belief that the spirits of the dead travel to the west, or, where a belief in a heaven exists, to the east in the strictest part of Australia. In the 'northern' area, on the other hand, and certain adjacent districts, the body is submitted to various processes, and the essential funerary rites seem to be the disposal of the bones, which marks the time at which the spirit of the dead is believed to have left the body. It is supposed that special treatment of the bones is a well-marked feature of funeral rites in parts of New Guinea.

When we come to deal with the more intangible sphere of beliefs, we are on more uncertain ground; it is indisputable that belief in a trivial All-Father prevails in Victoria, New South Wales, and parts of South Australia; that it has been recorded but rarely outside this area does not necessarily mean more than that the recorder has not penetrated very far into the ideas of the natives with whom he was familiar. When we look farther afield, it seems that the All-Father belief is pre-eminent in the norther area, and that it is found among important tribes of the Neo-Australian group, such as the Wiradjuri and the Kamilaroi, but there is no record of it among the Darling tribes and in the greatest part of Queensland. So far as we have evidence for it, the tonotum of the northern area seems to differ widely from that which is found elsewhere in Australia, and save among the Dieri and other contiguous tribes, there is little or no evidence of the complex ceremonies except in this part of the continent.

2. Religion.—There has been a good deal of controversy as to the genuine aboriginal character, and, being conceded, the real status of the Australian All-Father. There is, however, satisfactory evidence that Baine, about whom the controversy has turned in the main, was recognized in the Wellington valley before the advent of the Church of England Mission in 1832 (Moore, 1905, No. 28); and, though a Wesleyan mission existed there the Hervey Bay Mission, there is no reason to suppose that it could have exerted any great influence, certainly not enough to introduce such a figure as Baine into the initiation rites of the aborigines, as it must have done if the theory of the missionary origin of these anthropomorphic beings is to be maintained.

There is naturally more doubt as to the precise position occupied in the aboriginal view of the universe by Baine and his congeners; some authors have denied that the term 'god' can properly be applied to them (Flood, p. 190); while others have maintained that they are eternal, omniscient, all-powerful creators. Probably the truth lies nearer the latter than the former view. At the initiation ceremonies of the Emilyi tribe, according to Mrs. Langlois Parker, an excellent
authority, Baiame is proclaimed as 'Father of All, whose laws the tribes are now obeying.' He established the link between the ocean and the land, and the ground should keep peace; he gives rain to the orphan who cries for it; he is prayed to at the bora (‘initiation ceremonies’) and at funerals, and his name means ‘great’; his figure is made in earth on the bora ground (Parker, Ewahlayi Tribe, 71). Some of the difficulties which surround the question of the status of the Australian All-Father have arisen, however, because the disputants have overlooked the fact that the beliefs of the various tribes show not only different degrees of development, but also different patterns. Schmidt has pointed out (Anthropos, 1908) that the Australians seem to have three strata: (1) the belief in an All-Father pure and simple; (2) the belief in an All-Father who has taken over features of a tribal ancestor; (3) the belief in a being of this kind who is also the creator, has wives and children, and (in the case of Baiame) is sometimes depicted as ruling the world through a subordinate. As examples of these three classes of belief may be cited: (1) the Kurnai view of Mungan-ngana; (2) the Theddora, Wiradjuri, and Narrinyeri view of Daramulun; and (3) the Wiradjuri, Kamilaroi, and some Ewahlayi tribes view of Baiame. Bunjil also, the All-Father of the Central Victorian tribes, belongs to the third category. This theory depends on complicated considerations connected with the distribution (a) of personal names, for instance, for which Schmidt has produced evidence in favour of a primary dark race, represented by the crow, upon which two successive waves of migration, represented by the eaglehawk and the emu, have descended. He argues that both Daramulun and Baiame were not indigenous, but originally tribal heroes of the invaders, the former of the eaglehawk race, the latter of the emu race; or, at any rate, that Baiame, if he were the All-Father of the indigenous tribes, combined therewith the character of tribal ancestor of the invading tribes. On this point there is not much evidence on either side, but, such as it is, it tells in favour of the view that Baiame was introduced by the invaders; for it is reported (Australian Anthropological Journal, 1, 14) that the Mininna, on the Lower Lichardt, south of the Murray River, have in a god Gooree who lives in Wannoo; Baianai came from Warderah and taught them initiation ceremonies. So, too, the Mikadoons in the same neighbourhood believe in Gumbo, and say that Baiame, or Mungan-ngana, came from an island beyond Australia. Howitt has already called attention (Native Tribes, p. 498) to the fact that the evil spirit, Coen, at Sydney, had a namesake Kulin on the Herbert River; and if, as it seems, we are entitled to regard these as identical, there is no reason for mistrusting the evidence for a belief in Baiame just south of the Gulf on the score of its distance from the seat of the Baianai-cult in N. S. Wales. In this connexion it may be noted that precisely at this point south of the Gulf the Neo-Australian languages stretch northwards into the territory of the northern group. In this account Baiame figures as tribal hero, not as creator or All-Father, precisely as Schmidt's theory requires.

The following tribes are mentioned by Howitt (op. cit. 488ff.) as having the All-Father belief: Narrinyeri (Nurrandere or Martummere); Wiimitalo (Nurelli); S. W. Victoria (Firmmechal); Wojobaluk, Kulin, and Wooworung(Bunjil, Munic-nungga; or Municollis); Kamilaroi (Mungan-ngana); Wathitawhi (Tha-tha-thal); Tatulrah (Talurah); Theddora, Ngarego, and Yun (Daramulun, Papung, or Biamban); Kamilaroi and Wiradjuri (Baiame); Port Stephens and Herbert River (Coen); S. Queensland (Mamauh and Birral). About some of these, however, e.g. Birral, we have no information, and it is more likely that they are not among the All-Fathers. Birral may well be identical with Bedal (Thorne, Queen of the Colonies, 317), who is said to have made the world long ago, when he floated on the water, in form like a huge turtle two miles across the back. In this being we see few or none of the traits of the All-Father. In the Moreton Bay district, however, Buddai seems to have been the equivalent of Baiame (Lang, Cooksland, 1847, 459).

There is therefore good prima facie evidence for the existence of an All-Father in the south-eastern corner of the line from the mouth of the Murray to Moreton Bay. Beyond this area we have certain evidence only from the west coast between Geraldton and Albany, where Mamma Gnaa, Father of All, is reverenced (Trans. Roy. Soc. S. Aust. xvi. 488). Captain Bradshaw has informed the present writer that on the Victoria River a being is recognized who watches over the morals of the tribes, and the same is reported of Kolin on the Herbert River; but in neither case is the epithet 'Father of All' reported, and there is not the slightest reason to believe that this moral influence is the part of the beings reported from the Lurraia of Port Darwin by Foelsche (Curr, Australian Race, i, 233). The Cape River tribes are said (ib. iii. 146) to believe in a being in the sky, to whom good men go when they die.

In the central district, the supposed being is unlike Baiame; but the evidence as to the beliefs of these peoples is hardly satisfactory. Spencer and Gillen (Northern Tribes, 502 f.) say that Twanyirika of the Aruntas and Unmatjeras, and Kajatijima of the Binkins and Naughtons, pure and simple, whose function is to keep the women and children in subjection; Tumana of the Kaitish and Murtu-murtu of the Warrananggas are simply Alcheringa (v.e.) ancestors. Atnatau of the Kaitish stands by himself; he made the Alcheringa and stands in a real relation to the initiation ceremonies; for he is pleased when the operators sound the bull-roarer, and angry when they do not; but he does not trouble himself about morality.

In this account, however, there is no mention of the being known as Aljira (Alcheringa), as known to the Nurrandere (Veröffentlichungen aus dem Völker-Museum Frankfurt, i, 1), and who seems to have been mentioned by Gillen in the Report of the Horn Expedition (1896) under the name of Uthnaa (‘spirit’). It is therefore open to question how far the assertions of Howitt and Spencer, as appearing in Northern Tribes, can be regarded as exhaustive.

For the Dieri our evidence is equally uncertain. Gonso reported that they believed in a good spirit Mura-mura; but subsequently the Mura-mura were ascertained to be mythical ancestors, like the Mak-Kurnai and the Alcheringa ancestors generally (Howitt, op. cit. 487). Recently, however, it has been asserted that the Dieri believe in Mura, a good spirit, distinct from the Mura-mura.

Associated with the All-Father of the south-eastern area is often an evil being, sometimes described as his son, sometimes independent. Thus Henderson (Notes, 147) says:

'Mudgeong is an evil spirit, who, after having derived his existence from Pame (=Baiame), declared war upon him and now endeavours with all his power to frustrate his undertakings. The offspring of Pame were numerous, but the whole with the exception of two, as described by Spencer, were converted into different wild animals... The evil spirit seemed to be described under the name of Coen, or the principal of his dramatic representations appears to be performed; the principal one is emblematic of the destruction of the explorers.'

Another account (Macarthur, N. S. Wales, 1837, ii. 301) makes Coen a bird, mentioned by Henderson—the author of evil; and a third makes Daramulun himself the opponent (on these myths and their explanation see Schmidt,
in *Anthropos*, iii.). The same antithesis is made between Bunjil and Pulpan, Coen and Poyfan, etc. Schindler's view is that these myths date from the racial conflicts where the crow race gained the day, Bunjil ('eaglehawk') is the defeated; else where Mudgegong ('eaglehawk') is also defeated, but not by the crow.

It should be noted that there is a certain amount of confusion in the various reports; thus Coen, whom Howitt regards as equivalent to Daramunil, is depicted as an evil being (see Howitt, op. cit. 486). Other evil beings are Brewin among the Kurnai (J.M. xii. 191, xiv. 321, note 2), Von and South Australia Kooriie among the Djiir, Jingi in West Australia.

It has, however, frequently happened that an evil being has been reported, who, on examination, turns out to be simply the spirit of a dead man. Thus among the Wiradjuri buggoes is not a proper name; in Western Victoria Niabet (Colonial Tramp, 1891, 99) reports an evil deity Murnop, who comes in the lightning to destroy them, eats children, etc.; the owl is his messenger; he lives under ground and commands the evil spirits. But we learn from Howitt that the soul is the same contrasted evil, hence the name can hardly be of any specific deity, but must apply to the dead in general, who are especially feared in the south of Australia.

Female deities are unknown in Australia, but in a certain number of cases there is evidence that there is believed to be a feminine dead man; thus Kurriwibbin, wife of Kogorowen, is described as an enemy of mankind (Threlkeld, *Aust. Language*, 1892, 48).

3. Burial.—From the point of view of burial customs, the Australian tribes fall into two groups.

(1) In New South Wales, Victoria, South Australia, and the coastal portions of West Australia, simple burial without alternative rites, such as cremation, is the rule, save in an enclave near the mouth of the Murray River. (2) In Northern Territory and Queensland, simple burial without alternative rites is also found, though how far the absence of alternative rites means that our information is defective is an open question; but, as a rule, the body is exposed on a platform, or the flesh is eaten, or the body is buried and the bones subsequently exhumed. The bodies are disposed of with due regard for the disposal of the bones. This rite, however, is often reserved, as is cannibalism, for specially favoured individuals, such as warriors, magicians, etc. Alternative rites are used where the subject was unimportant, owing to old age or youth.

One of these two types of simple burial and complex rites—there seem to be different views as to the destiny of the soul. In the south the grave seems to be regarded in many cases as its abode; in the north it remains with the body or the bones until the latter are finally disposed of, and then goes to its own place. Fear of the dead seems to be more prominent in the south.

In Victoria and the south of N. S. Wales a hut was frequently built upon the grave, in which the widow or another relative sat during the time of mourning. This is also a Tasmanian custom, and strengthens the evidence for the intimate connexion of the Victorian tribes with the Tasmanian (see Folklore, vol. xix. [1908] p. 388).

4. Future life.—Australian beliefs as to a future life are curiously vague, and our information is defective. At Port Lincoln (Trans. Philosophical Institute of Victoria, v. 188) it was believed that the soul was so small as to be able to pass through a chink; after death it went to an island, and could dispense with further nourishment; a redoubt account is that the spirit is eaten by the aboriginals, however (Gerstäcker, *Reisen*, 1854, iv. 364), it was held that the soul lived in trees during the day, and came down at night to eat caterpillars, frogs, etc.; concurrently with this (3), it was believed that the soul went west to an abyss at death. The Enahlayi believe that the spirit of a dead man goes with the spirits of dead relatives to Oohi Oobii, a sacred mountain, from which he is hoisted to Bullimah, Baliane's residence, by certain spirits called *Mooreddysundali* (Parker, *Enahlayi Tribe*, 99 f.).

According to Spencer-Gillen (145, 174), re-incarnation is everywhere the creed. This has been questioned by Strelohv (Globus, xci. 285, xci. 123; *Veröffentlichungen aus dem Völker-Museum zu Berlin*, 1890). The facts are not yet ascertained, Strelohv, however, reports two Aranda beliefs. According to one, there is an island of the dead, from which a spirit returns for temporary re-incarnation, lasting for a year or two, and is finally annihilated; the other affirms that the good dead live with Altjirn, the sky-being. In the place of the re-incarnation doctrine, Strelohv finds the belief that the germ (*ratopa*) of a child issues from the body of a totemic ancestor, or that an ancestor throws a small bull-roarer at a woman, in whose breast the changes to the germ take place.

5. Cult of the dead.—Although totemic ancestors figure largely in myth in some parts, there is nothing in the nature of a cult of ancestors. The dead are feared; certain powers are ascribed to them, such as raising storms, sending rain, procuring a good harvest; in a few cases, various sorts are made to them (Collins, Eng. Colony in N. S. Wales, 1798-1802, i. 601; J. S. Lang, *Aboriginals*, 31; Lanhotlz, Among Cannibals, 1889, 282; Ogle, Colony of West Aust., 1833, 58; Salvado, *Mémoires historiques*, 1854, 276; Stephens, *Hist. of S. Aust.*, 1838, 78, etc.), but not specially as ancestors.

Near Adelaide the spirits of enemies were kept quiet by magic spells (Vorb. d. Gesell. f. Erdkunde, i. 194). Sleeping on the grave of a dead man was one of the methods of becoming a magician (Manse, *Pouvoir*, 17, etc.). There is a wide-spread belief that natives, when they die, return as white men (Roth, *Bull.*, 5, p. 16). There are also traces of a belief in transmigration (*Man*, 1905, No. 28).

6. Soul.—All natives of Australia seem to have held an animistic view of man, though the sky-beings are generally independent of the view of the soul, etc., we have only scanty information. Mrs. K. L. Parker records that the Enahlayi attributed to each person three spirits: Yowee, the soul which leaves the body only at death; Dowee, a dream spirit called *Bullawoll*, a spirit protecting the common, sometimes, Yunbeai, or tutelary animal spirit (*Enahlayi Tribe*, 35).

On the Tully R., Qu., the soul is associated with the shadow and the breath; the *koi* goes away during sleep; after death it goes into the bush. On the Bloomfield R. the *wan-wan* is associated with the breath, but is independent of the ghost. At Cape Bedford it is part and parcel of a man's spiritual part. On the Pennefather R. the *ngai* and the *chok* are distinguished; the latter leaves the corpse at death and wanders in the world of spirits; of a son, daughter, or sister. Both are associated with the heart and afterbirth (Roth, *Bull.*, 5. 17-19).

7. Magic.—With regard to magical practices, there are well-marked differences between the northern group and the remainder of Australia. Among the central tribes magic is practised by both men and women without special initiation, save in the Anula tribe, where the magician is the producer of evil, not the doctor. The initiated medicine-man has the duty of guarding the medicine against the magic of others. Among the south-eastern tribes, however, the medicine-man is both worker of magic and doctor indifferently; and, so far as can be seen,
the practice of magic is usually confined to initiated
men, though Mrs. Parker mentions a witch-woman
among the Ewahlayi.

The magician is so by birth; among
the Anulas only one kin performs these functions; among the Tongaranka a boy inherits his powers from his father (Mauss, op. cit. 10; Howitt, 404). More often, however, initiation is by revelation from the dead, from spirits, or from the All-Father, or else knowledge is communicated by other magicians. Occasionally a man who has escaped miraculously from a violent death is reputed a magician.

It is commonly believed that at their initiation ceremonies they have introduced into their bodies certain stones, usually fragments of quartz, upon which their magic powers depend, and which may be caused to leave their bodies if they partake of alcohol, hot drinks, etc., or are bitten by ants. The Ewahlayi believe that all magicians have a nagnal ('individual totem'), which is forbidden food to them, which they cannot cause to appear to others, and whose shape they can themselves assume.

The commonest form of magic, practised all over Australia, was the pecking of stones, etc., by children, south and east; spells are common; in Queensland a man's lifeblood is said to be withdrawn by the mangani; and magic may be worked by an effigy of the victim (Roth, 5, 28; Howitt, 334; Spencer-Gillen, 453; Mauss, Pouvoirs, passim, etc.).

In connexion with magic, mention must be made of the art of rain-making. The office of rain-maker was often distinct from that of medicine-man, especially among the Dieri, where all participated in the rites; the ceremonies may therefore be termed religious. The same remark applies to the totemic ceremonies of the centre and north.

8. Totemism.—The nagnal, associated with the magician among the Ewahlayi and elsewhere, is probably rare in most parts of Australia (for possible cases see Aust. Assoc. for the Advancement of Science Reports, iii. 515, v. 688; Science of Man, vii. 91; cf. Men, 1904, No. 53). Of kin totemism in the S. and E. we know little beyond the names of the animals. In some cases the killing of the animal is forbidden, but among the Ewahlayi there is no restriction. It is the nagnal that is sacro-
scand and it is on account of this that it is forbidden. The totem also helps the human being (Howitt, 400; Parker, 21).

The totemism of the north and central appears to be generically different from that on the south and eastern coast; it is somewhere to be found in the Arunta of central Australia, and among the Anulas, such totemism is connected with Intiwichma ceremonies, and are all important differentia. Still more important perhaps is the fact that in the south-east totemism is among animals; in the south, centre, and in South Queensland, animals and plants, the latter, fewer than the former; among the Arunta both are fairly equal numbers; and in North Australia, as in New Guinea, the plant totems outnumber the animals (see Schmidt, in Anthropos, iii.).

A progressive change is also noticeable with regard to the eating of the totem, which is per-
mitted among the Arandas alone; in both the Aranda and the Kuitish tribes the totem must be eaten at the Intiwichma ceremonies. Among the Warramungas it is offered to men of the totem by others, but not eaten. Finally, in the Binbuga and other tribes it is neither eaten nor offered. It has been mentioned above that the yunbeai ('nagnal') may be regarded as a fourth soul. There are traces of a similar animistic view of ordinary totemism. Among both the Ewahlayi and the Warramungas ordinary divinatory ceremonies to determine whether a murderer consists in observing the tracks near the body; the track of a snake indicates that a man of

the snake totem is the culprit (Spencer-Gillen, 519, 520; K. L. Parker, op. cit. 89).

So-called 'sex-totemism' is found in South Australia, Victoria, and New South Wales, mainly on the coast. Each sex has a 'brother' or 'sister,' whom they respect and regard as the creator of their sex. The sacrosanct animals are usually small birds (wren, nightjar, etc.) or the bat.

9. Initiation ceremonies.—The initiation cere-
monies fall into two main groups: (1) the central tribes west of a line from near Adelaide to the south end of the Gulf of Carpentaria, practise circumcision, and, with the exception of a small area near Adelaide, sub-mission also; knocking out two of teeth is known and practised in central Australia, but has no special significance; and (2) along the west coast and in Victoria and New South Wales the initiation ceremony consists in the knocking out of the boy's tooth. North of the Queensland border even this feature is wanting, and the sex of individuals is indicated, as amongst the economy, by the wearing of changes, and the direction of dress, which is in one direction for the male, in another for the female.

In connexion with the initiation ceremonies, mention must be made of the system of food prohibi-
tions, which perhaps attains a greater development in Australia than in any other part of the world. Eyre (Journal, 1845, ii. 233) records particulars of South Australian customs. Up to the age of nine or ten, boys were forbidden to eat any food; then they attained riper years (Howitt, 505-577; Curr, op. cit., passim; Spencer-Gillen, passim).

AUTHORITY.—Definition and scope.—The word "authority," as used in ordinary language, always implies a certain amount of coerciveness. The most common meaning is that of a power to enforce obedience. But the sense varies according to the sphere in which the authoritative power is exercised. As regards authority in the home, obedience obviates no coercion. Authority and obedience are correlative terms, supremacy being implied on the part of authority, and dependence on the part of those who have to obey. Authority has the right and the power to say the last word, and to give a decision from which there is no appeal. Its jurisdiction is final. But there is also a use of the word which reveals it as operative in the sphere of opinion, belief, and action. The final test of belief and of opinion is action, and authority in this regard is the power which is held to have the right to influence opinion, to induce belief, and so to lead to action. That is to say, this view really is a phase of the view which looks on authority as the power that enforces obedience, for it shows authority at work in that sphere which ultimately involves action. It reveals the process by which obedience is won. The right to influence opinion, to induce belief, to persuade a man to take a certain course of conduct, which belongs to authority, is thus the way to command obedience. Yet there is a shade of difference in the two aspects of authority which we have already alluded to. A view which regards authority as the power that commands obedience, we abstract from the way and means by which it persuades the man to obey, and fix our attention on the categorical command which might be given by the other authority, which is presented as rational, as proving its right to command, as presenting itself in an attitude of persuasion, as leading the object of authority to lend his own assent to the demand made on him. The power to create opinion, to influence belief, and to constrain to action is exercised with a view to enforce obedience. This power may be exercised in many ways, varying according to the sphere of operation, the means available, and the end in view. In the intellectual sphere it may take the form of authoritative opinion, the view of a man who has the expert knowledge which few others have at command. It may take the form of testimony as to matters of fact of which he is or has been the only witness. In short, it may take a thousand forms; but the outcome in every case is to make present, to constrain belief, and to influence action.

The common element in all forms of authority is ultimately to enforce opinion, and to constrain belief. Without this element of coerciveness, authority has no real meaning. All authority which is in itself coercive, or tends to be so, has its very nature to act. But, on the other hand, authority must be prepared to justify itself, and to show that it has the right to command, and the power to enforce its behests. It is not an end in itself; it is a means to an end. The end may be it is not necessary here to determine. It may be that Höfling is correct when he says:

"Authority can never be anything but a means, and the principle of authority is subordinate to the principle of personality, as mediate value must always be subordinate to immediate value. The burden of proof must always lie with those who would attract authority, or claim to be entitled to it, to oblige them to provide the necessary justification that it is the necessary condition for the complete carrying out of the principle of personality." (The Philosophy of Religion, p. 279.)

To Höfling the principle of authority, while it has its own place and function, is subordinate to the principle of personality. This is a different concept from that made out of the analysis of authority and reason, with which literature is so well acquainted. Höfling is concerned with the principle of the Conservation of Values, and for the right estimate of values the principle of Personality, he holds, is of supreme worth. It is not necessary to enter into his theory, or to discuss it. The main thing is that for him the principle of authority is not ultimate. It must justify itself. There is another view which we may take from Mr. Arthur Balfour.

"Authority, as I have been using the term, is in all cases contrasted with Reason, and stands for that group of non-rational causes referred to, and of which its results by psychic processes other than reasoning" (The Foundations of Belief, p. 219). "It is not that we are to judge with equity between these two kinds of demands, we must... forget that we are... Authority rather than Reason to which, in the main, we owe not religion only, but ethics and politics; that it is Authority which supplies the essential element of all science; that it is Authority rather than Reason which lays down the foundation of social life,—more than than Reason which cements its superstructure. And though it may seem to savour of paradox, it is yet no exaggeration to say that, we would find the quality in which we must insist not its evil; the brute creation, we should look for it so much in our faculty of convincing and being convinced by the exercise of reasoning, as in our capacity for influencing and being influenced through the action of Authority" (Ch. 229 f.).

In drawing out the contrast between authority and reason, Mr. Balfour dwells with delight on customary opinion, habit, and on that group of non-rational causes—moral, economic, educational—which produces its results by psychic processes other than reasoning. He has forgotten to observe that in all these processes reason is, at all events, implicit. For the customs, traditions, and institutions, which, in the social, moral, and educational field, are the means by which we have been led to adopt, not the principles which are contrasted with it, and, we may add, are not even hypothetical—considered as the elements of the system of society that have been the result of the acts of human beings, is, in every case, a result of the exercise of authority. It is no exaggeration to say that, we would find the quality in which we must insist not its evil, but the brute creation, we should look for it so much in our faculty of convincing and being convinced by the exercise of reasoning, as in our capacity for influencing and being influenced through the action of Authority." (Ch. 229 f.)

It may be broadly stated that in every sphere of human activity, and in every sphere of human thought, there is something which may rightly be called authority. The sanctions by which authority vindicates its attitude may vary with each sphere, but in all of them there is authority with its appropriate sanctions. It is not our purpose to make an exhaustive enumeration of the spheres in which authority has its appropriate place and function. To do so would be to enumerate all the sanctions from the intellect to emotion, and, in short, all the achievements of the human mind which are embodied in the literature of the world. But we may ask—

1. Is there an authority in science? And if so, what are its functions, and what are its sanctions? Waiving the question as to the abstract nature of science, and as to the depradation of it on that account, may we not say that it is through the achievements of science that we have won control over the external world, and subordinated to the uses of man? It may be the satisfaction of reason is more subtle than our sciences, and that, while we speak of heat, light, electricity, gravitation, and dwell on these in our abstract fashion, every particle of matter is at the same
time in some state of temperature, in some electric condition, and so on. Yet so far science has read the language written by Nature, and has learned the authority of nature. The external world has been controlled by man, and subdued to his uses only because he has submitted himself to its authority. It is possible for a man to strive to ignore the law of gravitation, but, if he does so, he will never build a house. Practical work in the external world is possible only if a man submits to the authority placed on him by the nature of that world. We do not mean only that he must recognize those great and universal characteristics of nature that make us esteem such generalizations as the law of gravitation, the law of the conservation of energy, and such like,—he must have regard to the particular nature of every natural object with which he has to do. He must deal with stones according to the qualities of stones, with timber according to the qualities of timber, and with other things after their kind. These dictate to science and to men generally the conditions under which work must be done. In building his bridges man must make allowance for the expansion of iron under cold and for its expansion under heat. The nature of his material and the laws of physics speak to him with an authoritative voice, and if he ventures to disregard that authority, he must pay the price.

He will find it sanctioned by tumbling houses, falling bridges, and shipwrecks. Nature will do anything for one who knows how to make her work, but she will do nothing for one who does not know her way and her limitations. We take from the sciences our first example of authority, and we have begun here because we find that the authority of nature can be justified, and that reason quite recognizes the validity of the claim which nature presents to man in the system in which he lives.

Reason can recognize the processes and methods of nature. Indeed, the possibility of science depends on the presupposition of the rationality of nature. Acting on that supposition, science has questioned nature, has experimented with her, has come to know her, has summed up its knowledge of nature in the special sciences, and has succeeded in making nature obey the laws and speak the language which reason has recognized the order of nature as real, objective, authoritative. The value of the generalizations of science lies in the fact that they represent nature, and that they may be verified in the judgment of the observer. If we were unable to know that the order of nature is recognized by man as authoritative, and science has taken it as such. No doubt, there is a correspondence between the order of nature and the constitution of the human mind. The correspondence exists, whatever the explanation of it may be. It would lead us too far afield to inquire into the origin and character of the correspondence. Nor is it necessary; for, whether we hold that mind gives laws to nature or the converse, the correspondence stands. Mind and nature are related the one to the other. So, whether we inquire into the order of nature or into the constitution of mind, we are led to something common to both.

For nature is rational, is a system, and mind finds that the rationality in nature is akin to the rationality of which it is conscious in itself.

2. Authority of the laws of reason.—When we inquire, therefore, into the constitution of mind, we start with the presupposition that we shall find it rational, just as we have found nature to be rational. One of the chief characteristics of mind is that it has the power of transcribing particular experiences, and of making universal and necessary propositions, which it believes to be true always and everywhere. These judgments are disclosed to it on reflection, but from their very nature they lie in the foundation of experience, and without them experience would not be possible. They are of such a kind that the mind recognizes their truth and validity as soon as it understands them. They bear on the face of them their own irresistible evidence. It is impossible for us to think of an event happening without a cause. The law of causation rules the thinking, and of an unrelated event we are unable to conceive. Axions are axiomatic. We cannot think without them. It makes no difference whether we call them 'axioms' or designate them 'postulates'; in either case they are there as the foundation of all our thinking. Without them we should fall into contradiction, and lapse into confusion. Thought must be consistent with itself, that is, it must not be self-contradictory, and thought must be consistent with reality. On the other hand, these universal and necessary judgments must be prepared to vindicate their validity. They must submit to criticism, and show themselves in their universal and necessary character. They must show themselves as all the glory of their evidence; they must be prepared to prove that the opposite of them is inconceivable; and they must prove that, unless we accept them, our thinking will be self-contradictory. It is not necessary to enumerate these axioms. Two and two make four and four is not at another time—on such axioms as these all are agreed, whatever the explanation of their validity may be. All thinking must assume the law of non-contradiction, as all fruitful thinking must recognize the validity of the laws of reason. These axioms are authoritative, and are authoritative in the ordinary meaning of the term. They enforce obedience to them under the sanction that, if they are disregarded, thinking will be inept, unfruitful, nonsensical. In this sphere the authority between authority and freedom, between authority and reason, between the principle of authority and the principle of personality, does not emerge. For the principle of authority here is the very principle of reason itself, and these necessary and universal judgments are those which make freedom, personality, and universality possible. Freedom can be exercised only on the basis of universality and necessity. Because there is a fixed order of nature, and necessary laws of reason, freedom is possible, and ideals may be conceived and realized. If there were no necessary, no universal and necessary judgments, no fixed properties of things, it would not be possible for mind to conceive ends and adopt means for their realization. Nor would it be possible for man to maintain a rational relation to a random world. The main thing, however, to insist on here is that these universal and necessary judgments speak to us with authority, coerce our opinions and beliefs, and constrain us to action consistent with them. They have thus the note of authority, and enforce themselves on us with very drastic sanctions. Our thinking, our action, and even our feeling must be consistent with them, and must proceed with a due regard to their supremacy.

3. Authority in the sphere of civil life.—We have seen that authority is rightly exercised over us by the external order of the world, and by the laws of mind itself, and that the sanctions are of the most real and emphatic order. Can we find a legitimate sphere for authority, with appropriate sanctions, in the sphere of civil life, in the sphere of morals, and in the sphere of religion? It is impossible to say that in these spheres a denial of authority involves self-contradiction. Disloyalty,
disobedience, and anomaly are possible, as history abundantly shows. Take the case of government, and ask, What is the place of authority in it? Historically it is the instrument of the will of the community, a consideration which were not needed in relation to the authoritative nature of laws of nature and laws of mind. With his usual insight and sagacity, Bishop Butler sets forth the essential note of government thus:—

"The annexing pleasure to some actions, and pain to others, in our power to do or forbear, and giving notice of this appointment beforehand to those whom it concerns, is the proper form of government. ... if civil magistrates could make the sanctions of their laws take place, without intercepting at all the sense of happiness, or the reproach of the trial and execution of the formalities of an execution; if they were able to make their laws execute themselves, or every offender to execute them upon himself—we should be just in the same sense under their government then as we are now; but in a much higher degree, and more perfect manner" (Anatomy, pt. 1, ch. ii.)

Attaching pleasure to some actions and pains to others, and giving notice of the appointment beforehand, is the proper notion of government. Let us take this conception with us, as we seek to investigate the function of authority in civil government. The State is the source of authority, or rather the source of laws in its judicial function it is the administrator, and in its executive function it is the active agency in enforcing obedience. All local authorities are derived from the State. These may be administrative, like town and county authorities, authorities dealing with health, etc.; they may be judicial; or they may be commercial; yet each delegated authority derives its power from the State, and is responsible to the State for its exercise. The authority of each independent State is supreme in its own domain. It might be asked, What is the authority of the State, or from what source is its authority derived? That is too large a question to be discussed here (see art. GOVERNMENT). But it may be well to learn from competent authority what is meant by law, by sovereignty, and by subjection and obedience. Austin tells us that—

"Laws set by God to men, laws established by political superiors, and laws set by men to men (though not by political superiors) are distinguished by numerous and important differences, but agree in this, that all of them are set by rational and intelligent beings to intelligent and rational beings (Austin: A Dictionary of the Law, vol. ed. 1831). Again, 'Of the laws set by men to men, some are established by authority, that is to say, a sovereign power or person setting up a sovereign power, or a sovereign body of persons setting up a sovereign and subordinate government, in independent nations, or independent political societies' (p. 2). As to the sovereignty itself, 'Every sovereign law, or every political law simply and strictly so called, is set by a sovereign person, or a sovereign body of persons, to a member or members of the individual society, and by the persons acting in a public capacity, to a sovereign or supreme. Or, changing the expression, it is set by a monarch or sovereign person to a person or persons in a state of subjection to its author' (p. 180). Again, 'The notions of sovereignty and independent political society may be expressed concisely thus: it a determinate human power, not in a habit of obedience to a like superior, receive habitual obedience from the bulk of a given society, that determinate superior is sovereign in that society, and the society (including the superior) is a society political and independent' (p. 170).

It may be well to refer in this connexion to Maine's The Early History of Institutions, p. 349 f., for an independent contribution to Austin's theory of authority and subjection. As to the theory itself, it is very abstract, and the great political facts are reduced and attenuated to abstractions, in which the fact of sovereign service and the loyalty of subjects have disappeared. It is a theory of the idea of sovereignty, and the abstract and obsolete tradition of our idea of authority. Yet, after all, it does not help us much in our inquiry. It may be desirable for the student to read more modern contributions to the theory of the State, especially those which have been influenced by the philosophies of Jurisprudence and by Hegel. Reference may be made to Green's 'Principles of Political Obligation' (Collected Works, vol. ii. p. 445):

"It is a state of opinion that the State as an aggregation of individuals under a sovereignty—equally so whether we suppose the individuals as such, or apart from what they derive from society, to be the only fund of natural rights, or the only fund under the sovereign for the possession of rights. A State supposes other forms of community, with the rights which arise out of the union exist only as the mere forms of those rights and completing them. In order to make a State, there must have been families which the members recognized rights in each other (recognized in each other two powers capable of direction by reference to a common Good); there must further have been a larger scale of authority than that of the family, or between growth out of families, of which each in the same sense recognized rights in the other. The recognition of a right being very far short of the full recognition of authority, which is the recognition by two parties, whether individuals, families, or tribes, being very different from agreement as to what the right consists in, it is clear that recognition require definition and reconciliation in a general law. When such a general law has been arrived at, regulating the position of members of a family towards each other and the dealings of families or tribes with each other; when it is voluntarily recognized by a community of families or tribes, and maintained by a power strong enough at once to enforce it within the community and to defend the integrity of the community against attacks from without, then the elementary State has been formed.'

For the vindication of the exercise of authority in a State, it is not sufficient to dwell on the abstraction of sovereignty, and the independence of a State; the authority must be vindicated on other grounds. Green has shown that a State is not an assemblage of mere individuals under a common government. Individuals are already united by moral bonds; they are in families, and in families, and as such, are united by recognition of rights and duties. Those in authority must do service, and must justify their action on the ground of recognized worth or good achieved; or even on the lower ground of utility. Authority must justify its existence. Aristotle has well recognized and insisted on the obligation to service which attaches to those who exercise authority. He shows that a State is not an association formed exclusively for the acquisition of wealth, or for military strength, or for the encouragement of commerce. The object of the State is the promotion of the higher life. When men are associated together in a State, 'the object of their association is to live well—not merely to live.'

Virtues are not to be wholly attuned to all whose hearts are set upon good and orderly government. And from this fact it is evident that a State which is not merely nominally, but in its true essence, a community of persons united in a higher and more serious purpose, is a community of persons united on account of their virtue. To neglect virtue is to convert the political association into an alliance differing in nothing except in the local community. But the law is, or should be, the law of equal persons. As such, it is a practice of a State which is not a function of the people, but a function of the citizen, and is therefore essentially different from that of the political society itself. It is true, the sovereign power is within question. But the arbitrary exercise of authority is the exercise of power, even if vested in the people. Hence it is the duty of the Good (Aristotle's) to maintain that the exercise of authority is not the exercise of power, but a function of the citizen, and it is the duty of the community of persons united in a higher purpose to exercise authority. But it is clear that this is the true view of the State, i.e. that it promotes the virtue of its citizens' (Aristotle's Politics, bk. iii. ch. 9, Wellen's tr. p. 124 f.).

The authority of a State is not justified by the mere fact of sovereignty; the sovereignty must, of a certain character. According to Aristotle, it must be an institution in which goodness, virtue, and justice are produced in the citizens. The State, in more modern phraseology, must be an institution in which a man can find himself, realize himself, and by its means be able to live a rich, full, and gracious life. It must be the home in which his ideals are so far realized, which in the history of the past and in the situation of the present affords ideals worthy of imitation to the average man in the society in which he lives. The authority of a State cannot be justified by its maintaining a political society. The authority of a nation over its citizens is thus justified by the tradition of the nation, by its achievement in former ages, by the ideal it sets before them at the present hour, and by its promise for the future. The authority of a State is neither rational nor justified by the material force which it has at its command to enforce obedience. Force is no remedy, nor can it win
authority of the governed. Without loyalty the exercise of authority is hindered, confined, rendered ineffective. It makes no difference in the final issue whether power is exercised by a king or by the citizens themselves; for, if it is exercised unworthily, it is exerted against the interests of loyalty, which is essential to the full exercise of authority. Briefly, it may be said that the State is an ethical institution, and while material force is needed, yet the exercise of that force is conditioned by the fact that it must always be exercised for the good of the community, and the interests of the higher values. Authority and loyalty must go hand in hand in every State which is worthy of the name. Of the manifold relations of governor and governed, of the claims which the State has a right to make on its citizens, of the freedom of the individual over against the State, and of the limits of civil obedience it is not possible to speak here. Nor is it necessary, for the due exercise of authority in this sphere must always be in such ways as to carry with it the good of the community, and to deepen his sense of obligation to the State, and to quicken him to do the State enthusiastic service. In this sphere, too, authority has to justify itself by its fruits.

4. Authority in morals.—We have passed in sensibly to the exercise of authority in the sphere of moral life. Is there a Categorical Imperative? Is there an Ought, a law binding on us, which we must obey unconditionally, and cannot disobey except at our direst peril? To these questions it is not possible to give an exhaustive answer within our limits. The facts of the moral life are so various, the explanations of them so numerous, and the theories of ethics so manifold, that it is difficult to isolate the voice of authority, and to render it audible. Nevertheless, the ordinary moral consciousness speaks of virtue and vice, of good and evil, and of right and wrong, and it has definite meanings when it uses these ethical contrasts. It has a notion that virtue and vice relate to character, that good and evil relate to the end of life, and that right and wrong refer to a standard. It is conscious, also, that they all relate somehow to an ideal of conduct. When it speaks of right and wrong, it sets up a standard of conduct; when it speaks of good and evil, it sets up the end of life. Now, when it speaks of virtue and vice, it recognizes an ideal of character which it feels ought to be realized in practical life.

Students of ethics will remember Kant's treatment of the ordinary moral consciousness, which in his Metaphysic of Ethic he analyzes, on the way towards his theoretical exposition of ethical. Kant lays stress on the Good Will as the absolute example of Good. He insists that the aim of the practical reason is to produce an action that is not merely good, but which is good as a means to happiness. A good will is the supreme good, though it may not have attained to completeness. Nonetheless, as a perfectly good will is not attainable in its fullness here, Kant proceeds to set forth the notion of duty. He assumes that the good will in its completeness is wholly rational, and obeys without question or hesitation the law of reason. But in a being like man, who has passions and desires as well as reason, the mot will is not wholly good. Hence the need of the conception of Duty. Kant insists that duty excludes not only all direct violation of morality but all acts of the motive of which is inclination, even when these are not in themselves opposed to duty. In the second place, he shows that an action is determined by the maxim or subjective principle of will which it manifests, not in relation to the object which acts upon desire. And he concludes, in the third place, that duty may be defined as the obligation to act from reverence for law (cf. J. Watson, The Philosophy of Kant Explained [1901], to which the present writer is indebted). Kant's view is, however, that the supreme good which is the motive of duty is not necessarily in harmony with reason. But a good will cannot be determined by natural inclination; it must be determined solely by the principle of duty for duty's sake. There is thus a dualism in human nature, there are wants and desires which demand satisfaction, and there is reason, which prescribes conformity to duty. What is the relation of duty to desire? In answering this question, Kant passes from the analysis of the moral consciousnessness to the philosophy of moral law. And among other questions he asks this one, What is the nature of the supreme good? He derives it from the idea of moral perfection, which reason forms a priori and connects inseparably with the conception of a free will. The principle of moral authority is, and must be, dependent on experience, and derives its authority solely from reason. As Dr. Watson says:

"We learn three things: firstly, that all moral conceptions proceed from reason essentially a priori; secondly, that it is of supreme importance to set the conceptions of morality before the mind in their purity, and not merely in the interest of a certain theory of morality, its origin and its aim in life; and thirdly, that the principles of pure practical reason, unlike those of theoretical reason, depend and are based upon the peculiar nature of man, but are derived from the very notion of the rational being, and therefore apply to all rational beings" (op. cit. p. 217).

Following out these assumptions, Kant proceeds to set forth the metaphysics of morality. The Categorical Imperative is expounded, and in pursuance of it he sets forth the laws of the universal imperative of duty. 'Act as if the maxim of your will were to become through your will a universal law of nature.' Another law reached by him after a prolonged discussion, into which we cannot enter, is, 'Act so as to use humanity, whether in your own person or in the person of another, always as an end, never as merely a means.' And a third law arises to complete the series: 'Act in conformity with the idea of the will of every rational being as a will which lays down universal laws of action.' (We use the translation of Dr. Watson.) Enthusiastic Kantians have endeavored to derive these three laws of motion. There need be no hesitation in recognizing their abiding worth. Nor need there be any hesitation in acknowledging the indebtedness of mankind to Kant for his lofty teaching regarding the conception of Duty. It is a permanent gain that he has shown the possibility of deriving the Categorical Imperative from what he calls the Hypothetical Imperative. It is the practice in some schools of thought to derive the binding character of obligation from the fact that, if we are to gain an end, we must use the appropriate means. This is quite true. If I am to become a teacher, I must qualify myself for the office. And so with regard to the use of any other means by which an end is gained. I may decline to be a teacher, and so be discharged from the training needed for a teacher. But I may not decline to be moral. The demand of morality on me is absolute. For this demonstration the world is indebted to Kant.

The severely abstract nature of Kant's ethics has given rise to difficulties. It is hard for the student of his ethic to find a point of contact with this working-day world. It is also severely intellectual, and seems to disregard the real nature of man. A common prayer of religious men, both in the congregation and in private, is, 'In heart to keep Thy law.' If this prayer is answered,
and the heart is inclined to keep the law, immediately the act is removed from the sphere of duty, for inclination has nothing to do with duty. This tendency goes on, and the emotion is so strong as to destroy its characteristic. Yet on some occasions Kant seems himself to be filled with emotion. This is specially the case in his commanding and striking address to Duty, and when he contemplates the majesty of the starry heavens above and the moral law within. Are we to say that in these moments Kant is lifted out of the sphere of morality? The truth seems to be that Kant in his analysis of the moral consciousness has forgotten the feelings and emotions and desires. Or, when he remembers these, he feels the power of them only as disturbing elements, as hindrances to the working of the Categorical Imperative. He has not apparently contemplated the possibility of a man doing his duty because he likes to do it. If statutes may become songs, if a man may learn to love the law, how does it stand with him? Is he moral or is he outside of morality? Apparently in his analysis Kant has left out this possibility. It is curious to reflect that Herbert Spencer also comes to a similar conclusion, for he thinks that in a perfectly evolved State obligations are of a secondary nature, as duty will become pleasure, and the strain will no longer be needed (Data of Ethics, § 47). In his exposition Dr. Watson says:

"A perfectly good will agrees with the rational will of man in conformity with the moral laws, but there is no obligation in not being under an obligation to conform to them. An imperative has no meaning as applied to the Divine will or any other holy will, such a will being by its very nature in harmony with the law of reason. Imperatives are therefore limited to beings whose will is not in harmony with the moral law, expressing the way in which they do the relation of objective law to an impermanent will" (op. cit., p. 335).

This has a somewhat curious outcome. Is an Imperative less imperative when I consent to its rationality, and consent with my whole nature so completely that all its impulses, desires, and longings are constrained so thoroughly that all opposition to it passes away? Is the imperativeness of the Imperative less than before? Does an Imperative ever become real and operative until I lay it on myself, and make it binding on myself? Does it cease when I am able to make it wholly operative? It would seem, therefore, that there is something lacking in the moral consciousness instituted by Kant. It neglects feeling. It forgets that the moral appeal is directed not to the intellect alone; to the will alone. It commands that the inclinations, the passions, and the desires shall be yoked to duty, and that man as a whole shall live in the moral consciousness established by Kant. It neglects feeling. It forgets that the moral appeal is directed not to the intellect alone; to the will alone. It commands that the inclinations, the passions, and the desires shall be yoked to duty, and that man as a whole shall live in the moral consciousness established by Kant.

Moral authority does not cease when the will of man becomes wholly the good will, nor does obligation cease when man is wholly moralized. The statute does not cease to be a statute when it becomes a song, nor does the law vanish when the heart of man is inclined to keep it. We may not inquire further, in this place, into the nature of moral obligation, nor need we discuss the various views of it which have appeared in the history of ethics. It is sufficient for us to have indicated that morality has authority, from whatsoever source it may be conceived to flow. Man feels that he is bound to attain a certain character, to live up to a certain standard, and to attain to that ideal of life which can be described as good. The impulse of moral feeling must agree with an objective reality, and his judgment of values must be rooted in reality. The objective work must be realized in the inward life. Here, however, we pass beyond the bounds of ethics, and enter into the sphere of religion.

5. Authority in religion. In the sphere of religion, authority takes on a new form, speaks to us with a new voice, and passes from the sphere of the impersonal into that of the personal life. As Haeckel finely says:

"All the religious people feel that it is in the religious consciousness that they possess truth, and they have always regarded religion as constituting their true dignity and the foundation of their life. They are actuated by it in all their actions, as a rule, all care, . . . we leave behind on the shores of time; and as from the highest peak of a mountain, far away from all definite view of what is really the case, with all the limitations of the landscape and of the world, so with the spiritual eye man, the individual who contemplates the cosmos, contemplates it as something having only the semblance of existence, which, seen from this pure region, bathed in the beams of its own sun, i.e., surrounded by a sea of colour, its varied tints and lights, softened away into eternal rest" (Philosophy of Religion, Eng. tr., vol. 1, p. 3).

It is in the sphere of religion that all the authoritative characters of a system, really mean the unity, the moralized, unified, and made effective in a grander manner. For it is here that we can gather them into a unity, and see them to be one, for they reflect the absolute, central unity of the universe. When we speak of the unity of nature and the authoritative character of its system, we really mean the unity which is given to the universe by the mind which informs it, and by the presence ensnared in it. It is the primary revelation of God, and speaks to us with a Divine meaning; and when we read its meaning as the result of the application of an authority, we see the world, the universe, and the machinery of it at once. So, also, when we read and decipher the laws of nature, think out the first principles of reason, and act on its axioms, we are dealing with reason which is not merely ours, but is also objective and authoritative. So, also, when we read history, we read history, and not the history of man organized into communities, and realize what in this sphere authority and subjection mean, here too we are in a Divine presence, and the powers which be have been ordained of God. All authority is thus ultimately Divine authority, and it is true of the world from the theistic or from the pantheistic point of view. In the latter case authority comes from the perfect whole, in the former case it comes from the living God who has made, sustains, and rules the world. So, too, the binding power of morality flows from God. It is for this reason mainly that we are dissatisfied with the analysis of Kant, and regard it as imperfect. For religion comes to ethics and seeks to deliver it from the dry abstractions on which it delights to dwell, and strives to make it live, to give it a moral raison d'etre. It would seek to derive the Divine authority from a Divine nature, and for to religion the Divine will is only the expression of the Divine character.

As to the authority of nature, of truth, of civil society, of moral law, religion regards it as valid in its own place and way. They are expressions of the Divine nature, and express it as far as they can. But nature is an imperfect expression of the Divine nature. It may show forth certain aspects of the Divine nature, but the full meaning of God cannot be expressed in nature, or in human reason, or even in man as yet. God has really put a meaning into His works, and that meaning we are bound to read. Science is our interpretation of that meaning so far as we have been able to make it. It is impossible to admit all the limitations of human reason, and in the nature of the man, for here we deal with a world of persons, each of whom has or may have a meaning in himself. But even here the language of human life and the instinct of our nature has had to express that meaning is not adequate to its work. For man is imperfect, man has been so far non-rational and
non-moral, and the meaning of an absolutely moral and rational Personality cannot be expressed by these imperfect means. Yet nature and history do in some measure reveal God, and their value for religion consists in the fact that they reveal the idea of this authority is transformed from the old mode of coercion, and has become something new. No longer is man impelled by the fear of consequences, or by the dread of an external penalty somehow connected with disobedience. The strongest sanction is that he dreads an unspeakable terror the possibility of estrangement from God, and of losing that fellowship which is his very life.

This, then, is the nature of authority in religion. And it sums up in itself all other authorities. It is the guarantee of law to this authority and sanctions, and in so doing makes them more than ever coercive. It is also to be observed that this authority is wielded by God Himself and by Him alone. God alone is Lord of the conscience, and in the exercise of power by the other authority is at best ministerial, and is authoritative only in so far as it can produce and substantiate its credentials from Him. Laws of nature, laws of reason, laws of civil authority, laws of morals, are binding on men so far as they are laws of God, and no further. This seems to be what authority is from the religious point of view.

Again, from the religious point of view all things and agencies have their value in this, that the most high is named that name which is so far as they are able to express that meaning. Thus they have to be supplemented and added to by those other ways of Divine expression which are to be found in the history of man and in the fullest revelations of God. This is not the place for a lengthy discussion of revelation, or of that form of it which Christians believe to be the highest and fullest, viz. the revelation of God given to man in Christ. Nor can we even indicate how in the revelation of God in Christ there is a complete rearrangement of all the other authorities, and manifests or a manifestation of authority binding on all. Truth for the intelligence, life for the heart, and energy for the will are summed up in Him who is the Way, the Truth, and the Life.

Leaving these topics for adequate treatment in their proper places, we may note here that the authority of God vindicates itself on every ground on which it could be vindicated. We instinctively bow down in obedience to the highest and the best, to the wisest and the most pure, to the mightiest and the greatest. We bow down to this authority, regard its behests as binding, not merely because we recognize its right to command, but because we find also that its service is perfect freedom, because we are persuaded that it can guide, strengthen, comfort, and console. Here also authority appears finally in its strongest and most persuasive form. Perhaps the most picturesque, as it is the strongest form of authority, is that exerted by a person upon persons. Think of the loyalty of soldiers to the general in whom they trust, think of the devotion of disciples to a master, think of the loyalty of men to a great political leader; they will work for him, serve him, live for him, die for him; his word will send them forth to fulfill his will or die. This element of personal devotion is religion in its highest flights. From this point of view natural laws, laws of reason, laws of morals, come become ways by which we acquiesce ourselves with God; but these do not satisfy, they simply impel us on to acquaint ourselves with God and be at peace.

From this point of view certain discussions regarding the ways by which God makes Himself known simply become irrelevant. There is no need to inquire into infallibility, or inerrancy, or any other categories of the same kind. These are categories which men cannot use. Nor are they needed. For the ways by which men by themselves known are simply means to an end, and we need not spend time on their characteristics. We only ask, Do they lead to God? However good and sure the ways may be, their ultimate value lies in this—that they lead to God. Yet men may linger in them, admire them, speculate about them, their beauty, inerrancy, and so on, till they place them in a position which belongs to God alone. It is time that men should use them as they are meant to be used, and cease to attribute to them qualities which belong to God alone.

Authority then is real, is ever present with men, is indispensable for the training and education of the next generation. It is exercised in many ways and in many degrees. It has to justify itself not merely by force, and by the use of penalty; it has to meet the demands of human reason, to satisfy the requirements of the human conscience, and to prove itself the guide, the counsellor, the friend of man. The will must find in it purpose, guidance, and energy; the heart must find in it something to stir the emotions, to win the affections, and to arouse the higher passions of love and desire. And the intelligence must find in it truth, principle, and reality. When we trace all authority up to God, we have reached that which is the highest and most sublime, that demands that men have a right to make on the authority which confronts them with an absolute claim to loyalty and obedience.

JAMES IVERACH.

AUTOMATISM.—Originally the ‘automatic’ meant that which happens of itself and without any visible external cause, and the sense of the word in the various sciences may all be traced back to this etymological signification.

1. The first of these is the physiological. When motions are observed in an organism which are not apparently initiated by any external stimulation, the action is described as automatic. Thus automatisms are one of the chief marks of a living body. Physiologists, however, generally hold that this spontaneity is only apparent, being really a secondary rearrangement and interaction of the chemical and physical forces which have been taken into the organism. All physiological activity is thus taken as continuous with and included in the general scheme of physical interactions.

2. When this point of view is extended to the psychological plane and confronted with the fact of consciousness, it may engender that form of parenthesis it is customary to insert before discussing the physical automatism, or the Automaton Theory. As the various physical energies are taken to form a closed system with a fixed amount of energy and incapable of being affected by anything alien or extraneous (such as consciousness), it must on this theory be deemed that consciousness has any efficacy, i.e. that its presence in any way alters the course of physical change. Why it should exist at all becomes a problem; but it may be regarded as an epi-phenomenon, a sort of unobjec-
tional residuum, the production of which is logically in some unexplained way produced by, the flux of physical changes, or as a series of changes running parallel to, and somehow corresponding with, the physical changes, but of a fundamentally different order. The scientific aim of the doctrine of psycho-physical parallelism is to distinguish sharply between psychical and physical process, and it has the methodological advantage of freeing the consideration of the latter from the perplexing influence of the former. It may assume a double form, according as the automatism is supposed to be the result of consciousness or unconsciousness. The motions of the organism merely simulate the phenomena of feeling and consciousness. According to Descartes, animals are unconscious automata of this kind. But inasmuch as the only consciousness of which any one has direct experience is his own, this argument may, and indeed must, be extended also to human actions. Another's consciousness is always an inference by analogy drawn from his actions. We assume our fellow-men to be conscious, because they behave as we do, because we are conscious and we have no direct experience of the existence of consciousness, we have not even here direct experience of its efficacy, if (with, e.g., Hume) we choose to set aside the testimony of the direct experience of agency as a proof of causation. The theory of psycho-physical automatism, then, fits in well enough with the assumptions of physics; but it comes into conflict with the biological presumption of the survival-value of any characteristic of life which has been progressively developed. For, unlike the automatism in the form of the animal, the conscious agent has the capacity to receive, act on, and interpret the experience of the surroundings, to be affected by the passage of time, to be subject to advantage and disadvantage, success and failure, in the course of physical change, it is hard to see how it could have had survival-value. A complete refutation of psycho-physical automatism, however, can be achieved only by displaying the methodological nature of its fundamental assumption.

3. In psychology proper, action is said to be automatic wherever the organism functions without the voluntary control (and in extreme cases even without the knowledge) of consciousness. Thus functions which are 'automatic', i.e., in the first sense may or may not be 'automatic' also in this; while, if the second sense of 'automatism' is adopted, it follows that all bodily motions are 'automatic' also, in this third sense. In practice, however, psychologists do not work with this theory of psycho-physical parallelism, but with voluntary and automatic psychic processes. Automatism in this sense is closely related to the phenomena of Volition (q.v.) and Habit (q.v.). Fully conscious volition occupies an extreme position in the scale of volitional forms which is steeped in complete automatism. Such volition appears to be the condition of organic response only to relatively new situations, and, as involving effort, strain, thought, and time, is too expensive to be economized as much as possible. Accordingly, the volitional character of an action recedes more and more into the background as a function becomes established. As actions become familiar and habitual by repetition, volition and consciousness both tend to fade from the picture of the physical change which accompanies the action, though for a long time the continuance of these factors as powers kept in reserve is suggested by their reappearance in emergencies. In this way what was originally a highly conscious, difficult, and volitional act (e.g., walking or reading) may become degraded into almost any degree of facile automatism, though it should always be remembered that this psychological declension means a biological gain. Hence it may even be maintained that the distinction between the voluntary and automatism has disappeared, and the primary automatism of all the organic functions which are not (normally) under the control of the will or within the cognizance of consciousness, may ultimately be abolished. The difference between them may be reduced to one between acquisitions of a newer and of an older date. Primary automatism may be regarded as that part of vital functioning which has become so regular and certain as no longer to require conscious supervision. This interpretation is evidently attractive from an evolutionary standpoint, but as evidently it needs to be combined with some hypothesis of an acceptable theory of the transmission (or apparent transmission) of habits.

The philosophical importance of this secondary automatism is considerable. For it enables the moralist to regard the economy of mental experience many acts and processes which are experienced are no longer voluntary or even conscious, and so facilitates the evolutionary treatment of ethical data. It plainly suggests, moreover, a definite theory of the origin, function, and future of consciousness, which is a law of function to tend from the conscious and volitional towards the habitual, involuntary, and unconscious, it would seem that any perfectly adjusted functioning must be unconscious, that consciousness itself was essentially a contingent of a disturbance of habit, and that unconscious functioning was both the beginning and the end of conscious life. Thus consciousness would be essentially evanescent and transitory. This inference can be avoided only by denying that the growth of automatism is a law of evolution. In that case, the course of the course of physical change, it is hard to see how it could have had survival-value. A complete refutation of psycho-physical automatism, however, can be achieved only by displaying the methodological nature of its fundamental assumption.

4. In addition, however, to the actions which are removed from conscious control after having once been conscious, other automatisms are found to occur which seem never to have formed part of the conscious life of the organism. They are to be initiated outside the normal course of experience, and to intrude upon it as aliens. They may assist it, or more frequently disturb it, whence they are usually regarded as pathological. Such automatisms may become conscious, but may attain to a considerable degree of coherence and persistence in cases of 'multiple' and 'alternating' personality (q.v.). They have been classified as sensory (e.g., dreams (q.v.) and visual and auditory hallucinations (q.v.) and as voluntary (automatic speaking and writing), and their interpretation raises the important question of sub-
consciences mental life (see subconsciously) and its relation to consciousness. It is also thought by some that in such automatism traces of superconscious life (prthajana) and powers have been found and these have been claimed as evidence of the possibility of communications from the departed. Their biological value for the guidance of conduct is not as a rule great, and this is precisely the reason why they are usually treated as pathological. What might be called the ascetic element of Kant's ethics. In all love, of whatever kind it is, he perceives only motives that are governed by the passions and self. (2) We must desire the universal, for only the universal is presented to us as an element of pure reason; all that is empirical is contingent. Here we find the influence of the rational and social element of Kant's ethics. These two arguments, which in Kant are blended in one, are in reality of very different kinds. The submission of the empirical will to the pure will is not connected with the idea of the universal, which Kant identifies elsewhere with the social; on the other hand, this notion of the universal affects the will only when it becomes the object of an attraction, the contents of a feeling. Kant's ideal is a will which is identical with reason, but experience does not bear out the inference, and it is conclusively proved, that the man whose will has become 'pure,' in the sense implied by Kant, is the moral man par excellence. It seems, indeed, that he would lack what constitutes the soul of all complete and profound morality. The concept of autonomy is an abstract idea stripped of all psychological basis. It expresses an idea of liberty indeed, but Kant was quite unable to deduce from it practical rules for human conduct.

Of present-day philosophers, the chief to revive the idea of autonomy is Cohen ('Die Ethik des reifen Willens,' System der Philosophie, 1907, pt. ii.). But, inspired by Fichte's ideas, Cohen conceives autonomy, not as the faculty of practical reason, producing laws freely for human conduct, but as the faculty of man, making the human individual the supreme end of all his actions. Under this conception, autonomy becomes, in a direct and positive manner, a social principle, which it is in Kant only indirectly or rather negatively.

Eugène EHREHARDT.

AVALOKITEŚVARA.—1. The name.—(a) Īśvara, which, among nauyugikas (philosophers) and bhaktas (devotees) alike, refers to the personal and supreme god, means etymologically 'king,' 'monarch.' It is an epithet common to the Bodhisattvas, or at least—for that name includes every individual who seeks to attain the Bodhi, even although he is still a 'natural man' (prathyugita)—to all the Bodhisattvas who are in complete possession of the qualifications of Bodhisattvas, viz., those who are 'great Bodhisattvas' (Bodhisattva-Mahāsattva), 'masters of the ten stages of Bodhisattva-ship' (dakṣaḥkāleśvara) (see Maheśvatī, 22, 15). But, when speaking of Avalokiteśvara, who is not only a 'great god' (deva) but also, as 'providence,' we cannot forget that Siva is called the 'great lord' (Maheśvara) or simply, the 'lord' (Īśvara).

(b) The meaning of the compound 'Avalokiteśvara' is not at all clear: it does not attach itself to its signification. It may mean either 'the lord of what we see,' i.e., 'of the present world,' or of...

* See Kern, Gench. I. 324, Jauer, in Itthimandala, 76, Burnouf, Introduction, 228, Friedelin, Commentaire, 139, "Narayana, une divinité de la grêle et du tonnerre"; Gradwael, Lamenœ, p. 150; Rays Davids, Bodhisattva (1899), p. 500; Waddell, Lamenœ, p. 40; and Judd, 1892; Watier, Praté-Chougr, I. 344; 'the beholding lord.'
Avalokitesvara is the sun; and, in fact, Padmapani, Lotus-bearer, which is a name of Avalokita, is also a name of Sun (sūna). Avalokita is the Viṣṇu of the Buddhists.

2. If Avalokitesvara signified originally 'the lord who is seen', 'de geemonbaarhe Herr', 'the revealed god', it looks as if we ought to trace back this signification on the one hand, and the conception of the Deity on the other, from a high. This meaning is not quite satisfactory, for Avalokita, like all Bodhisattvas, looks both at the Buddha ('Bhagavanadhāvakaśākara-pa') and at the creatures with a look of compassion ('karunakāmitāvakaśana').

The use of spyan-ras-kyis (see also Darmasāra) is strikingly reminiscent of the title of some Bodhisattvas, as for instance, &c., a name of Avalokita is a most present participle, which, as M. Kern remarks, is bad grammar; but Burnouf failed to see in this inaccuracy a decisive argument against the current interpretation, and we may agree with him. Further, from the grammatical point of view, spyan-ras-kyis, 'lord of compassionate glance', = Avalokana, 'lord of special mercies', = 'lord with compassionate glance'. Avalokita is the god whose face is turned in every direction in order to see everything and to save everybody; he is called the "dispeller of fear", the "all-sided protecter".

(c) One of the most notable names of Avalokita, and certainly the one which gives us the best idea of the character which had been ascribed to him for a very long time, is Lokakṣema, Lokanātha, 'Lord, Protector of the world.' M. Kern expresses this, without doubt, very well when he says: 'Avalokita represents here the god of the present,' 'the one who bears the world,' 'son of a Buddha (Amītābha), as the present is the son of the past,' the concrete counterpart of the 'Body of Law' (Dharmakīrti), the present form of the Lord, 'the pure one, the Lord of the dwelling-place, Amitābha, who dwells in the setting sun, is the god of Paradise.'. The texts clearly show that

*See Kern, J.C., "Buddhism," p. 126, note. Parijita (Mahāyāna Sūtra, 126, 83) seems quite clearly to mean parijitaratna, and it is possible that there are other examples.*

*See Böhtlingk-Roth, s.v. lok aitana (2). Further, Avalokita means 'a person to whom good-luck has been said,' one who has been seen for the last time (depends on Dīrghāṇa and Mahāāskara). Avalokitēsvara is indeed the lord of the departed and the help of the god of new-born. The present writer owes these valuable observations to Mr. W. F. Thomas.

*Lotus, ch. xxiv.; Kern, ii., 171; Beal, Catena, 388. Like spyan-ras, the lotus flower is the characteristic emblem of the Buddha, and establishes a constant contact between Avalokita and Siva. But the prefix aitana has no such precise meaning. The spyan-ras, 'glance,' like the smile (sūla) and the beam (rasā), is a mode of communication.*

*Burnouf, Introd. p. 226, note. Parijita (Mahāyāna Sūtra, 126, 83) seems quite clearly to mean parijitaratna, and it is possible that there are other examples.*

*See Böhtlingk-Roth, s.v. lok aitana (2). Further, Avalokita means 'a person to whom good-luck has been said,' one who has been seen for the last time (depends on Dirghāṇa and Mahāāskara). Avalokiteśvara is indeed the lord of the departed and the help of the god of new-born. The present writer owes these valuable observations to Mr. W. F. Thomas.*

placed in you.* Avalokita is a Great Bodhisattva, but he is not the only one, nor is he unquestionably the most important.

It is probably this stage in the history of Avalokita that is represented in the very old relics, where a 'Lotus-bearer' Padmapani (afterwards the equivalent of Avalokita) appears with four or seven other Bodhisattvas, surrounding a Buddha or below a Buddha.

There is reason to believe that Maitreya (the future Buddha), for example, whose doctrinal position is better established, must originally have taken precedence of him; and there are many highly authentic and well-authenticated writings, such as the Sanskrit-Tibetan Lexicon (Mahādeyapratīti) and the Chinese records, which lead us to believe that Maitreya was able to maintain his position. In any case, it must be noticed that the role of 'Good Bodhisattva,' helpful and divine, very noble (paramārtha), the giver of security (sukhayānusāda), etc., was divided among Kṣitigarbha and his companions, before it became the more or less exclusive designation of Avalokita. Now it must be borne in mind that the preceding remarks are not intended as a polemic against the generally current view from the dawn of the Christian era, in certain circles at least, Avalokita became an important personage and a jealous god.

5. *Lotus of the True Law, Sukhāvatīvyūha, Avatārayāpyakṣamāna.* (a) Avalokita is the principal Bodhisattva, but there is a whole chapter on his āparaṇa, his 'gesta,' in the Skṛt, *saivāthaṃya.* He is far superior to the other Great Bodhisattvas (Aśvāksayatama, etc.), who along with him listen to Sūkyānunī, with the single exception of the Bodhisattvas of the *Lotus* (Lotus of the *true* Dharma) who is the 'saviour': it is better to think of him than to do honour to thousands of Buddhas. He assumes the form of Buddha, Bodhisattva, Mahāsāvara, Kuvera, Vajrayāna, as the case may be, the more easily to fulfil his task of mercy. Aśvāksayatā (understanding intelligence) presents him with flowers; he divides them between Sākyā and the stāpa of an 'extinct' Buddha. According to the versified text, he real dwelling-place is in the *Sukhāvatī,* the paradise of Avalokita, where he sits sometimes on the right and sometimes on the left of Buddha.

* * See *Śūkyā, p. 260; Bodhisahyaprāṇa, p. 314. *

* See Grünwedel, *Buddh. Art in India,* pp. 196, 210 ff. *

* Maitreya is the only Bodhisattva acknowledged in the *Lotus*; the second in *Mahāyāna-pratīti,* the first in the *Dharmarāṣṭrapāra,* etc., and plays the chief part in the *Lotus.*

* The *Avatārayāpyakṣamāna* (Skṛt. *Kṣitiputra*; Mahāyāna) has some hesitation in recognising Avalokita in the Guatāra sculptures, and is certain only of the identification of Maitreya (Buddh. *Art in India,* p. 152 fn.). Nevertheless, the view which, following his example, we express on the chronological and dogmatic priority of Maitreya is supported not only by the fact that Maitreya alone is recognized by the Little Vehicl (Deal, *Buddhist Records,* ii. 61), but also by certain statements of the Chinese pilgrims, who were more interested in the heaven of Maitreya than in that of Avalokita, more interested in the coming of Maitreya than in the present living Avalokita (see especially ib. lii. 225, l. 227). *

* More or less exclusive, according to Wassilieff, as is proved by the collections of the hundred and eight names of divinities in *Kṣitiputra,* *Rṣya,* xiv.: Avalokita, Maitreya, Aśvāksayatā, etc., and six Bodhisattvas in the *Dharmarāṣṭrapāra,* the addition of Avalokita and the collection of the Chinese pilgrims, who were more interested in the heaven of Maitreya than in that of Avalokita, more interested in the coming of Maitreya than in the present living Avalokita (see especially ib. lii. 225, l. 227). *

* See the translations of Burrow and Kern. The *Māhāyāna* forms ch. xxv. of the Chinese edition. In China it is one of the *Lotus,* the *Sūkhyāna,* the *Tathāgata-samādhisāra,* the *Sarvavarnavānvidhakāla* and Kṣitigarbha (Wassilieff, *ib.*), the eight Bodhisattvas of the *Dharmarāṣṭrapāra,* with the addition of Avalokita and the collection of the Chinese pilgrims, who were more interested in the heaven of Maitreya than in that of Avalokita, more interested in the coming of Maitreya than in the present living Avalokita (see especially ib. lii. 225, l. 227). *

* The *Nīkāya* ascribes to every Bodhisattva this power of transformation. Even the wish of all the Bodhisattvas to become food and drink (pānābhijāna) in times of famine is taken literally.

* The association of Vajraṭīḍi with divinities who are worthy but not the most important. In the hundred and eight names of the *Sūkhyāna,* Vajraṭīḍi begins by mystical recipes from Avalokita. See E. Senart, *Congrés d'Alger,* *Vajrayāna.* and below, p. 230 and n. 7.

* The *Sukhāvatī* and the *Amitābhyāyakhyānamātra,* supplied with a very fine theology of *Amitābha* and Avalokita. It is possible to distinguish the *Sukhāvatī* from the *Lotus,* now ten ages (kalpa) since he became Buddha, and it will be a very long time before he is extinct.

In principle all the Buddhas are equal; they possess the same intrinsic perfections, the same knowledge. But it is very probable that they are differentiated in the exercise of the various roles because of the vow that they have made. Now Dharmākara, the future Amitābha, the under the Buddha Lokesvarārīja, § vowed that, when he reached Buddha- hood, he would have a 'Buddha field,' wonderfully blessed, the Happy (Sukhaṅdhatu), and that is why there flock to him from all the Buddha fields the beings appointed to nirvāṇa, either as future arhats or as Buddhas.* It is with Amitābha that those who are guilty but possess the promise and potency of deliverance spend their period of probation in the different Bodhisattvas become prepared for their last birth, by having good opportunities of going to visit, to honour, and to listen to the Buddhas of all the worlds.** After this period these Bodhisattvas will become Buddhas and their spheres will become the inner spheres of their own. As regards Avalokita, it is at the end of our age that he will appear as the thonanist and last Buddha of the age.†

The Bodhisattvas are not equal among themselves. In the heaven of Amitābha there are two, Avalokita and Mahāsthamaprapta,** almost as great and luminous as Buddhas, who sit on thrones equal to his. Avalokita is the more majestic; this is due to his vow to bring all beings, without exception, into the 'happy land.' And while his glorious body illumines a great many worlds, he traverses them all in different forms, sometimes real and sometimes magical; like Amitābha himself, he has parts of himself incarnated here and there; he never forgets for a moment his rôle as provider of the Sukhāvatī. And it is he, rather than Mahābuddha, who is the centre of the religious life of the whole Buddhist world, in the same way that the world of the modern Catholic is centred on the Pope. *

* *Sukhāvatīvyūha (Chinese tr. 147-186), in two reductions, edited by Max Muller, Anecd. Ovovintensi, and also in fac-simile Musse Guimet, a, translated in *SBE* xix., with the *Amitābha,* the Skr. original, of which there is no edition inferior to that of Dr. T. W. Rhys Davids (in 424). On this text cf. also *JETS,* 1894, 2, 1. *

† On the human descendants of Amiita and Avalokita, cf. also Rémusat, *Poëe-khot.*

* There are two things which have no limit, the brilliance of Amitābha and the Bodhisattva. But the light of Amitābha illumines all the fields of Buddha, owing to the 'special vow' of this Buddha to lighten his own field and an infinite number of other fields. Although Amitābha is praised, glorified, and preached by all the Buddhas, he cannot lay claim to any kind of monopoly. A fairly just idea of the system may be formed by regarding the Buddhas as saints (in the Roman Catholic sense of the word), who are all saints for the same reason, but among whom priests distinguishes more or less powerful saints. Cf. *Mahānyasa,* iii. 350. 15.

† A name of Avalokita.

* More refined in charity is the wish expressed in *Karmayānuparipāka* 'to have a Buddha field' inhabited by inferior beings overwhelmed by calamities, in order to have a more worthy object of play.

* In the kingdom of Amitābha all the Bodhisattvas are in their last birth, but they are not Buddhas; according to their special wish (pranidhānavacra) to save others. It is noteworthy that our text admits the existence of arhats, saints and angels who are not all Buddhas, according to the Little Vehicle, i.e. beings appointed to attain to nirvāṇa without passing through the stage of Buddhahood. The Great Vehicle believes that all beings will become Buddhas, and this was not the case in the Little Vehicle (ib. 142).

* They do not even have to move in order to worship and listen to the Buddha, who is everywhere in the world.

† Schmidt, *Über die tanzende Buddhas* (p. 106); and Rémusat, *Counompe, Melanges Pothier.*

* In modern Chinese versions of the Sukhāvatī, Vajraṭīḍi takes the place of Mahāsthamaprapta (Foucher, *Catalogue,* p. 53). The Japanese representation of the Sukhāvatī is nearer the original text of Maitreya, Avalokita, and Mahāsthamaprapta often have stūpas on their heads (Grünwedel, *Buddh. Kunst,* pp. 139 and fig 53).
than Amitābha himself, who is the lord of the Sukhāvati.*

This ostentations and short-sighted glorification of Amitābha has given rise in our opinion to a doctrine of salvation, very different from the ordinary doctrine of the Great Vehicle. According to the Little Vehicle, the Buddhists were only instructors; in the ‘rationalist’ Great Vehicle they have become models, and the Bodhisattvas appear as friends, counselors, protectors;‡ their presence does not in any way lessen the necessity for personal effort. In the Sukhāvati, Amitābha and Avalokita save the faithful almost in spite of themselves, as the cat saves her young by taking them in her mouth (a Kraṇāvatāra miracle). There is, however, a reservation: those beings guilty of ‘mortal sins’ are excluded from the Sukhāvati.

The Amitāyurdhyāna does away with this restriction: the paradigm is saved if he pronounces the name of Amitābha. In a word, our theologians, as well as those of the Vajgrāmya, have to distinguish between ordinary people who are liable to hell, etc., and devotees who are naturally exempt.

(c) It is to this period that the iconographic monuments seem to belong, about which the Chinese pilgrims had given us their testimony, between 65 and 185. Another point that we are quite justifiéd in referring to them here, as the Amitāyurdhyāna speaks of statues in which the characteristics of the god are reproduced. We find isolated statues of Avalokita, among which the great statues described by Burnouf, and groups in which he is facing Maitreya, Tārā, and Mahājñāpi, and probably also Mahāsthāna—wonderful statues, recurring throughout the whole Buddhist world from the extreme North-West to Ceylon.‡ They give us a sculptured representation of the texts, which describe in detail the attitude, colour, and qualities of the gods. The Amitāyurdhyānasūtra places a ‘magical’ Buddha, twenty-five leagues high, on the head of the glorious body of Avalokita, seated on the left of Amitābha; this is clearly represented in the icons (to which attention has already been drawn by Huien Ts’ang), where Avalokita wears in his head-dress a seated statue of a Buddha, who, at a very early date, if not from the very beginning, was identified with Amitābha.‡

The Amitāyurdhyānasūtra recognizes a characteristic of the Great Vehicle in the fact that worship was bestowed on the Bodhisattvas, Mahājñāpi and Avalokita, and on the Prajñā. Huen Ts’ang mentions that a statue of Maitreya was worshipped in a district which is quite hima-
yāstik (cf. A. and V. Beal, Buddhist texts, ii. 384, 1873). His name is not mentioned; the text is taken from the Sūtra of the Great Exposition of Pāramitā (A. 427); see Grünwedel, Myth., 451, 247. On the Māyā-ku-hun (the ‘hundred thousand precious con-
notations’), a formidable list of Avalokita’s names, supposed to belong to this time, see Rockhill, 232, and Schlagen-

6. Avalokita rises still higher in the Kāraṇa-
vyūha* and in the Sarvāraṇyena;‡ but here the

textology seems to be extremely involved; we have to deal with a sūtra, but with Parānic

literature. On the other hand, the formula and the mantras on incantation demonstrate that,
on account of the above-described notion of the pro-
vidential polymorphism of Avalokita, that god is

identified with all the Hindu deities, both mild and cruel. Avalokita is a Buddhist Siva, an ascetic and a magician.

(a) In some of its features the Kāraṇa-vyūha‡
recalls the Lotus and the Amantrāyūnasūtra:

Avalokita learns the law from Amitābha, he comes to worship Sakyamuni, and brings him flowers and leaves. But, in the other great sūtras and the mantras on incantation demonstrate that Avalokita is a Buddhist Siva, an ascetic and a magician.

There is no need for astonishment at this extra-
ordinary mixture of Buddhism and Hinduism. Avalokita is the great yogin, the great magician (vīdāyak-
pati, anekamuntrātattavikara); he is in possession of the formula (in which he glories in the Aman-
trāyūnasūtra); but, above all, he possesses the

only, the true, formula āhā mārgī putrīnān,²

* See the Calcula edition, 1873; Conze-Feer, p. 246; Hodg-

son, Extracts; the summary of Rajendralāl (Buddh. Lit., pp. 35, 109), the mastersly exposition of Burnouf (Introd., p. 251). The Tibetan translation probably belongs to A.D. 610 (Schlag-

weit, p. 81; Rockhill, p. 212), but the original is supposed to have been in existence some 200 years before from the times of the Vajrā-ṃa-śāstra. A. N., 427; see Grünwedel, Myth., 451, 247. On the Māyā-ku-hun (the ‘hundred thousand precious con-

notations’), a formidable list of Avalokita’s names, supposed to belong to this time, see Rockhill, 232, and Schla-

Ch. vi. See Beal, Caten., 39, 284; Nanjo, 399 (tr. A.D. 854-857); Warder, 191; see, 249; and the quotations from the Sūktānāmanabhakta. Enumerating the innumerable, we dis-

tinguish 32 manifestations of the god, 14 cases in which he provides safety, etc. For the worship of Avalokita and Amitā-

bha the reader is referred also to the Chinese sources.

² Sukyamuni speaks to Maitreya, Sarvanavaravajikkhambha and Batumipati Avalokita receives 41 designations. Are the lists of 186 names later?

² Sūkīpadalokanāra (see Foucher, loc. cit.); cf. the name Avalokita.

² Vajraśīrāvīraśākara. In the Bodhisattvadīpikā, Vaj-

ratāpa is par eva prajñāprāpya rāja, demonstrating the power of the visitor of halls; but from most ancient times Avalokita too has been engaged in the salvation of infernal beings.

* It is this famous formula that is in view in the Dīgāvāna (foot of p. 613) which makes no mention of Avalokita. Sākya-
numi imparts it to Ananda: it was preached by the six Buddhas, it is known to the Rākṣasa, and to the gods. It is placed in the first rank (see Burnouf, Introd., p. 511; Kern, Gesch. J. 400). The Tibetans claim that it fell down to them from heaven about a. d. 400. They place it in their great list of the 14 Bodhisattvas, and it is mentioned nor contemplated in Nanjo, No. 326 (tr. A.D. 450), which contains various Sākyamuni’s early sayings, and it has been written about the ‘formula of six syllables.’ We may mention Kātyāyana, J.A. March 1831; Rémusat, Melanges, p. 99; Pachouki, t. p. 75; Schlagwetit, p. 49; but these are of course mere Lamasiticism.

There is no doubt that the tantric literature gives it an

obscene interpretation. ‘Putrīnān and putrīnān in this jargon have

a very distinct value. On the other hand, Rémusat’s esca-

Is there a Buddha who possesses this 'hexasyllabic (padgakari) knowledge (vidyā)?' No. Is there a being who possesses it? No. It belongs to Avalokita alone, and he reveals it to whomsoever he pleases. The questioner: Is there anyone else: whoever knows the formula does away with the god, whose 'heart,' i.e. 'mystery,' the formula is, and in his way is another Avalokita.

Further, the single word 'Adored one' (vandita) is a sufficient description of him. He is the refuge, Buddha, Dharma, and Sangha, all in one. Whosoever pronounces or traces on his body the magical syllables receives a body which participates in the body of the thunderbolt (vajra-kājādāra), the apex of knowledge of the Buddhas (Tathāgata-śākata), and becomes like a dhātuddhātā, a stūpa with relics.

(b) Iconography and the manuals of incantation, which illustrate and supplement each other in a marvellous way, prove that this delineation of Avalokita is not merely verbal, but that it is in close connection with worship and daily idolatry. All the Tibetan forms of Avalokita are replicas of the Hindu cults, which are attested as early as the 10th and 11th centuries, but are undoubtedly much more ancient. In fact, our literary evidences (avatāra, stūpa, etc.) show a visible influence on the mother-country, for there are representations of Avalokita, as well as of other gods, after the fashion of Udyāna, of China and other places.

It would be impossible to describe the whole iconography of Avalokita; that task has quite recently been performed extremely well. We shall merely notice a few characteristic features. Avalokita is polymorphous; but, in many cases and until the more degenerate times, he retains the hands of the Buddha, and his feet are always human, and sometimes on his head a small figure of the Jina Amītābha.

In one hand he bears the lotus (padma),** with the other he makes the gesture of the 'bestower of favour,' and a ghost (preta) is represented holding up thin lips towards the ambara which flows from his fingers. As satellites Avalokita has Tārā (sometimes in two forms, calm and angry), Hayagriva ('horse-necked'), the guardian of the 30,500,000 magical formulae, and Sudhana, who is also a friend of Maitreya. When Avalokita has four arms, two of them are joined in añjali (the hands forming a cup) as a sign of respect; the other two hold the lotus and the rosary. But the asetic attributes are the antelope's skin and the water-pot. And then, whenever he represents a Bodhisattva, of Siva, Amoghapāsa, Hālāhala, Nilaṅkātha, Padunārtesvara, etc., his arms, his faces, and his eyes become multiplied, and he carries tridents encircled with serpents, skulls filled with flowers, bows, arrows, etc.

Among the curious figures, besides those which clearly show the identification with Siva, the following are noteworthy: (1) the figure of Śiṅhānātha ('Lion's cry'). This was the name given to the solemn declarations of Śakyamuni; Mahājūri, who in Buddhist is the personification of wisdom, is mounted on a lion. Avalokita becomes confused with Mahājūri, is seated on the lion, carries the book and the sword of Mahājūri, but all the time retains his own attributes as well. (2) The figure with the thousand arms, in which the arms, arranged in the form of a peacock's tail, give a graphic representation of the universality of the god. (3) The figure with eleven heads (antarāra, three, two), is a representation of the head of Amītābha and a thousand arms is the translation, as it were, of his former name Saman-tamukha.† It corresponds to a legend which shows very clearly the character of Avalokita: 'May my head split asunder,' the god had said, 'if I fail in my vow to save beings!'-an old Buddhist expression. As a matter of fact, he did give way for an instant to discouragement, on seeing the inefficacy of his efforts; his head split into a thousand pieces, and Amītābha put it together again. There are several forms of this story, in which the old is mixed with the new.

We shall also quote a modern Nepalese inscription which gives a good account of the dignity and the physiognomy of our hero: 'The chiefs of the Yogins call him the King of the Fishes (Matyendr), the devotees of the female deities (ādikās) call him Sakti, the Buddhists call him Lokāvarā. All honour to this being, whose true form is Brahman.'‡ This identification of Avalokita with the Sakti par excellence, i.e. with the personification of the cosmic female power, is shown in a more striking way than the coupling of the god with the twenty-one Tārās,§ that the Chinese transformation of Avalokita into a woman had probably been already effected in India.

7. We need not say very much about the Tibetan doctrine of incarnations, according to which all

* With an eye in the palm of each hand (Sandberg, Colloquial Tibetan, p. 197). Sometimes only sixty-six arms are represented (Foucher, Catil. 15).

† See Schlagintweit, p. 24; Schmidt, Forschungen, p. 202 (the head is broken into ten pieces). This number eleven recalls the eleven Endras, and shows us Avalokita as a disguise Siva. Being Viśvarupa, he is none less than Brahma who becomes Siva. It may be useful to mention that the Avalokita-shankalakavakshastra (Saranā, p. 729, 20th century) mentions in Chinese in 587-581. Among the other Samantab (Mahanirptattī, 23, 31, 36, 38, 63) the most famous is Samantabhadrā (Lotus, xxviii.; Kern, p. 427, note), a double of Siva, and the only one of the 'Dhyānibhidhātivas' who is not a pāpi (vyat, ratsa, padma, visiipā)."
The monastic dignitaries are sāmaṇeras (saprul-pa-khonbogten) of the highest degree, it will be sufficient to refer the reader to the article LAMĀISM and to the sources. We shall merely say that Ava-
kotivāsara, the patron of the Tibetan Church, is incarnated in the person of the Great Lama (rgyal-
ba rgya-mtsho), while Amāthita, described in the ritual of the royal monastery of Waddell, though without adequately setting forth his proofs, maintains that the theory is a recent invention (1640). There is no doubt that Lāmaic hierarchy is peculiarly Tibetan; but it is quite as certain that many Hindūs and Muslims have been successively in identifying them-

selves with gods.

L. DE LA VALLÉE POUSIN.

AVARICE.—Avarice may be defined as an ab-
sorbing passion for earthly possessions and a selfish

gratification in their retention. It includes both the

getting and the keeping, respectively. In the

closing days of man is tempted to put aside all considerations that stand between him and his object, and in the retention he looks less to the bene-
calf to which any possession can be put than to his own luxury in possessing it. It is a

language, avarice is largely restricted to this second feature, while the passionate desire that

begets the avaricious character is described as covetousness (wh. see). Avarice is thus applied more frequently to parsimony in the storing of wealth, and to greediness in seeking after wealth. Covetousness stirs up the discontented to clutch at what other people have; avarice

begets the miser who hoards greedily all that he has.

The avaricious mind seems almost to make money or possessions ends in themselves, and yet it may be doubted whether money is not always thought of as a means of gratifying the love of pleasure or the love of power in some of their many forms. The miser glots over his gold, but even in his most debased state he probably sees in it the possibility of making a fortune in the world, and he may probably in his imagination the splendour with which he might surround himself, the security he has against poverty, or the greatness of the one who will inherit all as his heir. Certainly, at first, avarice leads men to amass money because of the command it gives over it, and the luxury and luxuries of life, and because of its efficacy as an instrument of ambition (cf. Martineau, Types of Ethical Theory, 1856, ii. 172).

Avarice springs, therefore, from two of the strongest human passions, the love of power and the love of pleasure; although it may continue even when pleasure and power seem no longer likely to be gratified. In its last stage it becomes repellent to all, as its selfish absorption reveals the degrada-
tion and folly of the mammon-worship prisoner.

The degradation of avarice is graphically described by Dante, who represents the miser as cleaving to the dust, in Purgatory (Longfellow's tr. xix. 120f.—).
AVERROÈS, AVERROISM. — 1. Life.

AVERROÈS, a corruption of the Arabic name Ibn Rushd. Abu'l-Walid Muhammad ibn Ahmad ibn Muhammad ibn Rushd was born at Cordova in his year A.H. 529 (A.D. 1136), of a family of standing. His grandfather, who was kadi of Cordova, wrote some important works on law. His father also, and afterwards Averroës himself, held the post of kadi. He studied law in his native town, and may also have studied at the university of Abu Ja'far Harun of Traxillo. He enjoyed the friendship of Ibn Zuhr, a famous physician, and the acquaintance of the celebrated theosophist Ibn Arabi. In 548 we find him at Marrakesh (Morocco), being presented by Ibn Tufail to the Amir of the country, Al Ahmad Abû Ya'qûb Yusuf. His account of this introduction has been communicated as follows:

'When I came into the presence of the Amir of the Faithful, he says, 'I found him along with Ibn Tufail, who began to elucidate me. After asking my own, my father's, and my family name, the Amir opened the conversation with the question: 'What is the opinion of philosophers on the sky? Is it an eternal substance, or did it have a beginning?' A sudden fear seized me, and rendered me speechless. The Amir, however, was pacified by himself translated: 'A knowledge is unlooked for in a prince, and sent him away laden with presents.

It was Ibn Tufail too who advised Averroës to write a commentary on Aristotle. He told him that the Amir often complained about the obscurity of the Greek philosophers, and of the translations then existing, and said that he ought to undertake the explaining and arranging of them. There is a passage in Ibn Tufail's philosophical romance, Hay bu-Ad-Din, where he tells Averroës how to write a commentary; and this was the opening advice of Averroës, who was just then beginning to write.

In A.H. 555 Averroës was appointed a kadi at Sevilla, and, about 567, was installed at Cordova. From this time onwards he devoted himself to the composition of his greatest works. During the greater part of the time he was burdened all the time with public duties. He travelled a great deal. In 574 he was at Marrakesh, in 575 at Sevilla, and in 578 back again at Marrakesh, where Yusuf appointed him his chief physician, a post that had been held by Ibn Tufail. When Yusuf sent him back to Cordova, he bore the title of 'Grand Kadi.'

Averroës continued in favour during the beginning of the reign of Ya'qûb al-Mansur. Yusuf's successor, then he fell into disgrace. This was the result of the opposition which his writings encountered from the theologians, and it bears witness to the influence that his philosophy was beginning to exercise. They accused him of various heresies (see below, § 3); and even went the length of trying to make him pass for a Jew. After undergoing an examination on matters of his orthodoxy, he was banished to Lucena, near Cordova. The Amir also ordered (c. 1103 A.D.) all the works of the philosophers to be burned except treatises on Medicine, Arithmetic, and chemic.

These decrees were afterwards reversed, and Averroës was recalled to Marrakesh; but he did not long enjoy his return to favour, dying on the 9th of Safar, A.H. 595 (11th Dec. A.D. 1198). His tomb is at Marrakesh, outside the Tagazet gate.

2. Works. — Averroës' great claim to glory lies in his being pre-eminently Aristotle's commentator. To this he owes his renown and popularity in the West in the Middle Ages. His philosophy proper has been fiercely attacked, and, in the present writer's opinion, often misunderstood. But the care with which he handled the Schools, the compass of their abundance, and their ingenuity, have caused them to be used as a basis for the study of philosophy in schools.

In accordance with a custom which still prevails in Muslim teaching, these commentaries are of three kinds: the immediate, the medium, and the far-reaching. These three degrees correspond to the three years or three periods into which philosophical instruction was divided. It is in this way too that the Qur'an or the 'ɑqā'id ('articles of faith') is commented on in the universities of Islam, recourses being had to more and more comprehensive glosses, according to the progress of the pupils.

In Latin and Hebrew we have the three kinds of Averroistic commentaries for the Second Analytics, the Physics, the treatises on the Sky and the Soul, and the Metaphysics, but not for the other works, and none at all for the History of Animals, and the Politics. In Arabic we have the medium commentaries on Politics and Rhetoric, a treatise on four books of Aristotle on Logic, and a translation of fragments of commentary on Metaphysics. H. Derencbourg has brought into evidence the existence of an Arabic collection of short commentaries or compendiums ('awārīm') in the library of the Escurial. This work has almost exactly the same contents as that mentioned by the author of the History of the Almohads (Vagnan's tr. p. 211).

Besides this great work, his commentaries, we have a somewhat important work on Polémics, the Tahafut al-Tahafut ('Vanity of Vanities'), which was levelled against the theologians. It is in the Arabic text. There are also a few fragments in Arabic which are not so important. Among the works that Renan mentions as having been written by Averroës besides his commentaries, but which are perhaps not all clearly distinct from them, are: commentary on Plato's Republic, opinions on Al-Farabi's Logic, and on his manner of comprehending Aristotle, discussions on a few of Avicenna's theories, commentary on Nicolau's Metaphysics, treatises on the abstract intellect and its relation to the subject, and on the Doctrine of Faith ('Aqidah) of the Mahdi Ibn Tumart. Averroës was the author also of works on Jurisprudence, Astronomy, and Medicine. Of the last named, we possess the text of a treatise which, in the Middle Ages, enjoyed a somewhat wide-spread reputation, the Kulliyat (i.e. 'Generalities').

3. Doctrine. — It is by no means certain that the Western writings which we possess on Averroës give us a very true idea of his doctrine. His philosophy was fiercely attacked by the theologians, who regarded it as not useful for their own ends. With the intention of pointing out the dangers that it presented to the faith, they forced assertions out of it, they drew overstrained inferences from it, they told whiter, according to them, this doctrine led rather than what it really was. We know this method of procedure well from the work of al-Ghazâli entitled Tahafut (' Destruction,' or ' Vanity of Philosophers'), where he applies it to al-Farabi and Avicenna. This work has now been carefully studied. It is not the method of the philosophers, not so much for explicitly professing anti-religious doctrines, as for holding opinions and hypotheses which are not likely to be useful for proving religious truth, but from which conclusions contrary to the faith would rather be
inferred. This does not mean that al-Fārābī and Avicenna did not seek sincerely to establish a philosophy compatible with dogma.

Now the same thing happened in the case of Averroes. He was opposed by theologians, not only by Muslims, but by Christians also; and we see his system not from his own point of view, but through the distorting criticism of these theologians. Some of these authors are, indeed, more accessible than Averroes, whose ideas have to be sought either in the rare Arabic texts or in the Latin translations. His style is very obscure and difficult.

It seems that even Renan, in spite of all his intelligence, his facility, and his perspicacity, has not absolutely guarded against this fundamental injustice; and too often, in his slightly wavering explanation of Averroes' philosophy, he presents not so much the authentic doctrine of Averroes as that which has been attributed to him. The following is, very briefly, Averroes' doctrine according to Renan:

He had a very evolutionary character. Eternal matter, the evolution of the form by its latent power, an indetermined God, the impersonality of the intelligence, the emanation and re-absorption of the intellect, constitute cardinal points. He further represents Averroes as a downright determinist, whose God does not recognize individuals, but can recognize only the generic nature of the universe. He adds, in several places that Averroes denies resurrection. Not firmly enough impressed with the great influence of Neo-Platonism in Islam— an influence which to some extent evidence by Maimonides, he tries to trace the ideas of the Arabic philosopher to Aristotle, which he sometimes finds rather difficult, and is surprised that the theologians ever gave them precisely the same form that appear in Aristotle only in an obscure and secondary manner.

We cannot quite agree with these different ways of looking at Averroes. We believe that he must be studied as belonging to the school called al-Falasifa ('Philosophers'), of which we shall hear more in connection with al-Fārābī and Avicenna. Their doctrine is not as Neo-Platonism than Peripatetic; that Averroes' doctrine is precisely the same in principle, differing from it only in essentials; and this is exactly what appears from a perusal of the work entitled Tahafat al-Falasifa ('Vanity of Vanities') which Averroes wrote in reply to al-Ghazali's Tahafat.

Now it frequently happens that Averroes finds al-Ghazali's criticism justified, and he reproaches his predecessors for giving him this advantage. These have, at the same time, in these modifications dealt only with details, or with the manner of exhibiting the doctrines; they are not really essential.

Is there any need, as has been suggested, to regard these modifications of Averroes on the doctrines of the school of 'Philosophers' as an approximation to the system of the Peripatetics? This, again, is by no means certain. It is doubtful whether there is much less Neo-Platonism in Averroes than in his predecessors. His opponents in the middle ages accused him of having often misunderstood Aristotle, and sometimes their criticism seems well founded.

Let us now exhibit some of the chief points in Averroes' philosophy by comparing them with the corresponding points in Avicenna's philosophy. This is not a very easy task; for Averroes himself seems, more than Avicenna, to feel the difficulties of the philosophical problems. He is less confident, less systematic, more analytic; he disputes more, is more troubled about the opinions of others, and seems to have less firmness about his own conclusions.

(1) Eternity of the world.—The doctrine of the eternity of the world had early partisans in Islam in the Mu'tazilites, such as Abu'l-Hudail and Tusânî. The former considered the creation as simply the act of putting the universe in motion. We have a fragment of Averroes, published by Dr. Worms, which is very clear on this question. He recognizes that there is a creation, and that the world needs a motive power; but he interprets these two ideas in a different manner from the theologians. Averroes believes in a creation that is renewed every instant in a constantly changing world, always taking its new form from the preceding; but he does not admit creation ex nihilo. According to him, this continuous and incessant creation is simply the act of production of that which is accomplished once for all. Averroes claims that fundamentally this idea does not differ from that of the theologians. The fact remains, however, that in his system infinity can be reached in time—a point which the orthodox doctrine does not admit. But for him, as well as for the theologians, creation does not take place in time; it is produced for all eternity; and time is produced and created at the same moment as the world, according to the doctrine of the orthodox school. Time, and all these Muslim thinkers, is the result of the existence of the world, and is manifested in the movement of the spheres.

The world then, although it is eternal, has a 'mover' or 'agent.' On this point Averroes rectifies a proof of Avicenna's which does not seem conclusive to him. He maintains that the mover of the universe, eternal, like it, which produces it each instant and moves it. Celestial bodies, indeed, do not have a perfect existence except through movement; that which gives them this movement is their 'agent.' In this way Averroes distinguishes between eternity with cause and eternity without cause (eternitas secundum temporis, eternitas secundae essentiae). God alone is eternal without cause and without mover or agent. The world is eternal, but has an agent.

(2) Origin of the world is a problem.—Renan remarks that the problem which engrossed Averroes most was that of the origin of beings; we might say, with more precision, the origin of multiplicity. Indeed, it engrossed the whole Arabic school. God being one, how does multiplicity emerge from Him? Avicenna recognized the principle that 'out of one only one can spring'; consequently, he thought that first of all there came from God a primary being, one alone, called the 'first cause,' from whom then evolved the multiplicity of beings. Averroes further, does not entertain this principle. The opinion he professes is neither so clear nor so absolute, although he meant it to be more supple and synthetic.

He admits, like all his school, the succession of the celestial spheres, considered as incorruptible, animated, and moved by intelligences. He makes a few changes in the details of their procession. He holds that multiplicity exists, not only in the different aspects of knowledge that they have of another, but also in their mutual distances and in the 'dispositions' that they have in them. Averroes further, does not entertain the idea that celestial bodies are composed of matter and form, as Avicenna admitted—an opinion which leads to the conclusion that the existence of these bodies is not necessary, for matter and form depend on one another for subsistence. By rejecting this opinion, Averroes continues to diminish the importance of the rôle of creator.

A single power, he holds, comes from the first principle. The whole world results from it, and all its parts are ordered and combined that the whole, now created by this single energy, acts in concert. Thus, in animals, the different faculties, the members, and the actions, are united in a single body; and each animal is judged a single being, having at its disposal a single power. It is because of this diffusion of power, intellect, and soul, in the
heavens and in the sublunary sphere, that it can be said that God created, maintains, and preserves the world, as we read in the Qur'an. It does not necessarily follow that, because this power penetrates into matter, it is itself manifold. There flows then from the unit, i.e. from the first principle, a power, single itself, which becomes manifold in the beings that participate in it.

This system certainly shows how the lives of the different beings that compose the world harmonize. But Averroës seems to have avoided explaining the origin of these beings.

(3) Knowledge in God.—Averroës gives us his idea of the philosophical argument that 'the first principle comprehends only its own essence.' He does not agree with the theologians that have been driven to the conclusion that God is ignorant of the whole world, and does not know His own creation. The meaning of this assertion is that God comprehends in His essence beings in their most exalted state of existence; and when the philosophers say that He does not comprehend the beings that are below Him, it signifies that He does not know them in the way in which we know them, but in a certain manner that is peculiar to Him. For: if any other being existed who possessed the same knowledge as God, He would have an 'associate' in His knowledge, and He would no longer be unique. This is why it is impossible to say that Divine knowledge is general, or that it is particular; these are modes of human knowledge, and they refer to beings, who are the causes of human knowledge, but who cannot be the cause of God's knowledge.

To sum up: we cannot, according to Averroës, admit that the knowledge of God depends on beings, for then the less perfect would be necessarily comprehended in the essence of God, and comprehended in His essence beings and their order, for then He would not be intelligent. It stands to reason, therefore, that He conceives things in a higher order of existence than that in which we know them.

This theory of the different orders of existence is, nevertheless, a little obscure. Averroës tries to explain it by comparing it to colour, which is one in its essence but has different degrees of existence, according as it is in bodies, or in our sight, or in a concept. There would be an infinite number of individuals, each with its own order. In view of this explanation it would be unjust to claim that Averroës' system denies Providence.

(4) The soul and the intellect.—We may take it for granted that Averroës' psychology is, as a whole, constructed like that of Avicenna. But there is one point in this system which we must not forget, the distinction between the soul and the intellect.

This distinction is especially important in its bearing on the question of the survival of the soul and its 'unity.' It has often been said that Averroës taught the 'unity of the soul' and the unity of the intellect in the universe, and that he denied the immortality of the individual soul. The present writer does not believe that this latter assertion is correct; the former, about the universal unity of the soul or of the intellect, undoubtedly is. But still we must try to discover the exact meaning of this expression.

According to the school of 'Philosophers,' the intellect and the soul are not merely distinct in degree; they say, the intellect is not merely the most elevated kind of soul. We feel that every man's mind is individual, and the same is felt in other faculties in ideas, a real difference in their nature. The intellect alone seems absolutely free from all matter; it is essentially that which, as the basic principle, is immutable; it represents the higher domain of general or abstract; it is pure thought. The same can by no means be said of the soul. The idea of each isolated human soul is a person, and the person is an aggregate of the ideas of power and energy. The soul is the energy that animates matter; and as such, far from being absolutely opposed to matter, it is, on the contrary, profoundly mixed up with and involved in it. At times we are inclined to believe that the Arabic philosophers have an idea of this power similar to that of the modern mechanical school, and that they believe that it depends on some subtle matter, which is more delicate than ordinary matter, and is not usually apprehended by the senses. That is the reason given by figures who use the following:—

There are some who say that the soul resides in a subtle thing called celestial heat, in which are the souls that form the bodies. No philosopher will deny that there is a celestial heat in the elementary particles which serve as support for the animals and plants. Some call this the "natural celestial faculty." Galen calls it the "informing faculty." These souls exist on bodies; this is because the soul is separate from the body; for if it depended on it, it would not create it. The soul is something that is added to the innate celestial heat. Each soul has its soul, individual to the souls of those of the celestial bodies and the souls that are here below in the visible bodies. And therefore, when the soul returns to the body, the souls return to their spiritual condition and to those subtle bodies which alone can see them." (Tahāfut, p. 135).

It follows, then, that if the intellect exists perfectly and actually only when general and freed from the conditions of individuality, the soul, on the contrary, though belonging to the universal power that circulates in the world, may be individual and remain so. That is what Averroës points out after a passage in which he has been speaking of the unity of the intelligence: 'This argument,' he says, 'is of value for the intelligence, for there is nothing in the intelligence of the nature of individuality, but only a general form of the soul; for even if it is despoiled of the accidents by which individuals are multiplied, the most celebrated of the sages say: 'It is not exempt from the condition of individuality.'": (op. cit. p. 137).

The soul, therefore, according to this doctrine, may remain individualized after the death of the body. It may do so. Arguments of a purely philosophical order do not force us to believe that this individuality really exists, but they show that it is possible. Such seems to be Averroës' point of view on the question of the immortality of the soul. In the end, he leaves it to revelation to settle this question. 'It is a very difficult problem,' he says. The philosophical introduction to the problem is pointed to the point that no one has ever seen—the knowledge that the soul forms the body, and that, since it forms it, it cannot depend upon it. We cannot therefore deduce the destruction of the soul from that of the body. This agrees with what we find in Avicenna.

Belief in the survival of the soul is one of the principal ideas of individualism, combined with belief in the eternity of the world, brings up a difficulty with regard to infinite number. Since the number of souls produced at the beginning of the world is without end, there would be an infinite number of individual souls living at one and the same time. Now, most of the Arabic philosophers, Avicenna excepted, refused to admit infinite number. Averroës agrees with the majority. He seems to solve the difficulty by counting only a single soul as a principle; he does not apply number to the particular souls that are bound to it. There is but one soul, just as there is but one light; its multiplication to infinity in individuals is only a secondary matter. In short, Averroës refuses to admit infinite number in the case of objects that are quite detached from one another; but he does admit it, in a secondary manner, in the case of objects previously bound to a general unity.

Such is, as nearly as we can judge, the real import of Averroës' position on the problem of the unity and the survival of the soul. It is also evident that it is quite impossible to admit the contrary opinion, which is that Averroës denied the survival of the soul. For there is no doubt that Averroës claimed to remain one of the faithful. Now, if he had abandoned the idea of a single soul, he could believe himself a Musulman and at the same time deny the immortality of the soul. His thought must have been, like that of the whole school of Philosophers, that the former philosopher was true in the main, while the latter, although his faith was also true; that consequently there should be no essential point of contradiction between them,
Averroës interpreted this doctrine thus: the body which we shall have in the other life will not be the same as that of this life; 'that which will be resuscitated will be a representation of what is seen in this world; it will not be that very thing in essentia.' For what has perished cannot be reconstituted in the same individual; and existence can be bestowed only on the semblance of what has perished, not on the object that has perished in its identity.' To strengthen his argument, he uses the words of Ilm 'Abbas, a traditionist who had great authority in all the other world not as names in this world.' 'That proves,' says Averroës, 'that the future existence has a kind of generation more elevated than that of actual existence, and constitutes a more excellent order than the order of this world' (op. cit. p. 149).

Here again it is clearly a question of interpretation, not a denial of the doctrine. In the same way, we must not understand in a dogmatical sense passages such as Renan quotes (pp. 156, 157), in which Averroës disapproves of the use of myths in the West. According to him, it is not that the intellec is not in the order for that virtue may have nobler motives than fear of punishment, but there is no promise of reward.

(6) Truth and law.—In politics, Averroës, like al-Farābī, follows in the footsteps of Plato, whose Republic he commented on; and, according to the custom of Oriental thinkers of his school, he does not criticize the text he comments on. He accepts it as truth, almost as religious truth. He accepts, therefore, that political ideal, half socialist, half mystic, which on many points, such as the status of woman, does not at all agree with the customs of Islam.

We must not lose sight of the part played by syncretism, which dominated the whole philosophy of the Oriental Middle Ages. Ancient philosophy was considered true as a whole; and all its documents, even the most diverse, could be brought into accord, the commentator having the settled conviction that they could neither contradict one another nor contradict religious truth. There are two important treatises of Averroës in which he tries to point out this conformity between religious truth and philosophical truth. This work required some 'squeezing' of the text in order to change its meaning. We get used to efforts of this kind in the study of the philosophers previous to Averroës, and certain more or less heterodox sects in Islam, like those of the Faithful Brothers of Basra or the Brothers of Purity. We find, too, in Averroës the extreme form of this conception, which, admitting a priori the two truths, philosophical and prophetic, ends in assimilating the philosopher and the prophet. Just as there must always be prophets here on earth, or at least some who have a human world into relation with the world beyond, so also must there be philosophers. And here the idea takes a distinct turn that makes it still more unusual. As the human intelligence exists in actuality only by its union with the active intellect, there must always be in the human race, if this intelligence is really to exist and subsist, a few men of great intellectual gifts, a few great philosophers whose spirit participates in eternal truth.

In this passage, Averroës is no longer Peripatetic; but neither is he a syncretist; he is combining mysticism with a system that, from many points of view, is somewhat antagonistic to it. He is placing a kind of illuminative
Averroes encountered the same opposition from the theologians in the Christian world as it had met with from the Muslims. In its unusual form, it was opposed by the Humanists, who loved to philosophize in a freer manner and a more elegant style. The Hellenistic scholars criticized Averroes' interpretation of Aristotle, and the Patologists, having Marsilio Ficino in their mind, placed the doctrine of the Academy in all the freshness of its renaissance in opposition to Aristotle and his commentator.

In the Middle Ages, Albert the Great, Thomas Aquinas, and Giles of Rome wrote against Averroism. Raynald Lully attacked it fiercely. Petrarch declared, in his dislike toward it, and intended to rectify it. Formal condemnations of Averroes were passed at different periods; by the provincial council of Paris in 1299; by Robert de Courson in 1315; by William, bishop of Paris, in 1240; by Etienne Tempier, also bishop of Paris, in 1270 and 1277. Shortly after, these censures were ratified by the theologians of Oxford, over whom Robert of Kilwardby, Archbishop of Canterbury, presided.

Averroes, which, through the Jews, had held sway in the centre of France until the 14th cent., continued in vogue in the schools of Northern Italy until the 16th century. In the school of Padua it raised the famous disputes in which Achillini and Pompomuzo took part. Its reign extended down to the 18th cent. and is the last manifestation of the philosophical science, that is, to the time of Galileo.

**LITERATURE.**—1. Editions of Averroës' Works.—The two most important Latin editions of Averroes are those of Nihius, 1490-97, and of Junta, 1553. Arabic or Hebrew texts: Tuhfat al-Tuhfah, Cairo, A.D. 1269; I. Müller, Philosophy and Theology of Averroës, Munich, 1859 (Germ. tr. 1875); In commentum del Averroës de Poeticae Aristotelicæ, edited in Arabic and in Hebrew, by Ma'arouf, at the instigation of Averroës, by the same editor; Freudenthal and Frankel, "Die durch Averroës erhaltenen Fragmente Alexandri der Metaphysik des Aristoteles," with translation into German, in NEAW, 1884; M. Worms, "Die Lehre von der Anfangslage der Welt bei den mittelalterlichen arabischen Philosophen," in Beuneker and von Hertling's Beiträge, Münster, 1900.

**BON CAREA DE VAUX.**

**AVESTA.**—The Avesta, the sacred book of ancient Iran, contains the teachings of the prophet Zarathushtra, or Zoroaster, and serves at the present day as the holy scriptures of the Parsis of India and the so-called Gumbas of Persia (see art. GABAI, PARIS).

Although fragmentary in its present form, the Avesta is one of the greatest religious monuments of antiquity, and preserves the records of a faith that was once among the greatest of the world, and that spread through Europe in early ages, but for the triumphs of the Greeks over the Persians at Marathon, Plataea, and Salamis, and for the triumphal incursion of Alexander into the East.

1. Name.—The designation 'Avesta' is derived from the Pzand arastu, Pahlavi apastāk, or avistāk, a word of uncertain meaning and derivation. Possibly this term, like the Sanskrit veda, may signify 'wisdom,' 'knowledge'; more probably, however, it is derived from a presumed Avesta form auṣaisti, a term denoting a 'scripture,' a 'manuscript,' as opposed to the term zand (cf. Av. azainti), 'commentary,' 'explanation.' In the exegetical and religious works of the Middle
Persian period these two words occur together constantly in the phrase apavastikavand, which refers to the sacred body of the Avesta and its Palavi paraphrase and commentary, and it is the erroneous inversion of these words that gave rise to the name Zend-Avesta, which was used by Hyde (1700) and by Anquetil du Perron (1771), and was adopted from the latter by the earliest succeeding translators.

2. Original form.—The Avesta in its present form is only a small remnant of a sacred literature of considerable extent. Palavi tradition tells of scriptures in 1200 chapters, the Arab historians Palavi (Abü Makkadh 1, 675) and Masudi (ed. Sale, ii, 123) refer to a copy inscribed on 12,000 cowhides, various Syriac writers allude to an extensive sacred book, and Pliny the Elder (HN xxx. 1. 2) mentions 2,000,000 verses composed by Zoroaster. Such direct references to the extent and nature of the Palavi literature, however, are removed by the Palavi Dinkart and the later Persian Rivayats, which give a detailed account of the early scriptures and a summary of their contents.

According to these works, there were originally 21 Nasks (collections of which each was divided to correspond with) of the 21 Nasks (collections of which each was divided to correspond with) of the Ahuna-Vairya (p. 7) prayer, and comprised both the Avesta text and the Palavi commentary. These 21 Nasks were divided into three groups, each consisting of seven books each, the first (called yasna, or Gatha group, and consisted of Nasks 1-7); the second (called dhdtih, or legal group, and consisting of Nasks 8-13, 11, 20); and the third (called hutaekasman, or Hathaekasman group, and consisting of Nasks 4-10) containing matters belonging partly to the first and partly to the second group. The first group in each Naske (1 to 7) made up of these nine sections were no longer extant at the time of the composition of the Dinkart. Of Nasks 8, 9, and 10, for example, each of which had originally 60 sections, only 12, 15, and 10 sections respectively are said to have existed after Alexander.

The two subjects treated in the Nasks may be briefly summed up as follows: Nask 1, virtue and plecy; 2, religious observances; 3, exegetical—the three chief prayers of the religion being explained in it; 4, cosmogony; 5, astronomy and astrology; 6, performance of the ritual, and the benefit to be derived therefrom, 7, qualifications and duties of the priesthood; 8, ethical conduct; 9, duties connected with the priestly and moral teachings, the second (called dathih, or legal group, and consisting of Nasks 13-15, 12, 11) containing laws and pre-
scriptions, and the third (called hutaekasman, or Hathaekasman group, and consisting of Nasks 4-10) containing matters belonging partly to the first and partly to the second group. The number of sections in each Nask varied from 22 to 65. The number of these sections were not longer extant at the time of the composition of the Dinkart. Of Nasks 8, 9, and 10, for example, each of which had originally 60 sections, only 12, 15, and 10 sections respectively are said to have existed after Alexander.

History.—According to traditions, the substance of which there is no good reason to doubt, the Zoroastrian scriptures were preserved with great care in the early centuries of the faith, especially in the later Achaemenian Palavi. According to the various accounts of how the Palavi language was preserved, King Vahvaksha, who is generally identified with Volo-
geses 1., ordered that all sacred writings should be searched for, and that such portions as were preserved only in oral tradition should again be written down. This work was eagerly continued by the later Zoroastrian scholars, and it was finally completed by Pâpakîn (A.D. 225-240), who commissioned the high priest Tansar to collect the scattered frag-
ments, and by his son, Shâhîhpîr I. (A.D. 241-275). In the reign of Shâhîhpîr II. (A.D. 309-380) a final revision of the Avestan text was made. The Palavi manuscripts were collected, divided into groups, and a palimpsest was made of these manuscripts, which were later destroyed by the invasions of the Avestan faith, and the Seljuk and Turkish rule in the fifth and sixth centuries now consist of the Zend-Avesta which dates from the 12th century.

Further more serious even than the ravages of Alexan-
der and the centuries of neglect, were the results of the Muhammadan conquest of Persia and the introduction of Islam. Through political and civic disabilities the worshippers of Ormazd were compelled to abandon their faith or go into exile, and many Zoroastrian books as could be found were ordered to be burned. The small body of texts that escaped destruction was preserved by the few Zoroastrians who remained in Persia and by the Parsis, their co-
religionists who had taken refuge in India; and the books contained in these manuscripts, recopied from time to time, constitute the Avesta as we now have it. The oldest Indian manuscripts date from the 13th and 14th centuries; the Persian Avesta are not older than the 17th. No single manuscript contains all the extant texts.

Present contents.—The Avesta in its present form consists of the following divisions: (a) Gathas, (b) Gathas, (c) Minor Texts, such as Nâyâsâs, Gâhâs, etc., (d) Vendidad, (e) Fragments. These divisions fall naturally into two groups. (1) The first group comprises the Vendidad, Visperad, and Yasna, which are classed together for liturgical purposes. In the ritual these are not recited as separate books, but are intermingled with one another, and the manuscripts often present them in the order in which they are to be used in the service. In this case the Palavi translation is usually followed by the collection of Perzian, Vendidad Sâbuk, 'Vendidad Pure,' that is, without commentary. On the other hand, these books also appear in some manuscripts

* See art. ARDASHIR I. vol. III. p. 774.
as separate entities, and in that case each part is usually accompanied by a rendering in Pahlavi.

(2) The second group comprises the Minor Prayers (ṣūnas, 'prayers') often inserted in the recensions of the Avesta, and are called Khordah Avesta, 'Abridged Avesta,' or 'Small Avesta.' This forms a species of prayer-book for the laity.

(a) Yasna.—The Yasna is the chief liturgical work of the canon. It is recited in its entirety in the Yasna ceremony, which, apart from a number of subordinate rites, is devoted chiefly to the preparation and offering of the pārtahm (the juice of the Haoma plant, mingled with milk and aromatic ingredients). Parts of the book, however, are dealt with individually in the ritual. The Yasna is composed of 72 chapters, called Hātī or Hā, which are symbolized in the girdle of the Parsis (kwst), woven of 72 strands. Several of these chapters are mere repetitions to swell the apparent number. Chapters xvi. and xxvii. are substantially identical with chapters xxvii. and xlvii., and chapters lxiii., lxiv., lxvii., lxviii., and lxviiii., are composed of texts occurring elsewhere. The book falls into three nearly equal divisions (i.—xxvii., xxvii.—lvi.—lxvi.), the first part beginning with the invocation to the various deities in order of rank (i.—ii.), and the dedication of the oblation (myzado) and other offerings with similar formulas (iii. I.—v. iv.). After a short prayer (vii. 8—10) there follows the Hom Yosht (ix.—xi.), in which Haoma, the branch from whom twigs, like the Soma of the Hindus, a sacred drink was prepared, is personified and worshipped both as plant and as divinity. This section is in turn succeeded by the Zoroastrian creed (xii.) and by other formulas (xiii.). With chapter xiv. begin the so-called SteOTA Yasna, chapters of the Stōṭ-Yasht, or twenty-first Nask, of the earlier Avesta, which continue, with intermissions, as far as chapter lxviii. In the early chapters of the SteOTA Yasna are found invocations of the spirits of the day (xvi.), of the periods of day and year, and of the various forms of fire (xvii.). Chapters xix.—xxi. contain commentaries on the three most sacred prayers, the Ahuna Vairya, Ashem Vohā, and Yenghe Hātām, and represent part of the third original Nask, called the Bak Nask. The succeeding chapters (xxii.—xxxv.) are a further liturgical series called Hīndast Yasht, which accompanies the second preparation of the Haoma juice in the ceremony. The five Gathas, which together with the Yasna Haptanghātī form chapters xxvii.—lxi. (excepting lli.), stand out in terms of the sacred prayers or fire formulas, and are described in the next paragraph below.

Chapter llii. is a brief interpolation between the fourth and fifth Gathas. Chapter lvii. consists of but a single verse, aside from the introductory formulas, and forms the Aityraman Iskha prayer, with which the Sānashtyans are to restore the dead to life at the day of resurrection. After a brief poetical summary of the Gathas (lv.), comes the Srosh Yasht (lvii.), a long and detailed glorification of the angel Srosha, preceded by a briefer chapter in the same vein (lviii.) by way of introduction. Chapter lixii. is in praise of prayer in general, and especially of the prayer to be recited at the Last Judgment. The following chapter (lixiii.), with its renewed invocations, leads over to a formula of invocation, chiefly in verse, in which the angels of the yazatas and the heroes of ancient Iran are praised and glorified. The order in which the deities are worshipped corresponds largely with the sequence in which they are used to name the days of the week in the Yasna. The style of the Gathas is noticeably different from that of other parts, being almost free from the tiresome uniformity and barren reiteration of some of the later portions, and although there is a constant recurrence of the cardinal tenets, these do not become monotonous, because of their varying expression. Ceremonies and ritual observances are but little referred to, and the Haoma-cult, the Brazwahs, and the whole naturalistic pantheon do not appear in these hymns, either because they were considered too crude and loftier form, or, more probably, because they are concerned chiefly with the prophet's teaching regarding the conflict between Ormazd and Ahriman, the relation of the human individual to that conflict, its ultimate outcome in the routting of the forces of evil and the final victory of Ormazd, the last judgment, and the longed-for kingdom of Ormazd. The detached character of the verses, which nevertheless are a logical sequence, has led to the supposition that, like the verse portions of many Buddhist works, they were the text of discourses of the prophet and a summary of his teachings in a form available for oral tradition (cf. Pischel and Geldner, Veddiche Studien, Stuttgart, 1889, i. 287).

In the midst of the Gathas is inserted the so-called 'Yasna of the Seven Chapters' (Youna Haptanghātī), which is written in prose, but in the same dialect as the Gathas. It consists of a number of prayers and ascriptions of praise to Ormazd, the Amesha Spentas, or archangels, the souls of the righteous, the fire, the waters, and the earth. By some it is held to be representative of the later and more developed form of the religion than appears in the Gathas. Its language, in fact, shows certain departures from the Gāthic dialect. Under the Gathas are also included four specially sacred prayers or fire formulas, which are prefixed, and are described in the next paragraph below.

Chapter lxiii.—lxviii. contain invocations and offerings of homage to 'all the lords,' whence its name. In the ritual its chapters are inserted among those of the Yasna.

(d) Yashts.—The Yashts (Av. yastī, 'worship by praise') form a poetical book of 21 hymns, of which the names of the authors (yazatas) and the heroes of ancient Iran are praised and glorified. The order in which the deities are worshipped corresponds largely with the sequence in which they are used to name the days of the week in the Yasna. The style of the Yashts is characterized by their identical introduction and conclusion, but they differ greatly in length, age, and character. The first four are largely composed of
late and ungrammatical material, and the last two contain chanted Yasht formulas with a number of quotations from other passages. On the other hand, the intervening longer Yashts are almost entirely in verse, and have considerable poetic merit. Of chief importance among these are: Yast v., in praise of Arvâd Sûrâ Anâhita, the form of Yast which extols the star Tishtrya, and recounts his victory over the demon of drought; Yast x., dedicated to Mîthra, who, as the god of light and of truth, rides out in lordly array to wreak vengeance on the demons who belied their oath or broken their pledge; Yast xii., devoted to glorifying and propitiating the guardian spirits (fravâshîs) of the righteous; Yast xiv., in honour of Verethraghna, the incarnation of victory; and Yast xix., which sings the praises of the Kingly Glory (kaveya kaveâvah), a sort of halo or radiance said to have been possessed by kings and heroes of Iran in olden times as a sign of their rulership by divine right. Much of the material in the Yashts is evidently drawn from pre-Zoroastrian sages; there is a mythological and legendary allusion here and there to the Sûrâ Khvâr Xvâr, which serves to throw light on many of the events which they portray, and on allusions that would otherwise be obscure.

(c) Minor Texts.—Chief among the Minor Texts and Nyaishes, or Zoroastrian Litanies, a collection of five short prayers or ascriptions of praise addressed to the Sun, Moon, Water, and Fire, and to the angels Khurshêd, Mîhr (Mîthra), Mâh, Arvâdîr (Arvâd Sûrâ Anâhita), and Aâsh, who preside over these elements. These litanies form an important part of the Khordâ Avesta. They are composed of fragments from the Yasna and Yashts, and contain invocations, supplications, deprecatations, and odes employed daily by the laity as well as by the priesthood. Under the heading of Minor Texts come also the five Gâhas, addressed to the spirits of the five periods of the day; the two Sirozâhs, the greater and the lesser, which in their 30 paragraphs invoke in turn the divinities of each day of the month, and which are recited especially on the thirtieth day after the death of a person, or on special occasions. There are the four in number, used for various purposes with an accompanying offering: the Afrîn-gân-i Dâhman, repeated in honour of those who have died in the faith; the Afrîn-gân-i Gâthâ, recited on the five consecutive days after a Zoroastrian’s death; the Afrîn-gân-i Gâhanbar, composed chiefly of instructions to worshippers concerning participation in the celebration of the six special festivals of the year; and the Afrîn-gân-i Rapbâkhav, recited at the beginning and end of summer. All of these belong to the Khordâ Avesta.

(f) Vendidad.—The Vendidad (Av. viâcêr-ôdâta, ‘the law against the demons’), although inserted for liturgical purposes among the Gâhas in the Avesta, is not a liturgical work but a priestly code prescribing the various purifications, penalties, and expiations. It originally formed the nineteenth Nask of the Avesta handed down to Sassanian times, but its parts vary greatly both in point of style and in time of composition. Much of it must be of pre-Zoroastrian origin.

In its present form it contains 22 chapters, called fargarjas. Chapter i. is a didactic account of creation that attributes all the disagreeable features of the otherwise delightful regions of the earth to the activity of Ahriman. Chapter ii. tells the legend of Yima, of the Golden Age, and of the coming of a terrible winter and destructive floods, to preserve man and beast from which princely Yima is rescued by Ormazd by his son to build an enclosure (zorna). The following chapter (iii.) treats of the divine origins of the Avestan text; whereas the text as prescribed for bearers of corpses (a special class of men), praise of agriculture, and the defilement of the earth by corpses.

Chapter iv. concerns legal matters—breaches of contract, assault, punishments. Chapters v.—xvi. relate mainly to impurity incurred through contact with the dead and to the methods of purification. Outlining the previous chapters, the Vendidad gives an elaborate illustration for nine nights, the so-called Barashnâm (ix.). Chapters xii.—xv. are devoted chiefly to the treatment of incipient and remedial impurities, an animal defilement, and regard by the early pastoral Zoroastrians. In chapters xvi.—xxiv., instructions are given for purification from several sorts of impurity, and to purify the ritual vessels. The peculiar aspect of the pre-Zoroastrian Avesta are the superhuman accents of the Yasnâs and the litaniess, often accompanied by the of the Ahriman. The into the fire and earth on their way to the heaven. Chapters xxi.—xxxiv. are devoted to the nature of, and ceremony for, the a-sâma, the ritual of the holy day, to the incantation of the pertainings to the miracle of the human soul after death. Chapters xx.—xxii. are chiefly of a medical character.

(g) Fragments.—In addition to the preceding books there are also a considerable number of fragments. There survive, for example, three chapters from the original Hâdûkht Nask, the last two of which are eschatological in character, and deal with the destiny of the soul after death. Of special interest is a similar metrical fragment (Pr. V. 4), which refers to the efficacy of the seven prayers of the Sirvînîkshayas against the torments of the last day, and which is chanted by the Messianic Saoshyânts at the day of judgment, to confound Ahriman and his hellish crew and to raise up the dead (cf. Haas, ‘An Avestan Fragment on the Resurrection,’ Bulletin of the School of Oriental and African Studies, Vol. XVII, No. 2, p. 119). Among the longer fragmentary texts may be mentioned also the Afrin-i Paighambar Zartosht in honour of Zoroaster, a blessing invoked upon kings, and the so-called Vâstzâp Yast, an enigmatic compilation, disconnected and ungrammatical, which is in no wise related to the regular Yashts. Many fragments are found as quotations in the Pahlavi ancillary literature. Most important of these is the Nirangistan, a work in three fargarjas, or chapters, collecting and commenting upon a number of Avestan Nirangs, or ritual prescriptions. The commentary cites additional directions of the same kind from another source. This work is of value for our knowledge of the ritual and for Avestan lexicography, but unfortunately the manuscript material is poor and the text consequently corrupt. Many of the chapters that contain Avestan passages are the Afrin-i Dahan, also called Aqemendaç, after the first quoted Avestan word. The Pahlavi commentaries on the Vendidad and the Yaena, and other Pahlavi works, are collected in volume II of the Khordâ Avesta. The carti Dishâr, and the Purushnhid, contain a large number of Avestan quotations, many of them from the lost Nasks, and brief formulas and prayers are found here and there in manuscripts of the Khordâ Avesta. Mention should likewise be made of the additions to Avestan lexicography in the Fahang-i-Oim, an Avesta-Pahlavi glossary (ed. Hoshangji Jamaspji and Haug, Bombay, 1867; cf. Reichelt, in WZKM xiv. 172-213, xv. 117-186). For a complete list of fragments and their editions see Bartholomae, ‘Die den Avesta entsprechenden Beiträge der traditionellen 21 Nasks in arrangement or in extenso. Only two of these original 21 books are now represented with any degree of completeness. The Vendidâd, or nineteenth Nask, has
survived in approximately its full form; yet even this shows evidence of having been patched up and pieced together. Many of the chapters of the Sōt-Yash, or twenty-first Nask, are contained in the Vedas and later extend, with interruptions, from chapter xiv. to chapter lviii. (cf. Geldner, 'Avesta-litteratur', in GérP ii. 23-26). There exist also, in addition to these two remnants, an important part of the Bākan Yashit, or fourteenth Nask (most of the Yashits being referred back to another lost book), and portions or fragments of others are extant. Altogether there are preserved specimens of about 15 of the original 21 Nasks. This material is supplemented, however, by various passages that have been translated from the Avesta into Pahlavi, and have one or two reasons for being in that form. The Pahlavi Bāndādahēske, for example, is largely based on the old Avestan Dāndāt Nask, and serves in a measure to replace its loss.

5. Age and growth. — The present form of the Avesta dates, as has been mentioned above, from the Sasanian period, but the various portions differ considerably from one another in age. The relative age of the component parts can be approximately determined by a study of their metre, grammar, and style. Although it is impossible to say with any general representation of the later texts as a rule are written in prose, show lack of grammatical knowledge on the part of their authors or compilers, and consist to a great extent of formulative material. The application of this to the different periods and languages of the texts is somewhat as follows: (1) the Gāthās (Yas. xxxviii.-liii.), including (2) the Yasna Haptanghaiti (Yas. xxxv.-xxvi.) and some other compositions in the Gāthā dialect (Yas. xii., xvii., and the four most sacred prayers, or formulas, ascribed to Zoroaster, (3) the later portions (Yas. ix.-xi., xvi., xiv., xv., xvi., xvi., xiv., xvi., xvi., xiv., xvi., xvi., xvi., xvi.), portions of Vendidad ii.-xvi., xiv., xvi., and scattered verses in the Visparad, Nyaishes, Afrangins, etc., and (4) the remaining prose portions of the Avesta.

The determination of the actual date of composition of the different parts of the Avesta is a matter of speculation. According to the generally accepted view, the Gāthās, the oldest part in substance as well as in form, date back to an early period, probably to the time of Zoroaster himself, whereas certain minor portions of the scriptures may have been written or compiled as late as the time of Shahpur II. of the Sasanian dynasty. The extreme limits of the date of composition thus be about B.C. 550 and A.D. 375. In his latest works ('Le Zend-Avesta', iii. Introd.; see also Zend-Avesta, SBE iv.), the brilliant French scholar, Darmesteter, put forth a radical theory in regard to the composition of the Avesta as we now have it. In his opinion all sacred writings that may have existed under the Achemenians were lost after the invasion of Alexander, and not a page of any earlier work has come down intact. The pre-Alexandrian spirit may be recognized, however, in the Vendidad, which, although later than the Gāthās in composition, is older in material and Achemenian in tone. According to this theory, the Gāthās, though the oldest part of the Avesta in form, represent the latest growth of the Persian spirit and show the influence of Gnosticism, the school of Philo Justinus, which in the Pahlavi literatures assigns their origin to the middle of the 1st cent. A.D. This radical hypothesis concerning the age and growth of the Avesta met at once with spirited opposition on the part of scholars like Bühler, which would not have any acceptance to-day. Avestan specialists are at present agreed that there is no adequate reason for making so strong a claim that the tradition was lost. It is known that the latest Parthian monarchs were filled with the true Zoroastrian spirit, and it can be proved from Greek, Latin, and other writings that the traditions of the wisdom of Zoroaster lived on during the long period between Alexander and the rise of the house of Sāsān in the 3rd cent. A.D.

6. Language. — The language in which the Avesta is written is named Avestan. It belongs to the Iranian branch of the Indo-Germanic family of tongues, and is most closely allied to the Sanskrit, though individually quite distinct from the latter. This relation to the Sanskrit was one of the means of establishing the authenticity of the Avesta, and is still of the greatest importance in its interpretation. In its phonology Avestan agrees with Sanskrit in its vowels in general, but shows a greater variety in its e and o sounds. Final vowels, except o, are, as a rule, short. A striking peculiarity is the insertion of transitional and epenthetic vowels, the latter giving rise to improper diphthongs. Some of the consonants are identical with those of Sanskrit, others correspond uniformly with certain Sanskrit sounds. The Sanskrit voiceless stops, t, d, p, for example, are in Avestan represented by bh, dh, ph, when followed by consonants; Sanskrit initial 2 a appears in Avestan as h. Because of this close correspondence, many Avestan words and phrases may be changed at once into their Sanskrit equivalents by the mere application of certain phonetic laws. In inflexion the language shows nearly the richness of Vedic Sanskrit, and it possesses almost equal facility of word-formation. In syntax it differs from the Sanskrit in certain points, showing marked individuality, especially in the later portions of the text.

Two dialects may be recognized in the Avesta: one the Gāthā dialect, the language of the oldest parts, often called Gāthā Avestan (GAv.); the other, the language of the great body of the Avesta, called Younger Avestan (YAv.). The Gāthā dialect is more archaic, bearing to the Younger Avestan somewhat the relation of the Vedic to the classical Sanskrit. Possibly this older dialect may owe some of its peculiarities also to an original difference of locality. Its chief characteristic is the use of final vowels and the frequent use of parasitic vowels. Its grammatical structure is remarkably pure. The same cannot be said of all the texts written in Younger Avestan, as the late compositions in this dialect, owing to linguistic decay, show many corruptions and confusion. All that is old or written in metre, however, is correct, and occasional inaccuracies in such parts must be attributed to faulty transmission.

7. Metres. — The metres of the Avesta deserve considerable attention, because they assist in determining the relative age of the various parts. Almost all the oldest portions of the texts are found to be metrical; the later, or inserted portions, are, as a rule, though not always, written in prose. The Gāthās are composed in metres that have analogies in the Vedas. These were the only metrical parts known to the later Zoroastrians until Western scholars discovered the rhythmical structure of many passages in the later texts. Almost all of these versified portions, especially frequent in the Yashits, are written in eight-syllable lines (cf. Geldner, 'Die Metrik des jüngeren Avesta', Tübingen, 1877).

8. Alphabet. — The Avesta is written in an alphabet far younger than the language it preserves. The characters are derived from the Sasanian Pahlavi, which was in use when the texts were collected and edited in Sasanian times. The writing is read from right
to left. Nothing is known about the original Avestan script.

9. Pahlavi version.—The Pahlavi version of the Avesta was made in Persia in Sassanian times, when the great Zoroastrian sacred texts became more and more imperfect. Some of the exegetical portions and works of interpretation belong even to Muhammadan times, and may be assigned to the period between 700 and 900 A.D. Of the Pahlavi version there are now extant the entire Ysang, the Yasna, and Vedicid, with some portions of other texts. The rendering is a word for word translation of the original, with the addition of occasional independent explanatory glosses. The original Avestan construction is usually adhered to verbatim, and the glossator has scrupulously adhered to every peculiarity of the language in his day by the use of particles. These determinatives, however, are often omitted, and the loss of the sole means of indicating syntactical relation adds greatly to the ambiguity of the Pahlavi paraphrase. This version, with the accompanying glosses, presents the traditional Zoroastrian interpretation from an early time, and is of the greatest value for an understanding of obscure ideas and an insight into native thought. It is also of material assistance in determining the meaning of the original phrases and sentences and in checking the results of purely linguistic analysis. It must be conceded, nevertheless, that it abounds in errors and inaccuracies, and that its explanations are often fanciful. Furthermore, the more abstract or obscure the original, the less the commentator attempts to explain it. The Gathas, for example, have in general very few glosses, whereas some other parts of the Avesta are accompanied by an elaborate commentary. The chief defect of the version lies in its disregard of the principles of grammar on which it is based, and which its authors seem to have had scarcely any knowledge. As a result of the slavish adherence to the original, the style of the Pahlavi version is very clumsy in comparison with the Pahlavi of independent treatises.

About the year 1200 a large part of the Pahlavi version was translated into Sanskrit by Nervosangh, son of Dhaval, a Zoroastrian priest, who seems to have possessed a thorough knowledge of Pahlavi. His translation is of great value as a help in understanding the Pahlavi version, which has not been altered or changed in any way. This method often oblige to sacrifice the Sanskrit syntax to that of the original Pahlavi, and his language consequently assumes a peculiar archaic aspect. A further striking peculiarity of the Sanskrit of Nervosangh's version is his disregard of the rules of scatbi, or euphonic vowel-combination, so uniformly observed in other Sanskrit works. Nervosangh seems on occasion to have corrected the Pahlavi rendering when he thought it at fault, thus showing that he must have referred at times to the Avestan text itself and reached an independent decision as to its meaning.

A modern Persian translation of portions of the Pahlavi version of the Khordah Avesta was prepared in Persia at some time between 1600 and 1800 A.D., and two separate translations into Gujarati were made in India early in the last century, and appeared at Bombay in 1818 within five months of one another. These are the last independent native versions made before the percolation into India of the influence of Western scholarship. These later versions were made on the occasion of the first notices by various scholars, but the Danish philologist Rask was the first to point out more exactly the relation between them. He had travelled in Persia and India, and had brought back with him many valuable manuscripts of the Avesta and the Pahlavi writings. In a little volume published in 1820 he
AVICENNA, AVICENNISM

The name 'Avicenna' is the Latinized form of the Hebrew 'Aven Sinâ', the transcription of the Arabic 'Ibn Sinâ'. Abû 'Ali al-Hujjâj ibn 'Abd Allah ibn Sinâ was born in the year A.H. 570 (A.D. 980-981), in the city of Khurramân. The son of a money-changer, and very precocious as a child, he received a frail-class education. According to Musâmân custom, he began by learning the Qur'ân and belles-lettres (adar). He then studied Indian arithmetic under the guidance of a greengrocer. His next tutor was a philosopher named Nâzî, who came to reside in the capital with his father at Bokhara, and taught the boy the elements of Logic, Epistemê, and the Almagest. Avicenna studied medicine without the help of a teacher, and, while quite young, began to visit the sick. Aristotle's Metaphysics presented great difficulty to him at first; but his mind was soon cultivated by a small but active band of workers.

A. V. WILLIAMS JACKSON.
And meantime he finished his greatest works. Avicenna died in A.H. 428 (A.D. 1036-7), at the age of 58, in the course of a journey, made in the train of the Great Khans, to Persia.

His biography impressed the vision of very great activity—an activity, too, which was exercised in very many ways than one. Avicenna loved wine and pleasure almost as much as intellectual work; and he committed excesses which reflected on his life. Legend has siezed upon his character, and has made of him a sort of powerful but beneficent sorcerer, the hero of strange adventures and burlesque forces. A whole volume of Turkish tales is devoted to him.

Avicenna's works are very numerous. In Philosophy, the greatest is asl Shifat ('the Cure'). The Shaiakh composed it by degrees at his different residences during his wanderings. When it was finished, he made an abridgment of it entitled Najat ('Healing'). This abridgment, written in very concise language, but clear and logical, is suitable for study. Another famous philosophical work is entitled Isharát. The full title is Kitáb al-ísharát wal-tahnábát, that is to say, 'Book of theorems and propositions.' Juzjami composed it, and Avicenna, while he was in prison himself, put a high value on it. It has been commented on by the scholar Nasir ad-Dín Tusi (T. A.H. 672 (A.D. 1273-4)).

Avicenna's other philosophical treatises are: Philosophy al-Arai, Philosophy al-Ali, so called from the names of the patrons to whom they are dedicated; Guide to Wisdom, composed by the Shaiakh when in prison, and often commented on; an epistle on The Sources of Wisdom, printed several times in the East; several treatises on Logic, one of which forms a part of the Najat; a treatise On the Soul; a short poem on The Soul, rather a mysterious piece, which has been commented on; an epistle on The Human Faculties and their Perceptions, printed at Constantinople; lastly, a series of mystical treatises, and a few poems in Persian.

In Medicine, Avicenna composed the voluminous work entitled Canon of Medicine, so celebrated in the Middle Ages. He also produced works on the different sciences, abridged Euclid and the Almagest, and helps us to understand the Astronomy. Shortly before his death, he asked Ala ad-Daula for permission to resume the astronomical observations which had been interrupted by troubles and wars. He was also credited in the Middle Ages with some treatises on Alchemy.

A.H. 383: Characteristics.—Avicenna belongs to the school which in Arabic literature took the name of 'School of Philosophers' ('al-falāṣīfī'). This name denotes all the philosophers who made a special study of Greek works, and the scholars who translated them. Shahrestāni (tr. Haarbricker, ii. 212 f.) gives a list of about twenty who, before Avicenna's time, received this title of Philosopher. Among them are the Christian or Sasanian translators, Hunain son of Ishāq, Thabit son of Qurra, Yahyā son of Adi. Among the Muslims, the most celebrated representatives of this school, before Avicenna, are al-Kindi and al-Farábī. Of these, al-Kindi is the real organizer of Arabic Scholasticism, while to al-Farábī Avicenna is greatly indebted in Metaphysics, as he acknowledges in his preface to the work. In this account of his original work, we shall not consider medical or merely scientific portions, but confine our attention to his philosophical outlook.

vol. II. — 18

4. Philosophy.—Avicenna's Philosophy may be sub-divided as follows: Logic, Physics, Psychology, Metaphysics, Mysticism, and Ethics. This division is in conformity with the custom of the school.

(1) Logic.—The parts of the Najat relating to Logic were translated into French by Pierro Vattier (see Lit. at end of art.). The Išhárat also contains some important philosophical definitions. In a treatise on the Classification of the Sciences, Avicenna gives Logic a very prominent place indeed among the sciences. His reason is not only the importance of Logic in itself, but also the comparatively extensive knowledge that the Arabs had of Aristotle's logical treatises. This knowledge enabled him to unite with his other philosophical works. In this same treatise Avicenna further subdivides the science of Logic into nine different parts, which correspond respectively to the eight books of Aristotle, preceded by Porphyry's Isagoge, one of the best-known works of the Oriental Middle Ages.

The first part, correspond to the Isagoge, is a kind of general philosophy of language, and is occupied with the terms of speech and the indirect elements of the sentence. In the second treatise of simple abstract ideas, applicable to all being, and is called by Aristotle the Categories; the third deals with the composition of simple ideas, in the presentation of which is subject of the Hermeneutics; the fourth unites the propositions together to form demonstrations, and corresponds to the First Analysis. The fifth discusses the conditions to be fulfilled by the premises of reasoning, and is like the Second Analysis; the sixth, seventh, and eighth parts respectively consist of propositions, taken from reasoning, and close to the Topics or Dialectics, the Sophistic, and Rhetoric. The ninth and last part treats of discourses whose aim is to stir the soul or the imagination, like the Poetics.

Logic, then, is taken here in a very broad sense; syllogistic is only a part of it. Syllogistics with Avicenna is only a secondary matter, except that of being clear and well arranged, free from vain subtleties and all scholastic trifling.

Although, as we have seen, Avicenna gave Logic a very important place, he did not, at the same time, exaggerate its power. He shows very clearly that this power is, above all, negative. 'The aim of Logic,' he says in the Ishárat, 'is to provide mankind with a rule, the observance of which will prevent him from erring in his reasoning.' Logic then, strictly speaking, does not discover truths, but only the use of them, he already possesses, and prevents him from making a wrong use of them.

Reasoning, according to Avicenna, starts from terms settled at the outset—the first data of experience and the first principles of understanding. The method of deducing conclusions from a known deduced from a previously known is not unlimited; it must have a starting-point, found outside of the reasoning, which will be the base of the logical fabric. First, from direct experiences or ideas, descriptions or definitions are formed, and then, by means of these, arguments are arranged. Avicenna cleverly explains what definition is: by definition man is enabled to represent objects; by argument he is able to persuade. Avicenna gives both the senses and the reason a share in the formation of the primary data of the sciences. According to him, imagination always supports reason; opinion also, and even memory, fulfil the same office. There are primary principles which all hold because of common feeling, or because of logical and psychological. It is now generally granted that this school was a development of Neo-Platonism rather than strictly Peripatetic. Avicenna seems to have cleared up and systematized the work of his predecessors. In his account of his original work, we shall not consider medical or merely scientific portions, but confine our attention to his philosophical outlook.
AVICENNA, AVICENNISM

not even aware of how the conviction has arisen. A self-evident example of these first principles is: 'The whole is greater than the part.' This philosophy is very sound. It is a scholasticism, not yet antiquated, open and sincere, in many places recalling the analyses of Leibniz.

Avicenna further discusses the form and matter of definitions and arguments, distinguishes between definition and description, and sums up, in the manner of the Peripatetics, in different kinds of questions that arise in science: first of all, what a thing is, and if it is; next, where it is, when it is, how it is; and, lastly, why it is. We see here an application of the doctrine of the Categories. Avicenna recognizes the four causes — material, formal, efficient, and final. He shows that they may all appear together in a definition. Thus an axe may be defined as ‘an iron implement, of such and such a shape, for cutting wood.’ At the very beginning of his Logic, Avicenna explains specie, essence, property, and common accident, which together furnish another method of constituting definition.

The Sciences are founded on experiences and reasonings. They have objects, questions, and premises. As there are universal premises (see also the reasons of the sciences) there are universal definitions.

The different objects of the sciences establish a hierarchy among themselves, according to their dignity. Besides this, the sciences are divided into theoretical science and practical science. The principal objects of theoretical science are Physics, Mathematics, and Theology; of practical, Applied Physics, Mechanics and Art, and Ethics. The problem of the classification of the sciences was very popular in the Middle Ages, both in the East and in the West.

On the philosophical part of his Physics, Avicenna discusses several of the primary ideas of the human intellect, e.g., power, time, and movement. He desires from Physics a first acquaintance with the ideas which Scholasticism employs in Logic and Metaphysics, that is, to say, with the ideas of form and matter and the categories. The ideas of form and matter are suggested by observation of the physical world: ‘Physical bodies, strictly speaking, are constituted of two principles, matter and form; but their qualities are gathered from them, which arise from the existence of the nine categories.’ Scholasticism divides these accidents into primary qualities, which are inherent in the body, and secondary qualities, which can be taken away without annihilating the body, but which contribute to its perfection.

Avicenna’s conception of power is more closely alluded to dynamics than to statics. He is interested in the energy acting from within the body rather than in the forces which move it from without. Like Aristotle, he allows that each body has a natural place, to which it always returns, by some hidden power, when it has been removed from it. The commonest example of these innate powers is ‘weight.’ This idea of power is developed in Psychology and Metaphysics. In Physics there is no infinite power. Its effects are always either greater or less. Avicenna recognized the principle of mechanics that ‘what is gained in power is lost in speed.’

Thus he explains by movement, and it cannot be diminished otherwise. Time cannot be conceived in immobility; it would then be of fixed duration, and no longer true time. ‘Bodies,’ says Avicenna, ‘are in time, not in their essence, but because they are in movement, and movement is in time.’ Time was regarded by Avicenna as a property of being itself. For the world in general, it is measured by the movement of the stars.

Avicenna also speaks of the locality of bodies, then of space and impenetrability. He tries to show, by somewhat subtle reasoning, that bodies cannot move in a vacuum, because, he thinks, the dimensions of a vacuum are indivisible and potential, which he concludes that a vacuum does not exist. He does not admit the possibility of actual infinity. Like the ancient, he believes that the world is finite, and that there is outside of it neither fullness, emptiness, but absolute nothingness. He admits, again, that bodies are divisible in potential to infinity, and he rejects atomism. Atomism had its partisans at this time, the mutakallimun (‘theologians’), with whom Avicenna disputes. In this connexion too, he analyzes the idea of contact very cleverly.

Avicenna unfortunately hardly managed to rid himself of the errors of Peripatetic Physics, although he had the opportunity several times. Yet, from a philosophical point of view, his account, besides forming interesting reading, bears witness to a very acute mind.

(3) Psychology.—In Avicenna’s doctrine, Psychology is carefully systematized, and adheres to the scholastic form. Being, and also the faculties, are classified methodically according to a hierarchic arrangement. The general plan of this grand construction is as follows:

There are three kinds of minds. These are, in ascending order, the vegetable mind, the animal mind, and the reasonable or human mind.

The vegetable mind, or nature, possesses three faculties: (1) nutritive power, which, when resident in a body, changes another body into the form of the first; (2) a power by which the body itself increases, without changing its form, until it has attained its full maturity; (3) power of generation, which draws from the body a part which, when it has arisen, in its turn, produce other bodies similar to it acto.

The animal mind possesses two kinds of faculties: motive faculties and apprehensive or perceptive faculties. (1) The motive faculties ensure the maintenance of power and power. The appetitive power itself is either attractive or repulsive. If attractive, it is simply desire, concupiscence; if repulsive, it is inaccessibility. The efficient power, which is the producer of movement, resides in the motor nerves and the muscles. (2) The perceptive faculties of the animal mind are classified as external and internal. The former include the five senses—sight, hearing, smell, taste, and touch. The matter have their own particular senses and the common sense, a sort of centre in which all the perceptions assemble before being elaborated by the higher faculties. The common sense is situated in the front part of the brain, and it acts on the perceptions, the formative faculty or imagination. It strips the sensible form of the conditions of place, situation, and quantity, and it determines itself to attract, to repel, or to make an impression on the senses. The formative is followed by the cognitive faculty, which works first of all by way of abstraction on the sensible, assimilates them, and extracts notions out of them. The estimative faculty next groups these notions into what might be called judgments, but which are quite instinctive and not intellectual. This faculty it is which constitutes ‘animal intelligence.’ For example, the sheep knows by its eye to flee from the wolf. The last of the faculties of the animal mind is memory, which is situated in the back part of the brain.

The human mind alone possesses intelligence. This intelligence is divided into active intelligence, or practical reason, upon which morality depends, and speculative intelligence, or theoretical reason, which perceives ideas. The perception of ideas is built up through three faculties, which make the movement from mere power to actuality. The first of these faculties, the material intellect, is only a general possibility of knowing; the second, the intellect of possession, recognizes first principles; the third is that which is directly fitted to receive the forms of things that are intelligible, to actualize, to make the imperfect intellect. It seizes hold of that which is intelligible, when, outside the human mind, it unites with the ‘active intellect.’

There naturally arise, in the course of this theory, physiological questions relative to the functions of the senses and the localization of the different faculties. Avicenna treats of these as...
best he could at a time when the biological sciences were as yet hardly in their infancy.

In this respect the same argument may be made for the visual images are transmitted to the eyes, and draws a parallel between two processes of explanation, which he attributes respectively to Aristotle and Plato. He accepts Aristotle's method and rejects Plato's.

The discussion of the intelligence also brings up the question of universals. This question was not so preponderantly important in Aristotle as it was in Western scholasticism. Avicenna is a realist. Like the Neo-Platonists, he admits that the intelligibles, which are universals, exist in the active intellect. The human intelligence comprehends them in acta, when it unites with the active intellect, and becomes dependent on it for particular which the senses recognize. But this process of abstraction is not sufficient; it is only preparatory, and gives the comprehension of the universals only in potentia. Before this can pass to actuality, man's intelligence must be united with a superior intelligence. The reasonable mind starts from the sensible, and little by little rises above it, approaching meanwhile the region of universal realities. Psychology ends in Metaphysics.

The following are Avicenna's proofs of the spirituality of the soul. The soul perceives its own peculiar essence; intellectual power perceives ideas apart from organs; the locale of intelligibility cannot be a body. The immortality of the soul is a necessary truth. The dependence of the soul on the body is not essential but accidental. Another form of this proof is that the soul is a simple substance. Avicenna believes that the soul is created at the same time as the body is formed, and is to a certain extent in harmony with the body; it is a soul to animate. This condition of compatibility with the body makes metempsychosis impossible.

(4) Metaphysics. — There is one part of Avicenna's Metaphysics which seems quite old-fashioned now, and we must go back in imagination to the beginning of science to find any sense in it. It treats of the procession of the superior intelligences and the production of the celestial spheres. On the other hand, there is a part which seems to date from a very early period of philosophy, and is a systematic character no longer found in modern works of philosophy. This part treats of primary cause and necessary being. The following is very briefly the theory of the spheres:

they are described in the following manner. See § (3) from the vegetable world up to man, is continued beyond man into the region of the stars. The idea given at the top of the scale is the Necessary Being, and the last one is a region of eternity. From this first being emerges the world of ideas, which is a collection of pure intelligences, simple substances, concepts or of all possible worlds. The next consists of the souls of the stars, which are world. The souls are essences, bound to pure intelligences, which animate bodies. The bodies that they animate in this supra-human region are the stars, which are classed after the manner of ancient astronomy. The world of the intelligences of the stars, below the last of them, which animates the moon, is the active intellect. From it flows the sublunary world.

Very noticeable in this theory is the analysis of the world of ideas into active intellect and astronomical intelligences. The interchangeability of the stars is an old belief which was disputed down to the time of Galileo; and the comparison of their spheres with a superior kind of animal is an idea which dates back to the Hellenic world, and which was long dear to the East.

In connexion with this system, which strikes a modern reader as quaint, Avicenna discusses in a dignified manner the metaphysical theory of causality. He considers that the pure intelligences are the causes of each other in descending order, and the causes also of the souls of the spheres, and, through them, of their bodies. He holds, then, that intelligence is essentially active; it is even productive of being; and cause usually is simply intelligence. Elsewhere cause is identified with being itself; it is perceptible especially in the primary cause, which is the cause of potentiality at the same time, and includes in its essence everything of which He is the principle. He comprehends everything in a universal manner, and at the same time no attribute of any particular. The ultimate cause, beyond the cause of the cause, is hid from Him, not even the weight of a dhrub (an atom). He is, at the same time, a final and efficient cause. The final cause precedes the efficient in potential in acta the efficient precedes. The cause of the efficient cause is the final and efficient cause.

God is not the actual moving power of the stars, for this function would beget a certain multiplicity in Him, and, according to the spirit of Avicenna, He must have all safeguards of simplicity. He moves the stars by the intermedialation of the first caused, that is, of the first intelligence which springs from Him. This intelligence knows itself and it knows God. From this double knowledge arises a duality. The duality then changes to triplicity when the first caused still knows itself as possible in itself, and as necessary in the primary Being. In this way this philosophy introduces multiplicity into the world.

The doctrine of universals reappears in connexion with that of causes. There are causes of kind and causes of individual; the general it is his own cause, the particular has a cause. A thing has a cause of its quiddity and another of its being, i.e., a cause by which it is what it is, and another by which it exists. If a thing is to be individualized, its idea must be able to receive the effect of particular cause.

The idea of the necessary Being is the terminus of the theory of causality. The necessary Being as such has no need of causes. He exists from the beginning complete, with all His qualities. He is absolute. He is pure good, for He possesses the perfection of existence, and existence in itself is goodness: existence, always in acta, is pure good.

He is pure truth, for that is called true which can justly be said to exist, and, as His existence is necessary, He is therefore absolute truth.

The theory of causality takes quite a different form. A demonstration composed of three lemmas proves the necessary being:

(1) All possibles cannot spring from one possible cause, on which their possibles are united in themselves; (2) a series of causes finite in number cannot be possible in themselves and necessary to each other, so that they depend on one another in a circle; (3) everything can be possible and actual; and an incompleteness of being, and a failure to beget, and the idea is determinating. This consequently signifies that all possibles must have cause, that causes are not linked together infinitely, and do not return on themselves. Therefore the series of possibles ends in the necessary being.

This theory is a very fine effort to prove God and to deduce the world from Him in a vigorous way, by a dialectic of mathematical precision. Faith in the power of reason is manifested in this system. To us, who are now more sceptical, it seems pure rationalism, and it is difficult to see how it can be reconciled, however, by its vigour and power.

(5) Mysticism. — It is doubtful whether Avicenna was really a mystic in the religious sense of the word. Here again he has followed the custom of the Neo-Platonic school, regarding mysticism as only a subdivision of philosophy. Ibn Tufail seems to say that Avicenna had a kind of esoteric doctrine called hikmat-al-ishraq, 'philosophy of illumination,' which really contained his true ideas. But we know from one of Avicenna's works that this philosophy is almost exactly Avicenna's own Neo-Platonism with a different nomenclature.

Passing over mysticism as related to asceticism,
5. Avicenna's school.—The school of Avicenna does not boast any very celebrated names. His philosophic and religious teachings were transmitted to the Musulmans of the East by orthodox theologians, especially by al-Ghazālī. For the history of this school of 'Philosophers' proper in Western Islam, see AVERROES, AVERROISM.

LITERATURE.—(a) On the MSS of Avicenna's works: C. Brockelmann, Geschichte der arabischen Litteratur in Berlin, 1897—1905. For Avicenna's life: Ibn Abi Usábīa, ʿUqun al-Aʿlāb, ed. Müller, Königsberg, 1854, pp. 2—20. Avicenna's general philosophy is the subject of A. A. ʿArīf, L'Oiseau, in France's Dictionnaire des sciences philosophiques; T. J. de Boer, The History of Philosophy in Islam, London, 1903. A very important work is now in process of preparation in Germany on the Šifā of Avicenna. (b) The Šifā was published at Rome along with the Canons of Medicine in 1593, and at Beirut, Paris, 1753. See Le Livre de Logique du fils de Šinā, tr. Vattier, Paris, 1832. (c) On logic, Al-Fārābī, Documenta philosophiae Arabum, ed. Schmödl, Bonn, 1856. On psychology, Landauer, ʿDīs-ṣiḥḥat al-ʿilm al- 갖고ni." It is a rare work which has been prepared by the public. The virtues enjoy this happiness. Otherwise its taste is vitiated; it cannot attain its end, and accordingly suffers. But if a man has lived a mediocre life, his actions never reaching the height of his intentions, his soul, when freed from the body, becomes the centre of a struggle between his pure desires and his bad habits. Only when purified by this grievous struggle does it attain perfect bliss.

ETHICS.—Avicenna, announced of the speculative part of his philosophy, was on that account less interested in practical philosophy and moral analysis. In his mystical works, he has some fine pages on morals, but their character is distinctly metaphysical. He also wrote on ethics as well as a short treatise on Government, which was published recently. It is written in a practical spirit, but is really an elementary treatise in economics. It explains how a man should govern himself, his wives, his children, and his servants.

From the very earliest times, humanity felt a need of organization. First of all, man had to settle in places where he could most easily and comfortably live. This led to the setting up of a certain order of dwelling, of which established, these required looking after. This duty was entrusted to the woman. From the woman the family was born, and, as it increased, servants were added to the household.

Mun's need of subsistence was also the primary promoter of commerce and the arts. Avicenna divides the arts into three kinds: (1) those which are dependent on intelligence of the highest order, e.g. guidance, judgment, counsel; (2) these are exercised only by the great; (2) those dependent on education, e.g. writing, speaking, medicine; (3) those founded on strength and courage, as military arts. Every individual should learn one of these and apply himself to it.

The good wife is her husband's associate in ruling and guiding. The best kind of wife is intelligent, religious, fond of her husband, and springing from good stock. The management of the family is based on fear, dignity, and care. If a man does not make himself feared, his wives will depend on it of the family, in so far as they are complementary to metaphysics and morals. He describes Providence as the fact that the whole world is encompassed by the knowledge of primary Being. This knowledge is cognizable of the most perfect and the highest of the Being. The theory of optimism, exhibited in this idea, is similar to Leibniz's: evil is not a part of Divine decree in essentia; its place there is accidental. Avicenna recognizes the three kinds of evil: want, physical suffering, and sin. We find evil only in the world as a fact, and has not yet attained perfection. It affects only the individual; species are shielded from it. Evil, moreover, is always a good from some superior point of view. 'It does not enter into the plan of Divine wisdom to abandon lasting and universal good, because of fleeting evil in individual things.' Like Leibniz, Avicenna decides that, however common it may be, evil is not the general rule; it is only the exception to the good.

After death the reasonable soul attains perfection. To effect this, it must become conscious and intelligent, and receive within it the form of harmony and well-being which pervades the world of superior essences. It unites with this idea of perfection, and so becomes like it. Only the soul which has been prepared by the public for certain virtues enjoys this happiness. Otherwise its taste is vitiated; it cannot attain its end, and accordingly suffers. But if a man has lived a mediocre life, his actions never reaching the height of his intentions, his soul, when freed from the body, becomes the centre of a struggle between his pure desires and his bad habits. Only when purified by this grievous struggle does it attain perfect bliss.

AWE.—In the presence of an awe-inspiring object, we feel ourselves subdued, but are placid: we are powerfully had hold of, but neither resist nor desire to be set free. On the contrary, we are drawn towards the object, and its presence is well welcomed by us, though with a serious and pensive joy. The affections, then, are enlisted, as well as the imagination. The appeal is made to that part of our nature that is open to influences from what is higher or greater or grander or better than ourselves. We feel our inferiority, indeed, but there is no resentment; we are conscious that the superiority in the case is the complement, and not the contradiction, of ourselves. This is in line with the experience of the finite resting on, and complemented by, the infinite, and of the 'less being blessed of the blessed."

Greater, higher, grander, better—these are the conditions of the possibility of the emotion of awe; and there is the further condition that these should not appear as threatening us with danger, but as friendly, or, at any rate, as not unfriendly. If we were on our own level, this peculiar emotion could not arise; and if we were threatened with evil, a contrary emotion would be aroused. The antithesis to the awe-inspiring in objects is the commonplace and the obvious, or the desirable and the mean—everything that tends to lower, and not to elevate, the soul. Dealing with what impresses us, awe is by its very nature contemplative and enmolding; it allies itself with our ideals and our aspirations, and is helpful towards enabling us to purify and to raise the personal and its ethical value. Hence, mystery intensifies it—the unknown and the unknowable. We cannot but be serious in the presence of mystery. The feeling of the mysterious, when it takes possession of us, necessarily subdues us and lifts us up.

We shall better understand the nature of the emotion, if we note the objects that call it forth. Some of these are impersonal, and some are personal. Of the impersonal causes, we have (a) phenomena of nature showing us the incomprehensible, objects that transcend our capacity of understanding or that give special scope and exercise to our imagination—such, therefore, as are exceptionally impressive and create in us a certain indefinite yearning, wonder, and admiration; e.g., the starry heavens, the magnitude or vastness of...
space, the infinity of time, the origin of life, the mystery of generation, and the like. But, besides these, we have (b) intellectual theories and moral principles—generalizations of commanding sweep and laws of transcendent excellence. Of the two things that make the profoundest impression on Kant, the Moral Law was one: the grandeur of it, the unconditionality of it, the authority of it—all contributed to make it awe-inspiring to a degree. In all this we have the feeling of feeble-mindedness and insignificance of our thoughts and reasoning of might and worth set over against our impotence and imperfections. Next, we have (c) awe as associated with persons—an intellectual genius like Plato or Aristotle, a literary genius like Shakespeare or Goethe, a scientific genius like Newton, an ethical or a religious genius like St. John or St. Paul. But, of course, the highest of all examples is God—supreme in Majesty, the source of all the excellences ('wisdom, love, might') and the fountain of Holiness. We have here the realization of the Ideal, which points the contrast.—

"Who is the man and the man's name; because I am a man of unclean lips, and I dwell in the midst of a people of unclean lips: for mine eyes have seen the King, the Lord of hosts!" (Is 6). It is the contrast of the sinful and the weak, in presence of the holy and mighty, or not merely our frailty and weakness, but our strength do not repel but attract us. It is felt that underneath the majesty and greatness lie beneficence and mercy: in the hands of the Supreme, we feel ourselves secure. Again, we have (d) things sacred causing awe—things associated, therefore, with the Divine. Such and these holy places (see art. 'Bethel' in Hastings' DB and in EB), the soul-moving services of religion on special occasions—the dispensing of Communion in Protestant Churches and the Elevation of the Host in Catholic Churches, are all, and akin to this, (e) the awe that is associated with solemnity—e.g. the presence of Death, the death-chamber, funeral rites. Speaking of St. Edmund, Carlyle says:

"They confounded him with worth and sweet spices, with love, pity, and all high and awful thoughts; conversing him with a very storm of melodious adoring admiration, and sundry other sentiments; joyfully, yet with an air of awe, which has something of the awful in it, commemorating his noble deeds and Godlike walk and conversation while on earth." (Past and Present, bk. ii. ch. 20).

Now, this being so, there can be little difficulty in perceiving the relation between awe and fear. The dictionary subsumes the one under the other: it makes awe simply a species of fear or dread. No greater error could be committed; for neither in their nature nor in their results have the two much in common. It would be ill both for ethics and for religion if they had.

It is the peculiarity of fear (q.v.) to agitate and unsettle us. It deranges the body and unites the nerves, producing well-marked outward effects (shudder, perspiration, anxiety, dread, distraction, vocal utterance, erection of the hair, and such like); but it has well-marked psychical effects also—intellectual and volitional. The first effect of fear is to stimulate us to resistance or to circumvex
evention, and, if the terror is not excessive, it braces us for the effort; but, beyond that stage, it becomes detrimental and may be ultimately disastrous. However exhilarating fear in moderation may be, its normal action on the intellect is disturbing and disconcerting: it destroys the power of correctly appreciating the situation, and creates a tendency to magnify the danger, and so an inability to perceive the right course of action to be pursued if the impending evil is to be prevented. If at the moment the intellect, under fear, counsels resistance, the result may be a baffled flight; till, last of all, it becomes powerless to counsel in any form—it simply collapses. So that, thus far, fear may be defined as 'nothing else but a surrender of the succours which reason offereth' ('Wisdom of Solomon' 17). But the effect on the will is no less conspicuous. Danger, if moderate, may rouse to courage; fear, on the other hand, arouses to effective opposition; but, beyond this point, the result is disquieting and weakening, until, in extreme cases, absolute paralysis sets in, and the subject can do nothing but remain helpless and await his fate. And so, fear resolves, and does not attract; and its tendency is to paralyze both intellect and will and bring about disaster.

Moreover, when the moment of fear is past, our attitude towards the object that created it is one of hatred or dislike.

Not so with awe. In most of the respects now enumerated, it is the antithesis of fear. It has a calming and quieting influence on the body (as seen in the bowed head, the soft walk, the restrained speech, and the reverential look, of the subject of it); and, inasmuch as it affords, instead of repelling, it produces satisfaction and contentment, and a desire to continue in the presence or under the influence of the object that inspires it. In awe, we feel ourselves in the hands of superior power, but that power is conceived as beneficent and good, and we do not, in consequence, shrink from, or be ill-disposed, towards us, and under whose protection we may rest secure. The consciousness of danger (and therefore fear) is wanting, and the feeling of reliance takes its place. We trust the awe-inspiring object, and are attracted towards it, and we rest in the experience of it, and are satisfied. Hence the importance and significance of awe as a religious emotion, with its concomitants of reverence and veneration. It lies at the root of worship, and is the indispensable condition of the Divine.

Hence, further, awe enters into the sublime. Not every sublime object, indeed, need beget awe (for pain sometimes is associated with sublimity, and fear is a distinctly felt ingredient of it, producing uneasiness); but much that is sublime also impresses us with awe. Both are results of the manifestation of power or excellence, and both are most effective when associated with Personality. Moral heroism, for instance, and magnanimity are of this stamp—greatness of soul rising superior to misfortunes and the vicissitudes of events. "Anxius contra mundum" (a unique figure defying opposition, standing erect in solitary grandeur in the face of fearful odds) can never cease to move us strongly—to draw forth our admiration and to enlist our regard; and there are many acts of self-sacrifice and many lives of disinterested devotion that are sublime and awe-inspiring in the highest degree. They elevate our thoughts and win our affections; they purify our souls, and we feel that we are all the better for the contemplation of the frightful things.

William L. Davidson.

Axe.—There were several forms of axe, or adze, in use among the Greeks, as amongst other nations; but a special controversy has arisen over the σιδερος or λάθρας with double blinde, owing to its association with Zeus Labradon.

The double axe is derived from one of the Stone Age types, in which the handle passes through the middle, and the blade is slumped between the flanges. Examples of this type may be seen in
any good collection, such as the Pitt-Rivers Museum at Oxford. The type was first translated into bronze, and then the form was modified, the wings growing and assuming a more curved outline. Other specimens have been found with other tools in a carpenter's shop at Anthedon, and with other tools at Goninn and Palaikastro in Crete, and at Troy. A late Attic relief shows a youth holding one of a pair. On other works of art, I note attempts to kill Phæatus with this axe. These fits with it, the Amazons are frequently armed with it. It is represented as part of Gausl's war-spool, along with other arms and weapons, upon many reliefs;' and it was used as war-spool. It was to slay the sacrificial victim by the Hittites and at Paphlaga,' and in Crete, where a priestess is represented with one in each hand, and there is other evidence to be considered anon. Here is enough to prove that this axe was a war-weapon, or tool, and a sacrificial implement in consecration.

We are now in a position to understand its meaning in the hands of divine persons. Zeus of Labranda is well known to have held it: but so does Artemis, 22 and so does Dionysus, 26 and so does Apollo in Asia Minor, 27 and so do the local heroes in Asia and elsewhere. 28 These use it, no doubt, as a weapon of war; and Zeus with his axe manifestly protects Labranda as Athena armed cap-a-pie protects Athens, or any other armed deity stands forth in his might. We may even fairly suggest that the name Labranda has some such relation to Labranda, Danausse or Toledo to their famous sword-blades.

The use of the axe in sacrifice seems to be enough to account for its representation along with the ox-spool, first as a memorial of sacrifice, and then as a decorative scheme. Here our evidence comes largely from Crete and the Mycenean age. Mr. A. J. Evans has found representations in which the ox-spool is surmounted by an axe, the handle being fixed in the spool; one is a Knossian seal, 23 another a Mycenean vase-painting from Sphacteria. 24 These examples are horrid by Evans's horn of consecration 1 (see 'EGEAN RELIGION'), which is obviously a stand of some sort, and apparently is a conventionalized ox-spool, 25 also had the axe fixed in it; 26 one was found in the Knossian shrine with a hole, and a small double axe of steatite lying near, so that it may be fairly assumed that the axe stood in the hole. 27 The axe also becomes an ornament of vases and other works of art. 28 We may compare with this the use of the ox-head with wreaths in a frieze, so common in Roman times; and the reliefs of ox heads with other sacrificial implements, by Kairos. The axe shown is found carved with a late dedication to Apollo in Asia Minor, once apparently to commemorate the sacrifice of a bull. 3 It may perhaps be mentioned that the ox-spool, or its model, is hung up as a charm in gardens and vineyards by the modern Greeks, especially in the Asiatic islands, and less commonly elsewhere.

The axe was an object of dedication, like any other weapon or tool. We have seen it as part of war-spool; the axe was also dedicated to Apollo at Delphi; 4 and in the Dictyan and Labranda of Zeus 19 axes were found, 5 along with 20 lance-heads, 25 darts, 100 knives, pins, and tweezers, a cart drawn by oxen, human and animal figures, vases, and other things. All the Cretan axes are simulacra, being too thin or too small for use; butmost are performed, and some have handles. Other tiny axes of this sort have been found, of different types: thick and solid, like stone axes; thin, and sometimes marked with dots like dice; sometimes the handles are perforated for hanging. These have been also dedicated at Olympia, and Palaikastro (Cret); 6 to Artemis in Aredia, 7 in Ithaca, 8 and at Ephesus; 9 and to Athens and Artemis Orthia at Sparta. 10 The axe also becomes a motive of ornament; 22 and axes were found made of gold and bone in tombs and elsewhere. 12 It is obvious that these dedications cannot be held to have any peculiar appropriateness to Zeus, because they are dedicated also to Athena, Apollo, and Artemis, and with them are found many other things that are peculiar to Zeus. They are not for use; they may be either models of war-spool, 13 or ornaments, or perhaps fractions of the axe-unit of exchange. Similar axes are known in modern times as fractions of the axe-unit, and there are indications that the unit was known in Greece; 14 or again, the shape may have remained as traditional after they ceased to be used in exchange.

It remains to discern the graphic representations of the axe. The blocks that compose the walls of the palace at Knossos are scored with a number of different signs, which occur either alone or in conjunction, just as the symbols of writing might do. Amongst these is the double ox-spool, which is repeated along a number of times on the four sides of a square pillar in the corridor at Knossos. Whether the pillar be sacred or not 15—and there is at least room for doubt—there is no sufficient ground for regarding these signs as sacred. Such an explanation would account for only one out of many signs, all used together in the same way. It must also be

remembered that these signs were certainly covered over with plaster, as some of them still partially are. The Italic excavators of Phaistos regard them as literary signs; they all, or nearly all, occur on gems. Several, including the double axe, occur on the literary tablets of Knossos, and are interpreted as meaning 'by Zeus himself!'. They are probably masons' marks; and some of them, including the double axe, have been noticed on stone blocks, apparently used for masons' marks, in other places, as the old Hellenic blocks used to build the medieval fortress of Cos, and the stones of the Edinburgh Crete.

The above is enough to show that the double axe is not necessarily sacred, or necessarily connected with Zeus. But this is no reason why the axe should not have been the object of worship. Axe-worship is, of course, not fictitious worship, as some have loosely called it; but instances are not uncommon of weapons being worshipped, whether as weapons or as iron. Evans, in his paper on 'Mycenean Tree and Pillar Cult', has alluded to the subject; and A. B. Cook has collected evidence for it in 'Axes of Crete'. The evidence is of varying value: the most weighty piece of evidence is the representation on the Hagin Triadha sarcophagus: a priestess is pouring some red liquid into a jar between two double axes. The other evidence, such as axes set betweenhero-souls, held as writing by Evans himself, or visible on the ground of engraved seals, is indeterminate; but these may strengthen the case for worship, if it be established otherwise. Cook publishes a cut of a priest sacrificing before a number of objects, including an ibex, a star, a crescent moon, and two knobbled sceptres with a (one-flanged) axe set upright upon a stool (Assyrian); a Persian seal shows a worshipper before a stool with similar objects upon it. A coin of Tenedos shows an axe upright standing on steps between two supports; another, an axe connected with a jar by a fillet. These seem to be the most significant facts that bear on an axe-cult: it is impossible here to recount all that has been brought in evidence to prove it, or to discuss the far-reaching and often fanciful inferences that have been drawn from them. The reader, however, may be reminded that there are several distinct questions, which have been often confused: (1) Was there an axe-cult? (2) Was the axe specially connected with Zeus? (3) Was the axe a symbol of Zeus? (4) Is the axe associated with Zeus? (5) Is the Knossian palace the Labyrinth?

Literature.—The literature has been given throughout the article.

W. H. D. ROUSE.

AXIOI. — I. Meanings of the term. — The various senses in which the term 'axiom' is used are easily confused, and require to be carefully distinguished. We may mention five senses of the term, all of which are historically important. (1) Axiom in a predominantly epidemiological sense: a proposition whose truth is self-evident; an immediately evident objective truth. (2) Axiom in a predominantly psychological sense: a proposition of whose truth the man who calls it an axiom feels a fixed persuasion, while he regards the proposition as indemonstrable, and his faith as something fundamental and, for him, necessary; a proposition that, by the name of 'axiom', has been fixed for him by a process of auto-deduction. (3) Axiom in a predominantly logical sense: a first principle which, itself not demonstrable, can be used as a basis for demonstrations. (4) Axiom in a predominantly social sense: an opinion which is, as a fact, accepted by all who are competent to judge, and which is not necessarily a consequence of the innate constitution and the original instinctive tendencies of the mind lead us to accept, and which we therefore do not derive merely from our experience.

1. From the point of view of sense, (1) all our knowledge is supposed to be either 'meditate' or 'immediate'. An axiom is a proposition known to be true, not 'meditately', but 'immediately'. For this view, 'intuitive knowledge', 'immediate insight', 'axiom', or 'evidence' is presupposed, as a possible form of knowledge and of consciousness. The criterion of an axiom is said to be that, when we consider the import of a given axiomatic proposition, this state of consciousness, this direct assurance, arises, and makes wholly unnecessary any demonstration of the truth of the proposition which comes under our observation. Here the stress is laid, therefore, first upon the immediacy of the insight in question. To think the axiom, and to know it to be true, are supposed to be simply inseparable acts. The assurance or intuitive knowledge, or 'evidence', or 'intuitive truth', is immediate, whereas the assertion of the proposition is further regarded, according to sense (1) as objective. One does not mean by the term 'axiom', when thus used, merely to point out the fact that a given person feels sure that this axiom is true. Sense (1) implies that whoever accepts the terms of any proposition 'intuitively knows', that is, directly observes, the perfectly objective fact that the axiom is true.

2. Sense (2), on the contrary, lays stress upon what may turn out to be the subjective necessity with which some one feels convinced of the truth of the proposition as a whole, or of some particular proposition. When such a feeling of necessity attends a conviction, and when no demonstration of the truth of the conviction can be given beyond the more observation that, so long as one conceives the meaning of the proposition, one feels thus convinced, sense (2) requires one to call the proposition an axiom. Sense (2) therefore makes the criterion of an axiom relative to the subject who feels the necessity, and who is able to give other reason for his conviction.

Sense (3) is present in the mind of Descartes when he speaks of propositions as being 'certain', or as being capable of being 'certain'. Sense (3) is emphasized by those who, by the word 'axiom', mean (6) a proposition that is capable of being known as a fact, or that it is clearly 'convincing', or that it is such that we feel that it is true.

Sense (2) and (3) are often confused. The question as to the relation between the terms 'certain' or 'evidence' and 'truth' is central in the theory of knowledge, and only a thoroughgoing sceptic will deny that there is indeed a close connection between at least some of our 'assurances' and our truths, and that the danger of confusing mere 'conviction' with objective 'evidence' is manifest throughout the history both of science and of religious belief.

3. Sense (3) makes the use of the term 'axiom' relative to a given or proposed theory or system, consisting of propositions and of reasons. In this third sense an axiom is a proposition which is not demonstrated in the course of the development of the system of theory, but is assumed or accepted at the outset, and used as a basis for demonstrations that form parts of that system. If the system in question constitutes, or is regarded as constituting, the whole of the possible system of knowledge, then the axioms in sense (3) appear as...
‘absolutely first principles,’ since, by hypothesis, they are essential to the rational demonstration of the truths of this system and are not mere propositions to be proved in the course of any investigation that we can make. But if one is explicitly confining one’s attention to some more or less limited province of knowledge, or to some special system of propositions, axioms, and laws, the second (3) may be applied to that special system, and are then merely the principles presupposed, used, but not demonstrated, by the system in question.

Axioms in sense (3) might therefore be neither self-evident truths nor yet necessary convictions of any one, but merely ‘assumptions’ or postulations. On the other hand, sense (3), in so far as it requires an axiom to be a ‘first principle,’ emphasizes a character which we are all especially accustomed to connect with the term, namely, that character of universality that is possessed by axiomatic propositions are very commonly regarded as possessing. Senses (1) and (2) could be satisfied by particular, or even by individual, propositions. Thus the proposition ‘1 is a prime number’ is satisfied by the one who has toothache, and be viewed by the sufferer either as the ‘self-evident’ objective truth, or as the ‘immediate consensus’ and logical truths. Whether the great mass of mankind should be satisfied (2) is merely a question of the type of demonstration only when they are asserted along with universal propositions. And therefore at least some axioms, in sense (3) of the term, must be universal assent. It especially belongs to sense (3) to emphasize this universal character of at least part of the axioms of any theories.

Sense (3), in contrast with, and sometimes to the exclusion of, senses (1) and (2), has been made prominent in various modern logical discussions of the principles of mathematical theories. This is done by the ‘axioms’ of a given mathematical theory, recent writers mean, in many cases, propositions which one uses simply as the fundamental hypotheses of the theory in question (e.g., of the theory of some one of the ‘non-Euclidean’ or ‘non-Archimedean’ geometries, or of the Cantorean ‘Theory of Assemblies’). One need not assert such hypotheses to be true, except in the sense that one uses them, at least provisionally, as self-consistent assumptions about a logically possible state of things, and uses them as ‘principles’ or as ‘primitive propositions’ in some statement of a theory. An axiom, in this sense, is often opposed to a proposition that is shown to follow from the principles, and that is, in this sense, demonstrated in the course of the theory in question. In two different statements of a theory (e.g., two different theoretical descriptions of geometry or of number-theory) decidedly different sets of ‘primitive propositions’ may be the basis of a single theory. In such cases what in an axiom in one statement of a theory may appear as a theorem in another statement, and conversely, is a doctrine of a ‘first principle’ in one relative, not merely to the theory in question, but to a particular way of stating that theory, and of showing that certain propositions follow from certain other propositions.

If one insists, as Aristotle did, upon sense (3) as applying to certain propositions which are said to form the indemonstrable principles of all science, so that, without these absolutely first principles, no system of knowledge whatever is possible, then in a sense (3) also axioms are principles that are necessary, but cannot be proved. But if one follows his way of treating the theory of knowledge, there are propositions which are axioms both in sense (1) and in sense (3). In consequence of the Aristotelian tradition, senses (1) and (3) have thereon all science, and are self-evident, and hence philosophers actually inseparable; so that the ‘first and fundamental truths’ are the ‘self-evident’ or ‘immediately known’ propositions are, in discussions of the problems relating to axioms, not infrequently simply identified. But the logically important distinction between the relatively first principles of a theory and the axiomatic propositions (if such there be) has been brought after to light, especially by the modern logical investigations of scientific theories, and should never be forgotten in dealing with the topic. If a proposition is to be called ‘immediately evident’ in sense (1) and in sense (3), special reasons (such, for instance, as those of Aristotle) should be advanced for asserting that this is the case. As a fact, it can never be ‘self-evident’ that a proposition is an axiom in sense (3); for one can ascertain that a principle is indeed a logical basis for the demonstrations only by taking the trouble to go through the demonstrations themselves—a highly ‘mediated’ procedure.

4. Sense (4) uses as the criterion of an axiom the ‘universal assent,’ the ‘consensus’ of ‘all rational beings,’ or sometimes the consensus of all the ‘competent,’ of all the ‘normal,’ or of the ‘wise,’ or of some class of knowing beings whose common opinion in the matter is treated as the standard opinion. The criterion here in question has frequently been extended to a logical basis for the universal consensus of the long annals of the doctrine of Nature, of the ‘natural,’ or of the ‘Law of Nature’ and the ‘consensus of humanity’ as the standard whereby both opinions and deeds are to be judged. But among an outer circle, there is an opinion held by some, who hold that, as a fact of human nature, there are indeed propositions which nobody denies, or which all who understand their import affirm. In practice, however, those who appeal to ‘universal assent’ as the warrant for an axiom usually render their criterion somewhat inept, by the very fact that they employ this criterion in arguments directed against opponents, who, as appears, call in question either the truth, or the evidence, or the interpretation, of the axiom that is under consideration. If the opponent himself does not wholly assent, one can hardly appeal to ‘universal assent’ as an evidence against him, without modifying the sense in which one calls the assent ‘universal.’ Such modification occurs if one regards the consensus in question as that of the ‘wise,’ or of the ‘competent,’ or if one insists, in a well-known poetic fashion, that ‘nobody who is in his senses’ doubts the supposed axiom. Thus, in practice, an axiom in sense (4) is usually conceived in some close connexion with senses (1) and (2)—the consent of the ‘wise’ and the common assent of the controversy. Not infrequently a thinker first explicitly asserts that a proposition is, for himself personally, an axiom in sense (2); then he draws the conclusion that it therefore must be an axiom in sense (1); and thus he proves, by a more or less lengthy mediate course of reasoning, that the proposition, being ‘immediately evident,’ cannot be proved. Since, perhaps, some opponent still remains unconvinced, and declines to admit the ‘immediate evidence,’ the defender of the proposition in question, instead of making use of sense (4), and now undertakes quite convincingly to silence the objector by asserting him that nobody objects to the proposition, since it is ‘known to all.’ Or, if the opponent even yet persists in giving attention to the ‘immediately evident’ truth that at least he himself objects, the defender of the axiom finally confuses sense (4) itself by a convenient definition of the “assent of all,” whereby the opponent is excluded from the “all,” who are worthy of consideration; and henceupon the matter becomes, of course, quite clear, although not to the opponent.

Such processes have played a great part in the history of controversy. A famous example is furnished by the controversies which have been suggested by Locke’s revival, in
the First Book of the Essay on the Human Understanding, of the ancient questions as to whether all men possess in common a knowledge of logical, of mathematical, and of moral truths. Specifically, of moral principles, the interest in finding out whether there is any agreement amongst all men regarding the distinction between Right and Wrong has been pronouncedly influenced since Locke’s attempts to construct an axiomatic basis for morals have sought in Anthropology for evidence, that, regarding some moral opinions, all men agree, and have conceived their principles as definable in terms of sense (4).

5. Finally, in sense (5) of our list, an axiom is defined by reference to the famous doctrine of ‘innate Ideas.’ This doctrine is an equally famous attack upon it, in the First Book of his Essay, long made central in controversy; and the partisan of innate ideas, in the various forms which this doctrine has since assumed, have frequently connected, in many often conflicting ways, senses (1), (2), and (4), and to a certain extent sense (3), with the use of the criterion for an axiom which sense (5) emphasizes. From the point of view of sense (5) it is essential to an axiom that it should come to our consciousness by reason of the very ‘constitution’ or ‘original nature’ of the mind. Such a view of the mind emphasizes the importance of our instinctive tendencies and inherited aptitudes as psychologically determining our whole intellectual life, while evolutionists of the type of Spencer have been led to believe that nobody ever possessed those particular dispositions which, when developed through our individual experience, lead us to regard some propositions as certainly true, and as true far beyond the range of our personal experience. For Spencer an axiom is, in general, an expression in an individual of the results of the ‘experience of the race,’ and is in so far, indeed, innate in the individual. Such a doctrine has established new connexions between senses (4), (5), and (2), and has to some extent connected senses (1) and (3) with (5).

But let us now consider whether an axiom in sense (5) might prove to be an actually false proposition, for the ‘innate constitution of the mind’ might involve one or another aptitude to believe error. In fact, an evolutionary view, closely resembling Spencer’s, might lead, in a thinker less optimistic about human nature than is Spencer, to the doctrine that certain instinctive tendencies, determined by evolution, are still such as to deceive the individual. Thus the innate hostility and resentfulness which form one aspect of human nature might be of disadvantageous necessity to the result of the conditions of conflict under which humanity has developed. And such tendencies might easily lead, in a civilized man, to a belief regarded by the individual as axiomatic in sense (5), and probably also in sense (2). This belief might take the form of the principle that one ought to avenge all injuries, and to destroy, if possible, all enemies. As a fact, however, this belief, although dependent upon the very ‘constitution’ of the mind of one whose ancestors have lived by the sword and enjoyed blood revenge, may be, and is, a false principle of ethics. Or again, the lover’s beliefs about his beloved are deeply affected by the innate constitution of his mind, and may appear to him to be, not only in sense (5) but also in sense (2), axiomatic. Yet they may be in many respects false. A pessimist, such as Schopenhauer, is fond of emphasizing the innate ‘illusions’ which, according to him, characterize human nature. Buddhist doctrine is equally emphatic in characterizing the most cherished and innate convictions of conventionalism, as both logically and morally destructive. Salvation for the Buddhist depends upon discovering axioms in sense (1) which are extremely hard to discover, so that only the Buddhas ever attain to them. But, when once seen, these axioms for the enlightened indeed

self-evident. And the knowledge of them sets aside those axioms in sense (2) which are also axioms in sense (5), and which, according to Buddhism, are due to the innate deceitfulness of desire. So little, for some men, does either inanitness or subjective necessity imply self-evidence and truth.

Axioms of innate ideas generally admit, any individual may remain unaware of some of his inherited aptitudes for conviction. On the other hand, there is no reason why a new assurance, or an axiom in sense (2), may not appear to others than whom revelation or a sudden growth or ‘mutation’ (such as may occur in the course of evolution) endows with a faith which, just because it is novel, does not constitute an axiom in sense (5).

As for senses (4) and (5), they very frequently coincide in their denotation, but need not do so. Although what the very constitution of the human mind determines us to believe is, ipso facto, ‘believed by all,’ in case the constitution in question is precisely the constitution ‘common to all human animals,’ take the instance of locality, it is not also the individual, the congenital variation of this or of that mind. The individual may possess an aptitude for conviction which belongs to his ‘constitution,’ but which no other man, or any man, has possessed. This is as possible as is a new individual revelation due to any other source than the inherited temperament of the individual. Prophets, Buddhas, poets, geniuses generally, have often been credited with such aptitudes for forming out of the depths of their own nature new convictions, which they have then taught to other men. On the other hand, as Locke and other empiricists have frequently insisted, those convictions which in sense (4) are more or less common to many or even to all men, but not of that account to be regarded as mainly determined by our innate constitution. They may be supposed to be due to experience, which moulds men to common results.

The foregoing survey shows us that the five senses of the term ‘axiom’ here in question are in a large measure independent of one another, so far as their logical intension is concerned, while by virtue of their various applications, now to the same, now to different sets of propositions, these five meanings of the term ‘axiom’ have become filled with a manifold of meaning and necessity, and of the theory of knowledge. The result is that the term ‘axiom’ is a very attractive and a very dangerous term, which should never be employed by a careful thinker without a due consideration of the sense in which he himself proposes to employ it.

II. History of the term.—As to the history of the term ‘axiom’ and of its uses, the ancient sources are above all: (i.) Aristotle’s theory of the axioms as propositions conforming both to our sense (1) and to sense (3); (ii.) Euclid’s actual use of his axioms in geometry, in the Elements, and in union with certain propositions called ‘postulates’ (which were also theoretical principles in our sense (3)). The treatment of the principles of science and of morals in sense (4) as principles ‘known to all’ or as known to the ‘wise’ or to the ‘competent,’ has its beginnings in pre-Socratic philosophy, and plays an important part in the Platonic Dialogues, and is in various special cases and passages carefully considered by Aristotle, but becomes especially prominent in the Stoical theory of knowledge and of ethics.

While sense (2) plays a part throughout the history of ancient thought, it becomes especially important in Christianity and in modern discussions of the psychological aspects of the problem of knowledge.
Sence (5), implied by the Platonic theory of reminiscence, but long put into the background by the Aristotelian theory of knowledge, has come to play a very great part in modern discussion. Its complete classical expression is probably the one to be found in Leibnitz's Nouvelles Essais. The last line of the nature, the existence, the various senses, and the use of what we call truths has been dominated since 1781 by three great movements: (1) the critical philosophy of Kant; (2) the various forms of modern Empiricism, Positivism, 'Pragmatism'; (3) the modern logical investigations which were especially stimulated by the famous inquiry into the axioms of Euclid's geometry, and which have since extended to the whole range of the foundations of mathematics, and also to the principles of theoretical physics, and to still other branches of scientific theory.

III. Significance for modern philosophy. In the attempt to deal with the extremely complex philosophical problems which are suggested by the foregoing five senses of the term 'axiom,' there are some of the leading considerations which any student of the topic chooses to regard as the thesis of this text.

(a) First, not every philosophy which tries to avoid scepticism is forced to admit the existence of axioms in sense (i). The necessity of such an admission as the sole alternative to scepticism evoked the principle of the Parmenides, as described in the foregoing sketch to Aristotle. If all science depends upon a determinate set of absolutely 'first principles' (in sense (3)), then, unless these principles are also axioms in sense (i), our denial would remain sceptical, for all scientific theory would lack basis. But the Aristotelian theory of scientific procedure is not the only possible one. That theory depends upon conceiving the structure of scientific theory as necessarily linear, with chains of syllogisms leading from determinate beginnings to the conclusions that constitute the scientific theory. But for a thinker such as Hegel, the ideal form of the totality of scientific theory is cyclical rather than linear. Truth may be, as a whole, a system of mutually supporting truths, whose absoluteness does not depend upon any one set of first principles, but consists in the rational coherence and inevitability of the totality of the system. To assert such a doctrine involves considerations which cannot be developed here. It is enough here to remark that such a system might be attacked at this point of view there would indeed be axioms in sense (3), viz., in relation to certain partial systems, such as this or that mathematical or logical doctrine, whose theoretical development would indeed depend upon chains of deductive reasoning. And there would also be necessary truths, both in the parts and in the whole system. But there would be no absolutely first principles, and there would also be no immediate certainties—nothing, in fact, that is purely immediate in the whole system of truth. The whole would be mediated by the parts, and conversely.

(b) Second, the traditional alternative: either this proposition is self-evident or else it is dependent upon some other proposition from which it is deduced, or else it remains uncertain, does not exhaust the logical possibilities regarding the rational discovery of truth. Omitting here the complex problem as to the relation between our experience of particular facts and the general truths which our scientific theories aim at establishing, we may point out that the principle of contradiction such that to deny them implies that they are true. As Aristotle already observed, the principle of contradiction is itself a proposition of this type. Euclid's geometry contains more than one instance where a proposition is demonstrated by showing that the contradictory of the *probandum* implies the truth of this *probandum*. To prove that this is, in fact, the case, may be no easy one, and may involve elaborate mediations. But any proposition *A*, such that the contradictory of *A* implies *A*, is *ipsa facto* a true proposition, although nobody may yet have come to feel its necessity.

When we prove a proposition, however, by showing that its contradictory implies it, we do not make this proposition 'self-evident.' Nor yet do we demonstrate the proposition merely by reference to other propositions which we have to assume as prior certainties. What we find is, not so much 'self-evidence,' as 'self-mediation'—an essentially cyclical process of developing the inter-relations which constitute the system of truth. In case, then, there are no axioms in sense (1), we need not abandon either the ideal or the hope of the attainment of rational truth.

(c) Third, axioms in sense (2) we need and use wherever and whenever we are engaged in practical activities, or are absorbed in contemplations, such as require a layman aside of the critical sense and limitation of the business of reflection. The assertion 'I am sure of this' is never logically equivalent to the assertion 'This is true.' And it is no part of the business of science or of philosophy to seek, or to remain content with, merely private 'convictions' or 'premises,' however 'necessary' the subject feels them to be.

(d) Fourth, axioms in senses (4) and (5) interest the anthropologist, and the student of society, of history, of religion, of psychology; they can never satisfy the student of philosophy, or in particular, of logic, and of mathematics.

(e) Finally, sense (3), interpreted not absolutely but relatively, so that an axiom is a principle which lies at the basis of a certain selected system of propositions, and which is not demonstrated in the course of that system, the *sensum* in which the term 'axiom' is still most serviceably employed in modern theory. Philosophy seeks not absolute first principles, nor yet purely immediate insights, but the self-mediation of the system of truth, and an insight into this self-mediation. Axioms, in the language of modern theory, are best defined, neither as certainties nor as absolutely first principles, but as those principles which are used as the first in a special theory.

AZAZEL.—When the word 'Azazel' was first introduced into a Western Bible or language is unknown to the present writer. It first occurs in the Concordances of the Greek, Latin, and German Bibles; it found a place in AV in *Lv* 10:18; 26 for the 'scapegoat' of the text, and in the text of the RV, 'dismissal' being its interpretation on the margin. In Greek it seems to have appeared for the first time in Philo's *Hexaemera*, 1713, at *Lv* 16:26, from Cod. X (Codex Sinaiticus, now M). It is found a second time, according to Field, in the text of that Codex at *v*, *ει τη δε αναφθηναι τη καταστασις*; this reading
being shared, according to Holmes-Parkers, by Cod. 18. 

Redpath, Consonance to the Proper Names of LXX', p. 7, this reference to v. 19 is missing. Though it appears in the Hebrew Bible three times in the famous chapter on the yearly Feast of the Atonement, lexicographers as yet completely disagree as to its explanation. The literal meanings of the term (cf. Brown-Driver-Briggs, 1900), explains the word as 'entire removal,' seeing in the form a 'redup.

intens. abstr. from ʿ[=EN] = Arbab. laz = remove' = 'entire removal' of sin and guilt from sacred places into the desert on the back of a goat, the symbol of entire forgiveness. This explanation is said to be proper another, which finds in it a proper name, either of a rough and rocky mountain (Yoma, 67b, וֹיָדָא יִתְיָדָא, of or of a spirit haunting the desert. The form bālaz in this case, considered as changed from בֵּאלֶז, בֵּאלָז, being another name of a fallen angel. The name is not found elsewhere in Hebrew. In the Syriac Bible it is pronounced 'azaza and explained by the lexicographers as another name of the deity to whom the Babylonians dedicated Mespupah, Beela, or Beela (cf. Thesaurus Syriacus, p. 2551). The name became well known among the Syrians as that of a martyr in the days of Maximian, identified with St. Pancras of the Western calendars; see 'Histoire de Saint Azazail, texte syriaque inédit avec introduction de traduction française précédée des actes grecs de Saint Pancrace, publiés pour la première fois par Frédéric Macler, Paris, 1902 (Bibliothèque de l'École pratique des hautes études, fasc. 141), and cf. on it H. Delahaye, Analecta Biblica, xxiv. 85-95, and Brockelmann, ZDMG lvi. 493-50). Recently the whole conception has been derived from the Babylonians; cf. J. Dyneley Prince, 'Le Boue Emissaire chez les Babyloniens' (J.A. x. 2, 1, pp. 138-156, Ju.-Ac. 1903); but M. Posse, La Magie assyrienne, Paris, 1902, p. 85) seems to be right when he declares: 'Je ne puis rien voir de semblable.' If one reads Lv 16 with an open mind, the impression is that Azazel must be a being related to Jahweh in something of the same way as Ahriman to Ormazd, or Satan (Beelzebub) to God. To go into details on the text of Azazel, some of the things about the fallen angels (Gen 6:1-2) is outside the scope of this article.

not found among the other Semites and cannot be primitive. Corresponding to the original usage which limited the name ba’al to owners of things, the ba’alim are also the owners of objects and places, not the owners of persons. Lords of tribes or of individuals are not identified as a sitkum, 'adonim, wliaktnn, rabbnin, marin, but never ba’alim. One never meets Ba‘al-Isra‘el, Ba‘al-Maon, Ba‘al-Ammon, as one meets Ba‘al-Sidon, Ba‘al-Lebannon, Ba‘al-Moon, but instead El’ohi- or Melekh- Israel, Moab, Ammon.

In Bab-Assyr. the worshipper addresses his god as B‘ell, ‘my lord,’ or B‘elli, ‘my lady’ (cf. Madlone, Notre Dame); but this is not found in the Israelite usage. The personal name Ba‘al is used in places like Belti of Palmyra (de Vogüé, Jassar, Sémité, 1868, 62, 155). She is the consort of the Babylonian Bel, who is worshipped alongside of the native B¢l. The Ba‘al of Gebal appears in Greek and Latin writers as Béliis (=πηυς), Bøxens (Abdenurus in Müller, FHG iv 283, 9), Bǿyy (Hesychius, s.v.), Búxxa (Philo Byblius in FHG iii 509, 25), Béliis (CIL iii. Suppl. 10933, 10964); but this is never found in native Sem. inscriptions, and is due to the assimilation of the Greek genitive of Gebal with Béliis of Bâlîs of the Babylonians. The same is true of Ba‘alans (=πηυς), ‘our ba‘al,’ a title of Jupitter Heliopolitanus in Chron. Pasch. i. 561. It is noteworthy, however, that, while the worshipper does not speak of the god as ‘my ba‘al,’ he may call himself ‘slave of the ba‘al,’ e.g. in the Phen. proper names Abás-ba‘al, and the Palmyrene name Abdi-ba‘al.

Where ba‘al, ‘proprietor,’ is identified with mlek‘, ‘king,’ as is the case in certain Phenician inscriptions, this is due to syncretistic combination of the tribal god of the invading Semites with the local name of Tyre, and is analogous to the syncretism that is seen in such Heb. proper names as Ba‘al-Yah, ‘the ba‘al is Yahweh’ (1 Ch 12), or Yo‘ba‘al, ‘Jahweh is the ba‘al;’ if Kenemen’s restoration of Jg 9 be correct. Here Jahweh, the conquering god of Israel, is identified with one of the local ba‘als. Thus Melkart (=γηὺς, ‘king of the city,’ is called the ba‘al of Tyre (CIS 121, 35 257 ἐπισκεψα; ‘to our lord, to Melkart, the ba‘al of Tyre,’ CIS 123a, 39, ‘king-owner,’ a compound deity like Milk-Ash­ tart (CIS 123a, 147, 194, 380); Ba‘al-Makhtu, the name of a son of the king of Arvad (Kid ii. 173), perhaps the prototype of the obscure Ba‘al-ala­ga­qi of the treaty of Esarhaddon (KAT 3357); and Ba‘al-Malik, in whose honor a temple was dedicated at Carchemish (CIS, p. 155, the god ἐπισκεψα; ‘Ba‘al-Adonis’ occurs; cf. the proper name πιπιρ, Lat. Indrbotal (CIS 138), and Beal-nuppu (CIS i. i. 111). Such late combinations in Phenician do not invalidate the general conclusion that ba‘al as a divine name designates primarily the owner of a sanctuary and not the master of his worshippers.

If this be true, it follows that there are as many ba‘alim as there are sacred objects and sacred places which they inhabit. Except in late theological abstractions, there is no such thing as a god ba‘al in the plural. The OT speaks habitually of the ba‘alim in the plural (Jg 21 3 8; 18 10, 18 7 129, 18 18, 2 Ch 17 40 18 33 344, Jer 22 9b, Hos 8 4b 10 11); according to Jer 22 11, they were so numerous as to be the citizens of a city. They could not be understood of images of one god Ba‘al (so the older interpreters, and more recently Baethgen and Baudissin), for idols are never mentioned along with altars, standing stones, or asheras as gods. But it is quite clear that ba‘al in the singular is not to be treated as a plural of majesty like Elohim, for, unlike Elohim, when a divine name it is never construed as a singular.

It can be taken only as indicating a multitude of local numina. When the singular ba‘al is used, it requires a noun in the genitive to indicate which ba‘al is meant; e.g. Ba‘al-Ḥazor, Ba‘al-Sidon, Ba‘al-jarrān, even (PERS 3 526) that these are merely the local forms of one God Ba‘al, like the local forms of Zeus among the Greeks, is untenable, because there is no evidence that ba‘al ever became a proper name like Zeus, and because the Semites never combined names of gods with names of places in this fashion; e.g. we never meet such combinations as Askart-­Sidon, ‘Askart-Gebal’ to distinguish the various forms under which Askart was worshipped.

If it is used without a following genitive, it irregularly takes the singular article in the inscriptions. Thus the ba‘al of Jg 6 28, 28, 32, 11 is the local numen of Ophrah, ‘the ba‘al’ of 1 K 10 17, 26 27, 12, 21 23 24, 2 K 3 10 16 28 11 12 21 22, 17 31 25 29 10 (and the corresponding passages in Ch), Jer 29 7 11 17, 12 10 19 23 26 28, 13 26 9 11; Hos 20 19 13, Zeph 1 1 is Molkart, the ba‘al of Tyre, whose cult was introduced into Israel in the reign of Ahab (1 K 1611), whence it spread to Judah through the influence of Ahab’s daughter Athalith (1 K 22 34, 25, 2 K 3 27, 14 22). In these cases that the ba‘al means the image of one god Ba‘al, or that the article is used to distinguish the local manifestations of one deity (Baudissin, PRE 3 328).

In Babylonian, where there is no article, Bel alone, as a designation of Marduk, the chief god of Babylon, becomes a true proper name; but the usage is not found in the other dialects. The insertion of the article in the Heb. and Phen. shows that ba‘al has not yet lost its appellative force.

Only in proper names is the article with ba‘al omitted, e.g. in the place names Barmoth-ba‘al Kiyath-ba‘al in the Heb. personal names Jeru­ bba‘al, Išb‘ba‘al, Méri-ba‘al, Ba‘al-yada, Ba‘al-­ Yah, Ba‘al-hanan, and in numerous similar Phen. personal names, such as Ba‘al-hanan, Hanny-ba‘al, Ba‘al-yadon (see Bloch, Phen. Glossar. s. v. 72; Scholz, Glaubensdienst, 181 f.) ; but these formations do not prove that ba‘al is a proper name any more than the similar formations with ‘eb, ‘father,’ ‘ah, ‘brother,’ ‘am, ‘uncle,’ melk‘, ‘king,’ ‘adonim, ‘lord,’ prove that these words are personal names in Semitic. The article in these cases is due to the fact that these formations go back to a time when the article had not yet been developed in the various Semitic dialects. Ba‘al is no more a proper name in these compounds than ḫäs in analogous Greek names. In the same way we must consider the use of the article in names of gods compounded with ba‘al, e.g. Milk-ba‘al, Aḥdôn-ba‘al, Askarti-­shém­ ba‘al, Tamit-pen-ba‘al, perhaps Ba‘al-God and Ba‘al-Ziphôn (see below, ii. 8, 10). When Ba‘al without the article is mentioned in the Greek inscriptions, the context shows that only the local deity is meant. Even in the Occident no one god Ba‘al arose, but there were many local ba‘als, whose names were either transliterated or translated into Greek. In Latin Augus­ tus was still conscious of the appellative force of the name in Punic, when in his commentary on Judges (12 iii. 707) he translated ba‘al ‘dominus.’ Jerome in his commentary on Hos 5 translates it ‘èxov, id est habens’; and Servius (ad Æn. i. 621) says, lingua Punica et alia dividit; he was of opinion that these facts it is impossible to agree with Baethgen (Beiträge, p. 16) when he says, ‘It is clear that there was originally always one and the same Ba‘al, who stood in relation to various localities;’ (PERS 3 327); it is apparently originally a title of the male divinity in general. Afterwards, when a number of such divinities were worshipped alongside of one an-
other, this word became the designation of the chief god of each locality. On the contrary, in Sem. inscriptions and in Sem. literature, outside of Babylonia and Assyria, ba’al never loses its appellative force. Only in the theological speculations of Gr. and Lat. writers does Belus appear as a great god. This tendency is to be regarded as the work of the Greeks, who were ignorant of the primitive meaning of ba’al, and thus were able to identify all the Sem. ’b’alim with the Bab. Belus (see below, i. 7).

If there was no such thing as a god Ba’al, and this name designated merely the individual pro- prier of a particular sanctuary, then it is evident that the traditional identification of this deity with the sun has no foundation. It is true that the sun was the ba’al of certain places, as Larsa, Sippar, Helopolis (Ba’al-bek), Beth-shemesh; but this was only one of many kinds of ba’als. The moon was the ba’al of Ur, of Harran, of Palmyra, and perhaps also originally of Sinai (from Sin, the moon-god). Other gods of all sorts were ba’als of other places. If Ba’al-mesopot has anything to do with the sun, it is only a local use of the ba’al of certain places (see below, ii. 5). By the Greeks and the Romans the local ba’als were identified with Zeus, Saturn, and Herakles as well as Sol. Only in the speculations of late writers such as Macrobius, who are disposed to regard all gods as one or another form of the sun, was this identification with the sun. This theory has been revived and has been given wide currency in modern times (e.g. Creuzer, Symbolik u. Mythologik, ii. 413; Movers, Pflanzer, i. 183; Baedaeus, PEE 329 E), but is nevertheless destitute of scientific foundation. So also Baeleghin’s theory that ba’al was primarily the god of heaven (Beitrage, p. 264), or any other theory that identifies ba’al with a single god, goes to pieces on the fact that this word is not a proper name but an appellative.

In the light of these facts it appears that the ba’al cult carries us back to the polytheistic stage of religion (see Polytheism). Among the Semites, as among other ancient peoples, and as among savages in all parts of the world, every object in nature that could do something, or that was believed to be able to do something, was revered as divine. The objects of worship were conceived, after the analogy of human beings, as living persons consisting of soul and body. The phenomenon was thus the divine being of a spiritual, or sometimes even a physical, nature. In the case of celestial or atmospheric phenomena the name of the divinity was usually the same as that of the phenomenon (see below, ii. 3). Thus Shemesh was at once the sun and the sun-god; Ramman, the thunder and the thunder-god. In other cases the name was distinguished from the physical object by being called its ba’al. This is a striking difference between Indo-European and Semitic polytheism. Among the Indo-Europeans Dyaus, the laurel, is also the name of the nymph that the sacred oak at Nauplia, is also the name of its indwelling nymph: Athenae, the patron goddess of Athens, bears the same name as her city; but among the Semites the nymphae of a palm-tree are not called Tanur but *Ba’al-tanur* (Jg 22:24); the nymphae of a well, not *Pe’er* but *Ba’al-thoq-ba’er* (Jos 19:19); the nympha of a mountain, not Lebanon but *Ba’al-Lebanon* (CIS 5); the nympha of a city, not Sidon or Gebat but *Ba’al-Sidon* (CIS 3) and *Ba’al-Gebat* (CIS 177). This difference of conception is significant for the later development of Indo-European and Semitic religion. The Indo-European could never free himself from the identification of his gods with nature, and consequently the highest forms of his religion remained pantheistic. The Semite, on the other hand, was accustomed from the earliest times to distinguish between the object and its ba’al. His religion tended towards transcendentalism, and in its highest form among the Hebrews became pure theism. Apart from this more independent relation of Semitic naming towards the object, all religious objects and no objects at all apart from the objects or localities that they inhabited. Their cult was a lower stage of religion than polytheism, for they were not gods in any proper sense, but only *Bal’im, *Maniim, *spirits. Hence the name polytheism, which later writers apply to this sort of religion instead of the ambiguous term ’animism’ used by earlier writers. Out of the *ba’alim* gods might grow by groups of phenomena coming to be regarded as manifestations of a single power, or by a particular *ba’al* being identified with the sun or with a part of a city; but, apart from such developments, the *ba’alim* remained simply local deities.

ii. Classification of the Ba’als. — The ba’als might be classified, according to the physical objects which they inhabit, as terrestrial and celestial. Among the terrestrial ba’als we may enumerate:

1. Ba’als of springs. — For the primitive Semitic nomad in the desert the spring was the most wonderful object in nature. Its waters gushed miraculously from the earth, as did the holy spring of vegetation, to man, and to beast. On it the existence of the tribe depended, and about it as a centre the tribe rallied. It is no wonder, therefore, that it was revered as divine, and that its name was regarded as the mother of the tribe. In all branches of the Sem. race springs retained their sanctity down to the latest times.

The following sacred springs may be mentioned. — Among the Arabs: the Zemzem at Mecca (Wellhausen, Rote, 1921); among the Canaanites and Hebrews, Ba’al-eshib, ‘the spring of decision,’ an oncral fountain at Kadesh, ‘the sanctuary’ (Gen 14); Beer-lahai-roi, between Kadesh and the Jordan (Gen 21:32-33; Josh 11:5). Beer-sheba, near Kadesh, (Gen 21:32-33; Josh 11:5); En-eel, near Jerusalem, by the sacred stone Zophethel, where Adonijah offered sacrifices (1 Kg 1; 2 Sam 22:30). En-manah, the ‘gusher,’ an intermittent spring near Jerusalem, where Solomon was crowned (1 Kg 1), probably the same as Bethesda (Jo 5:2), and of which a Fountain of the Fruits is related (May 35). En-moqlay, a spring near Joppa, with superstitious reverence by the people of Jerusalem, the ‘Dragon’s Well,’ also near Jerusalem (Neh 2:9); Ba’al-sheemah, ‘spring of the so-called Mother of the Gods’ (1 Kg 18:3); Ba’al-me’or, the spring of the Holy of Holies, probably the sanctuary at the source of the Jordan at Panias (belonging to the god Pan), or Caesarea Philippi, the modern Banias. — Among the Phoenicians: a spring at Joppa connected with the myth of Persus and Andromeda (Papp. iv. 35; 9); the sanctuary of the springs Tibilis (Kohmannus Insur. 157); the nympha *Avhers* (< Heb 34, *overfowling spring*) in Philo Byb. (PhIG III 579f. frg. 4; 5); the river *Adonis* (< Heb 34, *my lord*), the modern Nahir Benhin, which bursts from a cave in the cliffs near the mouth of the *Ashdor* and *Adonis*, according to Lucian (Dea Sbr. 6) and Euseb. (Hist. const. iii. 55); the river *Arkispios* (the Gr. equiv. of the Heb. *El-Arka*), near *Nahr Ibrahim*, ed. Tobler, p. 4; Levy, Phyn. Stud. i. 521.— Among the Phoenicians, colonies. the spring *Massipia* (< Heb 34, *fountain*), the daughter of *Penerezza* and of Hиракlos (CIS 24); the spring *Kais* at *Syracuse* (Udod. Sic. v. 41), and the hot springs at *Himera*, in Sicily (ib. 11), both of which were connected with myths of Heracles. — Among the Phoenicians, Melfi, Phocaea, Gades, in Spain (Strab. iii. 7. 5; Piny. Hist 97 [100]), 219.— In Syria: *Mabug* (< Heb 34, *fountain*), the native name of Banubi or Hierapolis, and of the sanctuary of the *Avaroris*; the eunuch spring *Kanadha*, at *Antioch* (Zonc. Zorn, v. 19).— In Assyria: *Rash-Eanu*, *the fountain of Rash-Eanu* (Abu al-Aswad, Cal. Ed.). — Among the Persians and the Muslims and infidels, the holy springs have retained their holiness down to the present time, being regarded as the seats of Christian, Nestorian, Pechmeran and Muslim saintship; and in all parts of the Muslim world springs are still regarded as the abodes of pious spirits, whose favour is sought through sacrifice and offerings;
The sacred groves in India, often called "special trees" by the Hindus, were highly revered and held to have mystical properties. These groves were considered as "pure" and "sacred" spaces, devoid of pollution or harm. They were believed to be the dwelling places of deities and spirits, and any disturbance or harm to them was considered an offense. The belief in "special trees" often led to the preservation of these groves, ensuring their existence for generations. This practice of worshiping trees and groves continues to be prevalent in many cultures around the world, reflecting a deep connection between humanity and nature.
Boaz, 'Ezra', 'Zeuxis', 'Hudhah', 'wesel';
Ezra, 'Ezra';
Husniah,'Husniah';
Telam, 'lamb';
Jonah, 'dove';
Jeth, 'mountain goat';
Car and Cheren, 'lamb';
Chilchil, 'mountain goat';
Daghes, 'serpent';
Nimarch, 'leopard';
Susa, 'mare';
Eglah, 'gazelle.'

Among foxes, there is the springbaal, 'ba'al-ra'si' or 'ba'al-man,' of 1 Kings 5:15; 'Atayyrosis = Ba'al-Tebor (Genesius, Thes. exeg. 777);
Ba'al-Hermon (Jer 5:6; 1 Ch 5:5);
Zeus Karnaites = Ba'al, which still forms the religious centre of the Median world.

The divinities that inhabited these mountains were their 'ba'als.'

The name of 'ab, the harem of the goddess, is probably derived from the word 'ba'al.'

An Egyptian text speaks of the 'ba'al upon the mountains' (W. M. Müller, Alter Orient, p. 399).

In Canaan we find Ba'al-Pe'or (Num 25:5);
Ba'al-Peor (Ex 35:5);
Ba'al-Peor, 'moon' (Num 21:21). The goddess Hadda is probably Ba'al-Peor.

For holy mountains in the Phoen. colonies see Baudouin, Studien, ii. 249.

For holy mountains in Northern Syria and the Lebanon, see my article 'Gods of Modern Survival' in this supplement, 11 (Curtiss, Green, Rev. p. 155f.

BAAL, In my i. Moreover, in town owner Ba'al-zdph On, is or does 'the town owner few The and, it There "Anion. more Balsame m God (but.of in its worshipped 442). Zenjirli, ordinarily 7ndni»n 6*), that be (Melanges, trary, is applicable to 32. (Ezk 347).

Sabrean in God is worshipped in Bar-zur, deity' (Is 32, 178), of Philistia, that rises off' (Ezk 34, 'rose' (Is 27, 369), 'broken' (Ezk 40, 'middle' (Is 24, 27), 'above the altars' (3 Ch 14, 594), that could be 'cut off' (Lv 26, 'broken' (Ezk 40, 'middle' (Is 24, 27), 'above the altars' (3 Ch 14, 594), that could be 'cut off' (Lv 26, 178), of Philistia, that rises off' (Ezk 34, 'broken' (Ezk 40, 'middle' (Is 24, 27), 'above the altars' (3 Ch 14, 594), that could be 'cut off' (Lv 26, 347).

The sanctuary of Shaddai, 'rock' refers to a meteoric stone or supposed 'thunderbolt' that was revered as a fetish.

The sacred stone was regarded as the residence of the dwelling and, therefore was known as beth el, 'abode of deity' (cf. Gn 17:12-22, where Jacob calls the stone that lies set up beth el, and Gn 31:12, where God says, 'I am the God of Bethel, where thou didst anoint the stone, and where thou madest a vow'). This name for holy stones was common also among the Phoenicians, from whom it spread to the Greeks and the Romans as beth or, ba'el (see Struve).

The divine proprietor of the 'house of deity' was its ba'el, just as the human owner of a house was its ba'at, e.g. Ba'al-hammân, 'owner of the stele', in the numerous Punic inscriptions referred to above. The form Ba'al-massâ/bah does not happen in any other form to be perfectly in accord with Sem. habits of thought, and is the necessary counterpart to the conception of the massâ/bah as a beth el. 6. Ba'al of sanctuaries. - In a few cases, apparently, the ba'at is not named from the sacred object in which he is supposed to reside, but from the sanctuary. The Sabean goddess Đhât Himâ, 'she of the holy ground' (ZDMG, 1877, p. 84), thus takes her name from her temenos. A similar formation seems to be found in m n ā nā (CIS 41), with which Renn is probably to be rendered 'Ba'at el of the inner sanctuary.' After this analogy also we should perhaps interpret Ba'ad-dîr (= 7în 'ayîb), who was worshipped at Siqus, in Numidia (CIL viii. 5279; Suppl. 19121-1923). If Ba'al-zebul is the correct rendering of Ba'âr el-Zubal (see above, 3), then this 'ba'at of the dwelling' may take his name from the sanctuary in which he was worshipped (but see below, 8).

7. Ba'al of places. - In the foregoing cases we are told what the particular natural phenomenon was with which the ba' at was connected. In other cases the phenomenon is not mentioned, but the ba'at is named from the place in which he was worshipped. Thus in Canaan we find Ba'al-Mé'con (Nu 3256, Jos 13:18, Ezk 43, 1 Ch 5), Ba'al-Shalishah (2 K 12), Ba'al-Hazor (2 S 13:18); in Phoenicia, Ba'al-Sidôn (CIS 3), Ba'al-Tyre (Hoffman, AG 3000, 180), Ba'al-Be'or (CIL viii. 177); in Syria, Belos of Apamea (CIL xii. 1277); in Minor, Ba'al-Tarsus (Scholz, Götzenland, 149), Ba'al-Gazur (Head, Hist. Num. 631). In all these cases we must suppose that the divinity was connected with some striking physical phenomenon, only we are not told what the phenomenon was. There is no name of the town where it was located. Sometimes we know from other sources that there were sacred springs, trees, or stones in the places in question.

8. Celestial ba'als. - The object with which the divinity was connected was not necessarily situated on the earth; it might be the sky, one of the heavenly bodies, or some atmospheric phenomenon. Thus in Palmyrene, Phoenician, and Punic inscriptions we often find mention of Ba'âl-sh'mayin, Ba'al-shâmmâm. This name is not derived from shâmâ, 'sun,' but may have an analogous strength of identifications of this god with the sun by late Greek writers, but is derived from shâmâyim, 'sky,' as Augustine (Quast. in. Adv. xvi. 1) correctly translates, Balsameni quorum dominus coeli Punic celt, daturas diei, "the abode of Heaven' in any abstract theological sense, but the one who lives in the sky. It is thus the exact equivalent of the Sabean god, Đhât-Sâmâtâ, 'he of the sky.' Ba'al-Shâmmâm is the Sem. counterpart of Varuna, Oannes, among the Indo-Europeans. It is noteworthy, however, that, while the latter worships the sky directly, the former worship the ba'at of the sky (Liddellarzi, Ephemeris, i. 3).

Closely connected with Ba'al-shâmmâm in conception is Ba'al-zephôn (zâphôn), 'owner of the north.' This was also worshipped at Memphis (W. M. Müller, Asia u. Europa, p. 315). In the annals of Tiggath-pileser iii. (KIB ii. 20 f.) a peak of Lebanon bears the name Ba'al-zâryûnu (cf. Sargon, Annotations, 204). In the treaty between Ba'al, King of Tyre, and Esar-haddon, king of Assyria, one of the gods mentioned is Ba'al-zâryûnu (KAT 337). There was a town Zaphôn in Gad (Jos 13:7, Jg 12), also in Southern Palestine (KIB v., No. 174, 16), but it does not seem likely that this can have been the location from either of these insignificant places, since its cult spread all the way from Phoenicia to Egypt. Zaphôn is rather an abbreviation of Ba'al-zaphôn, and that in its turn of Bethê-ba'al-zaphôn, just as we find the series Melô, Ba'Mâ-ôn, and Bethê-ba'al-Mâ-ôn (Nu 332, 2, Jos 15). Moreover, Zaphôn alone occurs as the name of a deity in the Phen, proper names 2572 from Abydos (CIS 108), 2572 from Carthage (CIS 265), 2265 from Carthage (CIS 267, 357). The last name is Ba'al-zâphôn, with the element zôphôn ('client of Zaphôn'), appears also as the name of an eponym in the time of Ashurbanipal (KIB i. 207, iv. 130). These names throw light upon the Heb. proper names Zaphôn, Zaphôn, Zophônites, Zôphôn. If Zaphôn is a god, we may either suppose with Gray (Heb. Pr. Names, p. 135) that this is a case of compounding two divine names, like Jahwë-Hollow, or, more probably, we may regard Zaphôn, 'the north,' as an object that might either be worshipped directly or be regarded as the abode of a deity, so that the god might be called either entirely Zaphôn or Ba'at-Zaphôn. The sanctity of the north as the dwelling-place of the gods is widely attested among the Semites (154); cf. Ba'at, Beitrage, p. 22; Baudissin, Studien, i. 278). Ba-al-
pîphôn, ‘owner of the north,’ accordingly, is nearly synonymous with Ba‘al-śabāl, ‘owner of the sky,’ of the Phen. pantheon: the two deities existed side by side (KAT¹ 357). The name Ba‘al-śabāl, ‘owner of the dwelling’ (see above, 3 and 6), may be given with reference to this heavenly abode rather than with reference to an earthly palace (cf. 3 and 4).

The worship of the sun, moon, and stars was universal among the ancient Semites (cf. Baethgen, Beiträge, p. 61; Grunwald, Eigennamen, pp. 30–35; Jastrow, Rel. Bab.² p. 134, 151; KAT³ pp. 361–370); but, as noted above, it was not customary to speak of a ‘sun god’ as we have seen of the bull of the ba‘al of the sky or the ba‘al of the north. Like animals, they seemed to possess personality, and were worshipped directly as gods rather than as the abodes of gods. By the Hebrews they were spoken of collectively, not as the ba‘alim, but as ‘the host of heaven. The same holds true of atmospheric phenomena. Ra’mman, ‘thunder’ (KAT² 442); Reqem, ‘storm’; Baraq, ‘lightning’ (KAT² 446); Resheph, ‘flame’ (KAT² 478); Ra‘bōh, ‘thunderbolt’ (?); Baraq, ‘hail’; Mašar, ‘rain’; and many other names, which are explained by the manner of the ‘stiff’ or ‘frost,’ are shown by the evidence of proper names to have been objects of worship in all branches of the Semitic race (Grunwald, Eigennamen, p. 281). These phenomena are worshipped directly. Ramman, Reqem, Baraq, and Mašar are worshipped under their own names, and besides Ba‘al-Ramman or Ba‘al-Reqem as the name of a god, although such formations are common in names of men (see below, 9). In this respect Semitic and Indo-European nature-worship were strictly parallel (see Aramis, 1 1).

9. Adopted ba‘alim.—Celestial and atmospheric phenomena that could not be reached in their proper abodes like terrestrial ba‘alim often had sanctuaries built for them on earth, and thus by a sort of adoption became the ba‘alim of these places. Thus Dib-śabāq, ‘he of the sky,’ appears in the Sabean inscriptions also as ba‘al of Ḫabīq; and in like manner Ba‘al-śabāmīn, ‘owner of the sky,’ is ba‘al of Tyre (KAT² 357), of the Phoenician colonies (Baethgen, Beitr. p. 25), and of Palmyra (de Vogüé, op. cit. 59). Ba‘al-śabāmīn, ‘owner of the sky,’ is also a name of Egypt and of Phoenicia. Shauw, ‘the sun,’ is in the Sabean inscriptions also ba‘al of Gufslat (CIS iv. 11.1) and ba‘al of Gabbaran (CIS iv. 43.3). The sun was the ba‘al of Ba‘al-ḥek (Hellenopolis), and the sun-goddess was Ḫabbīt, the ‘heat of the sun.’ In Sin, the moon-god, was the Ḫel of Ur and Ḫarran (Lidzbarski, Nordsem. Epig. p. 444, pl. xxiv.), and in Palmyra a god bore the name Yarchi-ḥal (v.97), ‘the moon is ba‘al.’ On a Syrian seal (Lidzbarski, Ephemeris, i. 12) the name Ba‘al-Reqem appears, which shows that in some districts Reqem, ‘the storm,’ had become the local ba‘al. Similarly, various ʿādhanīm, ʿ&tākkīm, ashtarāth, and other tribal gods, that had originally no connexion with physical phenomena, might become the ba‘alim of certain places directly that the original worshippers settled in these places. Thus Ḥabab tawāne became the local Ba‘al of Canaan, Melkert for the Phoenicians the ba‘al of Tyre, and ʿAshṭart for the Gebalites the ba‘al of Gebal. Certain local ba‘alim also became so important that their cults migrated to other cities, so that they became the ba‘alim of these new places. Under the name of Zeus Aţabγyrios the cult of Ba‘al-Talor spread to Rhodes and Sicily (Baudouin, Studien, ii. 217). Zeus Kassōl (b‘al Kassōl) was also the ba‘al of Palatinum (Strabo, iii. 1). Müller, Fig. p. 568). Melkert, the ba‘al of Tyre, was also worshipped at Carthage and the other Phen. colonies. Ba‘al-Ḥarran was also one of the gods of Sam‘al (Lidzbarski, Nordsem. Epig. 444, pl. xxiv.). In such cases as these, where ba‘alim were not originally connected with sanctuaries, but became the propitiators by adoption, the names have individual personal names; ordinarily they were nameless, and were known merely by the locality in which they had their abode.

10. Departmental ba‘alim.—The ba‘alim studied thus far have been a series of ‘proprietors’ of certain physical objects or places. This usage of the divine name corresponds to the meaning ‘owner’ or ‘citizen’ of the common noun ba‘al. The question now arises whether the divine name is also used like the common noun in connection with certain deities. Of such names, which predominate over abstract qualities or activities, are very common in the Indo-European religions, and by Usener (Gotternamen) have been entitled ‘departmental deities.’ Of the existence of such ba‘alim in the Semitic religions there is no clear evidence. At the temple of Deir el-Qa‘lī, near Beirut, inscriptions have been found in honour of Ba‘almarākūt, Ba‘almarawī. This name is translated κόμαρον κόμων, ‘leader of dances’ (le Bas, 1855= Kaeffel, Ephg. Gr. 833), which indicates that the god, of which the ba‘al is a derivative of raqād, ‘dance,’ and may express the abstract idea of ‘dancing.’ This interpretation seems to be favoured by the Greek translation. In this case we have a ba‘al who presides over the temples and fêtes. According to them, deities.—Similarly, however, marginal notes ‘dancing-place,’ and may have been the name of the locality where the temple was situated. ‘Owner of the dancing-place’ could easily have been paraphrased in Greek as ‘leader of dances.’ In this case we have simply a ba‘al who takes his name from the locality where he is worshipped, like all the other ba‘alim we have studied thus far.

In an inscription from Cyprus (CIS 41) we meet ʾra‘ ad-a ms. This is commonly read Ba‘al-marāpē, ‘possessor of healing,’ or Ba‘al-marāpē, ‘heal the healer,’ in which case we have another departmental ba‘al; but marāpē, ‘healing-place,’ or marāpē, ‘healer,’ may equally well have been the name of a medicinal spring of which this ba‘al was the owner. This will then be a local ba‘al of the familiar type.

In Jg 5.11 ba‘al is also a ba‘al of Carpathia of Egypt and of Phoenicia. Ba‘al-ḥereth (cf. 12. El-ḥereth). This is commonly interpreted ‘Ba‘al of the covenant.’ The ‘covenant’ is then understood of the relation between the deity and his worshippers (Baethgen, Sayce), or of an alliance of two cities (Berthelot, Kittel), or of an alliance between Shechem and neighbouring Canaanite towns (Ewald, Kuenen, Wellhausen, Cheyne), or of agreements in general, as Ze‘ēr Ṭēṣoph (Nomdēk, LDMG xlii., 1888, p. 478). On any of these interpretations the name stands without confirmation elsewhere in the OT, and without analogy in the whole field of Semitic religion. Under these circumstances it is reasonable to suspect textual corruption in the passage in Judges. Instead of ʾna‘a, b‘rēth, we should perhaps read Ḫa‘a, ʾna‘a, b‘rēth, ‘heals.’ Ba‘al-b‘rēth would then be the counterpart of Ba‘al-hét (cf. 6. El-bérēth). It is also the name of a god in Is 65:4, probably also in the proper names Mīgdal-Ba‘al (Jos 15:52) and Gaddī-E (Nt 13:8), Gaddi (Nt 13:8), and the tribal name Gaddī. The name Gaddı-melek, ‘Gad is king,’ occurs on a
deity, but is not used elsewhere. A trace of the old religious meaning of the word survives, however, in Ba'al, 'fear,' in the Semitic name Ba'al occurs as designation of the god of the mountain. Thus 'yfûnîn, 'in the presence of the Ba'al' (Euting, Sin. Inschr. 327); also in proper names, e.g., 'Amlaba'î, Garmi-ba'î, 'Abilba'î (see Euting).

In Nabatean the name occurs in Ba'al-Shamin (CIS 183, cf. 176) and in the personal names Atti-bel (CIS 190) and Ba'al-Adhôn (CIS 192). This Ba'al apparently has been borrowed from Syria. In classical Arabic ba'al is not used as a title of deities. From this W. R. Smith (109 ff.) infers that the ba'âtim were deities of the watered land, of agriculture, etc., and were known to the desert Semites, and were first worshipped in the fruitful lands of Syria and Mesopotamia. This conclusion is unwarranted, (1) because, as noted above, the ba'âtim cannot be limited to watered land, and ba'âtim of trees, stones, mountains, celestial bodies, etc., can be worshipped in the desert as well as anywhere else; (2) because there is no evidence that the phrase ba'âl, or what the ba'âl waters (= Ahtar-land) or a ba'âl-pan, is borrowed from the Aramaic; (3) because the usages of the Christian Igal have the cross as their ba'âl, and the verb ba'âl, 'be ba'âl-struck, frightened'; (4) because the sacred mountain Serobât is probably a compound of sar and ba'âl. These are sufficient reasons for thinking that the designation of deities in Arabic, although in the classical literature it has dropped out of use (so Noldeke, ZDMG xxl, 1886, p. 174; Wellhausen, Reste, p. 146; art. Arabe, I. 9). Instead of ba'âl, dhîl, which has already begun to displace it in Sabean and Missayan, is commonly used in Arabic in forming titles of gods, e.g., Dhîl-âholasa, Dhîl-Rigil, Dhîl-Kafrain, Dhîl-Årama, Dhîl-Ameât, Dhîl-Labba, Dhîl-Ålama, Dhîl-sh-Shard. All these adverb the divine in question as belonging to the particular or locality, and are thus the exact equivalent of ba'âl names. On Dhîl-sh-Shard, Wellhausen (p. 51) remarks that three Shfras are known, all wooded thickets with water. This god was widely worshipped in Arabia (Wellhausen, op. cit. pp. 48-51), and was the chief god of the Nabataeans (Baethgen, Aarb. iv. 17). The primitive religion of Arabia was evidently the worship of a multitude of local numina. Subsequently, through trade and shifting of population, cults migrated, and gods became ba'âls of regions far removed from their original country. Thus at Mecca, in the time of the Prophet, there were 360 different gods. Under Islam these old ba'âlms still survive as the jinn (W. R. Smith, 119 ff.) and the âliu (Zwemer, Arabia, p. 47 ff.).

2. In Canaan.—The earliest evidence of the ba'âl-cult in Canaan is found in the Egyptian inscriptions, where ba'âl (ba'al) is mentioned as a god of the Canaanites and of the Hyksos invaders (see E. Meyer, Set-Typikon, p. 47; ZDMG xxxi, 1877, p. 725; W. M. Müller, Asien, p. 320). In the Tell-el-Amarna letters the ba'âl of Gebel is frequently mentioned (KIB, nos. 18, 25, 55 ff.; 61, 54). Ba'al does not occur. In the personal names Bel-ge'bir and Bel-ram, the god may be the Babylonian Bel. It is probable that the ideogram IM in these letters should often be read Be'il instead of Adad (Hommel, Alter. Überlief. p. 229; Knudtzon, Beitr. Ass. u. syr. f. 320 f.; Zimmern, KAT 337). The OT says that the ba'âlms were the gods of the Canaanites, and that they were adopted by Israel after the conquest of the land (Jg 2, 10, Hos 13, 15; 2 Sm 5, 2). Consequently it is possible to learn a good deal about them from survivals in Israel. With the exception of Ba'al-Judah (2 Sm 6), and possibly Ba'al-Gad (Jos 11, 1), all the place names

Heb. seed; Gu'tla-ba'âl Gâd-ba'âl (Hoffmann, Phen. inscr. 27) and such names as Gâd-ya, Gâd-Itâ, in Assyrian business documents (Johns, Dec., No. 275, 3, 197, etc.). For the curious and god也被記載為Ba'al-Gad,困难性之精子形成之名稱為Gad,‘the owner,’ and the place where the name was first mentioned, after which the difficulty would be solved; but there are no trustworthy analogies for such a procedure. Baethgen (Beitr. pp. 79, 254) regards this as a case of the synthesis of two deities, like 'Ashkar-Chemosh, 'Attar-'Ata, Jâshish-Elohîm; but this implies that ba'âl had become a proper name, and of this there is no evidence among the Hebrews or among any of the other West Semites until a late period. According to Baethgen, the name of the god, in the sense of the idea (i. 272 n.) the analogy of the other ba'âls, and to regard Gâd as the name of the district occupied by the tribe of Gâd. The name of Ba'al-Gad will then be parallel to Ba'al-Judah. Even if Ba'al-Gad were to be taken as the name of the tribe of Gâd, this would make no difference, for, as we have just seen, ba'âl frequently migrated.

The name ðîbî (CIS 806b, 4) is commonly regarded as the equivalent of Heb. Ba'al-yâmin, 'owner of days,' and is supposed to be a sort of Sem. Kronos. The reading is very uncertain, and the name may be the equivalent of Ba'al-yamim, 'owner of the seas.'

These are all the cases that can be cited of apparent departmental ba'âls. All are capable of an interpretation which makes them local ba'âls of the familiar type. Accordingly we are probably justified in concluding that ba'âls who presided over human activities or abstract qualities were unknown to Semitic thought. Such functions belonged rather to 'âdûtôm, mâlkhôn, and other triform names, and to the gods of the Phoenicians, was the god of healing, and Ishar of Babylon was known as Mâlîlidîtù, Myîlîtta, the goddess of childbirth. From our investigation, we reach the conclusion that the ba'âlms were originally ba'âl, 'the divine,' and that the only sense in which ba'âl was used as a divine name was that of 'owner' or 'proprietor.'

iii. HISTORY OF THE BA'AL-CULT.—1. In Arabia.—In South Arabian inscriptions ba'âl is constantly used to describe the great gods as 'proprietors' of particular shrines established in their honour. Thus, Ta'labiyam, ba'âl of Tur'at, or ba'âl of Kôdûman; Ḥâgâr, ba'âl of Maryâb; Imaâkkâh, ba'âl of 'Awânum, or ba'âl of Barânum; 'Abîtar, ba'âl of Alâm; Shâmâ, ba'âl of Gujufât, or ba'âl of Gâblan (CIS iv. 2, 3, 31, 1, 19, 21, 28, 1f., 41, 21, 43, 2f., 46, 5, 67, 3, 74, 3f., 80, 2f., 90, 1f., 100, 1). These names all belong to the ninth class noted above, 'adopted ba'âl.' To express the primary relation of a god to the physical objects that he inhabits, or the sanctuary where he is originally at home, the Minean and Sabean inscriptions use ðîhî (fem. ðîhtî), 'he of,' 'she of.' Thus instead of Ba'al-Shâmâm we meet Dhît-Sâmâmî, 'he of the sky,' who is also ba'âl of Baqûr; and similarly Dhît 'Hûmûr, Dhît-Ba'âl-dû, Dhît-Mûsûmî, or even the ba'âls of various shrines (CIS iv. 145, 155).

In Ethiopic ba'âl occurs as a loan-word in the version of the OT as a name of the Canaanithis
in the O.T. compounded with ba'\textit{\textit{al}} were probably derived from the earlier inhabitants. The original form of such names was like \textit{Beth-ba'\textit{\textit{al-Ma\textsuperscript{o}on}}, 'house of the owner of Ma'on} (Jos 13\textsuperscript{14}), which might then be abbreviated into \textit{Ba'al-Ma\textsuperscript{o}on} (Nu 32\textsuperscript{3b}) or \textit{Beth-Ma\textsuperscript{o}on} (Jer 48\textsuperscript{26}). The following names occur: \textit{Ba'al-ba'\textit{\textit{al}} (Note 13\textsuperscript{14}), 1 Ch 4\textsuperscript{24}, Ba'\textit{\textit{al-}}Jezreel (Jos 15\textsuperscript{14}), Ba'\textit{\textit{al}}-Shalishah (2 K 4\textsuperscript{24}), Ba'al-tamar (Jgs 20\textsuperscript{13}), and \textit{Baal-hanan (Ca 8\textsuperscript{14})}. These \textit{Ba'al} names are found in Benjamin, Gad, Judah, Simeon, Reuben, Dan, so that they witness to a general diffusion of the \textit{ba'al}-cult throughout Canaan. There must have been innumerable other \textit{ba'al} whose names have not come down to us, since, according to Jer 2\textsuperscript{11} 29\textsuperscript{9}, they were as numerous as the towns, and were worshipped on every high hill and under every green tree. The existence of \textit{ba'al}-worship in Philistia is attested by the name \textit{Ba'al-zebub} (\textit{Ba'al-zebub}) at Ekron (2 K 19\textsuperscript{27}); in Edom by the names \textit{Ba'al} and \textit{Ba'al-Zama\textsuperscript{1}}; in Moab by the names \textit{Ba'al-Peeor} (Nu 2\textsuperscript{27}), \textit{Ba'\textit{\textit{al}}-Baal} (Nu 22\textsuperscript{4}), \textit{Beth-ba'al-Ma\textsuperscript{o}on} (Jos 13\textsuperscript{14}), \textit{Mishal Iscr. lines 9, 30}; in Ammon perhaps by the personal name \textit{ba'al} (Jer 40\textsuperscript{34}); see \textit{AMMONITES}. The \textit{ba'al} who were worshipped in the fertile region of Canaan were regarded as the protectors of the various classes of cultivators, as the givers of wool and flax, oil and wine, grains, vineyards, and fig-trees (Hos 25\textsuperscript{12}; 25\textsuperscript{14}); but it is unsafe to infer from this that all the \textit{ba'al} of Canaan had an agricultural character. As the names just enumerated show, there were also \textit{ba'al} of springs, trees, mountains, and cities that did not necessarily have such a character. The Old Testament often combines the \textit{baal} with the \textit{\textit{ash}ter\textit{\textit{oth}}, in such a way as to suggest that the \textit{\textit{ash}ter\textit{\textit{oth}} were regarded as the consorts of the local \textit{baal} (e.g. Jg 21\textsuperscript{20}, 1 S 7\textsuperscript{13}). Perhaps we may suppose that, under the influence of the meaning 'husband,' which the common noun \textit{baal} had, every \textit{baal} was regarded as the 'husband' of an \textit{\textit{ash}ter\textit{\textit{oth}}. It was the introduction of this sexual element into the \textit{baal}-cult of Canaan that made it peculiarly obnoxious to the prophets, and led them to stigmatize it as adultery (Am 2\textsuperscript{2}, Hos 4\textsuperscript{14, 17}). The places where the \textit{baal} were worshipped were known as \textit{baalim}, 'high places' (see \textit{HIGH PLACE}, p. 20); the place-names \textit{baalim} (Nu 22\textsuperscript{4}) and \textit{Be'alim} (Num 21\textsuperscript{16}) belong to the \textit{\textit{ash}ter\textit{\textit{oth}}. Inhabitants of Petra have discovered at Petra a rock-hewn high places that have lately been discovered; these give a good idea of the arrangement of such sanctuaries (see \textit{Robinson, Bible World, 1869, pp. 8-21}). Such high places contained altars, \textit{doh\textit{\textit{rin}}, marish\textit{\textit{ith}}, and benu\textit{\textit{min}} (Jg 6\textsuperscript{7}, 2 Ch 14\textsuperscript{2, 4, 14-24, 34-37}). Idols are not mentioned in connection with the \textit{baalim}, and were probably not found in most of the high places. They belonged rather to the temples of the great gods. The existence of altars implies sacrifice. The offerings were doubtless animal sacrifices, which later on grew into the developed Hebrew cult, and to the offerings of the Phoenicians. Hos 2\textsuperscript{2} indicates that grain, new wine, oil, silver and gold were presented to the \textit{baalim}. Hos 2\textsuperscript{19} speaks of 'the days of the \textit{baalim} unto which she (Israel) burned incense, when she decked herself with her ear-rings and her jewels, and went after her lovers' (see \textit{CANAANITES}).

3. In Israel.—The conquest of Canaan by Israel was a process extending over several centuries. The Hebrews did not discriminate the aborigines, but certain clans forced their way through the wilderness into the land, and occupied the rural districts, while the cities remained in the hands of the Canaanites. For some time there was constant warfare between the two races, but gradually hostilities ceased and they began to mingle. Little by little Israel acquired agriculture, industries, and all the other forms of Canaanitish civilization. With this came inevitably the adoption of the worship of the local gods of Canaan. Agriculture could not be carried on without observing the ceremonies that became associated with the planting of the grain and the reaping of the harvest; altars, sacrificial trees, and holy stones in all parts of the land could not be appropriated without taking with them the divinities that belonged to them. As the Book of Judges and the early prophets repeatedly lament, 'Israel served the \textit{\textit{baal}}', that is, alongside of Jahweh the national god it also worshipped the local numina of the land that it had conquered. Through this process it was in danger of losing the measure of national unity that had been achieved by Moses, and of splitting up into a number of small communities that rallied about the local \textit{baal}. Consciousness of this peril was awakened through the rapid development of the Philistine power. About B.C. 1050 the Philistines conquered Israel, taking captive the richest town, Ashkelon, and the city of many shafts (Jer 20\textsuperscript{29}). Hebrew nationality was now in danger of extinction, and the only thing that could save it was a union of all the clans in a supreme effort to shake off the Philistine yoke. No one of the \textit{baalim} of Canaan was important enough to form a central power to challenge the rule of the Pharaoh of Sin, who had brought Israel out of Egypt, and who had united the clans in a common cult in the desert, was able once more to rally them for the common defence. The leaders of Hebrew thought perceived that the only way to save Israel was to forsake the \textit{baalim} and to return to Jahweh. Some extremists, such as the Kenites and the Nazirites, wished also to reject agriculture, life in towns, and the other elements of Canaanitish civilization that were associated with the \textit{\textit{baalim}}; but the wisest men saw that it was impossible to return to the life of the desert. If the \textit{\textit{baalim}} were to be conquered, it could only be by appropriating to the service of Jahweh all that had hitherto belonged to them. Through the efforts of the Levites, the so-called 'Judges,' or Vindicators, the Seers, and other enthusiasts for Jahweh, He finally triumphed over the \textit{\textit{baalim}}, not by avoiding them, or by destroying them, but by absorbing them. The name \textit{baal} became a synonym of Jahweh, and the \textit{\textit{baalim}} were regarded as manifestations of Jahweh. He ceased to be the God of Sinai and became the God of Canaan, the patron of agriculture and civilization. The ancient shrines of the land became His shrines, and the legends connected with them were retold as stories of His dealings with the patriarchs. The agricultural ritual and the harvest festivals of the \textit{\textit{baalim}} were re-consecrated to His service. By the time of David the process was complete. Jahweh had appropriated everything that belonged to the \textit{\textit{baalim}} that were associated with the god of Israel. And David interprets the name \textit{Ba'al-\textit{\textit{priazim}} as meaning 'Jahweh hath broken mine enemies before me like the breach of waters.'

This process of syncretism has left an interesting monument in some personal names of the period of the early monarchy. These are as follows: \textit{Ish\textit{\textit{baal}}, 'the \textit{\textit{baal} contends'}} (Jg 8\textsuperscript{30}); \textit{Is\textit{\textit{baal}}, 'man of the \textit{\textit{baal,' a son of Saul (1 Ch 28\textsuperscript{2}), also one of David's heroes (1 Ch 11\textsuperscript{2}); Mer\textit{\textit{baal}}, a son of Jonathan (1 Ch 11\textsuperscript{2}); Ba'\textit{\textit{al}} knows son of David (1 Ch 14\textsuperscript{14}); \textit{Ba'al}\textit{\textit{sham}, 'the \textit{\textit{baal}} is gracious,' a Gederite (1 Ch 27\textsuperscript{2}).} No names of this type are found after the time of David. In most of these cases it is certain that \textit{\textit{baal}} is not a foreign god, but a title of
Jahweh, who has become the ba'\={a}l of Canaan, since Jerub-ba'al, Saul and David, were all loyal and faithful to him, is nothing but 'ba'\={a}l Jahweh,' the name of one of David's helpers (1 Ch 12*), the identity of the ba'\={a}l with Jahweh is asserted; so also in Yo-ba'al (Jg 9*), if Kuenen's emendation be correct. These names accordingly belong to the time when the Canaanites were conquering the b'\={a}l'\={a}nim by identifying them with Jahweh. In popular conception in the time of Hosea the b'\={a}l'\={a}nim were not foreign gods, but local Jahwehs. Hos 2* says that Israel has called Jahweh ba'\={a}l, and 2* identify the feasts of Jahweh as the days of Israel's ba'\={a}l. This was a result of this process the b'\={a}l'\={a}nim lost their power, and Jahweh became the God of Canaan; but the victory was purchased at the cost of a mixture of the religion of Jahweh with all sorts of alien elements. The early prophets faced the problem how to maintain the supremacy of Jahweh; the later prophets from Amos onward faced the problem how to purge the religion of Jahweh from the heathen innovations that had entered it. Their efforts were only partially successful, and Judaism, as we know it, is the result of the efforts of the rabbis. The Law, properly regarded as a compromise between Prophectism and Ba'\={a}lism.

A totally different sort of ba'\={a}l-cult was the worship of Melkart, ba'\={a}l of Tyre (see below, 4), which was only absorbed into the ba'\={a}l'\={a}nim by the king of Tyre, Ahab. Pressed by repeated attacks of Damascus, Ahab was constrained to seek the help of Phoenicia, and formed an alliance by marrying Jezebel, the daughter of Ethba'al, king of Tyre (1 K 16*). Such a relation of dependence usually involved the worship of the chief god of the protector (see e.g. 2 K 10*); consequently Ahab was compelled to establish the cult of Melkart in Samaria (1 K 16*).

Against this religious innovation Elijah and Elisha warred (1 K 18. 19*; 2 K 9. 10). There is no record that either of these prophets opposed the old native b'\={a}l'\={a}nim that were identified with Jahweh. The golden bullock at Bethel, for instance, they never attacked as Hosea did subsequently; but the ba'\={a}l of Tyre was a foreign god, and to worship him was to repudiate Jahweh (1 K 18); hence the intensity of the opposition of these prophets. According to 1 K 18, Elijah was successful, and in agreement with this we learn from the annals of Shalmaneser II. that in B.C. 856 Ahab was no longer in alliance with Phoenicia, but was highly regarded as the true successor of the Phoenicians and the Phcenicians. According to 1 K 20, the prophetic and popular sentiment was sufficiently strong in Israel to compel Ahab to give up the Phoenicians and their god and seek this new ally. Subsequently Ahab must have repudiated the Syrian alliance and have re-established relations with Phoenicia, for he died fighting against the Syrians (1 K 22*). After his death, under the influence of the queen-mother, Jezebel, Ahab's son Joram, continued this work, and raised Tyre's influence once more in full force (1 K 22*). This cost the dynasty of Omri the throne. Instigated by Elisha, Jehu slew Jezebel and her son Jehoram, and exterminated the worship of Melkart with fire and sword (2 K 9. 10). Immediately after this, in B.C. 842, we find him paying tribute to Assyria instead of Phoenicia, apparently on terms that did not demand the worship of Ashur. Melkart never again gained a foothold in the northern kingdom. The problem which confronted Amos and Hosea was not the existence of the foreign deity, but the purification of the religion of Jahweh from admixture with rites of the ancient b'\={a}l'\={a}nim of Canaan. The worship of the Tyrian ba'\={a}l was introduced into Judah by Athaliah, the daughter of Jezebel (1 K 22*), 2 K 9*, doubtless as the price of a revolution in which the Canaanite allusions in the genealogy of the king. In the subsequent revolution that was incited by the priests Athaliah perished, and all the people of the land went into the house of the ba'\={a}l and brake it down; his altars and his images were utterly destroyed, and the priest of the ba'\={a}l before the altar* (2 K 11*). In the re-erecture of all sorts of heathenism under Manasseh, the Tyrian ba'\={a}l was once more worshipped (2 K 21*). To this Jeremiah and Ezekiel allude whenever they speak of the ba'\={a}l in contrast to the ba'\={a}l'\={a}nim. Under Josiah, what was stamped out (2 K 23*), and did not again gain a foothold in Judah. It was a foreign religion that never appealed strongly to the mass of the people.

With the old b'\={a}l'\={a}nim of Canaan it was very different. They were thoroughly identified with Jahweh in the conception of that nation that it was unconscious of apostasy in worshiping them. All the efforts of the pre-exilic prophets to banish them were unsuccessful. Under the reign of every good king, and after every attempted reformation, the records show that the high places were not taken away, the people still sacrificed and burned incense in the high places. The Book of Deuteronomy and the reformation of Josiah had for their central aim the destruction of the high places, the centralization of worship at Jerusalem; but both Jeremiah and Ezekiel confess that the effort was unsuccessful. It was the Exile, which removed Israel from the old holy places and old religious associations of Canaan, that finally eradicated this cult. Orthodoxy Judaism detected the attempts of the forefathers, and, interpreting literally the words of Hos 29 (17) 'I will take away the names of the b'\={a}l'\={a}nim out of her mouth,' substituted bosheth, 'shameful thing,' in the place of ba'\={a}l in the reading of the Scriptures. In Jer 32 and elsewhere bosheth has actually taken the place of ba'\={a}l in the Heb. text. The Greek version often has θειός to indicate that the reader is to substitute εἰδούς for ba'\={a}l, and in 1 K 18* this alternates with ba'\={a}l in the text. Particularly in the Books of Samuel ba'\={a}l has been eliminated from names of persons, although it has been allowed to stand in the parallels in Chronicles. Thus Ish-ba'al (1 Ch 8* = Ish-bosheth throughout Samuel (Ish-vei, 1 S 14*); Ish-ba'al (1 Ch 11* = Josiah-bashosheth (2 S 29*); Meri-ba'al (2 S 20*), or Mobi-ba'al (2 S 9*), or Mophi-bosheth (2 S 4*), cf. the other Mophi-bosheth, 2 S 21*; Ba'al-yaad (1 Ch 14* = El-ya'da (2 S 5*). Abi-abalon (2 S 23*) is perhaps a perversion of Abi-ba'al, and 'Ebed, 'slave' (Jg 5*), of some ba'\={a}l'\={a}nim compound. (see Geiger, ZDMG xv., 1892, pp. 728-732; Nestle, Die isr. Eigenmamen, pp. 108-132; Dillmann, SBAW, phil.-hist. Kl., 1881, p. 609 f.; Wellhausen, B. Samuelis, pp. xii. f., 30 f.; Driver, Samuel, pp. 186, 185 f., 279; Gray, Heb. Proper Names, pp. 121-136). In spite of these efforts, however, the name has stood as a designation of naturally irrigated land (see above, ii. 1), and under modified forms the ba'\={a}l'\={a}nim lingered in the rural districts. In modern Palestine, the Jews unite with the Christians and Muslims in reverencing numerous local saints that are only the thinly disguised b'\={a}l' of earlier days. In spite of all the efforts of Judaism, Christianity, and Muhammadanism, one may still say with the author of Kings, 'Nevertheless the high places are not taken away, the people still sacrifice and burn incense in the high places' (see Curtiss, Ursen. Rel. p. 81 ff.).

4. In Phoenicia and the Phoenician colonies.—In Phoenicia the name seems to have been pronounced ba'al; to judge from such proper names as
Hannibal, Aschenbal (Schroeder, Die Phön. Sprachw., p. 174). The most important of all the Pheen. br'lamin was the lord Melkart, the ba'al of Tyre (CIS 121). He is mentioned in the treaty of Esarhaddon with Ba'al, king of Tyre (KAT 357), as (i.lu) Mil-kr'l-l, one of the great gods of Tyre. His name Melkart (= Melk-ziyeth, 'king of the city') seems to be derived from a tribal god who was identified with the local ba'al, just as Javveh was identified with the br'lamin of Canaan. In all the names of the kings of Tyre the element ba'al refers to Melkart: thus, Ab-i-ba'al, the father of Hermes, the Melkart of Tyre (KAT 8). In the temple of Rehoboam: Eth-ba'al (Assyr. Tu-ba'-lu), the contemporary of Ahab (1 K 16), Ab-i-ba'al, the successor of Eth-ba'al; Ba'al-i, the contemporary of Sennacherib; Eth-ba'al-ii., the contemporary of Nebuchadrezzar; Ba'al ii. (c. 575-564), and somewhat later Mer-ba'al. He is also the ba'al meant in the numerous Tyrian proper names compounded with this name (see Lidzbarski, Nordsem. Epig. 239 ff.). Under the name of Herakles his temple at Tyre is mentioned by Menander in John, viii. 13 (Ap. Darn. ii. 18) and by Herodotus (ii. 44). In regard to his cult little is known from native sources. Our fullest information is derived from the OT accounts of his worship in Israel. He had a temple, an altar, and an 'asherah (1 K 16, 2 K 10, 11), also a mosh'eb, or stand for the image. The image is mentioned (2 K 11), and is implied in 1 K 19. Hos 210. There were prophets of the ba'al and of the associated 'asherah (1 K 18), also Chemarim, or priests of the ba'al (2 K 23; Zeph 1). The bullock was sacrificed to him (1 K 13). Like other melk'ahim, Melkart received human sacrifice (see under art. AMMONITES, vol. i. p. 391; and cf. Jer 19 32), but this was in his capacity as melk and not as ba'al. From this the inference cannot be drawn that such sacrifices were customary in the service of other br'ilim. Kissing his image is mentioned as a rite in 1 K 19; dancing round the altar, and cutting the body with knives and shouting the name of the god, in 1 K 18. Distinguished from Ba'al-Melkart in the treaty of Esarhaddon, in spite of its identical etymology, is Ba'al-ma-la-gi (KAT 337). This is apparently Ba'al-Malki, 'Ba'al my king,' and is the same as Milk-ba'al of the Phoenician colonies (CIS 123a, 147, 194, 380). What his character was, and how he was differentiated from Melkart is unknown. Ba'al-Melkart is Ba'al ash-shefb (Euting, Ap. Darn. ii. 175), and Ba'al-Mack (see above, ii. 8), is also mentioned as one of the great gods of Tyre in the treaty of Esarhaddon (KAT 357). In an inscription from Um-el-‘Awamid, near Tyre (CIS 7), a certain Abdelm states that he has dedicated to Ba'al-shamém a doorway and its doors, that it may serve as a memorial of him and a good name under the feet of his lord Ba'al-shamém. Philo Rybius also records the worship of Beldeasq in Phoenicia (Müller, PIG p. 556), and Menander and Dios in documents of the 3d cent. B.C. (c. 171) speak of the golden pillar in the temple of Zeus Olympios (ba'al-samêm), which they distinguish from the temple of Heracles (Melkart). Herodotus (ii. 44) also distinguishes the temple of the Thasian Herakles from that of Melkart. As a different deity from Ba'l-shamém the treaty of Esarhaddon mentions Ba'al-tas-pu-nu = Ba'al-zaphôn, 'owner of the north' (see above, ii. 8). Ba'al-shamämn (see above, ii. 5) is apparently mentioned in the previous inscription, line 3 (Ap. Darn. ii. 185, p. 380 ff.), and in the inscription from Um-el-‘Awamid (CIS i. 8). Besides these br’ilim which had risen to the rank of great gods, there were numerous local br’ilim of a more primitive character. Ba'al-Lebnon is mentioned in CIS 5 (see above, ii. 4). The worship of Zeus Atalayros (= Ba’al-Talab) in the Phoenician colonies makes it certain that he must also have been worshipped in the mother-country (see above, ii. 4). The river Belus, near Acre, proves the existence of a local ba'al of the stream (see above, ii. 1). Ba’al-Sidon is mentioned in CIS 3. With him was associated ‘Ashtart. But he is Ba’al-šidôn, ‘owner of the promontory,' at the mouth of the Nahr el-Kebel just north of Tyre (KAT 43). At Gébal ‘Ashtar was worshipped as the local ba'al in connection with her spouse Adonis (CIS 1; KT B v. No. 55; Philo Rybius, ed. Müller, p. 369; Lucian, Deo Syn. 6; see ASHTART). In the Phoenician colonies all the great br’ilim of the mother-country were worshipped, and in addition a number of new local br’ilim. Ba’al-zaphôn is found in Egypt (Ex 14, Nu 337), and in the proper name Bôd-zaphôn at Abydos (CIS 108); also Ba’al-séphûd at Menophis (Müller, Darn. ii. 175), Ammon, and Tyre (Ap. Darn. ii. 175); he was transplanted from his mountain near Antioch to Pelusium (see above, ii. 9). In Cyprus we find Melkart the ba'al of Tyre (CIS 88. 3-7) and the proper name Abd-Melkourt (CIS 14, 7); Zeus Keraunos (Waddington, 2739), who in a Palmyrene bilingual is called Belus, and on a stone from Egypt ‘Ashtart. In Rhodes there is Zeus Atalayros (= Ba’al-Tabor) (see Pausanias, Studien, ii. 247); in Corinth, Zeus Maturos (Euting, 243); in Thassos, Melkart (Paus. v. 25; Herod. ii. 44). At Carthage, Melkart the ba'al of Tyre appears frequently in proper names, e.g. Abid-Melkourt (CIS 179, 243, and often). Abd-Melkurt (Euting, Korth, Inschr. 18 = Ammian, CIL viii. 38), Ammot-Melkurt or Mot-Melkurt (Euting, 339, 329), Bod-Melkurt (Euting, 28, 261 = Bodmicer CIL 9618). At Melkourt (Euting, 213), Ba’m-Melkurt for Ba’al-Melkurt (Euting, 15), Melkurt-mashal (Euting, 130), Melkurt-balaz (CIL 234; Euting, 48), Ham-Melkurt (Euting, 165), and many others. The compound deity Milk-ba'al is also found, as in Phoenicia (CIS 123a, 147, 194). Ba’al-Adon (CIS i. p. 155) is a combination of the ba'al of Tyre with the Adonis of Gebal. Ba’al-shamém also appears (CIS 350). In Phaestus (Pausanias, 2.139), Hannu 594, a large statue of Belus, in whose name Augustine also knows him as a Punic deity (P-L iii. 797). The worship of Ba’al-zaphôn at Carthage is attested by the proper names Zaphôn-ba'al (CIS 207, 837) and Ba’al-zaphôn (CIS 265). Ba’al-hamman (see above, ii. 5) attained at Carthage the rank of a patron deity. More inscriptions have been found in honour of him than of any other Punic god. In Carthage itself he is always associated with the goddess Tanit, whose name stands first, showing that she was considered the more important personification of the god. The name Belus signifies Belus, or Bôd-zaphôn, whose name, however, is a Punicized form of the Semitic ba’al, 'lord.' The god is represented with rays surrounding his head, and holds a tree in his hand. Above him stands the sun. On another stele he grasps a grape-vine with his right hand and a pomegranate with his left. Still other depictions near representing palms, flowers, and fishes. The god is thus seen to have been a patron of fertility, like the br’ilim of Canaan (see Genesius, Phoen. Monumenta, ’Numid,’ i. ii. iv). Bâlaranress (bes = Ba’al-Kar- rum, ‘great god of Ram') was the chief and principal divinity who was worshipped on a two-peaked mountain near Carthage (see above, ii. 4). Ba’al-at-hatir and Ba’al-adjiris are also local Numidian deities (see above, ii. 6). In Malta, Melkart ba’al
of Tyre is named in inscriptions on two votive pillars (CIS 121). Another pillar from Malta bears the inscription: ‘pillar of Malak-bél, which Nebum has placed for Baal Hamman the lord, because he has heard the voice of his words’ (CIS 123a). This shows syncretism of the already compound deity Milk-Bal’ at with Baal-hammān. In Sicily we find an inscription on a sarcophagus (De Bèrèn, vi, 29.1.; CIL 141.153). ‘Agīl-bél (𐤄𐤆𐤁𐤇𐤊𐤄𐤂𐤇𐤊, ‘Agilisbelis’) was evidently a moon-god, since he is depicted as a young warrior with a crescent on his shoulders. The etymology of his name is obscure. De Vogüé connects ‘Agīl with 𐤇𐤇𐤇𐤇, ‘bulllock,’ as a symbol of the new moon. He was probably the original ‘Bāl’ of Palmyra, and he is meant in proper names compounded with ‘bél; e.g. ‘Abed-Bél, ‘Abed-isbelos’ (Vog. 6), Zebad-Bél (frequently), Repha-bél, ‘Rephāeliaos’ (Vog. 66), Zayd-bélos (CIG 4065), Malak-bélos (Waddington, 2379), Bel-barak, Bel-leha, Bel-‘ arson, etc. (On the use of ‘bél over against ‘bél and ‘el in Palm, see Nöldeke, ZDMG xlii, 1888, p. 357; Badínsin, PSE 324; on the proper names, Ledain, Dictionnaire des noms propres palmyréniques.) Malak-bél (𐤄𐤆𐤁𐤇𐤄𐤇𐤇𐤊𐤎, Malakbelos), like Milk-Bal’ at (see above, i., iii. 4), is ‘Bēl of the ‘belos’ (Bél of the Aramaic ‘bel-bél’ (see Bél, ‘belos’), ‘king,’ with ‘bél (= ‘bél). The form ‘bél suggests that the deity is of Bab. origin. (On Malak as a Babylonian god see Zimmern, KAT 469; Jastrow, Die Rel. Bab. u. Assy. p. 102). The rays with which this god is represented on the monuments (Lajard, ‘Mysteres, p. 1.) let us suppose that he was connected with the Babylonian Bel-Marduk (see below, 6). In the Lat. version of the Palmyran inscription of the Capitol (ZDMG xviii. 101 f.) the god is called ‘sul sanctissimus.’

Another pair of Palmyran deities that appear together in the inscriptions are Bel and Yarhl-bél (de Vogüé, p. 64). Bél, as the form of his name and his conjunction with Belti show, is imported from Babylonia. He is Marduk, the great bel of Babylon (see below, 6). His name occurs with special frequency on seals (Mordtmann, 50; de Vogüé, op. cit. 132, 133, 134). Many proper names are compounded with bel as with bel, e.g. Eta-bél (Ἐλάθης), Bel-saqeb (Βαλφωνί), Bel-barak, Bel-sani (Βαλφωνί), Ner-bel (Νερφωνί), Abel-bél (see above, 6). As the sun god of Palmyra, he bears a message of cheer. This inscription by its mention of the Ben-Hadad of the OT is shown to belong to 8th cent. B.C.; and, like the inscription of Esar- haddon mentioned above, witnesses to the antiquity of the deity Bel. A parallel should be drawn with the Egyptian Pogonum, Inscriptions égyptiennes, 1908, pp. (167-178).

In Palmyra, Baal-shamimeh, ‘owner of the sky,’ whom we have met already among the Nabateans, the Phoenicians, and in the Phoenician colonies, appears as the chief god under the form Be’el-šāmīm (Ῥαβμός, Ism. 19, 10, 18; 50, note 1; 53, No. 73; Entting, Berichte Akad. Berlin, 1885, 609, 41). His full Sem. title is בֶּל שָׁמִים, ‘owner of the sky, lord of the world,’ is in the Gr. parallel transliterated, Διά μεγίστα εκείνης. Most of the inscriptions of Milk-Malak-bél, which he has borne, have the name, but have the inscription, ‘To Him whose name is for ever blessed, the good and compassionate’ (de Vogüé, Palm. 74-105 al.; that he is meant, however, is shown to be clear from the Greek parallels which read, Διά εὐφρατον καὶ εὐφράτου. One inscription (de Vogüé, 16) is so restored by P. Vogli to identify him with Ἡσαῦ; but this is very doubtful. The form be’el in his name shows that he is of foreign origin. סָבִּים does not appear in Palmyran proper names, and is not used except in the sense of ‘number,’ as in our text. In the title of the ‘mede of the sun’ of Samaria, in the inscription of the Baal of the village of Baitokaiei, near Apamea (CIG 4474 = Le Bas, 2750v.; CIL iii. 184 and p. 372), SABAL-BEL. Especially famous was Zeus Karios (Βαλακασίων), whose cult we have found al-
ready in Egypt. Among the Nabataeans he appears as Kasie or Eta Kasie (de Vogüé, Syr. Cent. Notab. iv. 2, vi. 2, viii. 1, 2; Hallaran, v. ). Baudissin conjectures that he is the same as Kózē, the chief god of the Edomite ANTEKITES. He was worshipped on a lofty mountain on the coast near Antioch. His name, which is evidently derived from the root ʔaʔ̪aʔ, 'cut off,' de Vogüé refers to the 'precipice' on which his temple stood. Baudissin thinks that it rather means 'decider, judge.' The former interpretation is, however, in accordance with the local character of most Ba'al names. At his sanctuary a feast was celebrated by the people of Antioch (Strabo, xvi. 2, 5). Seleucus Nicator obtained an oracle from him concerning the building of Seleucia (Malahus, ed. Dindorf, p. 190). He is also mentioned by Lagarde (Analecta, i. 176, line 24). In Diodorus Siculus he also coins a translation of Zeus Olympios, whose cult Antiochus Epiphanes established in the Temple at Jerusalem, has been perverted by the Jewish scribes into shēkūt-šōme'nēm, 'the appalling abomination.'

5. In Babylonia—Babylonia was originally occupied by the non-Semitic race now commonly known as Sumerian. The religion of these people was a polytheism that differed in no essential respect from the polytheism of the Semites. There was a multitude of divinities presiding over all sorts of things. The name of a god's 'lord' was generally known as in, 'owner,' lord,' and a female one as nin, 'proprietrix, mistress;' thus, En-ki, 'master of the sea'; En-zi, 'master of wisdom'; Nin-ki, 'mistress of the sea'; Nin-har-sog, 'mistress of the great mountain'; Nin-in, 'mistress of destruction'; Nin-er-ut, 'mistress of the great house (temple)'; Nin-Mar, 'mistress of Mar!'; Nin-a, 'mistress of water' (?). By a process common among the Semites (cf. ASHTART, 2) many originally feminine divinities were transformed into masculine, as Nin-in-sag, Nin-er-ut, Nin-a-gal, Nin-sag, 'master of great strength,' the patron of blacksmiths; Nin-šad, 'master of the wild boar'; Nin-an-zi, 'master of the tree of life.' Celestial phenomena were objects of special reverence, and gave the religion of Babylonia an astral character which it retained down to the latest times. Here may be mentioned Anu, the sky; En-il, 'master of the air;' Sin, the moon-god of Sumer and Akkad, Assyria, and Aslanbaniap. This was Sin, the ancient Babylonian moon-god. His cult seems to have been indigenous in Ur in Southern Babylonia, and to have migrated to Harran at a very early period (cf. A. Schrader, En-il und Chaldeos zu Harran in Gn 11). From the earliest deities to the latest times he received the homage of the Babylonians and Assyrians among with their domestic deities. Sargon, king of Assyria (B.C. 722-706), confirmed the exemption from taxes that Harran enjoyed as the city of Sin (Amula, ed. Winkler, xxv. 5). Nabonidus, the last king of Babylon (B.C. 555-539), rebuilt the temple of Sin at Harran (Rawlinson, v. 64, col. i. 8-ii. 46). At a later date we find the cult of Beł-šēmām, 'the owner of the sky,' at Harran, perhaps though syncretism of the Syrian with the Babylonian, the moon-god of the city of Sin (Jacob of Sarug, in ZDMG xxix. p. 131). Beł-šēmām is also found in Nisîlîa (Isaak of Antioch, i. 299, v. 78 ff.; Bickel, Beł-šēmām princeps deorum, 251, 258, 358, etc.). From Mesopotamia the worship of this god spread into other areas. Bēšāmān (Beshimon, Bashammin, Pasham), who had a famous temple in the town of Thoran in Armenia, was none other than Beł-šēmām (Agathangel, 131, and Lagarde's note). According to the by the city of Takran, Tigranes brought back his image of gold, silver, and crystal from Mesopotamia (Langlois, Historique de l'Arménie, i. 54, 140; ii. 60, 88). It is clear that during the Greek period the cult of Beł-šēmām was generally diffused throughout Syria and Mesopotamia, and that he attained the rank of amnunān dēnas. This was doubtless due to his air-idolity and was called Beł-šēmām Olympios in Phoenicia, Palmyra, and elsewhere. Zeus was the chief god of the Greek pantheon, and, therefore, wherever the Greeks went, his supposed Syrian counterpart enjoyed his pre-eminence. In the later Greek period the name of Zeus (Διός, Διός, Ζεύς, θεός, at Palmyra). Identification with Anu, the Lord of Heaven, in the Bab. religion may also have assisted in the process. In Syriac writers his name appears as a translation of Zeus (2 Mac 6; Isocrates, Anab. xeiva, 176, line 24). In Diodorus Siculus he also coins a translation of Zeus Olympios, whose cult Antiochus Epiphanes established in the Temple at Jerusalem, has been perverted by the Jewish scribes into shēkūt-šōme'nēm, 'the appalling abomination.'
mountain of the north where the gods assembled; he was called 'great mountain.' His tower-temple at Nippur was known as E-kur, 'the mountain house.' All this indicates that En-lil must once have had the political as well as the religious centre of Babylonia; but this was in a pre-historic time, when the local gods were represented by the earliest inscriptions (c. 4000 B.C.), Nippur had lost the political hegemony, although its god still retained his ancient pre-eminence.

Alongside of En-lil stood his consort Nin-ili, who shared the high rank of her husband. She was known as ‘lady of earth’ and, in the local pansies of the land, as ‘mistress of heaven and earth.’ One of her common titles was ‘Nin-har-sag, ‘lady of the great mountain,’ with reference to her supremacy on the mountain of the gods. Associated with En-lil as the greatest gods of the Sumerian pantheon were ANU, ‘the sky,’ and En-ki, ‘lord of the sea.’ ANU is mentioned in the earliest inscriptions, and, like En-lil, had temples in all parts of Babylonia. En-ki, otherwise known as E-a, ‘house of water,’ was the patron-god of Eridu. In pre-historic times he was the chief god of the region of the Persian Gulf, and must have been politically one of the most important cities of Babylonia. In the inscriptions of Lagashziggiru (perhaps as early as c. 4000) the triad En-lil, ANU, and En-ki is already known (VAB i. 9). En-ki is the chief god who is represented in the oldest inscriptions. Thus the visible universe was portioned out between ANU, lord of the sky; En-lil, lord of the earth; and En-ki or E-a, lord of the sea. There is reference perhaps to this triad in the words of the second commandment, ‘the heavens above, and the earth beneath, and waters under the earth’ (Jastrow, Die Rel. Bab. p. 140). A second triad of inferior dignity consisted of Ur, the moon-god of Ur; Utu, the sun-god of Sippar; and Nana, the goddess of Erech. The superior rank of En-lil in the triad was not due to the greater political importance of his city, Ur.

The Semites who entered Babylonia used the word bēl (= ba’al, cf. Aram. ’baal) in all the senses in which it was used by the other Semites, and, in addition, developed the meaning ‘master’ or ‘lord,’ which is not found in any of the other dialects. They spoke of their gods as bēl, both with reference to their ownership of physical objects and places, and with reference to their authority over tribes and individuals. The worshipper addressed his god as bēl, ‘lord’ in the way that he addressed other Semitic languages. When they conquered Babylonia, they found the Sumerian gods on the ground, and adopted them as their own, just as Israel adopted the ’elāh of Canaan. The en of a particular object or locality became for them the bēl; the nin, the bēl. The old Sumerian moon-god Ur became Sin, the bēl of Ur; the sun-god of Sippar, Shamash, the bēl of Sippar; Nana of Erech, Ishtar, the bēl of Erech. The names of other Sumerian gods, such as En and Ningirsu, were never employed in their local forms on the bēls or bēlitās of their respective sanctuaries. En-lil, as the chief god of Babylonia, was known as Bel par excellence (there is no article in Bab.), and in course of time this appellative drove the old name out of use and became the common designation of the god, so that, when bēl was mentioned without any qualifying word, En-lil was understood to be meant. Thus in Babylonia bēl became the name of an individual god in a way that was never true of Bel at among the West Semites. In like manner, Nin-har-sag, the consort of En-lil, was known as Bēlt, ‘the lady.’ For many centuries after the conquest of Babylonia by the Semites their language was not reduced to writing, and the ancient Sumerian was employed as a sacred tongue for all the inscriptions in the temples. The result is that before the time of Hammurapi the name of the god of Nippur is always written En-lil, although it is certain that the Semites habitually called him Bēl. From the time of Hammurapi onward Semitic inscriptions begin to be common, and then the name of the god appears written either phonetically as Bēl, or ‘lord,’ or En-lil, or ‘the strong call of En-lil.’ When he conquers the people of Gishlu, it is in the name of En-lil (VAB i. 14). He speaks of himself as ‘endued with strength by En-lil, nourished with holy milk by Nin-har-sag’ (VAB i. 19). He owes his position as king to the fact that his name has been spoken by En-lil (VAB i. 19). Entemena of Lagash undertook restorations of the temple at Nippur, and constructed there a laver for the god (VAB i. 54). Gudea also marks his high position as king of Lagash in the triad En-lil (VAB i. 114), and in the name of En-lil (VAB i. 128, 130). Nin-girsu, the patron-god of Lagash, is called the son of En-lil (VAB i. 123). The temple of En-lil at Shuruppak, the capital of Lagash, was called En-udu, ‘house of the god,’ which is given in position that he held over against the local god. Ur-engur, king of Ur, rebuilt E-kur, the temple of En-lil at Nippur (VAB i. 189). By the dynasty of Ur En-lil was honoured to an extraordinary degree (cf. VAB 1906–c. 195, 2006–d). Aradzi of Larsa calls En-lil his god, who has given him the throne (VAB i. 212). Votive inscriptions in his honour from kings in all parts of Babylonia have been found by the expedition of the University of Pennsylvania at Nippur. His worship spread even as far as Elam (VAB i. 181). The primitive character of Bēl of Nippur is difficult to determine, on account of the confusion of this god with Marduk in all the later religious texts. From the oldest inscriptions we gather that he was conceived as a mighty warrior, armed with a net, who marched forth for the destruction of the enemies of his worshippers (VAB i. 14, 19, 128, 130). The Creation-epic shows that in its original form he was regarded as the creator of heaven and earth. He determined the fates of men (VAB i. 21, 222). He was worshiped in his temple, and punished those who violated them (VAB i. 14). On his temple at Nippur and the remains there found see Peters, Nippur; Hipprecht, Babylonian Expedition of the University of Pennsylvania, and Explorations in the Bible Lands.

The high position that Bēl of Nippur maintained for centuries he finally lost through the rise of the city of Babylon to political supremacy. Before the time of Hammurapi (c. 2200 B.C.), Babylon was a relatively obscure place, and its chief god, Marduk, enjoyed only a local cult. He is never mentioned in the inscriptions of kings who reigned before the first dynasty of Babylon. He was originally the god of the morning and the spring sun, who had become the bēl of Babylon by a process similar to that by which Sin, the moon-god, had become the bēl of Ur. When Hammurapi expelled the Elamites and united all Babylonia beneath his rule, Babylon became the chief city of the empire, and Marduk, its god, was suddenly exalted to the chief place in the pantheon. He now became Bēl, or ‘lord,’ par excellence; and this title presently became a proper name that was used even more frequently than his real name, Marduk. There were now two Bēls in Babylonia —the old Bēl of Nippur, who, in spite of the fallen state of his city, was still revered through force
of religions conservatism, and the new bēl of Babylon, who had proved himself to be the de faco lord through the strength of Hammurabi’s arms. What was more natural than to attempt to prevent conflict between the two potentates by affirming their identity? This step was taken in the case of the priests of the old Babylon, but not in the case of those of Hammurabi. All the attributes of the old bēl of Nippur, ‘lord of lords,’ ‘lord of heaven and earth,’ ‘lord of the lands,’ ‘creator,’ etc., were transferred directly to the new bēl of Babylon. All the ancient hymns and prayers to bēl of Nippur were appropriated to the use of his rival. When Hammurabi and his successors of the first dynasty speak of bēl, and use the language of the ancient inscriptions, they mean Marduk. In spite of this attempted syncretism, however, the priests were unable to banish the old bēl entirely even from Babylon. As a member of the supreme triad—Anu, Bēl, Ea—bēl held his own, and was constantly invoked in the inscriptions along with Bēl-Marduk: but this was more a religious formula inherited from the past than an active belief. For all practical purposes of worship, Enlil-Bēl was absorbed by Marduk-Bēl. Outside of the city of Babylon the claim of Marduk to be the same as the older bēl was not received without opposition, and there are evidences of a long struggle before it became a decided fact. Among the gods of the old city of Nippur naturally never accepted it, and throughout the entire period of the Kassite third dynasty Nippur retained its place as a sanctuary, to which pilgrims flocked from all parts of Babylonia. The Kassite kings had no special fondness for the patron-god of the dynasty of Hammurabi, and they bestowed special honour upon the old bēl of Nippur (Hilprecht, Old Bab. Insers. i. i. Nos. 28–32). With the fall of the Kassites and the establishment of a native Babylonian dynasty, Nippur was placed on the map of the gods, given him, and Bēl of Nippur waned until little remained but the memory of his former glory. Curiously enough, Bēlit of Nippur did not share the fate of her husband and become the wife of Marduk when he was identified with Bēl. Marduk had already a consort, Sorpinatum, a relatively unimportant goddess, who was in no way comparable with the old Bēlit of Nippur. The two were never identified, as logical consistency would have demanded, but Bēlit held her own as an independent divinity.

In the inscriptions of the Assyrian kings, Bēl usually means Marduk. He occupies the second place in the pantheon (after Ashur), and is usually named in connexion with his ‘son’ Nabu, the patron-god of Borsippa. The Assyrian kings showed him the highest reverence; and even when they conquered Babylonia, they claimed to do it in the service of Bēl, and took the throne by the formal ceremony of grasping the hands of Bēl at Babylon. Along with this there existed also the cult of Nabu-Bēl; and Nabu-Bēl and Anu, Bēl, Ea, still stand at the head of lists of gods in which Marduk appears as a separate deity; and when the Assyrian kings speak of Bēl, the lord of the lands, who dwells on the holy mountain, they mean the Bēl of Nippur. Tiglath-Pileser I. states expressly that he restored a temple of ‘the old Bēl’ at Ashur (Rawlinson, i. p. 14, col. vi. 87). This double use of Bēl as a proper name lasted through the entire Assyrian period, and, besides this, bēl retaining its generic meaning as a title of all the gods. The standing formula for the gods in general is ilātu rabiti bēltiya, ‘the great gods my lords.’ Bēlit was worshipped in Assyria partly as the ancient goddess of Nippur, partly as the consort of Anu or Ashur. Her name is also used as a title of the Assyrian Ishlar. This confusion is due to the fact that the common noun bēlit never lost its appellative meaning of ‘mistress.’ Many goddesses might be called ‘mistresses,’ and then through this similarity of title be confused with one another. When Ashurbanipal wishes to distinguish the older bēlit, he calls her Bēlit of Nippur (Borsippa) as his bēl.

In the New Babylon period Bēl-Marduk regained the supremacy that in the Assyrian period he temporarily surrendered to Ashur. His cult was revived with great glory by Nabopolassar, Nebuchadnezzar, and Nabonidus, and all the attributes of supreme divinity were heaped upon him. Throughout Babylonia he was acknowledged without question as the Bēl, and his cult spread widely in the provinces of the empire. We have found it already at Palmyra (see above. p. 51), and traces of it at Edessa is attested by Jacob of Sarra (ZDMG xliii. 1875, p. 131). When Bēl is mentioned in the OT and Apoc. it is always Marduk that is meant. The old bēl is unknown, except in so far as his character survives in his successor. In Jer 51st he is called ‘bēl of Babylon.’ In Is 46th he is named in connexion with Nebel, the god of Borsippa, the suburb of Babylon. In Jer 50th Merodach (= Marduk) stands in poetic parallelism with Bēl. Cf. also Bel and the Dragon (= Dn 14 in LXX), Baruch 6th (cf. 6th). Bēl also occurs in a few Heb. proper names.

7. Among the Semitic peoples.—Through Phen. colonies in all parts of the coast of the Mediterranean, and through Greek colonies in Syria, the worship of the old Sem. bālīm was widely disseminated throughout the Greek-Roman world, and exerted a deep influence upon Occidental thought. The local divinity was either called by his original Sem. name, e.g. Bālianis at Heliopolis, Baalsamem at Tyre, Palmyra, and the Phenician colonies, Balmarcides at Deir el-Qal’a, Beelmaris at Tyre, Balkaranensis at Carthage, Baladdiris at Gabala, Asag, and Hammurabi at Babylon, who, it is said, was given a new name when he was enthroned. His name was translated into its supposed Gr. or Lat. equivalent. The local bāl was everywhere regarded as the supreme god, hence he was frequently identified with Zeus or Jupiter, the name of his city being appended to distinguGU him from other similar divinities, e.g. Zeus Kasios, Zeus Damascenos, Zeus Karmelos, Zeus Atabyrios, Zeus Tarsios, Jupiter Heliopeutianus (see above under the corresponding Semitic names). Other bālu had peculiarities which led to their identification with certain local divinities. Carthage, for instance, is regularly called Saturnus in the inscriptions (cf. Alex. Polyh., frag. 3 in FHG iii. 212; Servius, in. a. 642, 729; Damascenus, Vit. Isid. s. 115; Joh. Chrys. on Ps. 165, § 3; Theodor. on Ps 10325 in PG lxxxvi. 733). The bāl of Heliopolis, who was the son, was, of course, identified with Helios and Sol. Melob-Bēl at Palmyra is in the Latin parallel called *Sol sanctissimus* (cf. Servius, in. a. 642, 729; Nom. Dionys. xl. 392 ff.; Macrobius, Saturn. i. 29). Hessychius (s. bālu), the elyx of the Elysian plain of Egypt, the old bēl of Nippur, the Babylonian Aned. 225), connect bālu with Uranos. Beal-Melkart of Tyre is almost uniformly identified by classical writers with Herakles (cf. Baethgen, Beiträge, 201 L.). Late writers assert that in Persian Beal is the same as Areš (Malalas, p. 19; John of Antioch, frag. 5, in FHG iv. 542; Chron. Paneth. i. 18). This variety in the identification bears witness to the multiplicity of the bāluim with which Greeks and Romans came into contact (see Scholz, Götzdienst, p. 149 ff.; Baethgen, Beiträge, p. 197 ff.).

The Bab. Bēl is also known to the classical writers. In Servius (in. a. 612) a dim memory survives of a distinction between the older and the younger Bēl, but in general only Marduk-Bēl is known, and all the attributes of Enlil-Bēl are
BAALZEBOU, BEELZEBEUL.

These two names probably refer to the same supernatural being; or, at any rate, the second of them is derived from the first. Baalzebub (בָּאלֶזְבּúb) is the NT form (2 Kgs 1:16, 17), and Beelzeboul (בֵּלֶזְבּוּל) the NT form (Mt 10:25; Mt 12:27-32; Mk 3:22; Lk 11:18-19).

Baalzebul is in the OT represented as the god of the Philistine city of Ekron, whose oracle was so famous that Ahaziah, king of Israel, sent to consult it, to the neglect of the oracles of Jahveh. The Hebrew word בַּלְזֶבּוּל would mean 'lord of flies'; זבּוּל-assyrian זבּוּמְבּוּ, 'a fly' (cf. Ec 10). The LXX and Josephus so understood it, since they make the name of the god בַּלְזֶבּוּל (cf. LXX, βῆλεςβοῦλ, and Jos. Ant. ix. 2). Aquila supports the same reading by transliterating βῆλεςβοῦλ, while Symmachus supports the NT form βελεζβοῦν. Bezdöhl found, in an inscription of the Assyrian king Assur-bel-Kala (11th cent.), mention made among the gods of Ebir-mari (a name applied in Deut 29:24 to Syria or the land of the Philistines) of the god bel-bi (or-na). Were the last syllable certain, it would show that Baalzeboul was found there earlier (cf. Catalogue, K. 3500, and Hommel, AHT 193).

Movers (Die Phänöster, i. 260 ff.) held that the original name was בַּל-זֶבּוּל, 'lord of the mansion,' which originally meant a heavenly motion, but afterwards the god of the nether world.

This view is of very doubtful certainty, since בַּל in the sense of 'house' (1 Kgs 8:40 and Ps 49:5) is very uncertain (cf. LXX).

In Is 63:4 and Hab 3:10 it is used of a station of the heavens, while in the Talmud (Chagiga, 12b) בַּל is the fourth heaven, in which are the heavenly Jerusalem and the altar.

This would hardly be possible, if in Jewish thought the word had ever represented a region of the world the lord of which was the prince of demons. Hälewy (Ja xix. 1862) p. 304 and CAI 111 (1892) p. 74 thinks Zeubul the name of a place, comparing the ἴπαυνα of the el-Aunara letters (KB v. 174. 16)—a theory which Kittel ('Könige,' in Nowack's Handkommentar, ad loc.) rightly rejects. The resemblance between Zeubul and the name Bel does not strike, and the Biblical text states that the deity in question was the god of Ekron. In all probability Baalzeboul means 'lord of flies,' which are very numerous in the neighbourhood of Ekron (see Barton, A Year's Wandering in Bible Lands, 1904, p. 216 ff.). This title was given as an epithet to the god, whether by the Ekronites or the Hebrews we do not know, though Baethgen (Beit. z. sem. Religionsgesch. 1888, p. 25) holds that he represented a process of divination by flies. In the NT, as already noted, the name is בַּלזבּוּל and applied to the lord of the devils, and made a synonym of Satan (cf. Mt 12:22, Lk 11:15, 19). Cf. above, p. 287.

These facts have given rise to various conjectures. (1) The theory of Movers already referred to, that the name was בַּל-זֶבּוּל, is struck by some others as improbable, and the NT receive confirmation from the fact that in Mt 10:25 ὀικοδόμης (οἱκοδόμος, = 'master of the house') may be considered a translation of it. There is no real reason, however, to consider one of these words a translation of the other. If בַּל (='house') is the origin of Bel, then Bel would easily have ἀρχή (=Syr. bāla, 'lame') suggested to him, and might so understand the Beelzebul of AV has no authority in Greek MS. It owes its currency to the Vulg.

4 Cheyne (EBC, col. 514) holds that οἰκοδόμης suggests the reading ἔκποες, 'master of the house.'
name (so Gollid, 'Mark,' in Inter. Crit. Com. p. 62). (2) It is supposed that the name is a variation of Brailzebub, and that both the form and the significance have undergone change. As to the form, it is supposed (a) that the final 6 was changed to 3 by an various pronunciation, so as to make it mean 'dung,' as bo'dl ('= lord') is sometimes changed to bo'elh ('= shame') (cf. Esh-bosal, 1 Ch 92, with Ish-bosheth, 2 Sh 29); this perverso transformed 'fly' to 'dung,' or 'filth.' (b) Baussan (PRE) holds that b was changed to 3 in popular pronunciation, without intent to change the meaning, as Babel-Moundeb is sometimes changed to Bab-el-Mandel; and (c) Riehm (HWF) held that in the time of Christ Bael-zebub was Aramaized to ρωτνταα (='lord of eminence'), and so was the exact equivalent of Zabulub. As to the significance of Beel-zebul the NT period different theories have been proposed to account for its evolution from the OT god. Geiger (Uebersicht, p. 53) thought that the god of the hated Philistines became the representative of heathen power, and so the arch-enemy of Israel. He found confirmation of his view in the fact that, in Aramaic, בָּעֵל would be phonetically transformed into בָּעַל (= 'hostility'). This theory, though plausible, lacks historical confirmation. The Philistines were a wily and treacherous enemy after the early days of the kingdom. Syria, Phoenicians, Egyptians, Persians, Greeks, and Romans took successively the place of principal enemy, and it is hardly probable that the god of Ekron, who is mentioned in but one narrative of the OT, could have continued to hold this place. Had he done so, he could not have escaped mention.

Another view is expressed in the Talmud, which regards the fly as the representative of evil. In Berekoth, 61a, it is said: 'The evil spirit lies like a fly at the heart of man.' Again, in Berekoth, 10b, it is said that Shumamite woman (2 K 4:27) perceived that Elisha was a man of God, because no fly crossed his table. This estimate of the fly goes back to the Mishnah, for in Abot, 9, we read: 'A fly, being an impure thing, was never seen in the slaughter-house of the temple.' In reality the revival of interest in Baal-zebub in the NT was due to literary causes. Cheyne has pointed out that Lk 9:44 shows that in the time of Christ the narrative of 2 K 1 possessed a strong interest for the Jews. Probably both the hostility to Baal-zebub exhibited in the narrative and the perversion of his name into the Aramaic בָּעֵל (='lord of hostility') helped this literary interest to make Baal-zebub a synonym of Satan. As the name meant 'lord of flies,' this would be sufficient to call into existence the Talmudic conception that the fly is a kind of imp, especially as Lv 11 and Dt 14 imply that it was to be reckoned among unclean flying things. The change of zebub to zebul in the NT was, no doubt, due to conscious perversion. In addition to the above cited, cited, cited, cited, cited in the Talmud (Aboda za'ira, 18b, ed. Dalman, Aram, Gem, p. 137) shows that 321 as applied to the sacrifices of the heathen was changed to 321 ('dung').

GEORGE A. BARTON.

BAB, BABIS.—Bab (בָּבֶא = 'Gate' in Arabic) was the title first assumed by Mirza Ali Muhammad, a young Sayyid of Shiraz, who in A.H. 1290 (= A.D. 1844) began to preach a new religion, which spread through Persia with extraordinary rapidity, and, in spite of violent persecutions, culminating in the execution of the founder on July 9, 1830, and of some twenty-eight of his principal disciples on September 15, 1832, has continued to gain strength and extend its influence day by day. Both the history and the doctrines of this religion present so many remarkable features, that the subject has, almost from the first, attracted a great deal of attention, not only in the East but in Europe, and latterly in America; and the literature dealing with it, even in English, is very extensive; while the Arabic and Persian writings, manuscript, lithographed and printed, connected with it are so numerous and, in some cases, so voluminous, that it would hardly be possible for the most assiduous students to read in their entirety even those which are accessible in half a dozen of the best-known collections in Europe.

An exhaustive treatment of the subject is therefore impossible, and we must content ourselves with a sketch of the most important outlines of the history, doctrines, and literature of the religion in question.

1. Antecedents.—In order to understand properly the origins and developments of Babi doctrine, it is, of course, essential to have a fair knowledge of Islam, and especially of that form of Islam (the doctrine of Shi'a, or 'Sect of the Twelve' Imams), of which Persia has from the earliest Muhammadan times been the stronghold, and which, since the 16th cent of our era, has been the State religion of that kingdom. Information on this subject must be sought elsewhere in this Encyclopedia under the appropriate headings; but, even for the most elementary comprehension of the early Babi doctrine, it is essential to grasp the Shi'ite doctrine of the Imamate, and especially the Messianic teaching concerning the 'Imam al-Mahdi.'

According to the Shi'ite view, the prophet Muhammad appointed to succeed him, as the spiritual head of Islam, his cousin Ali ibn Abi Talib, who, being married to Fatima, was also his son-in-law. Ali's rights were, however, usurped in turn by Abi Bakr, 'Umar, and 'Uthman; and though he was elected Khalifa after 'Uthman's death, he was assassinated after a brief and troubled reign of five years (A.D. 656-661). His eldest son, Ali-Hasan, the second Imam, abdicated five or six months after his accession. He was followed in a line of infant Imams by his son Mu'awiya. His younger son, al-'Usayn, the third Imam, attempted to regain his temporal rights by a rash revolt against the Umayyads, but perished on the fatal field of Karbala (Kerbela) on Muhammad 19, A.H. 61 (Oct. 19, A.D. 680), a day celebrated with wailing and mourning in all Shi'a communities, especially in Persia. The nine remaining Imams all lived in more or less dread of the Umayyads, and afterwards of the 'Abbasid Khalifs, and many of them died by poison or other violent means. The Talmud (Aboda za'ira, 18b, ed. Dalman, Aram, Gem, p. 137) shows that 321 as applied to the sacrifices of the heathen was changed to 321 ('dung').

of the faithful on the spiritual guidance of the Imam of the Age, thus became the two most characteristic and essential dogmas of all the various Shi'ite sects. 'Whosoever dies,' says a well-known Shi'ite tradition, 'without recognizing the Imam of his time, dies the death of a disbeliever.'

Now, according to the 'Sect of the Twelve,' the Twelfth Imam, or Imám Mahdi, was the last of the series. But since, according to their belief, the world cannot do without an Imám, and since this last Imám, who succeeded his father in A.H. 329 (=A.D. 757-4), disappeared from mortal ken in A.H. 329 (=A.D. 940-1), it is held that he never died, but is still living in the mysterious city of Jahlūla, or Jahlūla, surrounded by a band of faithful disciples, and that at the end of time he will issue forth and fill the earth with justice after it has been filled with iniquity.' This Mesianic Advent is ever present in the mind of the Persian Shi'ite, who, when he has occasion to mention the Twelfth Imám, or Imám Mahdi (also entitled Husayn Allahshāh, 'the Proof of God,' Baqiy- yatullah, 'the Living,' Sayyid al-Kāmil, 'the Lord of the Age,' and Qā'im, 'Ali Musa',dān, 'He who shall arise out of the house of Muhammad'), always adds the formula {الله} فرجه! (May God hasten his glad Advent!).'

Now, in connexion with Báb doctrine, it is to be noticed first of all that the 'Manifestation' (بیان) of Mirzâ 'Ali Muhammad the Báb took place, as already said, in A.H. 1290, exactly a thousand years after the succession of the Imám Mahdi to the Imámāte, or, in other words, at the completion of a millennium of 'Occultation' (غیاب). For the Imám Mahdi, according to the Shi'ite belief, appeared in public once only, on his accession, when he performed the funeral service over his father, the last of his line, the son of the Imám's brother, and the first of his followers. During the first 69 years of the millennium of 'Occultation,' however, his instructions and directions were communicated to his followers, the Shi'a, through four successive intermediaries, each of whom bore the title of Báb, or 'Gate.' This period is known as the 'Minor Occultation.'

It was in this sense, then, that Mirzâ 'Ali Muhammad, at the beginning of his career, declared himself to be the Báb, or 'Gate,' viz., the gate whereby communication, closed since the end of the 'Minor Occultation,' was re-opened between the Hidden Imám and his faithful followers. He did not invent this term, nor was he even the first to revive it, for it was used in the same sense by ash-Shâlahînî, a Messiah of the 10th. cent. of our era, and by others. So far as recent times are concerned, however, it was the Shaykhi school, founded by Shaykh Ahmad al-Ahsâ'î (b. A.D. 1733, d. A.D. 1856) which revived the idea that amongst the faithful followers of the Twelfth Imám there must always exist one, whom they entitled Shá'í-i-Kâmil, 'the Perfect Shí'ite,' who was in direct spiritual communication with him. Neither Shaykh Ahmad nor his successor Sayyid Kāmil of Rishk (d. A.D. 1843-44) made much use of the title of the Shá'í-i-Kâmil of the Perfect Shí'ite' was practically idle, and the idea connoted by that title. To this Shaykhi school, sect, belonged not only Mirzâ 'Ali Muhammad himself, but Mullah Husayn of Bushrawayh, Qurra'at-ul-Ayn, and many others of his first and most zealous disciples. On the death of Sayyid Kāmil his followers were naturally impelled by their doctrine concerning the 'Perfect Shí'ite' to seek his successor. There were two claimants, Mirzâ 'Ali Muhammad, who on May 23, 1844, within a short time of Sayyid Kāmil's death, announced himself to be the 'Báb,' and whose followers were consequently called 'Bábís'; and Hájjí Muhammad Karím Khán, a scion of the Qajar Royal Family, who was recognized, and whose descendants are still recognized, by the con-

2. History of the movement during the life of the founder.—The first period of Báb history begins with the 'Manifestation' on May 23, 1844, and ends with the martyrdom of the Báb at Shiráz on July 9, 1850. The detailed history of these six years will be found in the translations of the Traveller's Narrative (Camb. 1891) and the New History of the Báb (Camb. 1893), while a fairly complete bibliography of earlier works on the subject, both European and Oriental, is given in the former work (ii. 173-211). In the JERAS for 1889 (vol. xxi. new ser, pp. 485-526 and 851-1009) are also discussed critically various matters connected with both the history and the doctrines of the sect. If the three chief historical controversies (discussed in Part II) have been settled by members of the sect, the earliest and most instructive is that written between 1850 and 1852 by Hájjí Mirzà Jání of Kâshân, who must have finished it only a little while before he was put to death among the twenty-eight Bábís who suffered martyrdom at Shirín (Shiraz) on Sept., 1852. Of this work the only complete manuscript, so far as the present writer can ascertain, which existed (until he caused it to be transcribed for himself) was Suppl. Pers. 1071 in the Bibliothèque Nationale at Paris. One of the MSS brought to Paris by M. le Comte de Gobineau, the talented author of Les religions et les philosophies dans l'Asie Centrale. Another MS in the same collection (Suppl. Pers. 1070) contains the first third of it, while the New History (تاریخ جدید) is a reduction made (about A.D. 1875-1890) by Mirzâ Husayn of Hamadân, containing many additions, but also remarkable for some extremely important omissions and alterations. There is thus sufficient material for an edition of this most important document, which the present writer is now (1908) printing. The Traveller's Narrative, the third of the three principal systematic accounts compiled by the Báb, is given by the Báb in two passages of the Persian Bāyān (Wahid ii. 7, and vi. 12). See Trav. Narr. ii. 218-220.
Bábí, their history, is not only later, but deals less with the early history of the movement than with the biography and writings of Bahá'u'lláh, to whose son 'Abdu'lláh (also called 'Abdu'l-Bahá') its authorship is ascribed. The accounts of Bábí history, however, recorded in the Bahá'í scripture (and by the Lámmál-Mulk in the Nášibullát-Tawáríh and by Ríyá-qul-Khán in his supplement to the Rawtát-u-Safá') must, as a rule, be used with great caution, but exception must be made in favour of the late Sayyid Jamál-dín al-Afghání's article on the Bahá'í in the Burtamí Burtamí of the Arabic encyclopedia the Dárálratút-Má'aríf (Bei- ruti, 1831), and of a more recent history compiled in Arabic by a Persian doctor named Zá'im-d-Dawla, and published at Cairo in A.H. 1321 (A.D. 1890-1).* From both of which, in spite of the prejudice against the Bábís which they display, important facts may be gleaned.

A very brief summary of the events of this first period (A.D. 1844–1850) is all that can be given here. The Bábi himself, who was only twenty-four years old at the time of his Manifestation,† and not thirty when he suffered martyrdom, was a captive in the hands of his enemies during the greater portion of his brief career, first at Shiráz (August–September 1845—March 1846), then at Isfahán (March 1846—March 1847), then at Makkát near the holy place of Mecca, and finally, under the supervision of his step-mother, in the prison at Chiríq, where he died. He enjoyed the greatest freedom at Isfahán, where the governor, Mintehbir Khán, a Georgian eunuch, treated him with consideration and even favour; but he was able to continue his writings and to correspond with, and even receive, his followers during the greater part of his captivity, save, perhaps, the last portion. He himself, however, took no part in the bloody battles which previously broke out between his followers and their Muslim antagonists. The chief of the latter, the three were in Mázandarán, at Shaykh Tabarsi, near Báfrúsh, under the leadership of Mullá Husayn of Bushraywáy and Hájí Mullá Muhammad 'Ali of Báfrúsh (autumn of 1848 to summer of 1849); at Zanján, under Mullá Muhammad 'Ali Zanjání (May–December 1850); and at Yazd and Níriz, under Aghá Sayyid Yáhíyá (summer of 1850), while a second rising at Níriz seems to have occurred in 1852.§ Amongst other events of this period was the issue of the famous Baha'í, a periodical important not only to the Bábi, but to others who have preserved detailed accounts, is the martyrdom of 'the Seven Martyrs' at Tihrán, which also took place in the summer of 1850.§ During the later period of his career Mirzá 'Ali Muhammad discarded the title of 'Báb' (which he conferred on one of his disciples) and announced that he was the Qá'im, or expected Imám, and even more than this, the Nágút (ناغوت) or 'Point.' It is by this title (Hazrat-i-Nágút-i-Úlá, 'His Holiness the First Point'), or by that of Hazrat-i-Rabbíyíl-Á'ít, 'His Holiness my Lord Most High,' that he is generally spoken of by his followers, though latterly the Bahá'ís, desiring to represent him as a mere forerunner of Bahá'u'lláh—a sort of John the Baptist—seem to have abandoned the use of these later and higher titles. But from the Báb's own later writings, such as the Persian Bayán, and the Persian and Arabic Bayáns, as well as from what is said by Mirzá Jání and other contemporary writers, it is clear that he was regarded as a great Prophet in a very full sense, as will be shown when the doctrines of the Bahá'ís are discussed, when the term 'Point' (Nágút) will also be explained. The circumstances attending the execution of the Báb at Tabríz on July 9, 1850, and especially his strange escape from the first volley fired at him,* are fully recorded in the DECLARATION, not specially mentioned, and need not be recapitulated here. His body, however, being exposed for several days, was recovered by his disciples, together with that of his fellow-martyr Mirzá Muhammad 'Ali of Tabrız, wrapped in white silk, placed in a coffin, and concealed for some seventeen hours in a little shrine of the Imám-záda-i-Má'súm between Tihrán and Bákhtá-Karim. At a later date it was transferred to 'Akka* (St. Jean d'Acre) by order of Bahá'u'lláh, where it was placed in a shrine specially built for that purpose.

3. Period of Subh-i-Ezel's supremacy (A.D. 1850–1868).—Before his death the Báb had nominated as his successor a lad named Mirzá Yáhíyá, son of Mirzá Buzurg of Nír, and half-brother of the afterwards more famous Mirzá Husayn 'Ali, better known as Baha'u'lláh. Mirzá Yáhíyá was, according to Mirzá Jání, only 14 years old at the time of the Báb's 'Manifestation,' so that he must have been born about A.H. 1246 (= A.D. 1830–1831). He died when he was a child, and he was brought up by his step-mother, the mother of his elder half-brother Baha'íl, and was of about the same age as 'Ali a.s. his senior.‡ Mirzá Jání, our oldest, best, and most unprejudiced authority (since he was killed in 1852, long before the schism between the Ezelis and Bahá'ís took place) reports Bahá'u'lláh as saying that he did not then know how great a position Mirzá Yáhíyá was destined to occupy.

At the early age of 15, about a year after the 'Manifestation,' he was so attracted by what he heard of the Báb and read of his writings, that he set out for Khurásán and Mázandarán, met Janáb-i-Qá'im (i.e. Mullá Muhammad 'Ali of Báfrúsh) and Qurrátull'Ayn, and, with Baha'úlláh, attempted to join the Bahá'ís who were besieged at Shaykh Tabarsi, but was prevented by the governor of Anúl. In the fifth year of the 'Manifestation' (A.H. 1260 = A.D. 1849), shortly after the fall of Shaykh Tabarsi, the Báb, having heard of Mirzá Yáhíyá's youth, zeal, and devotion, declared that in him was fulfilled the sign of the Fifth Year given in the tradition of Kúmáyil, 'A Little Light, a Young Martyr,' and commanded him to address the Bahá'ís under the title Subh-i-Ezel ('The Dawn of Eternity'), sent him his own rings and other personal possessions, authorized him, at such time as he should see fit, to add 8 wihdás (or 'Unities') of 19 chapters each to the Bayán, and appointed him his successor. On the Báb's death, therefore, Subh-i-Ezel, as we shall now continue to call him, was recognized with practical unanimity by the Bahá'ís as their spiritual head; but, owing to his youth and the sealed life which he adopted, the practical conduct of the affairs of the Bahá'í community was committed chiefly to his half-brother Bahá'u'lláh, or Janáb-i-Bahá, as he is called by Mirzá Jání. There seem to have been some rival claimants, notably Mirzá Asadulláh of Tabrız, entitled Dayún, † who was, according to Gobineau (p. 277 f.), drowned in the Shírúf, in the 'Arab by some of the Bahá'ís who wished to put an end to his pretensions; and, according to Mirzá Jání, certain other persons, such as the 'Indian believer' Sayyid Básir, Agá Muhammad Káriá'í, and a young confectioner entitled 'Dínábí' (دينابی)
BAB, BABIS

The records of the Baghdad period are comparatively scanty, but the propaganda went steadily on, though conducted without a pretense of foreign to the early days of the sect. About a year after his arrival at Baghdad, Baha'u'llah retired alone for two years into the highlands of Turkish Kurdistan, living chiefly at a place called Sarkalih, and occasionally visiting Sulaymaniyah.

The Bahá'ís' prospect in his retreat was looked upon as a kind of preparation and purification; by the Ezels, as due to annoyance at the opposition which he encountered in his plans from several prominent Bábis of the old school. Subh-i-Ezél, a man of great modesty and reserve, had lived in great seclusion both before and after this event, and the disputes which appear to have occurred at this period seem to have been chiefly between Baha'u'llah and his adherents on the one hand, and Mullá Muhammad Ja'far of Nizará, Mullá Rajá 'Ali Qáhir, Sayyid Muhammad of Ispáhán, Sayyid Jawád of Kerbelá, and the like on the other. Ultimately, owing to the hostility of the Persian Consul at Baghdad, Mirzá Buzurg Khán of Qazvin, and Mirzá Husayn Khán Mu'stakirí-Dawúla, the Persian Ambassador in Constantinople, the Turkish government was induced to expel the Bábís from Baghdad, where their proximity to the Persian frontier, and to the Shi'ite shrines of Kerbelá and Najaf, afforded them great opportunities of proselytizing among their countrymen. Their departure took place in the spring or early summer of 1864. They were first taken to Constantinople, where they remained for four months, and thence banished to Adrianople, where they arrived about the end of the year above mentioned. There four of their number died (Dec. 1864-August 1868), and there it was that in A.H. 1293 (A.D. 1866-67) Baha'u'lláh publicly announced that he was the 'He whom God shall manifest,' foretold by the Báb, and called on all the Bábís to recognize him as such, and to pay their allegiance to him, not merely as the Báb's successor, but as him of whose Advent the Báb was a mere herald and forerunner.
